We will not dwell on all the emotions of joy and remorse to which this strange discovery gave rise. Letters were immediately despatched to Portsmouth explanatory and apologetic; the voyage was given up for the present; and Tapp was invited to present himself without delay. But in a few days an answer came from the brother, saying that the poor fellow had been so broken-hearted about the whole thing, and was so possessed by the belief that the police were after him, that he had left England without telling where he was going; "for," said he, "if I am inquired for, you can then say with truth you don't know where I am. If I find myself uncomfortable on the continent, I shall go to America; but if I do, I promise to write to you." Therefore, said the brother, "I think he is still in Europe, though where I have no idea. He knew he could never prove his innocence, and expected to live and die with this stigma upon him."

The discovery of the diamonds had taken place about three months previous to my meeting them; and in spite of Bunbury's travels, Tapp had not been traced, which I thought might be owing to the delicacy with which they conducted their investigations. They were afraid, if any vague rumour of pursuit reached him, he might leave Europe.

The information I had to give was of course most joyfully received, and they were encouraged to undertake a fresh campaign by the hope it inspired. They left Vevay the next day, to return towards the Rhine; whilst I was left to meditate on these strange events, and on the curious trifles which often decide our destiny. What would have become of Tapp, and what would have been Maria's fate, if Mrs. Middlemas had not thrown that box on the floor; or if Spot had been called down to dinner at the usual time?

Who can tell? Certainly, the whole course of their lives would have been changed.

I thought of the extraordinary error of Alexis, too. I have never seen him; but I have witnessed many wonderful phenomena of that description, and I concluded that it was a case of thought-reading. He was placed in *rapport* with Mrs. Middlemas, and gave back her own impressions.

Some time afterwards I heard, with great satisfaction, that the poor injured Tapp had been discovered at a hydro-pathic establishment on the Rhine, where he had gone to avoid English travellers, and also with a hope of obtaining some relief from the state of nervous disorder to which these events had reduced him.

The wedding was fixed for an early day, and I shortly afterwards received two cards, united by a bow of white ribbon, which I suppose was the supreme fashion at the village of B—. They were inscribed with the names of Captain and Mrs. Tapp.

TERROR IN THE TILL.

REVOLUTION is a catching disease. When it once breaks out in your neighbourhood, you never know who will take it next; yourself, perhaps. And the after-consequences of an old revolution in former times are almost as bad as the effects of a recent eruption at the present day; they are apt to show themselves when least expected, and to betray a constitutional taint where we never dreamt of looking for it. Charles I.'s decapitation was made the precedent for guillotining Louis XVI.; and the two together will serve as a joint example for some unhappy monarch one of these days. But that ugly grim French revolution not only violated the unity of royal and aristocratic necks, it did worse in some folks' opinion,—it rifled people's pockets, it touched their tills. Citizens and citizenesses were compelled to buy and sell in novel coins and weights and measures of unheard-of relative proportions. Nothing but tens, and multiples or decimal fractions of tens, were permitted to pass current by the *Assemblée Constituante*; and the result was, a system of decimal moneys, measures, and weights, which endure, and are even approved of, to this day.

It was hard upon the vested interests of the old-established coin to be thus swept away into annihilation. The plea was the old one—necessity, that it served the culprits right, and that they richly deserved their fate. For it must be confessed that coins current, like feudal tyrants, may sometimes reach the point of unbearable; men can put up with their exacting and impracticable nature no longer. The Code Napoleon and the decimal system of coins, weights, and measures, founded on the *METRE* (or the ten-millionth part of the earth's meridian from equator to pole), have conferred such inestimable blessings wherever they have been adopted, that we will not now too nicely discuss the price at which they were originally purchased. I will put a few questions to the point.

Have you ever travelled through Switzerland and the minor states of Germany? What do you think of the small change there? How did you get on when you crossed the frontier out of one grand duchy or canton into another? Did you ever find you were able to dispose of your foreign cash in hand at a premium? Are not batzen, groschen, silber-groschen, schelings, bloutzgers, rappen (whence the phrase, "I don't care a rap"), gulden, kreutzers, florins, sols, and the rest of their mis-minted race, enough to make a man curse the day when coppers in general, and base silver tokens in particular, were invented? Do you think you ever got your fair change, or half of it, out of a silver five-franc piece or a golden sovereign? And did you bewail your destiny, or bless your stars, on escaping out of the monetary labyrinth into Belgium, France, Geneva, or Sardinia, where decimal francs and centimes are the national currency?

Things are not quite so bad as that in England; but we

have still had enough to worry our patience. We have such harmonious and consistent proportional parts as, five yards and a half make one rod, pole, or perch; twelve ounces make one pound troy, while sixteen ounces make one pound avoirdupois; and for every-day convenience, we have the simple and rational combinations,—so uniform and easy for foreigners and children to learn,—of four farthings make one penny, twelve pence make one shilling, and twenty shillings make one pound. Verily the pence and shilling tables are a fascinating study,—such as you give to good boys and girls as a pleasing recreation, and as a reward for having said their lessons well. Nay, some worthy Dominies of the olden school consider the shilling-table far too easy, and see a radical defect in the decimal element which enters into its constitution.

It is further back than yesterday that a monetary revolution has been threatening to break forth, even in our own beloved anti-revolutionary island. Murmurs, not loud, but deep, have been heard to issue from the lips of people who think themselves, justly, somebody. Conspiracies have been hatched in high places, in dark places, and in light ones too; for an international convention held its sittings in the Palais d'Industrie at Paris, during the Great Exposition there. To be brief, our tills and cash-boxes are seriously menaced with a thorough reform, which will completely change the aspect of compound addition, subtraction, multiplication, and division, not to mention reduction, practice, and tare and tret. "Woe's me!" shouts the ciphering-master in an awful fright. "My bread will be snatched out of my mouth, if a decimal system of accounts be adopted. I must have compensation, or a retiring pension. It is a barefaced robbery, of which we, poor pedagogues, are the innocent victims!"

For the present, the evil day is staved off a little while, by a combination of bankers, who patriotically consult their own convenience, and have voted, when referred to by high authority, that things shall continue in *statu quo*. But the English plan of progress is, to move on slowly and surely. The coinage-reform may not come immediately; but, sooner or later, come it will. Meanwhile the revolutionists are slightly divided among themselves, though rather apparently than really so. Some say, "Take the sovereign as the starting point, and found a decimal coinage on subdivisions of that respectable piece;" in which case the penny must be sacrificed. Others, more democratic in principle, say, "No; the penny is the people's coin. At all events, we will be true to our coppers. Make a decimal coinage out of multiples of pence, if you like. You will have to throw the sovereign overboard; no matter."

Terror is in the till; the trembling money-counters speculate as to whose doom it will be to be immolated first. As often happens, the lowest in rank are the loudest in their lamentations and appeals for mercy.

"Help!" cries the penny in an agony of apprehension. "Help! Murder! Fire! Thieves!"

"And pray," we answer, "what's the cause of all this riot, you brazen-throated representative of George III.?"

"Why this, sir; although I wish you would mind your own business, instead of interfering with mine. During a late session of parliament, on the motion of Mr. William Brown, the great Liverpool merchant, and one of the members for Lancashire, a resolution was carried in favour of a decimal coinage. A committee of inquiry was consequently appointed, at the head of which Lord Overstone,—better known as Mr. Jones Lloyd, the great London banker,—presided. It would be the business of the committee to obtain information from every quarter, and to report in favour of what it might consider the most eligible plan for the introduction of a decimal system of book-keeping and accounts. Of course any recommendation of this committee would have much weight in influencing parliament in its final decision. It is right this should be generally known; because within another year or two perhaps we shall have an act of parliament in force establishing a decimal system."

"Do you really think so, my dear Mr. Penny? I only wish we may get it."

"You do, do you? I don't; that is, not exactly. I therefore advert to this important matter, in order to call public attention to what seems strangely overlooked by the press, and in public discussions of every kind; although there can hardly be any public question of greater importance, or which more concerns the interest and convenience of every individual in this country."

"Very well declaimed, Penny Brown, Esquire; but what is this point so strangely neglected by the press, and in public dis—?"

"I advert to it, sir, inasmuch as Mr. Brown (no relative of mine—I disown him!) urged upon the House of Commons the propriety of adopting a system which involved in its establishment the disarrangement of me, the present penny. He proposed to retain the pound unaltered, but to divide it into a thousand instead of nine hundred and sixty parts, as at present; thus inevitably deranging the value of the nearest equivalent to the penny four per cent, less or more. At present there are two hundred and forty pence in the pound. The new plan gives two hundred and fifty pence, decreasing the value of each penny in proportion. I will not submit to be so degraded."

"But surely you will yield a little, to accommodate your superiors in pecuniary rank?"

"Don't talk to me about superiors. I say the disarrangement and inconvenience which would ensue, should the member for Lancashire's reasonable plan become law, on a vast number of small payments is very obvious; and the injustice—the inevitable injustice—such a system would induce is a matter of no small importance. I warn my countrymen what they may expect should there be no decided expression of public opinion in favour of me, the existing penny, who have no desire to become the late Mr. Penny; for it is understood the views of all the members of the committee are in favour of retaining the pound, dividing its nine hundred and sixty farthings into a thousand, and thus entirely superseding the penny. Yes; don't treat the matter lightly. I warn you, the infringement of my (Penny's) rights will be the break-up of the British Constitution. The banishment and expulsion of the penny will be followed by the same disastrous results as the emancipation of the Roman Catholics, the last total eclipse of the moon, the introduction of railways, the great comet, free-trade in corn, and the winding-sheet on my grandfather's rushlight."

"But do you mean to say that we are to abandon decimals altogether, in order to preserve untouched the entailed inheritance of the Penny family? Have you the face (whatever you may have the reverse) to say that decimal accounts, weights, and measures, are not desirable for Great Britain to adopt?"

"Not quite that, sir. The importance of a correct system of decimal coinage and accounts can hardly, I own, be over-estimated, and must shortly inevitably engage the serious attention of the mercantile community. There can be no question of the vast convenience of decimal book-keeping, compared with the mode at present in use; but, sir, in adopting the change, it would be infinitely more easily effected, and inconceivably more convenient, could it be accomplished in a way not necessarily to require the setting aside of any of our existing coinage; and above all, so as not to interfere with the present penny. It is atrocious on the part of Mr. Brown to retain the pound, but to alter the value of the penny. It is a base violation of all national feeling."

"Nonsense!"

"You may call it nonsense; but I tell you that it will be found much more important to preserve inviolate the penny than the pound. Such an arrangement would occasion infinitely less inconvenience to, and misapprehension among, uneducated people. Rather more than a century ago, when the adjustment of the style took place, there were very large numbers of the people who honestly believed that

they had been cheated out of eleven days of their September in that year; the same will be the case with the Pennyites, if you depreciate their favourite coin at the rate of four per cent."

"And so the enlightened and well-informed portion of the community is to yield to the prejudices of the ignorant. Had you not better instruct them a little in the real state of the case?"

"I know nothing about that. I only know that no later than fifteen years ago, when a new copper coinage was obtained for the Isle of Man,—when the old fourteen-pence Manx to the English shilling was assimilated to our currency,—there were in consequence actual riots in the island, far more serious, comparatively speaking, than any of the Sunday demonstrations in Hyde Park. The calculation there was clear and explicit—three-pence-halfpenny Manx equal to three-pence British; yet there are Manx people, even at the present day, who speak of the measure in bitter scorn, as having robbed them of their twopence to the shilling."

"But as we are to have a thousand pretty little new coins, to be called 'mils,' instead of nine hundred and sixty farthings, people would be much more reasonable were they to rejoice at having gained forty 'mils' in the pound."

"More sophistry, sir, which will persuade nobody. Should the value of the penny be altered, so that there can be no precise equivalent, the people will persist in the belief that decimals are only an attempt to injure them for the benefit of the rich; and the allegation would not be entirely unfounded. Why should the rich man be enabled to compute his pounds as heretofore, while the poor man is called upon to pay his penny and a fifth, most probably his penny and a quarter, postage for his letter or his newspaper, in place of a simple penny? It would be a tax of four-and-twenty or five-and-twenty per cent, falling almost exclusively upon the poor, for the convenience of the rich and the middle classes. There will always be an insuperable difficulty in introducing a demical coinage, if the present PENNY is in any way interfered with. Mark me; you will, and shall have penny riots, perhaps a penny revolution, if you dare to touch the sacred penny."

"Who would have thought that an honest penny would have ever turned firebrand and agitator! In the first place, is it quite a fact that it is poor people who pay the penny postage? And are you sure that that same postage would not be reduced a fraction, instead of increased a fraction? But please just have the goodness to inform us how you would patch up a coalition between decimals and pence."

"Easily enough. I have two plans; both admirable. The first, without being exactly a decimal system, would closely approximate to it, without interfering with the present coinage in any respect. Let accounts be kept in crowns and pence; the crown, value five shillings, equal to sixty pence. According to the proposed method, the sovereign would be equal to four crowns '00 pence; the crown would be expressed thus, 1'00; the halfcrown, 0'30; the shilling, 0'12; the penny, 0'01; the halfpenny, 0'00½; and the farthing, 0'00¼. The pence-column must be added, and divided by sixty, the quotient (crowns) carried forward, and the remainder (pence) set down. This would be a very near approach to a decimal system, and would embrace many of its conveniences."

"Whew! you make me whistle Lillabullero, like Uncle Toby. Decimals, by Irish arithmetic! A multiplication table made of india-rubber, and stretched cornerwise, so as to make twice two are five, and twice three are seven! Certainly a very near approach, a close shave, to decimal accounts, with four farthings (in vulgar fractions) to a penny, and sixty pence to a crown! You would get, however, still nearer to decimals were you to take either nine or eleven pence to the shilling, and either nine or eleven shillings to the pound. My dear Mr. Penny, you must be joking."

"Never was more in earnest in my life. But I perceive, sir, you are determined to find fault with every thing that I

propose. However, you cannot refuse to accept my second proposition of victorines and mils."

"Victorines! Do you mean fur-tippets?"

"No, sir; I am shocked at your levity. I say we can establish a perfect system of decimals and decimal book keeping without disturbing our present coinage in any respect. Suppose we reckon in victorines (value four shillings and twopence) and mils (halfpence), value as at present, there would be a hundred mils in the victorine. Mr. Brown's thousand-mil system would involve three or four (?) decimals, and this of itself would become an inconvenience tending to inevitable confusion; whereas the same end may be accomplished by this invention of mine, without altering or interfering with the penny, that is to say, with the halfpenny. By this system no present coin need be withdrawn. A new silver coin, the victorine, sufficiently dissimilar not to be readily mistaken for the present five-shilling or crown piece, might be issued. It would perhaps be more simple, and answer every purpose, to continue to reckon farthings in vulgar fractions. A farthing might be called a demi or half mil."

"Very simple indeed, to have two silver coins current at the same time, one equal to four and twopence, and the other equal to five shillings! Very simple to have vulgar fractions in one column and decimal fractions in the next! Go on, brave Penny!"

"The method of expression would stand thus: the sovereign would be 4 victorines 80 mils; the half-sovereign, 2'40; the shilling, 0'24; the penny, 0'02; and the farthing, 0'004."

"And so, dear Penny, to save yourself, you would make the sovereign an odd number; that is, a value which is not a multiple of your unit, the victorine?"

"O, that's a trifle! In any conceivable alteration of the coinage which may be proposed there will always be some obstacles to surmount."

"Perfectly true. And therefore we may as well take the trouble of surmounting them for the attainment of a wise system rather than a foolish one."

"But mine is wise, and easy too. The process of conversion from £ s. d. into victorines and mils is very easy. Reduce the sum to halfpence, strike off the two right-hand figures, which are mils; those to the left are victorines. You may perhaps say that this is not strictly an original plan, but a sort of imitation of the American dollar of a hundred cents, or of the French franc of a hundred centimes. What if it be? There is nothing absolutely original in the system of decimals; adaptability is of more importance than originality. And what originality is there in dividing what is now nine hundred and sixty into a thousand, unless it be an originality in needless confusion and positive injustice? The American and French systems are both equally excellent, and better than any thing we can create at the expense of disarranging the important penny. Should parliament pass a decimal law, setting aside the present penny, the legislature neither would nor could (except in the exercise of a liberality or an injustice which the country would not submit to) at the same time sanction a universal reduction, or a general imposition of four per cent on all present payments. Besides this, the inconvenience, misunderstanding, and confusion which such a law would inevitably occasion among small traders and the humbler classes of society would arouse an outcry against it, and an opposition not to be endured beyond the termination of a single prorogation of parliament. It is of no use your saying that the poor man (on the thousand-mil system) would receive fifty mils for his shilling, instead of forty-eight farthings; and, in purchasing power, the mil would no doubt be as great as the farthing. You are trying to bribe the poor man with the base temptation of gaining two mils on the shilling. Such a corruption of principle horrifies me. To be sure, the thousand-mil per pound would be all very well, if we only wanted a new system, and were not called upon to deal with, what I glory in, the existing state of things; above

all, with that great national bulwark, popular ignorance and popular prejudice. I prophesy you will have a penny outbreak. With a penny match you will set fire to the wooden framework of society—I mean the assembled blockheads. A penny, sir, notoriously regulates all existing contracts, and the amount of every monetary transaction. London streets may be paved with gold; but, sir, coppers are the keystones of the Royal Exchange, and of every arch in London Bridge, not to mention the tolls over Waterloo ditto."

"And when do you propose the introduction of your victorines and mils?"

"There is not the slightest occasion to hurry. In our grandchildren's time will be soon enough. The great beauty of the project is, that it may be adopted permissively rather than compulsively—in fact, gradually, or not at all, if you like. An act might be passed allowing its optional use, but legalising contracts and accounts kept either according to the existing system or the new one. All large establishments, at least the majority of such,—all government offices (so fond of improvement!), including the Custom-House, the Stamp-Office, and the Post-Office, would probably adopt it at once of their own free-will and fondness for change. Perhaps they wouldn't, and there would be no legal obligation on them to do so. Perhaps some might like to try the new plan, while others would have too much reverence for the good old times to abandon the genuine British coinage. Thus even the prejudices of large numbers of the people would be properly respected, as they ought. In process of time, within another generation, or two, or three,—for all schools and educational establishments more or less would exclusively teach decimals perhaps,—the decimal system (with vulgar fractions for the farthings) would become universal. And, with the exception of the new silver coin (the victorine), value four shillings and twopence (which could never be mistaken for a five-shilling piece in a hurry, or in the dark; it could give rise to no disputes with urbane cabmen and mild omnibus-conductors), no other new coinage would be required for at least a quarter of a century. After the lapse of some such period, the present silver and copper coinage would be considerably worn, and would require to be withdrawn from circulation. Then, and not before, the new issue might be called respectively half and quarter victorines (value 2s. 1d., and 1s. 0½d.), ten-mil pieces (value 5d.), and five-mil pieces (value 2½d.). The two first would be very similar in appearance to the florin and the shilling, and the two latter rather thinner, but having very much the appearance of the present sixpenny and threepenny pieces. The new copper coinage might be of two mils (one penny), the mil (one halfpenny), and the half-mil (one farthing). The present pound would always be the equivalent of four victorines and eighty mils. Discontented people might call that an awkward proportion; but to show how unreasonable is such a complaint, I have only to mention that the five-pound bank-note would just be twenty-four victorines. What do you think of that, sir? You have your decimals, and the penny is saved."

"Confusion worse confounded! Contradiction! Absurdity! Indecision! Delay! If that be all the prisoner Penny has to say for himself, his days are numbered, though his sentence may be deferred. But the indictment is already fully made out. The preamble was published in the *London Gazette* for October 26th, 1855, as follows: 'The Queen has been pleased to direct letters patent to be passed under the great seal, nominating and appointing the Right Honourable Lord Monteagle of Brandon, the Right Honourable Lord Overstone, and John Gellibrand Hubbard, Esquire, to be her Majesty's commissioners for considering how far it may be practicable and advisable to introduce the principle of decimal division into the coinage of the United Kingdom.' If nothing comes of it immediately, something surely will by and by."

"And that's the way in which an old servant is to be treated? Spare me, gentlemen, spare me, on account of my previous good character. Pity the sorrows of a poor old

Penny, whose trembling rim has rolled him to your door, whose life is dwindled to the shortest span. O, give him a reprieve, and Heaven will bless your store (of halfpence and farthings)!"

E. S. DIXON.

THE STAFFORDSHIRE POTTERIES.

I.

We were travelling a few years since in Cornwall, outside the antiquated vehicle, a four-horse stage-coach, when we suddenly came upon a singular feature in the landscape—a brook flowing with milk, or what seemed to be such. In that land of hills and rocks most of the streams are of an ochreous red colour, opaque and unsightly, owing to their being fed in part with the refuse-water from mines. But at this stage of our journey the brook which foamed and tumbled at the roadside was of the purest white; the mud which lined its banks was white; the very grass and briars that grew within reach of its spray were encrusted with white. We rattled along by the side of this river of milk for a brief space, toiled up a steep hill, and emerged on a wide common, when the mystery was at once solved. We had reached the china-clay works; and the water which had excited our curiosity had been employed in washing one of the materials which contributed largely to the excellence of English pottery. The geological structure of the country is granite; a rock which, though generally exceedingly compact and hard, is liable to be converted into sharp gravel by the decomposition of one of its constituents, feldspar. The result is a white powder or paste, according as it is dry or wet, mixed with crystals of quartz and mica, the other minerals of which granite is constituted. To be available, the former substance has to be separated from the others, which is effected by letting the water run into pits filled with the mixed mass in the state that it is quarried. There the lighter particles are suspended in the fluid and allowed to run off into other pits. After a time the water is drained off; and the sediment is pure feldspar, of the consistence of clay. This, when sufficiently dry, is cut into cubic blocks, and shipped off to the potteries.

But why, it may be asked, is it not manufactured on the spot, and the expense thus saved of conveying it to Staffordshire, and of bringing back the pots and jugs to Cornwall? For two very good reasons, each of which (as is not always the case when two reasons are given) would be a sufficient one: first, because feldspar alone is not convertible into jugs and cups, other ingredients being requisite which are not found in the neighbourhood; and secondly, because potteries consume a vast quantity of fuel, and Cornwall can supply neither coal nor wood. A similar white clay is found in Devonshire; but there a manufacture is established, because the other necessary minerals are within reach, and coal is also found. There exists at Bovey in that county a manufactory which turns out no small quantity of articles in pottery of excellent quality; the necessary fuel being afforded by the stone-coal, or anthracite, found there.

The main seat of the potteries, however, is in Staffordshire; and thither, a few days since, we were whisked in a very different sort of vehicle from the Cornish stage-coach, being deposited by railway at the Stoke station of the North Staffordshire Railway. No granite rocks, heathy commons, or rivers of milk here! Dingy walls, cone-shaped furnaces, and a smoky atmosphere, indicate the centre of a crowded population devoted to some occupation more artistic than

that of raising to the surface the natural products of the earth. Passing through the office, we found ourselves under a portico paved with encaustic tiles; the road, wherever its materials can be discriminated from the black mud which coats it, appears to be composed, here of coal-ashes, there of potsherds; a dirtier place we have never set foot in. But if a good workman is known by his chips, we have here ample evidence that the industry which scatters such chips as these must be gigantic. We proceed towards the town.

NEW FLOWERS.

CALYSTEGIA PUBESCENS.

THIS will soon be one of the most popular flowers for the adornment of verandas, summer-houses, rustic bowers, and garden-screens. It is a bindweed,—in fact, a convolvulus of rich habit and most exquisite form, when considered in detail.

The first plant raised in this country was the produce of a half-dead chip sent in a box from Shanghai to the Horticultural Society by Mr. Fortune in 1844. The root was found inserted in a dead peony-root, and the box was labelled as containing a plant of double convolvulus.

The semi-defunct chip was submitted to the operations commonly used to restore vitality; and the result was, a plant of fine promise, that won favour for itself at once, and is already in the hands of the trade, for the good of every body.

Imagine, in the first place, a common bindweed of the hedges,—one of the noblest of our wildings; then make the leaves smaller and more leathery in texture; make the flower as large as a double anemone; crimp it up irregularly after the fashion of a nearly full-blown rose; paint it of a delicate pink; and you have *Calystegia pubescens* in its individual character. Then imagine a fine breadth of garden-hedge festooned with it from head to foot; or a bowery retreat sheeted with it in rich masses, the slender stems covered with their elegant foliage, and a profusion of flowers creeping into every crevice, and breaking every angular outline with dashed leafiness and soft blotches of colour; and you have, in your mind's eye, the same fine trailer in its landscape or ornamental character.

It is very hardy, grows freely—too freely sometimes—in the worst of soil; but prefers a rich moist loam, like other convolvuluses; it is increased by division of the root, and flowers freely in July and August.

Those who cultivate this *Calystegia* must beware of its fast-spreading roots. If planted any where in the open garden, it will be likely soon to monopolise every square yard of ground, and choke up neighbouring things with its luxuriant growth above ground. For an archway of wire, or a

trellis, in any spot where a delicate climber would not grow, or where some ugly object is to be “planted out,” it is very useful; but the cultivator must, in planting it, not forget the tendency of its roots to set all boundaries at defiance. If allowed to run riot in a rough shrubbery, or mix with a tall fence, where its roots cannot reach the general garden soil, it is a fine thing, and worthy of adoption. I cannot speak positively as to its capability for bearing the smoke of towns; but did I need such a climber to screen a town-fence, I should not hesitate to plant it.

Messrs. Henderson, of Wellington-Road Nursery, St. John's Wood, have an improved form of this plant, raised by Mr. Donald Beaton; it is called *Calystegia pubescens simplex*, a chaste French-white single flower, which lasts from June to September. Mr. Beaton says, in the *Cottage Gardener*, it should be grown in masses in by- corners, and allowed to climb over pea-stakes, no matter how rich or how poor the ground is. This variety of Mr. Beaton's will certainly become a popular flower as its merits get more fully known.

SHIRLEY HIBBERD.

FAMILY UNITY.

ONE, perhaps, of the greatest miseries is a lack of unity of feeling and affection in a family, and one also that unfortunately too often prevails. A “lone body,” and a looker-on, for nearly threescore years, I have seen much of this unhappiness, almost invariably arising from the most insignificant causes,—a want of forbearance and unselfishness in the every-day course of life,—exactng too much similarity of mind and feeling. It is strange how very little concession we can make to others in unimportant things, if they differ from us. An opinion is passed on the most trifling subject; some one dissents, and then follows an argument, which, as neither will “agree to differ,” ends with angry feeling on both sides, simply because we wish to make our own ground good, and exercise no control over our “unruly member,” the tongue.

Again, in our intercourse with those around us, we rarely are careful always to maintain that true politeness, which is only another name for a much higher feeling—unselfishness. The sacrifice of perhaps a favourite seat, or a pet habit only, or some such seeming trifle; but which would very often greatly conduce to the comfort of those with whom we associate so intimately. I had the privilege of once knowing well one of those rare beings who found her life in promoting the happiness of those around her. She was perhaps, in the eyes of the world, a quiet unobtrusive person enough; but in her family she was a spirit of light: an atmosphere of peace seemed to pervade when she was by. Was there a sick child to be amused, quieted, she was the one called on. (Children especially acknowledged her influence by their conduct while with her, as children always do intuitively perceive when they meet with one whose habit of mind is higher, purer, than is generally met with.) Was there a piece of disagreeable advice to be given, to her tact it was committed, and it assumed a different aspect. In any little dispute, both parties felt she could settle it without either feeling they had been *worsted*. In any press of occupation, her time was always available when others required it. And so it was in every thing; and I believe the whole secret of her influence over others, and her power of conducing to their comfort, lay in perfect forgetfulness of self, which gave her the power of throwing herself into the very thoughts and feelings of others, while carefully bearing in mind the relative claims each had upon her. Did we all bear in mind that, except when actual duty points another way, the greatest virtue in social life is to conciliate all with whom we come in contact, and consider them in every way before ourselves, we should find life never wanting in that interest of which so many complain; while by this abnegation of self our own daily upward course would be much smoother.

SCENES OF THE ENGLISH SCHOOL: NO. 11.

VILLAGE GOSSIPS.

VILLAGE GOSSIPS.

By G. B. O'NEILL.

THE old fellow before us is relating some marvellous hap,—appearance of a ghost maybe, “down by Farmer Hodges’ five-field;” or something which has occurred in a far-off country—some tale of Australian or Californian gold-finding; or what “them Booshians” did in the Crimea. Whatever it be, his auditors have fallen into the interest of the tale with all their hearts. Often has the tale been told by him, we see; for his senses, which age has half-blunted, have overcome the shock of the first news, and he has become critical, telling his story with comments of his own. ‘He is a practised snuff-taker, as his eye shows, and also the form of his nostrils; notice, too, the habitual pinch of the right fore-finger on the thumb, and the way of use with which the left hand holds his box. There is an intelligent look about him; and it is evident that he has seen many a seed-time and harvest, not without profitable reflections thereupon. He is the gaffer of the village.

But if his senses have become blunted, not so the girl’s. Look how she takes in the marvel with eye and mouth! Her action is capital, and her face healthily pretty. She is the future belle of the village perhaps; for we see by her dress that modern customs have not been without their effect upon her.

The dame’s face is good. See how she reprehends something which is in course of telling; and how the form of her hands shows a life of labour, contrasted with those delicate ones of the girl!

The picture has a pretty little frame in itself, of those great leaves of the vine, and the white-flowered alder-bush. The only thing to be regretted in it is, that the old man’s arm is rather too small for his head and his approximation to the spectator; and also we doubt if the action of the girl’s right hand should not be more in unison with that of the left. These hands are so capitally drawn, that this is the greater pity.

The reader will see how important a part the hands play in such a picture, if he hides the faces; when it will be perceived that the action of the hands alone would almost tell the tale.

JOHN PIKE YAPP.

A TALE OF MAYO.

By THE AUTHOR OF “PAUL FERROLL.”

IN THREE CHAPTERS.—CHAP. I.

THERE is a tract of land in the West of Ireland, comprehending 45,000 acres, which has been bought by an English gentleman. He took to it after the great famine had won the battle over it, and after the battle-field had been cleared of victims, and the very walls which had once sheltered human beings had disappeared.

So complete was the desolation, that in places all trace of habitation was lost. The new owner was once superintending the cutting of a deep drain, which was to prepare the way for the operations of the plough, and for introducing the cultivation of wheat in the west of Mayo. As they cut, the workmen came to a spot where some large stones retarded their operations.

“What is this?” he said. “It is strange to find these stones in the bog.”

“This was father’s cabin,” said a gaunt naked boy, who, with a score more idlers, were gazing on the Englishman’s movements. Those few words went to the English gentleman’s heart; but to the young savage they conveyed nothing more than the fact; for they had all been so used to misery, that misery came naturally to him, and left little space for feeling.

There had been, however, dwellings in the bog, where things were a little better; and among these John Pike

Yapp’s had perhaps been the least wretched. This was owing in part to the small number of his family; for he had but two children. His wife and he were both young and healthy; their boy was beginning to earn money by running on errands, when an opportunity offered itself; the girl was the youngest and the least hearty of the family, and, from the cares she required, was the one who had wound her way deepest into poor Pike’s heart.

He had been employed up to 1848 on his own bit of land, and a job or two in harvest; and although the produce of his labour did but just keep him and his family above starvation, still it had done so, and they had been content. But the beginning of that year had been the beginning of the great woe of Ireland. The partial failure of the potato-crop of 1847 had exhausted all the small reserve of resources the inhabitants possessed; and the doubtful appearance of the actual crop, with the report of disease already apparent in different parts of the island, alarmed the more prudent with the prospect of the winter.

Pike among others took alarm. Many of his neighbours had often gone east in the summer, and returned with the gold of the east to pay their rent, or repair their ragged wardrobe; and Pike, though he had been able to avoid this severe experiment hitherto, came by degrees, in the early summer of 1848, to the conviction that it was the only course remaining for him.

“And when will ye come back, Pike—when will ye come back?” said Honor, his wife, when the last morning was come, and they were up with the light to speed him on his way.

“I’ll be back, my girl, by the blessing of the saints, before ye’ve done grieving for me,” said Pike.

“Ah, Pike, ye must grow an old man or ever I leave grieving,” said Honor; and hiding her face in her hands, she burst into unrestrained tears.

Pike sat down by her, and flung his right arm about her neck. He drew up his children on his knees and kissed them, and twined his hard begrimed fingers in the shining curls—shining, though they were matted and tangled—of the little girl.

“Purty curls!” said he. “May the blessed Mother protect ’em till I come agin! Don’t disremember yer dad, my little ones, and mind ye what yer mammy says; and look out for me one autumn day, and ye’ll see me coming over the hill as ye see me going now. So come, Honor, come past the big stone with me, and there we’ll part.” And hand in hand, silent and with swollen hearts, they left the cottage together, and walked up the steep bank at the bottom of which it was built.

A traveller on horseback was going along the road into which the path emerged. He was Mr. Threader, the English agent for most of the property in the neighbourhood. His attention was caught by the pair who approached, their heads drooping and their hands together: the woman in the dress of the country—the red petticoat and blue cloak; the man with his long coat, patched and mended, his brimless hat, his small bundle, in a once bright-coloured handkerchief. Pike and Honor reached the big stone where they were to part; and here they looked each other in the face, and tears and sobs broke out from either heart, the man and the woman alike breaking down and giving way to nature. Neither spoke, nor was another kiss given; but at last they let each other’s hand fall, and each turned to go on their different way, weeping aloud.

The Englishman was less moved than he would have been by more silent sorrow: this was not the sorrow of his country. Presently he rode up by Pike’s side, and said to him:

“Well, my man, is it like a man to give way thus to your grief?”

“In throth is it,” said Pike; “for it’s being a man makes me feel it.”

“Still it’s women only who shed tears,” said Mr. Threader.

"And what for should not they that's woman-born shed tears, when their natural sorrow comes upon them?" said Pike. "But I've done; I'll go forward now; so good morning to your honour."

"And where are you going?" said the traveller.

"To the east, to win bread."

"What do you expect to earn by the time you come back?"

"Arrah, I'll be discontinued under three guineys," said Pike.

"How easy it would be to give him three guineas, and let him stay with his wife and children!" thought Mr. Threader; but he did not do it. Instead, he pulled out the substitute for most of our painstaking and most of our charity,—half-a-crown namely,—and made a present of it to Pike.

"The blessing of Heaven be upon you!" cried Pike, astonished and delighted. "Ten times twenty thousand blessings be upon ye! It's good luck, besides three tinnies. I'll take it to the woman." And turning, he ran down the hill as quickly now as he had come up it slowly, and rushed into his own cottage once more, which he had not thought to see for so long. Honor was raking together the turves on the fire, weeping still; the boy was watching his mother very gravely; the little girl was on the ground, setting up a broken teacup.

"Here's a Godsend!" cried Pike; "here's enough to buy oatmeal these three weeks. And here's another kiss, my woman; and God bless the purty ones! A gentleman give it me, and give me a light heart too. It's loock!"

"And I've seen ye agin too," said the woman. "O, ye'll come back now; I feel ye'll come back!"

"And good by agin, Honor. That run has done us both good," said Pike; and away he shot with an easier heart.

Mr. Threader's half-crown had been well laid out in the purchase of light-heartedness for a fellow-creature.

The summer wore away, and Pike prospered. He did not find it necessary to cross the seas, but got enough to do in Dublin and the neighbourhood; and by the time harvest was housed, had accumulated the sum he had fixed upon. He had heard no news from home, nor had he sent any; the natural thing was, that all should go on as if he had been at home, and vain fears did not torment him. Honor, who was safe at home, was more troubled for her wandering husband than he for her; for she knew not where to look for him, nor in the perils of the way what might befall him. Still she believed for the most part in the natural course of events, and took patience to wait till they should unfold themselves at their own leisure. Thus, when October was half over, she began to expect him every day; and it was no surprise, though it was great joy, when one evening the latch was hastily lifted, and Pike himself cheerily burst into the room.

"Honor, how is't all with yer? I'm here, my girl, agin at long last; and where's the little ones? All right—all right; yes, here's kisses for all, and long life to us!"

"Why, then, 'tis you that are welcome entirely," cried Honor; "and no more trouble at home, at all at all, now the man's in it agin."

"And I bring the guineys too," said Pike, carefully drawing his old handkerchief from his bosom, and showing her the three golden sovereigns.

"Ah, indeed!" said Honor; "but the master's proctor has been here after the rint, and that will take the biggest part, honey."

"Sure it will," said Pike; "but it'll save the phaties."

"Pike, Pike, haven't ye seen all along the country they're gone every where?"

"Nay, I see two or three patches as green as never they were; and I thought all along ours was to be one of them."

"Scarce a root here in Castle-Anton," said Honor; "not a blessed root."

"But, woman, what's the heap at the door? sure I see a covered-up heap as I come over."

"Ah, Pike, it's just a few not so bad as the others; but last year we would not have given them the pig."

"Well," said Pike cheerily, "we have never a pig this year to give 'em to."

"But my cousin Johnny died, by lave of the Virgin herself," said Honor, "and left me yonder milk-pitcher. See if she shan't have the best corner and the best cover, the blessed cratur." And she led her husband to the side of the few smouldering turves; and there (lifting a very old bit of sacking) showed him a goat, whose swelling udder justified the fond title, of milk-pitcher, which she had given it.

"Blessed Saint Anthony!" cried Pike. "Is not she better than the Dublin Savings Bank? And the childer themselves can put in their gatherings of grass, and draw out preciouiser than money from her blessed teats."

"Ay, but it's very little support with scarce no food besides," said Honor gravely.

"Well, but have not I brought you a present as was made me by a gentleman's house that saw me walking past. Here's crusties for all, and some for to-morrow," said the hopeful Pike, emptying his pocket of broken bread, which he had hoarded since yesterday for this home-feast.

Both parents were well aware of the extreme difficulties which threatened them through the approaching winter; and they managed the little store they had like sailors, leagues from land, who have to spin out the resources to which there can be no addition till the long waste of ocean is past. They ate the worst of their small stock of potatoes, and every day turned and wiped the others, renewed the earth over them, and chose out for their meal those which decayed. They determined to send their goat to a distance along the bog, where it might find fresher pasture; and every day Pike himself, or the little boy, if his father could find any better employment for himself, fastened a string, knotted together out of numberless pieces, to the animal's neck, and patiently attended on its nibblings. They laid out a very small portion of Pike's earnings in oatmeal, and this they kept in a jar with a stone on the top, which stone was thoughtfully lifted and parsimoniously replaced. More than all his money was due to the landlord; but these were not times when landlord or tenant could contemplate the payments proposed when things went prosperously. Payment of some kind, however, must be made. Accordingly, one fine autumn day, Pike drew from his hoard of money four-fifths of his whole substance, and wended his way five Irish miles to put it into the hands of his landlord. The landlord had, indeed, no hands of his own; he had tied the cords of debt fast about himself, and was a mere lay figure between his income and his creditors. As such he kindly received his numberless tenantry, and as far as a good word would go had one for every body.

It was chiefly such tenants as had any property which could be seized, should they not pay, who came to bring their money to O'Toole. No doubt Pike had had his own thoughts of the turf-heap and the goat, the cabin and the garden where potatoes used to grow, which he should have perilled had he not produced his earnings; at all events, there he was, fumbling with the bit of rag that folded them up, and slowly counting to himself, as if it were unnatural to finish in a moment a matter which, to him at least, was so important.

"I hear you've been from home," said O'Toole; "but not across seas, hey Pike?"

"No, your honour; only far enough to fetch these many shillings for your honour. There's forty-two of them and one goat. Will it be enough?"

"We'll put them to your credit," said the agent, booking and bagging the coin. "There'll be ten still to pay some day."

"Or maybe ye'll get excused," said O'Toole in a low voice; "times are hard on us all, and I've me payments to make as ye have," he continued, "else perhaps I could do more than good wishes for me people."

"Long life to your honour for that same," said Pike, folding up the empty rag and replacing it in his pocket.

"But I'll tell ye something," said O'Toole, "that's better than any thing I could do for you. England's ashamed of herself, wallowing in luxury while poor Ireland's starving, and has been stirred by her conscience to send us over a few of her loose guineas: I'll tell you what it is, Pike, there'll be no starving, if indeed you're not better off than before; for if all's fairly divided that's coming, there'll be a raal ten-shilling piece for every man, woman, and child in Ireland."

"Salvation to me!" cried Pike in astonishment. "Then it's myself wishes I had a dozen childer! Why, I'd get a dozen illegant ten shillings, and that's six pounds, among us four,—Honor and little Honor, and Johnny the spalpeen, and me!"

O'Toole laughed at Pike's calculation on his imaginary twelve, who were to feed his real four, and told it as a brave bull in as many companies as he went into for a month to come. But the impression on Pike was more serious. He went home in the state of mind of a man whose most confirmed and habitual opinions have been overthrown by some undoubted authority, but he does not understand the reasons.

"Honor," he said, "here's great news indeed. We have not need to fear any longer; for there's a terrible good lady been a-looking after us."

"Then God bless her sweet face, and give her back her own and three halves!" said Honor. "And who shall she be, honey?"

"The lady with the pitchfork in her hand, and the deep bonnet on her head, and the big pan she holds fast to sit upon, and her clothes so thin you'll see her skin through," said Pike, who had been deeply studying and admiring Britannia on his groat as he went that morning to O'Toole's.

"Hut, Pike; who are you maning?" said Honor.

"Who could I mane but England her ownself?" answered her husband.

"Ah, what jeer has the master been putting upon you?" said Honor. "I fear you had a taste of his drink after the rint."

"If I but had!" said Pike. "But no such luck for tinnepny tenants like me, girl. No, no; it's all thrue. England has been sending over more gowd than goes in forty ships; and we're all to get a piece of it in place of phaties."

"O, blessed mother, what a stone off one's heart!" said Honor; "for I've been afraid days past to look on the phatie-heap and think of the winter."

"That's bein the way with me too," said Pike; "but I said nothing till now. And now, girl, my opinion is, 'twere best to eat away while the creeturs are good at all at all, and then go in and get the bounty they have for us."

"Besides," said Honor, "the less we have the more they'll give, I'm thinking. Maybe, if we said we had kept a store, they'd answer, Then you don't need."

"That's as like as not," said Pike, struck with his wife's foresight. And accordingly they took the stone off the jar of oatmeal, and dived among the potatoes for the best of them, and for some time eat fearlessly, and rejoiced to see the little ones stout and cheery again.

This temporary and comparative plenty existed more or less all over the neighbourhood, as the news spread of the expected bounty. It was, however, but a very short-lived gleam of comfort; for the unusually scanty resources of the country were soon exhausted when thus called upon.

"Neighbour Pike," said a voice at the door one day, when they sat about nearly the last bowl of potatoes they could collect out of the decaying roots, "I'm called on you to see can you spare half a phatie; I've not eaten too long—all out;" and the man who thus spoke staggered into the room, eagerly staring at the food which was on the bench.

"Take your share," said Pike, handing him the bowl; "but fairly, man," he added; for his hands seemed about to grasp all they could hold of the slender meal.

"O, if ye knew what it was to burn here as I do for want of natural food!" said the man.

"And don't I; and don't we all in our turn?" said Pike.

"And what's to be coming of us I can't see; for the bounty of England is long reaching us."

"Some have had it, but not me," said Lewis.

"I thought ye war above wanting it," said Pike; "yo had yer males always convanient at Miss Tredabor, when I went east."

"Ay, but there was a loss of grain there," said Lewis; "a sack or so out of her hundreds of sacks; and they went and proved it on me, though I was as far from taking it as you may yourself suppose, Pike; and I've lost my males ever since entirely."

Pike shook his head. "Arrah, Lewis, I did not think you'd fall into the ould way agin. But take ye food now; I don't believe we shall have it to take or give by and by."

"And milk ye have!" said Lewis. "How came you by milk, yer sowl?"

"There's a little left in the creetur," said Pike, pointing to his goat, which was tethered behind the cabin.

"Troth, if she was mine," cried Lewis, "I'd eat roast this day."

"Keep yer hands off her," said Pike; "she's our salvation. I'll look to her like the youngest child, or I'll know the reason why any body casts his eye on her."

It was not unadvisedly that Pike spoke; for the eyes of the starving man coveted the goat; and when he was gone, Pike observed to his wife, that if any harm happened to her he should know whom to accuse. Nor was it long before he found he had some reason for his fears.

Shortly after, the famine, which had been hanging over the country, descended with all its blighting influence; and the small stock of provisions being exhausted, the inhabitants rapidly fell into the fangs of the torment. They searched the earth for one decayed fibre of the once friendly potatoe; they travelled for miles to buy half a peck of oatmeal a halfpenny cheaper in one place than another; they tore off the bark of trees; they dug up the roots of grass; they turned their languishing eyes to the promised help from England; and crowds beset the doors where those appointed to the office divided as well as they could whatever stores reached them. It was quite impossible to give to all, and nearly so to give in the proportion of need. Cousins and kinsmen came in for Benjamin's share, and those who showed misery most got more than those who bore it best.

Pike saw Lewis among the foremost; and when Lewis's bag was filled, pushed forward himself, knowing that his own claim was at least equal. But he spoke the truth in saying that he had only two children, and that he had earned money in the harvest; and as they were compelled to refuse many applicants, they refused Pike, at least for the present. His visions had been of four ten-shilling pieces—unreasonable visions; but his betters it was, who had raised them; and when they vanished, and not even one meal of food took their place, the poor fellow's heart sank within him. Could he return and carry nothing home? Impossible; and he took a circuit of ten miles to pass by his landlord's house, where he had first heard those tidings which had so deceived him. He did not need to go quite so far; for as he crossed the moor which lay all round O'Toole's demesne, he espied on the side of the hill, where the heather conquered the bog, the master himself, gun in hand, striding along, with the usual attendance of ragged boys.

"Good loock to yer honour," said Pike; "and better loock than's with me the day."

"Ha! it's you, Pike," said O'Toole. "Well, and I am glad to see you. Is all well with you?"

"All's can't be worsar," said Pike, "save seeing yer honour in health."

"And how's that? though indeed, except health, I won't say there is a great prosperity in my own concerns."

"Ah, yer honour has no needcessity to depend on them ten-shilling pieces as ye promised me."

"What, don't ye get them?" said O'Toole. "How's that, I'd be glad to know?"

"Jist because there are none to have," said Pike.

"Then I've been misinformed," said O'Toole; "and that's treatment I don't understand."

"Meantime, if yer honour had but an errand to run," said Pike more doubtfully, "or a broken vittle—the childer at home is well-nigh out-hungred."

"And, by Jove, ye should have it, had I it," cried O'Toole enthusiastically; "but am I not here,—I'll tell you the simple truth, Pike,—trying for a bird, because there's gentlemen coming to dine with me; and save the salmon, which is out of season and can't be had, and the grouse, which I have not got yet, and the claret that remains in the cellar, I've just an empty larder for them."

"O, yer honour is pleasant," said Pike; "but ye would think seriouser if ye saw the childer at home."

"I could not think more, nor graver than I am thinking, if it was my own," said O'Toole. "But see, Pike, this I'll do: I put these pence, out of the back of the drawer, into my pocket this morning; and they are yours. I do believe they may be a few of your very own at rent-day; for some were put by for my private use. And here again, here's bread-cake, which stayed after breakfast on the table, and I took it up and thought I or some of the boys would like it. Take it, Pike, and good may it do you;" and O'Toole, with generosity that warmed his own heart, emptied his pocket, and put into Pike's ragged garment a little heap of the brown cake.

"Then the blessing of the Lord be upon you!" said Pike, "and give ye half every thing to the day of judgment. I'll go home with an easy heart now that I dare face their hungry crying this night. Long life to yer honour, and give ye yer heart's desire on the birds for dinner;" and well satisfied with his day's work, he descended the hill, and in the village he went through laid out his few pence in the shop, and made his way home as fast as his faint limbs would let him.

When he was within half a mile of his cabin, he saw before him on the moor a boy, whom he recognised as his own, very slowly leading the goat, which he suffered to stop every moment to crop the bog-herbs and grass. The boy, he soon perceived, was crying bitterly; and when he called to him, sat down by the wayside and sobbed as if his heart would break. In vain the father for some time inquired what had befallen. At last the lad, waxing more and more loud as he came near to the necessity of explaining his woe, pointed to the udder of the goat and, scarcely audibly, said, "She's milkit."

"Murder!" cried Pike. "Who's done it?" and stooping, he verified the too true word by examining the only storehouse of life that remained to them—the udder of the animal. "That blackguard, Lewis," he added directly. "Stop yer roaring, Johnny, you young bull-calf, and tell me."

"The man that put his hand so far in the phaties," sobbed Johnny.

"And this is his thanks!" cried Pike. "How long ago? Which way did he go?"

"Before sundown," said Johnny; and it was now waxing dusk.

"Which way, I say?" cried the father, greatly excited.

"Home," said Johnny, pointing behind to a cabin just visible above the bog.

Pike said no more, but darted away to the place pointed out. The door was ajar; it could not be shut close. Lewis was within, sitting on the floor, his back against the wall, a child crawling over him, and seeming to kiss him; but the hapless wretch was gathering the remains of food from his shaggy bristly beard. Two more had got an iron-pot between them, scraping it for remnants which no longer existed. A ragged woman stood in the bare cabin weeping. There were few cabins then that did not contain that dismal sight—a woman weeping; but *her* tears were bitterer than most.

"Ye thief!" said Pike, bursting in; "where's the milk ye've stole from me this day—my childer's milk?"

"And what will I know of yer milk?" said Lewis, stumbling to his legs.

"It's just in yer throat; it's on yer beard still," said the angry Pike; "ye've made a meal of my childer, and I believe ye've not even fad yer own."

"And that's truth," said the weeping wife. "The brute, —was not he *there*, a-standing *there*, this minute past, with his one hand in the dish and the other a-fighting us away; fighting even the little one, that was made worse, seeing and not tasting the food."

"Ye base, ye cruel!" cried Pike, scarce comprehending what he heard.

Lewis at this time was in a state of satisfied hunger; human feelings could get in, the wolf's being appeased. He tried at first to bully; and then, every thing convicting him, gave in and burst into tears. "I could not help it, Pike," he said; "it's harder for me than other men to starve; there's that here when I starve that nobody feels but me. But I am sorry now."

"And don't we all starve?" cried the indignant Pike. "Is it since yesterday morning I've not had the blessed bit in my mouth?"

"Noa, Pike," cried Lewis; "and what's that in yer bag?"

"Is it not the childer's and the woman's own, that should have been a meal with the drop milk that's in yer greedy paunch, and would I touch it?"

"Ah, yer sowl," cried Lewis, drawing near, and folding his hands as if he were praying, "give a bit jist to this famishing child!"

"And ye dare!" cried Pike, astonished at the boldness of the request; "ye—ye that are full of my meat, and would have the robbed man feed yer own. No, by the powers, if they all starve dead before the eyes of us!"

"It wasn't I drank the milk, neighbour," said the wife; "twasn't the little ones,—one crumb for the childer."

"Ask your husband," cried Pike. "Didn't I hand him the bowl when he was hungry? didn't I tell him the ones-at-home's life was in the goat's teats? wouldn't I have shared with him the bit of my own share?—the thief! And he and his comes thinking I shall just feed 'em for robbing me. Be aisy, ma'am, be aisy." And so saying, indignantly did he fling out of the cabin, pushing back the children who clung about his legs, and who wailed and wept with weak voices as they ran after him, holding their arms up to shield their heads from the thrusts he made at them.

Pike's kind heart bled to hear those weak wailing voices. Even as he ran, his fingers fumbled in the bundle and broke a piece of the coarse bread. "Then it's jist eating the less myself," said he, breaking it into four, and giving each a bit; and turning again, he ran all the way home, overtaking his sobbing boy and the goat, and bringing, together with the bad news of her robbery, the good news of food to stop the direct present starvation.

BOOKS AND MEN.

THERE are, in the realms of literature and thought, as in the more material world, byways as well as highways. Besides the great works in poetry, philosophy, history, and science, there are many lesser productions which deal nevertheless with topics of no little significance; and others which, though in peril of neglect and oblivion, are, in their small way, not unimportant, and supply indications of approaching discoveries destined at a future time to be regarded as of considerable value. The multitude of books, of which we all wish to know something, consists of such tentative efforts: the higher creations of the intellect are necessarily the few. Out of the mass, we may occasionally make a selection, on which some passing remarks, conceived in a right spirit and applied in a proper manner, may not be altogether unprofitable.

A curious state of feeling has arisen in some thoughtful

minds, both in America and England, in relation to SHAKSPEARE, owing to the exceedingly doubtful character of the documents usually relied on for testimony as to the supposed events of his life. It must be confessed that we can scarcely touch one of them, as proof of a fact, without its becoming on the slightest inquiry transmuted into a myth. An instance of the sort occurred lately in our own experience. There is a passage in Fuller's *Worthies*, which is relied upon by Shakspeare's biographers for contemporary evidence of the poet's conversational powers, as discriminated from Ben Jonson's. Here it is: "Many were the wit-combates between Shakspeare and Ben Jonson. I behold them like a Spanish great galleon and an English man-of-war. Master Jonson, like the former, was built far higher in learning, solid, but slow in his performances; Shakspeare, like the latter, lesser in bulk, but lighter in sailing, could turn with all tides, tack about, and take advantage of all winds by the quickness of his wit and invention." Who would suspect that this celebrated passage was written by a man who was only eight years old when the poet died? Yet such is the fact. Its value, therefore, is only traditional, and not personal. It is a fancy portrait of the two dramatists, derived, not from actual intercourse, but probably from the perusal of their writings; not a record of what their conversational "wit-combates" really were, but what, from a critical estimate of their works, they might be imagined to be. With such examples of the tricks to which the inquirer is liable from acknowledged authorities, no wonder that scepticism should in some minds take an extreme form. The latest is, that Shakspeare is not at all the author of the works that pass under his name; but that they may with greater probability be referred to Lord Bacon. This is the theory propounded by Mr. William Henry Smith in a printed letter to Lord Ellesmere, and since advocated by him in more than one lecture delivered at the Beethoven Rooms and other places. Of course his argument is mainly negative, tending to make out a *prima-facie* case for inquiry, rather than supplying data for a demonstration; and, indeed, it would be absurd to attribute any larger value to the argument than to show how curiously circumstances will range themselves about a startling theory when once propounded. According to Mr. Smith's statement, we have no reliable sources of information as to Shakspeare's boyhood,—no suggestion of any precocity of talent, any adequate schooling, whether in circumstances or tuition, or any manifestation of superior attainments at any period of his life. Taking Shakspeare's antecedents, the production of the plays under his name by him would be simply miraculous; while taking Bacon's antecedents, it would be no marvel at all. Mr. Smith adopts Pope's notion, that what occasioned the "plays to be considered Shakspeare's was only this,—they were pieces by unknown authors, or fitted up for the theatre while it was under his administration; and no owner claiming them, they were adjudged to him." That this was the case with some of the plays is generally acknowledged; Mr. Smith asserts it of all. William Shakspeare, then, in this gentleman's opinion, was the man of business of the theatre, who had to provide the wardrobe, properties, and plays, and exhibited in the purchase of any or all of these matters much shrewdness, skill, caution, and sagacity. As to the authorship of plays in general, "the chambers of the briefless barrister have ever been the hotbed of dramatic productions." In Lord Bacon, we find a man who had been unexpectedly driven to the study of the law as a *métier* of subsistence, with scanty means whereon to support luxurious habits, and who would naturally add to them by pursuits so usual with persons similarly situated. Proof exists that Bacon had great dramatic talent. It is recorded that "he could assume the most different characters, and speak the language proper to each, with a facility that was perfectly natural," and that he both "wrote and assisted at masques." In a letter to the lord treasurer, Bacon expresses his regret that "a joint masque of the four innes of court," which had been intended, could

not be performed; and informs him that there are "a dozen gentlemen of Grey's Inn ready by themselves to offer an entertainment to the queen." We are also informed that, in a masque acted before the queen, at Greenwich, in February 1587, the "dumbe shewes" were "partely devised by Maister Francis Bacon."

It would be between the years 1579 and 1611 that Mr. Smith supposes that Bacon was thus occupied with dramatic production, while he was studying for the bar at Gray's Inn, and was on terms of intimacy with Lord Southampton, the avowed patron of Shakspeare. That he was during this period in that state which induces men to adopt almost any means of raising money, is attested by this fact, among others, that he was arrested in 1598 by one Sympton, a goldsmith of Lombard Street, for the large sum of 300*l*. And, in conclusion, "surrounded by enemies ready to represent him upon all occasions to the greatest possible disadvantage, we can readily conceive that he felt the necessity of keeping his connection with the players unknown to be hardly less urgent than the necessity which compelled him to resort to them."

In his lectures on this subject, Mr. Smith calls in the testimonies of Coleridge, Macaulay, and Pope, to prove the identity of the faculties exerted by Bacon and Shakspeare in their various writings, and particularly in regard to the remarkable strain of humour displayed by both. An examination of the text, too, shows some singular resemblances,—frequently the same allusions, indicating the same course of reading, and the same errors of reference and citation. Without, therefore, supposing for a moment that it will at length be proved that Bacon has any right whatever to these immortal dramas, we may conclude that the inquiry set on foot, and the collation instituted between the texts of the works of the sage and the bard, may result in some curious coincidences, and lead to very suggestive inferences. One thing must be granted, that justice has not yet been rendered to Bacon's poetic talents, and that the verses which are extant in his name have far more merit than is generally supposed. There are verses, too, of Shakspeare, which Mr. Smith himself has undervalued,—the sonnets and poems of Shakspeare, which prove Shakspeare's capacity as a poet, and, in Coleridge's opinion, manifest all the powers afterwards more fully developed in the dramas. *Venus and Adonis* was published in 1593, *Lucrece* in 1594; and Francis Meres, a writer of the time, mentioned, in 1598, Shakspeare's "sugered sonnets amongst his private friends." It seems to us, therefore, that Mr. Smith's first inquiry should be to account for Shakspeare's power to produce these. The same man who wrote the poems evidently might write the plays: the critic's wonder is accordingly misplaced.

A work has been lately published calculated to throw some light on our Elizabethan literature, and which may rightfully be mentioned in connection with this subject. We allude to the collection of Sir Thomas Overbury's *Miscellaneous Works*, edited by E. F. Rimbault, LL.D.; an author most famous in his day, and since unjustly neglected. His poems, *The Wife* and *The Remedy of Love*, are replete with every excellence: they have imagination as well as wit; the learning of the schools, and the knowledge of the world, are combined in these compositions. Of his prose works, that entitled *Characters* is the most meritorious. Here are indeed shown graphic power and skill in word-colouring seldom reached. Both Shakspeare and Ben Jonson were indebted to Overbury's works; and the latter bore express testimony to him in verse and prose. No such record proceeds from Shakspeare in relation to any contemporary. It certainly is extraordinary that Shakspeare has not left a single commendatory line concerning his fellow-workers, in an age in which commendatory poems abounded.

In dealing with a forgotten poet of a past age, let us not forget a minor poet of the present, whose merits are considerable. There is many a lover of elegant verse who will be pleased to learn that another volume has proceeded from

the pen of Mr. W. C. Bennett. It is entitled *Queen Eleanor's Vengeance, and other Poems*. Among these, there are strains that bring Tennyson and Browning to mind, without abating our respect for the immediate author. The ballad which initiates the collection is written in stanza-couplets, and shows a power in dealing with the elements of the terrible perhaps not suspected by the author's admirers. On the fair Rosamond he dwells but little; the vindictive feelings of the jealous Eleanor are those that have plainly fascinated the poet's genius. A dramatic poem, entitled "A Character," manifests the same tendency. The creole, Lina Merton, is a Queen Eleanor on a small scale, and of a more metaphysical turn of mind; but her vengeance is equally cruel, or rather more so. The queen only murders, but the creole annihilates. The piece, however, most to our mind is "The Boat-Race." The "New Griselda," which is evidently the writer's favourite, has less of pure beauty, and the conventions introduced disturb the ideal impressions. Mr. Bennett's classic imitations are, as usual, excellent. Theocritus writes again in such pieces as "Pygmalion," "Ariadne," and "The Judgment of Midas." The political pieces are vigorous, satirical, and fully justify the reputation already acquired by the author for compositions of the kind. But it is in his domestic moods that we best love to encounter Mr. Bennett. Is not the following exquisite?

"BABY'S SHOES.

O THOSE little, those little blue shoes!
Those shoes that no little feet use.
O the price were high
That those shoes would buy,
Those little blue unused shoes!
For they hold the small shape of feet
That no more their mother's eyes meet,
That, by God's good will,
Years since grew still,
And ceased from their totter so sweet.
And O, since that baby slept,
So hushed, how the mother has kept,
With a tearful pleasure,
That little dear treasure,
And o'er them thought and wept!
For they mind her for evermore
Of a patter along the floor;
And blue eyes she sees
Look up from her knees
With the look that in life they wore.
As they lie before her there,
There babbles from chair to chair
A little sweet face
That's a gleam in the place,
With its little gold curls of hair.
Then O wonder not that her heart
From all else would rather part
Than those tiny blue shoes
That no little feet use,
And whose sight makes such fond tears start!"

No doubt the hypocritical will discern faults in the above; but the true natural feeling manifested will atone for all trifling defects. Among the more ambitious efforts, we may note with especial commendation the poems entitled "Columbus" and "The Star of the Ballet." The last is a ballad in which simplicity, thought, and sentiment wrestle for the victory, and lovingly unite, as it were, in a war-embrace. The most remarkable poetic phase of the times is truly that of our minor minstrelsy.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

Mrs. Norton has made many powerful appeals through the press in behalf of the rights of mothers to have the care of

their own children. But this is only half of the argument, and goes upon the assumption that all mothers are good and careful trainers of children. The following plain narrative shows another side of the question.

A wealthy man in the sister kingdom, in the first-class social position, was married to a lady of corresponding position, and had a family of four children, three boys and a girl. The father was a *bon vivant*, who kept horses and dogs and claret, frequented the turf and gaming-table; and after being "nobody's enemy but his own," died of *delirium tremens*; and his wife soon followed him to the grave, leaving the children utterly destitute. Relatives "well-to-do" abandoned them; and refused to bestow upon them even the means of showing their destitution in the commonest conventionalities of outward garb. They were thrust forth as pariahs upon the world.

But the eldest boy, scarce sixteen years of age, had the heart of a hero. A tradesman of his father's gave him some coarse mechanical employment at a few shillings a-week; and then seeking a poor lodging in an outskirts of the town, he became the father and protector of his brothers and sister; feeding on potatoes, but exulting in the thought that those he loved were kept away from the dregs of vice. Horror-struck at his father's end, he took the temperance pledge, and religiously kept it.

Grown to man's estate, after privations that none but the heroic nature can undergo without debasement, he made his way to England, and obtained good wages. All the luxury he then indulged in was changing his diet of potatoes for a diet of dry bread. Every farthing of his wages beyond this and lodging was devoted to the task of sending out his brothers and sister to establish them in the United States. This heavy task accomplished, he married a delicately-nerved woman, of nature as heroic as his own, and power of self-sacrifice that was a marvel. Goodly children were born to them; he rose in position from a workman to a foreman, with the confidence of his employers; and all would have been well, but that one of the brothers in America had married a dawdling worthless wife, and become a drag on his resources. His incessant help was unavailing. His sister came home to him; and one after the other his brothers died.

Meanwhile hosts of relatives poured in upon him in his prosperity. They who had shirked him as a poor boy were now not ashamed to borrow his money, and quarter their families on him, till human nature could bear no more; and the delicate nerves of the wife, roused to action, forbade with resolute will all further encroachment. Letters came from America, asking for more assistance to enable the widow of the deceased brother to carry on his business. A consultation was held, and husband and wife resolved to send for the widow and her four children, to bring them home to live with them, treating her, a stranger to them, as a sister, and her children as their children. The money was sent out to pay their debts and their passage home.

They came: a girl of ten, two boys of four and five, and another boy a year old. Nothing could be kinder, more genial, than their reception. The mother was placed in the position of sister, and the children put upon an equality with their cousins. Soon came out the truth, that all the children were afraid of her, that the daughter had been made her drudge and slave, and the other children victims of her tyranny; that the death of her husband had been a consequence of her selfish misconduct, if not worse. The children, browbeaten into fear, were all liars from terror, and frightened at her. She would do no kind of work, give no help, even to the care of her own children. All she cared for was, to eat and drink, and complain of want of society, and denial of places of amusement. At home she preferred the kitchen to the parlour.

At length she told her brother-in-law, that if he would take all the children on himself, and give her a specified sum of money, she would go to her relations in Ireland, and trouble him no more. She went; and the children were

ELIZABETH BARRETT BROWNING. FROM A MEDALLION BY MARSHALL WOOD.

sent to school, and were gradually trained to better habits. The youngest child remained at home, and became a favourite.

Six months elapsed, during which the worthless woman had spent the money, and tired out all her relatives. She then came back, and wanted again to be taken in; but this was sternly refused. Then she tried to exact black-mail, as a compensation for leaving her own children to be maintained. Failing in this, she laid down at the door for the whole day, howling like a wild-cat, to get the commiseration of the neighbours on account of her "cruel separation from her dear children." Then she set up a life of mendicancy in the neighbourhood, making her occasional appearance whenever the children were at home, and scaring them out of their senses. At length, on promise of better behaviour, she was allowed to come to the door and see them from time to time. It almost required force to get the children to her; and her practice was to threaten them, that when they grew up she would shame them all. One day she called, and the servant set the youngest child down at the door while she went to fetch the others, who had run away to hide themselves from such a mother. During the servant's absence, she carried off the child, to use as a means of better obtaining charity.

And so, as the plea of maternity is in all cases to give a right to the care of children, this unfortunate child is to

be brought up in a condition of hopeless misery. The heroic self-sacrificing nature of the husband and his wife is simply martyred by the malicious will of a demon in woman's form. The question, therefore, is, not one of woman's right to her children, or man's right to his children, but the right of the children themselves to such training as may raise them to be useful members of the community, and not mere pests to society.

And the wretched woman herself thinks she is ill-used. She tells every one that her father kept his carriage, and that it is the duty of her relatives to see that she is comfortably maintained, without being degraded by working. To her own mind, she realises a series of iniquities practised on her, and is very desirous to have possession of her daughter, that she may work for her, while she lives in idleness. She can only see justice from the side of her own comfort.

She too has been injured in being badly brought up. Her lazy and worthless nature might have been turned in early youth, not to love justice, but to recognise necessity, and bow down to it, instead of uselessly struggling to plunder the industrious. Meanwhile there is a clear case of an unscrupulous wild-beast in woman's form passing her time to compass the misery of a generous and self-sacrificing household, in order to extort black-mail, with more calculating wilful cruelty than a garrotter. And probably when

she has thoroughly destroyed the child by the inculcation of vile practices, she will some day leave him at the door of his uncle—when she can no longer extract a profit from him—a poisoned thing, to inflict still greater pain on those whose affection will forbid them to abandon him.

In the eyes of the law, the uncle would be justified in sending the whole family to the workhouse; and the humanity and affection of his nature is made an instrument of torture to him.

When will the law provide a remedy for the wrongs done by, as well as against, mothers as well as fathers; and give to the children a chance of being well cultivated, as a counteraction to being badly born?

AURORA LEIGH.*

THE progress of Mrs. Browning's mind, from her earliest poems to the present, is an interesting study for the poetic observer. After the plaintive human tenderness of her first lays, now little known, we had the spiritual aspiration revealed in the "Seraphim;" then the strife between human love with its mortal crosses, and faith with its immortal crown; which formed the frequent burden of her two volumes in 1844; then the sympathy evinced in "Casa Guidi Windows" with the present condition of Italy,—a poem proving the writer's sense of the uses and responsibilities of her power; and finally, the present volume, *Aurora Leigh*, in which a direct and practical interest in the world of to-day is yet more evident.

Mrs. Browning has lost something since she began to write; but she has gained more. There is less tenderness, less of the touching music drawn from grief, less of those qualities that come home to the individual; but there is more strength, a yet nobler aim, a profounder insight, a deeper sympathy with universal man. There are times now when Mrs. Browning becomes sarcastic and denunciatory. Her genius has laid aside the lute that whispered of life's sorrows, and done battle with its ways. Its mien is at once sterner and loftier; less winning to the many, but with a grander expression, enhanced, as it were, by the scars of conflict.

Aurora Leigh is a poetess. She is so, not by any formal choice or mere mental aptitude, but by nature. Her genius is the growth of her being, the necessary efflorescence of such a root. Given the quick instincts of right, the warm impulses, and the ideal yearnings that are blended in this woman's heart, you have as its inevitable result such a creation as an Aurora Leigh. Such a woman will pierce to the core of things, despise all false semblances, aspire to an unattainable perfection, and turn at first with a sad scorn, not only from the counterfeits of worth, but from its true exemplars, if they move on the humble level of mere utilities, and propose by their benevolence to ameliorate man's outward condition only. Her cousin, Romney Leigh, embodies this latter type of character. He is a philanthropist who would rescue the victims of poverty and crime chiefly by an improvement of their circumstances, and who is apt, in what are called practical reforms, to condemn the influences of imagination and feeling, and the solemn realities of man's inner life, to which they point.

Spiritual agency and material agency are symbolised in these two persons; and their union in the sequel signifies the fusion of the principles which they represent. The aspiring and scornful idealist finds the noblest use of her gifts in their practical application. The material worker learns that man's social progress is blindly aimed at unless pursued in the light of his immortality; and, better than all,

both acknowledge that in every true worker there must be that which is lovelier than any glimpse of imagination, director in its blessings than the most practical deed,—the surrender of the doer in soul and act to the Source of all good, a will that seeks but to reflect His, and leaves results with Him who, through all intermediates, is the One Cause. Says Aurora to Romney, referring to a long-past conversation:

" 'We both were wrong that June day,—both as wrong
As an east wind had been. I who talked of art,
And you who grieved for all men's griefs . . . what then?
We surely made too small a part for God
In these things. What we are, imports us more
Than what we eat; and life, you've granted me,
Develops from within. But innermost
Of the inmost, most interior of the interior,
God claims his own, Divine humanity
Renewing nature,—or the piercingest verse,
Prost in by subtlest poet, still must keep
As much upon the outside of a man
As the very bowl in which he dips his beard.' "

Interwoven with the story of Aurora Leigh and her cousin Romney is that of Marian Erle; and there are passages in it which will startle and probably repel the reader. In selecting an image of almost saintly purity from surroundings of misery and sin, Mrs. Browning has so far exercised a choice which cannot, we think, be fairly impeached. Such cases are exceptional; but an exception, no less than a rule, is a fact, and may claim its place as a true contribution to our experience. Moreover, the exception is here fraught with meaning. Providence does at times demonstrate the worth of the soul by showing it victorious over circumstances; and the effect of such an instance is always ennobling. Still, there are certain external impresses left on the forms of character, even when they do not touch its essence. The spirit of a Marian Erle might possibly, under all opposing conditions, have remained holy and devoted, as it is here shown; but its mode of expression would have been more homely, and its very purity would have earlier conducted it from those scenes of pollution by which it is so long environed in the story. But when from these considerations we pass to the graver one, that Marian Erle becomes the innocent victim of an outrage almost too horrible to glance at, we naturally demand from the poet overpowering reasons to justify such a result.

Doubtless Mrs. Browning has set forth these terrible details partly to show the nobility of Romney Leigh, who will not allow the foulest indignity of circumstance to shake his constancy to one who is virtually pure. Doubtless the truth that no malignity of fortune can stain an unblemished soul finds a powerful illustration in such a narrative. Yet we are bound to say, that all these ends might have been attained by means less harrowing and repulsive; although we fully admit, that if we could reconcile ourselves to the obnoxious theme, it has been treated with consummate delicacy and power.

Yet again, while on points of taste, we must object to that abrupt invocation of sacred names which so often occurs in the book. Irreverence is the last quality that we should really attribute to Mrs. Browning; but there is a savour of it in her manner which will give needless pain.

In unfolding its general design, the poem touches upon the chief figures in modern society. The poet, the artist, the high-churchman, the pantheist, the woman of convention, the woman of fashion, the seamstress, the mechanic and labourer, with all the varied social problems which such characters suggest, have their place and their comment. Again, there are exquisite descriptions of scenery, a wonderful affluence of fresh and striking imagery, and passages of story intensely dramatic. In treating of the poet's art, which may here stand as the symbol of all intellectual effort, the perception that religious feeling is the prime element of the highest genius is finely conveyed. The transcripts of nature and external life, it is urged, lack their real value, unless they express man's spiritual condition.

* *Aurora Leigh*. By ELIZABETH BARRETT BROWNING. London: Chapman and Hall.

"There's not a flower of spring,
That dies ere June, but vaunts itself allied
By issue and symbol, by significance
And correspondence; to that spirit-world
Outside the limits of our space and time,
Whereto we are bound. Let poets give it voice
With human meanings; else they miss the thought,
And henceforth step down lower, stand confessed
Instructed poorly for interpreters,—
Thrown out by an easy cowslip in the text."

The following, too, is nobly felt and expressed:

"Fame itself,
That approbation of the general race,
Presents a poor end (though the arrow speed,
Shot straight with vigorous finger to the white),
And the highest fame was never reached except
By what was aimed above it. Art for art,
And good for God Himself, the essential Good!"

The poet's duty to apprehend sublimity in the present is not less grand in conception and utterance:

"Every age,
Through being beheld too close, is ill-discerned
By those who have not lived past it. We'll suppose
Mount Athos carved, as Persian Xerxes schemed,
To some colossal statue of a man:
The peasants, gathering brushwood in his ear,
Had guessed as little of any human form
Up there, as would a flock of browsing goats.
They'd have, in fact, to travel ten miles off
Or ore the giant image broke on them,
Full human profile, nose and chin distinct,
Mouth muttering rhythms of silence up the sky,
And fed at evening with the blood of suns;
Grand torso,—hand, that slung perpetually
The largesse of a silver river down
To all the country pastures. 'Tis even thus
With times we live in,—overtime too great
To be apprehended near.

But poets should
Exert a double vision; should have eyes
To see near things as comprehensively
As if afar they took their point of sight,
And distant things, as intimately deep,
As if they touched them. Let us strive for this.
I do distrust the poet who discerns
No character or glory in his times,
And trundles back his soul five hundred years,
Past moat and drawbridge, into a castle-court,
O not to sing of lizards or of toads
Alive! the ditch there!—'twere excusable;
But of some black chief, half knight, half sheep-lifter,
Some beautiful dame, half chattel and half queen,
As dead as must be, for the greater part,
The poems made on their chivalric bones.
And that's no wonder: *death inkerits death.*"

Free on the whole from the obscurity that counterfeits depth, the book is not, on the other hand, poetry made easy. It deals both with imagination and philosophy; and those who love neither, and yet expect to understand the entire poem, will be disappointed. Yet there are many pictures invested with such a glow of feeling, that even a dim imagination will make them out by the light of the heart. Has there been any thing yet written of a babe more lovely suggestive or musical than this? The mother

"Approached the bed, and drew a shawl away:
You could not peel a fruit you fear to bruise
More calmly and more carefully than so,—
Nor would you find within a rosier flushed
Pomegranate—

There he lay, upon his back,
The yearling creature, warm and moist with life
To the bottom of his dimples,—to the ends
Of the lovely tumbled curls about his face;
For since he had been covered over-much
To keep him from the light-glare, both his cheeks
Were hot and scarlet as the first live rose
The shepherd's heart-blood ebb'd away into,
The fluster for his love. And love was here
As instant! in the pretty baby-mouth,

Shut close as if for dreaming that it sucked;
The little naked feet drawn up the way
Of nestled birdlings; every thing so soft
And tender,—to the little holdfast hands,
Which, closing on a finger into sleep,
Had kept the mould of 't.

The light upon his eyelids pricked them wide,
And, staring out at us with all their blue,
As half perplexed between the angelhood
He had been away to visit in his sleep,
And our most mortal presence,—gradually
He saw his mother's face, accepting it
In change for heaven itself, with such a smile
As might have well been learnt there,—never moved,
But smiled on, in a drowse of ecstasy,
So happy (half with her and half with heaven)
He could not have the trouble to be stirred,
But smiled and lay there. Like a rose, I said:
As red and still indeed as any rose,
That blows in all the silence of its leaves,
Content, in blowing, to fulfil its life."

In almost every page the reader will meet the proofs of a moral insight, keen and noble, embodied in felicitous diction. As an instance, take this on the superiority of the blindest veneration to frigid and learned scepticism:

"Good love, how'er ill-placed,
Is better for a man's soul in the end
Than if he loved ill what deserves love well.
A pagan, kissing, for a step of Pan,
The wild-goat's hoof-print on the loamy down,
Exceeds our modern thinker who turns back
The strata . . . granite, limestone, coal, and clay,
Concluding coldly with, 'Here's law! Where's God?'"

Nor are examples wanting in which a fine meaning is disfigured by a reckless audacity of phrase. Thus:

"Headlong leaps
Of waters that cry out for joy or fear
In leaping through the palpitating pines,
Like a white soul tossed out to eternity
With thrills of time upon it."

In many cases, where the talk of frivolous persons is reported, the language becomes mere prose cut into lengths; but the dramatic intention is here obvious, and the writer should be allowed the benefit of it. She never puts trite dialogue into any mouths but those from which nothing better would emanate in life.

Still, it must be said that the poem wants some of the graces of art, even though it often shows that better grace which is proverbially beyond art's reach. Hasty and even random execution is often visible. The last touch of the chisel is lacking, and will be regretted by all except those sectarian minds who mistake roughness for strength, and cannot believe that grandeur of idea may consist with accuracy of detail. When Mrs. Browning is logical or philosophical her verse is often harsh, and outrages every rule of scanning. When, on the contrary, she writes from emotion, the defect rarely occurs; at times, indeed, the lines swell upon the ear, wave after wave, as it were, with the fullness and the cadence of a tide. As critics, we of course register these peculiarities of style for praise or censure; but let us say (and we can pay no greater homage to Mrs. Browning's mind) that praise for her merits as an artist is the last thing we care to tender her. There is a strain of noble intensity in her book that attracts us from its manner to its substance. We feel that we have been communing with a spirit, perhaps somewhat extreme in its scorn of pigmy natures, and at times confounding narrowness of view with insincerity of motive, but a spirit so generous, earnest, and high, that it lifts from the transitory and the mean all that come within its range; translates us from the world of shows to that of realities, and makes us feel that the noblest things are also the most real. There is so much help, truth, and sympathy in the aspect of such genius, that we only notice by an after-thought the wreath upon its brow.

LONDON CHILDREN.

By G. W. THORNBURY,

AUTHOR OF "ART AND NATURE AT HOME AND ABROAD."

I REMEMBER of old time attending a public lecture in Whitechapel. What the lecture was about, I cannot at this distant period take upon me to distinctly say; but this I know, that the very climax and bloom of the evening—the noisy tumultuous hand-clapping moment, the umbrella-knocking and toe-crushing period—was when the lecturer produced a handful of green corn, just picked, and a bunch of ripe wheat-ears saved from last year's harvest, and explained to the children the rise and progress of the quarter loaf, from the small dry yellow seed to the full wonder of the autumn fruitfulness.

Not a child present had, I am sure, ever seen a corn-field; and such delight and twinkling of small pale faces I never beheld since I once attended a meeting of five hundred white-faced bakers, who intended to strike, and were planning a rise in wages,—five hundred bakers, I may say, in a violent and distressing state of fermentation, who found they could not make their own bread by manufacturing other people's.

On my way home from Whitechapel I fell into a muse on the hard lot of London children, whom Fortune has driven out of Paradise, that is, the country, into the flowerless thistly world, which is London. No angling for minnows for them; no knocking down of glossy chestnuts; no dog-roses to pick to pieces; no blue sky even; no swift chase of purposeless sunbeams over field and common;—but instead, black alleys walled out from heaven; subterranean cellars, where even the yellow-toothed rat sickens; noisome fever-garrets, where the spider would be too feeble to trap even the thin fly, were the thin fly in a proper robust state of health, or of an average good constitution.

For them no autumn gold trees wave, or blue violets grow; no rich crabs lurk sour, yet tempting, behind sheltering leaves; no stream babbles its unformed child-music; no bird prates its one untiring thought of love and spring. O, friends, what must the London street-child think of God, for making that city, which he supposes is all God's world! Spring he knows by the bunches of primroses sold by squalid pale men in Oxford Street; autumn by the dead dry leaves that blow and whisk idly about Russell Square. He knows nothing of stillness or of solitude; you can't be quiet in London. His idea of the perfection of the human voice is derived, not from Lind or Grisi, but from Brother Jack, who cries all day past the doors of rich fraudulent bank-directors, "Buy a rope—buy a rope!" a cry which might be thought personal, did we not see Jack means a rope of onions, red and yellow and brazen, with shivery shining skins, and a scent disliked by all respectable people. The child's idea of an octave is not drawn from Mario, but from Uncle Bob's "Salmon—delicate salmon!" a sound which makes musical critics tear their beards, and thrust their fingers in their, alas! too sensitive ears.

I watched a pair of children only yesterday: the eldest girl with her mother's bonnet on, the bonnet too large, and much squeezed and doubled up; the girl overwhelmed with a pile of fat listless babyhood hidden in a shawl; the youngest a little Saxon angel, with dirty face and eager wondering eyes, very quick in their azure changes to various brightnesses and aspects of joy. As to dress, the youngest had very little on but an old dress-coat, the tails sweeping the ground, and evidently much used for purposes of warfare and traction. The pair were on a tour of sight-seeing between school-hours, and I determined to follow them, just to see what amusement they would pick up.

First they halted, with a wistful deprecatory look, alternately coaxing, flattering, and independent, before an old woman's fruit-stall, that stood under an archway not far from a crossing in a street in the Strand, where the river showed by fits below, flashing now and then like a

silver sword half-drawn suddenly in playful anger. The stall was gay with five-fingered chestnut-leaves, and had cherries tied with white thread on sticks. To London children's eyes, they seemed so many blood-red jewels, brought from distant lands of sweetness and delight. Alas, to me had long passed away the great days of bob-cherry and knuckle-down! There were apples too, dry and red as old men's cheeks, and leathery gold pears, and chestnuts, mealy and out at elbows, suffering a crackling martyrdom over a kettle of red-hot coals, and singing as they died. There were nuts, too, mahogany-brown, that the old cheery woman, who was reading a greasy tract and knitting, would roll and shake about in a tempting way that Government ought not to allow; it was so deliciously cruel. A sarcastic and reproachful glance, which signified, "You little miserable creatures, you haven't got a halfpenny; don't stare about here, if you don't buy!" drove the children on; but they stopped at the next crossing. Here was something too good to lose,—a real sham soldier, with a wooden leg and a sham medal on his chicken heart. Why, Lor', this is better than the blind man who stands in the Clapham Road, shuffling about his eyelids, with a dirty card on his breast, on which is written, "Blind from his birth, likewise totally deaf," as if he was rather proud of the thing. They stop and see how the sweeper splashes those who don't give him any thing, and how he grinds his old teeth when a cab almost amputates his toes. The men who sell sweet herbs and boot-laces stay them for a moment; but, great observers as they are, they must run home now, for father comes to tea at five.

Then a chatter and a squeak drives them into instant hysterics. Yes, it's PUNCH; and Punchdom, with its sudden revolutions, its *émeutes*, suppressed revolts, and final tyrannicide, hurries them away to fairy-land, and drowns all thought of mother's hard knuckles, father's fist, and daily short-comings; or perhaps some eventful day presents to their large eyes those Apollos of Southampton Street, the Arabian acrobats, rich in spangles, boneless, extraordinary men, who perform feats of superhuman agility with a jaded and morose air of disconsolate, yet almost regal pleasure. Wonderful sights are waiting at shop-doors, too, for these favoured children: enormous turtles flapping on the backs of fat porters; stuffed birds, all emerald and crimson, standing in conceited attitudes in shop-windows; squirrels in the treadmill at bird-fanciers' doors, with real chickens, that the children feed with their scanty meal.

So that, after all, in spite of black mud, houses, and dark alleys, and screams of quarrelling women, and curses, and dog-fighting, there is some compensation for London children for the flowers, meadows, and the trees that make a low noise at night as if they were audibly breathing, and for the blue skies that ripen at sunset into red. Yes; these poor London children, that stare greedily into pastrycooks' windows, that watch older and richer boys buying fruit at stalls, that push through the legs of an execution-crowd, that laugh when elderly gentlemen trip up, that watch old flaunting dowagers get out of their carriages at Regent-Street doors, that pinch footmen's fictitious calves, that laugh at fussy barristers' wigs, that sing popular melodies, that fly kites and drive hoops in quiet streets,—the pert, ready, lively, sarcastic, suspicious, cynical street-children have their amusements, and do not pine for the country's summer green or autumn orange.

I love these London children, with all their diseased precocity, their pert premature manliness and womanhood, their air of patronage, and their indomitable republican independence; their daring, energy, and restless curiosity are all cherished by me. All the same to them is it whether a pale face and a heap of wet rags is carried dripping on a stretcher to a suburban hospital, or if it be two red-faced cabmen pounding themselves to "purple ruins;"—it is all one for the gesticulating boy, who forgets his special errand in his wider sympathy for the human race in general.

The London child knows nothing of the dear old country sights. He has had no glimpses through black doorways of

gigantic blacksmiths emerging from glazes of orange light; for him are no chasings of stately geese over thirsty commons; for him no silvery dances of merry dace or gold-finned minnows round the green fresh water-cresses in the brook. He traps not the hesitating sparrow or the wily finch; for him no starlings' necks twinkle, opal and emerald, in the sunlight that bathes with gold the elm-tops. The jolting and ceaseless thunder of the Fleet-Street omnibuses is for him a poor exchange for the mellow pounding of the thrasher's flail, or the rasp and tinkle of the whetstone and the scythe. When he meets in St. Giles's a band of Irish reapers, with their sickles twisted with hay, and their faces turned countryward, he thinks little of the golden seas they will soon be wading in waist-high; or how the larks, a thousand strong, will carol to them as they toil with their hot faces all in a row. He sees man's spoiled muslin-work till he forgets the perfection of God's wild-flowers.

The London child's world is one of blank squares, with black bushes like worn-out brooms, and leaves on which the lamplight shows the black dew; soot-dripped statues on sooty pedestals; silent by-streets and noisy courts, where every body seems washing and no one washed, where half the population are children, and the rest women and thieves. He plays with oyster-shells, or builds palaces of mud. Walls particoloured with handbills are his delight, and the Temple Gardens are his idea of rural perfection, if it wasn't that he had seen Rosherville. He is always watching, whether he is an errand-boy studying the flageolet, or a butcher's boy with slate castanets in either hand—now it's a shoal of black lobsters who object to being dyed red; or, at the same fishmonger's bulkhead, a prism-coloured mackerel, or a basket of eels, who will tie themselves into dark slippery knots. To-day he rubs his nose flat against the window of a shop by St. Paul's, and sees the silken vanities that flaunt in mockery of the church and its stone seraphs and protesting saints. To-morrow, the purple satins and the yellow tiffanies that stream in coloured cataracts in other windows are better to him than a peep-show. For him the street ballad-seller tapestries the black railings with fluttering songs; and in the square of Leicester the itinerant astronomer offers men a view of another world for "one penny." Every one who passes him is to his eyes a sight, an amusement, whether porter with white apron and shining badge, lawyer with friz-wig and blue-bag, brewer with quilted doublet and copper-nailed shoes, shoe-black in scarlet, or even the dismal man in livery who deals out handbills as if he were dealing at whist. The jeweller's shops, with their golden trophies; or the cobbler's stall, where the busy dwarf jerks the thread,—it is all one to him; for he is a child-philosopher, and from all things draws inferences. The London boy is generally a cynic, and contemptuous of foreigners, particularly thin shivering Hindoos; and quizzical Germans with red mops of beards are to him guys—just that—guys. He is all eyes, and is quick as a spy, keen as a detective.

I still look on London children, I repeat, as so many fallen angels driven from the paradise of the country to the purgatory of the town. Exiled from all pleasant sights, scents, and sounds, to inhale the exhalations of sewers, to batten on fogs, and to toil through mud, deafened by the brute violence of the endless roll and roar of trade. To live only, and not to live well, is the object of the poor in cities. The flowers he sees are cut and dying flowers; the birds, the poulterers'. His sky is a lurid vision; his air, bearable miasma. He is thrown cheek by jowl with vice, as poverty always is in cities. His life will be toil, and its end the workhouse; his grave will be in a dripping corner of that grassless burial-ground that makes rich men shudder to look at or to think of.

Do London sights compensate children for the loss of their country birthright? I trow not. No, not even those great globes of crimson blood that incarnadine the common pavement with rich reflections cast through the chemists' windows; not even the Zoolu's skull and the alligator's jaw at the old curiosity shop; nor the medieval upholsterer's

helpless armour and china teacups;—no, not even the blue-eyed portraits next door to the dentist's, nor the miles of tapeworm put in pickle in the enterprising medicine-man's window in Long Acre.

Not but what there is something very supernatural and haunted about the broken windows of a house in Chancery, with its walls sloughed and speckled with posting-bills and notices. A London harse, too, with its nodding black feathers and red-nosed coachman, is a thing to be remembered; so is a country-waggon, with a red-checked girl staring from under the awning-tilt for the first time at daybreak at the unheeding town. There is no place where amusement is so thrust upon you and forced down your throat as in this London. The broken-down gentlemen that lurk about at ginshop-doors, the wrinkled veterans at cab-stands, are all part of the London boy-experience. Every street is a leaf in the page of the great volume he can't help reading. The tinker with his flaring kettle of coals, the sparks spiriting from his sandstone-wheel, the chair-mender on the door-step, the grinning Italian with his shuffling feet, the sly groom in the Quadrant with a stolen dog under his arm, the itinerant almanac-seller, are all his friends and fellows. The beadle, the costermonger, the pugilist, the soldier, the city-man, the beggar, the cabman, the carter, pass before him in shifts and changes, and all for his amusement.

Over this great mammon city, with its black dome, red roofs, and white towers, the coppery fire of the blank sun smoulders through the fog; and all for his delight as much as for the big thirty-thousand-pounder just stepping into his barouche and bound for Clapham. For him, through tawny smoke and lurid clouding, break the soft blue spots of summer sky, like glimpses of the very veil that hides Heaven's Holy of Holies. The stars shine and interchange for him, though he does live underneath an alley, and next door to a potato-cellar. For him every sunset flowers and widens into the great black blossom of night, on whose sable leaves the stars shine but as dewdrops.

THE CONDENSED AIR-BATH.

BY AN M.D.

THE effects on the health and spirits of the various changes of weather, only too numerous and sudden in this capricious climate of ours, are well known and constantly experienced by every one. The circumstances to be taken into account as producing these effects, in connection with changes of weather, are numerous. Differences of temperature and of amount of moisture, the force and direction of the winds, electrical changes, ever-varying degrees of light, have each their effects on the human system; but there is one circumstance,—depending to a considerable extent, indeed, on some of those already mentioned,—not so perceptible to an ordinary observer as most of them, which nevertheless must bear a large share in producing the results of atmospheric changes. We allude to the varying density, weight, or pressure of the air, indicated by the rise and fall of the mercurial column in the barometer; the former, of course, indicating an increase, the latter a diminution, in the weight of the air. Judging by our sensations merely, we should be inclined to suppose that the state of the atmosphere was just the reverse of what it really is. In fine weather, when the barometer is generally high, we feel a lightness and exhilaration of spirits, an increased aptitude for exertion; while nothing is more common, in an opposite state of the weather, than to hear it said that there seems to be a weight in the air. We then

feel heavy, languid, and unwilling to exert ourselves, and our spirits are more or less depressed. These varying effects are more perceptible on the occurrence of sudden changes.

The effects of diminished atmospheric pressure also are manifested in a marked degree by the change from low to high altitudes, and have been graphically described by many travellers and aeronauts; while those of increased pressure are experienced on descending in the diving-bell or into deep mines.

There has just been introduced into this country a means of taking advantage of increased atmospheric pressure in the treatment of disease, which, although it has been in successful operation in France for a considerable number of years, has attracted but little attention from the members of the medical profession in this country. It is, however, to an Englishman that we must ascribe the merit of making the first steps in this direction, without at the same time detracting from the deserts of the French philosopher, of whose researches we have afterwards to speak. So long ago as the year 1664, Dr. Henshaw constructed an air-tight chamber, in which, by means of a large pair of organ-bellows, the air could be rarefied or condensed; and he seems to have applied this means to the treatment of various diseases, using apparently rarefied air for those of a chronic character, and condensed air for the acute. The degree of rarefaction or condensation was regulated by the sensations of the patient as regarded his respiration. He states, however, that difficulty of breathing is oftener experienced in condensed than in rarefied air. We shall find, as we proceed, that the contrary is the true state of the case, under moderate increase of pressure. These experiments do not appear to have led to any useful results; and no doubt from various causes, especially the insufficiency of the means available for the purpose, and the supposed dangers of increased pressure. The subject seems to have fallen into unmerited neglect, till M. Tabarié, in 1832, presented to the Institute of France a report on the effects of differences of atmospheric pressure; and starting from the idea that an element so indispensable as the air to the existence of all organised beings must also, by modifications of its physical and chemical qualities, become an inexhaustible source of useful influences on the organism, after long and laborious research established this fact, that compressed air is an agent of the highest importance in the treatment of various maladies, and enunciated certain principles serving as guides for its efficient application. He was assisted in his researches by Dr. Bertin, of Montpellier; and Dr. Pravaz, of Lyons, has made a series of independent investigations, the results of which he has published in an essay, which received the honour of being *couronné* by the Institute of France in 1850. M. Tabarié found that, to produce salutary effects, the pressure must be gradually increased, sustained for a time at a certain degree of intensity, and again gradually diminished; and that the amount of pressure calculated to be of greatest service is moderate, an increase above this not being attended by any increased advantage, but rather the reverse, as he believes that the principal salutary agency is *continuance* of the high pressure, that the transition from any pressure to a higher has a disturbing effect, and that therefore the shorter, within certain limits, we can make the interval of transition the better. Dr. Pravaz also has shown, that beyond a certain limit no advantage is to be expected, principally because the pressure of the air, when highly increased, overcomes the resisting elasticity of the lungs. The amount of pressure considered most beneficial is about two-fifths of an atmosphere additional; that is, about six pounds on the square inch more than the ordinary pressure of the air, which is fifteen pounds. These researches have led to the establishment of compressed-air baths at Montpellier, Lyons, Nice, and more recently at Ben Rhydding, in Yorkshire, where we have had an opportunity of experiencing and observing its effects. We shall now proceed to give some account of the construction, use, and effects of the bath itself.

An iron chamber is constructed, of sufficient strength to bear the increased pressure, provided with windows of strong plate-glass, and a door fitting in such a way as to prevent any escape of air. A pair of force-pumps communicates with the chamber by a pipe, opening by numerous minute apertures in the floor, and is worked by a steam-engine. By a simple arrangement, a sufficient quantity of air is allowed to pass off constantly to keep that in the chamber of the purity requisite for the purpose of respiration. A barometric tube is placed outside, its upper end open, and communicating therefore with the external air; while the cap, or curved end below, and the mercury contained in it, are subjected, by means of a tube, to the pressure of the air inside the bath. The height of the mercurial column, therefore, will always indicate the difference in pressure between the air outside and that inside; and a scale is attached, showing the amount in pounds.

The interior of the chamber is furnished with seats, a couch for weak patients, and any other convenience that may be requisite; and the iron walls are cased inside with wood. The entrance and exit of the air should be so managed as to cause as little noise as possible, so that patients may sleep, if so disposed. There is an arrangement also by means of which, without allowing of any escape of air, small articles, such as books, letters, &c., may be conveyed into or out of the chamber (for in this bath patients may read, write, or converse, as they please); and by means of a bell, those inside can summon an attendant, to whom orders are conveyed by writing on a slip of paper, and showing it at one of the windows. If necessary, an apparatus may be adapted for heating or cooling the air before it enters the chamber. The barometer and the valve for regulating the escape of the air may be placed in the engine-room, so that the whole is under the eye of a single attendant.

The patients, then, being seated in the chamber, the door is closed, and the engine set in motion. By regulating its velocity and the amount of air escaping, the pressure is raised to the amount of $4\frac{1}{2}$ lb to 6 lb on the square inch, as indicated by the barometer, at a rate of 1 lb in five minutes. When it has reached the desired maximum, the engine still continues to work, as there must be a constant supply of fresh air. The high pressure is kept up steadily for a time, varying from half an hour to an hour, and is then reduced as gradually as it rose. In general, the entire sitting occupies two hours; but the amount of pressure and the length of time must be adapted to the capabilities of the patients, some being unable, from weakness or peculiarities of constitution, to bear it so long.

The first feeling generally remarked by an individual in the bath is a sense of pressure, sometimes, though rarely, amounting to acute pain, in the ears. This is easily accounted for, when we remember that the internal ear communicates with the throat by a small tube, and is separated from the external by a membrane commonly called the "drum of the ear." The pressure on the drum, then, is caused by the loss of balance between the air outside and that inside the ear, the former not gaining immediate admittance to the internal ear from the walls of the tube, at its opening into the throat, being in contact. Swallowing once or twice, or endeavouring after inspiration to expel the breath while the mouth and nostrils are kept closed, will in most cases open the tube and establish the balance of pressure. When the maximum pressure is attained, the sensation in the ears generally ceases, but returns again as the pressure is brought down, from a reversal of the causes above mentioned; the condensed air in the interior of the ears not finding a ready exit by the tube, and therefore pressing the drum outwards. After a few sittings in the bath, the tube commonly continues pervious, and no uneasiness is experienced. The saliva is generally increased in quantity. But the best marked effects are those on the circulation and respiration, particularly in persons labouring under maladies implicating these functions; for it is to be remarked, that a person in health

may not experience much, if any, change beyond the pressure in the ears. When the pressure reaches its maximum intensity, or rather after it has continued for a time at that intensity, the pulse undergoes in most cases a diminution in velocity, varying from a few beats per minute even to forty-five; and what is most remarkable is, that in many cases the pulse does not again rise after coming out of the bath to the same amount as before, and so its velocity has thus been permanently reduced. The same remarks apply to the rapidity of the respiration, which, as is well known, is in some diseases much increased; while under the action of the compressed air difficult and rapid breathing becomes easier and slower, and even persons whose respiration is healthy find a remarkable facility of breathing—feeling, indeed, as if breathing were unnecessary. In most persons there is a greater flow of spirits and increased appetite for food; and in some drowsiness comes on in the bath, and sleep is improved after it.

The diseases in which the air-bath is found most beneficial are those of the air-passages—such as relaxed sore-throat, loss of voice, diseases of the windpipe, chronic bronchitis, asthma, consumption, palpitation of the heart, and chronic congestion of the brain.

On the theory of the mode of action of the air-bath we shall say but little. There are one or two circumstances, however, connected with it which we may briefly notice as contributing very much to the results. First, the effects of increased pressure on the tissues with which the air comes in contact, especially in the air-passages, which may easily be conceived to have a tendency to diminish congestion, that is, increased quantity with diminished circulation of blood in a part. Secondly, M. Pravaz has shown that an increase of the capacity of the chest is caused mainly by the compressed air opposing a greater resistance to the natural contractibility of the lungs. And thirdly, in breathing condensed air, we receive into the system, through the lungs, an increased quantity of its vital ingredient, oxygen-gas; for not only is the actual volume of air inhaled increased by the greater facility of respiration, but that volume contains a larger quantity of oxygen than an equal volume of air at the ordinary pressure, though the proportion of oxygen to nitrogen remains the same. How important a due supply of oxygen is to the system, and what beneficial results may be expected to flow, in many cases, from an increased supply, we cannot here fully explain. One thing will be obvious to every one, that if oxygen is necessary to the system, a patient whose lungs are so affected as to diminish the quantity of air respired, must suffer from the want of a due supply of that gas. This want, then, the air-bath tends to supply, both by introducing air charged with an additional amount of oxygen, and by increasing the capacity of the lungs for receiving it.

The results already obtained in the treatment of disease by this method are very striking; and there can be little doubt that it is destined to become one of the most valuable means of alleviation and cure in a large class of maladies.

Among the cases we have seen treated at Ben Rhydding, Yorkshire, with favourable results, may be noted one of palpitation of the heart, and two cases of consumption.

One of the most remarkable cases we have noticed, however, is that of an old soldier who had suffered from chronic bronchitis and asthma for the long period of twenty-seven years. Here also there was increased mucus; and in some parts of the chest a wheezing or coting sound, generally accompanying asthma. After the first sitting the cough was gone, and after five baths the mucus sounds were much less distinct; and other favourable changes had taken place in the chest. This man's pulse before commencing the baths was 108 per minute; during the first bath it fell to 84. When examined the day after his fifth sitting it was 96. His weight increased in five days three pounds and a half. But a still more remarkable change and improvement had taken place. When first examined, it was ascertained that the utmost amount of air he could expel from his lungs, after the deepest

possible inspiration, was 80 cubic inches; 180 less than a man of his height in health ought to breathe. After five sittings, the amount was 150 cubic inches. His breathing, as might under these circumstances be expected, was much relieved, and his sleep greatly improved. In the two cases mentioned before, the increase of vital capacity was by no means so great; but still remarkable, considering the amount of morbid deposit in the lungs. In one it rose from 73 to 80; in the other, from 130 to 140 cubic inches after ten sittings.

Such results are truly encouraging, and give good reason to anticipate still further advances in the treatment of that sad malady which annually destroys so many of the young, the beautiful, and the accomplished, in our island; and we may expect that when the benefits of the air-bath become more extended, it will do away with the necessity, in many cases, of patients' seeking in other lands the mild atmosphere they cannot find in their own, and too often suffering and dying far from the friends and comforts of home.

THE STAFFORDSHIRE POTTERIES.

II.

In the neighbourhood of the canal are extensive yards and warehouses, in which are collected or stored away the raw materials on which the skill and taste of the artisan are shortly to be expended. These masses of flint, of so little value at home in the chalk districts; these blocks of steatite, amazingly like the specimens we brought away from the Lizard Point; these cubes of white clay, the very counterpart of those we saw being carted away from the Cornish clay-works,—are the far-fetched treasures of the Staffordshire potter. This art took root here in some distant age, when men were contented with mere earthen jars and beechen platters. Here it spent its little-progressing infancy; here it gained its strength under the stimulus afforded by wealth and luxury; and here most undoubtedly it has attained perfection. Some poor wanderer, perhaps, centuries ago, discovered that the country afforded clay to mould and coal to bake, and here set up his wheel. His trade thrived, he employed his children, and hired labourers to help him; and now, though most of the materials of modern pottery are fetched into Staffordshire from a great distance, the wheel still revolves in its primitive simplicity, and Staffordshireware is to be found wherever the English language is spoken.

A familiar sound of heavy dull hammering calls us to look into a shed from which the noise proceeds, and here we find a stamping-apparatus precisely similar to that used in Cornwall for reducing tin-ore to powder; here employed in pulverising the burnt flints, which play a very important part in the finer kinds of ware. The use of flint as an ingredient in potters' clay is said to have owed its origin to the following accident. A potter, named Asthery, travelling in London, perceived something amiss with one of his horse's eyes; an ostler at Dunstable said he could soon cure him, and for that purpose put a common flint-stone into the fire. The potter, observing it to be, when taken out, of a fine white colour, immediately conceived the idea of improving his ware by the addition of this material to the whitest clay he could procure. Accordingly he sent home a quantity of the flint-stones of that country, where they are plentiful among the chalk; and, by mixing them with tobacco-pipe clay, produced a white stoneware much superior to any that had been seen before. Some of the other potters soon discovered the source of this superiority, and did not fail to follow his example. For a long time they pounded the flints in private rooms, by manual labour, in mortars; but many of the poor workmen suffered severely from the dust of the flint getting into their lungs, and producing pulmonary disorders. These disorders, and the increasing demand for the flint-powder, induced them to try to grind it by mills of various constructions; and this method, being both effectual and safe, has continued in practice ever since.

THE PLANTING OF A WARDIAN CASE.

CRYSTAL Palaces for Home have been treated of as to their general principles; and we have endeavoured to show that unless they are regarded as miniature greenhouses no permanent success can be expected. Since the appearance of these papers in the NATIONAL MAGAZINE, several other journals have taken up the question, and have adopted similar views. Mr. Glenney, in *Jerrold's paper*, Mr. Appleby, in the *Cottage Gardener*, and other practical writers, have called public attention to the original failings of the Wardian cases; and though we should hesitate to say that we gave the hint for this new view of the subject, it is certain that *we were the first* to analyse the causes of failure, and point out the remedy. A correspondent has called our attention to some passages in the pamphlet of Mr. Stephen Ward, alleging that we have dealt with it unjustly. We desire to act fairly and openly; and the only difference between ourselves and Mr. Ward is this: he trusts for ventilation to the impossibility of hermetically sealing the case; we insist that ventilation should be properly provided for. Between the two the difference is great indeed.

The design for a crystal palace is intended for the adornment of a window, a conservatory, or any position where its outline would produce a pictorial effect, and where abundance of daylight and little sun would reach it. We need say nothing as to its construction, except that access is to be obtained to the interior by having the front of the central compartment and the end of each wing fitted on hinges, so that the glass-plate forms a door. In each division the framework running along the roof should also be finely perforated, and a slide of zinc fitted so as to move to and fro in a groove, to admit air, or close the ventilating holes, according to circumstances. The two wings and the central compartment might be made separate, so as to fit neatly together, and allow the three parts to be removed from the trays in which the ferns are planted. If so constructed, several trays for plants may be made; and when the vegetation loses beauty, as it may do with the changes of the seasons, the trays can be lifted out, and fresh ones containing new sets of plants inserted in their place, and those removed from the case carried to the greenhouse to be regenerated by careful treatment. This is the way the Wardian cases are managed by the nobility, who contract with nurserymen to supply trays of plants from time to time; and this trick has been kept secret, so that many a connoisseur not *au fait* in the matter has been puzzled again and again to discover by what process the Wardian cases are brought to such perfection just as the London season opens. For it is agreeable to change the vegetation occasionally, however well the plants may be doing, with careful management.

The case here figured is planted as follows. In the centre is the beautiful dwarf palm of the south of Europe, *Chamaerops humilis*. At its base grow some dwarf ferns and lycopods—such as the Tunbridge filmy fern, Wilson's filmy fern, the True Maiden-hair, *Adiantum capillus veneris*, *Asplenium marinum*; the lovely little bladder ferns, *Cystopteris fragilis*, and *C. alpina*; with *Lycopodium stolonifera*, *formosa*, *denticulata*, and *apothecia*.

In the left wing are specimens of *Lastrea cristata*, the crested fern; *Lastrea filix mas*, the common male fern; the lovely Hart's Tongue, *Scelopendrium vulgare*, of which there are at least twenty-five distinct varieties; *S. vulgare proliferum* being very

desirable as a diminutive curiosity: it bears little plants on its fronds. On the right of the Hart's Tongue, *Osmunda regalis*, the most renowned of British ferns, completes the planting of this side, as far as conspicuous plants are concerned.

In the right wing the graceful Lady fern, *Athyrium filix femina*, throws up her plumes of verdant feathers. At her feet is the common polypody, *Polypodium vulgare*; the commonest and most easily cultivated, and, with two or three exceptions, the most beautiful and distinct of all the British ferns. Another polypody, *P. dryopteris*, rises from the hollow below it: it has one clear stem, with three branching divisions of the frond; the colour a most refreshing green, and the whole aspect of the plant distinct and elegant. The common brake, *Pteris aquilina*, and *Lastrea spinulosa*, complete the planting on this side. All the plants are drawn from nature.

For covering the diversified surface and filling the hollows of the rock-work, there are many interesting British ferns and flowering-plants suitable. Spleenworts, the Adder's-tongue, *Asplenium lanceolatum*, *A. trichomanes*, and *Trichomanes radicans*, are low-growing ferns that delight in the moist air of a Wardian case; and among flowering-plants, the pretty *Drosera rotundifolia*, Marsh Pennywort, Ground Ivy, Hound's-tongue, Wood Oxalis, Rosy Oxalis (a border-flower), Germander Speedwell, and common small-leaved Ivy, are gems in their way.

The same soil will suit the whole of these, namely, one-third fibrous peat, one-third loam, and one-third river-sand, with a moderate mixture of broken flower-pots and soft charcoal. The soil should ~~not~~ be sifted, the coarser its texture the better; but the several ingredients should be well incorporated, and the whole brought to a friable and light texture. A layer of crocks should be placed below the soil, for drainage.

Most of the nurseries contain collections of ferns from which selections may be made. Should any difficulty be experienced in obtaining just what are required, Mr. Sim, of Foot's Cray, Kent, can supply from his splendid collection any kinds, whether British or foreign. SIMPLY HIRMAN.

SPECIMENS OF THE ENGLISH SCHOOL: NO. VII.

PAINTED BY W. P. FRITH, R.A.

SCENE FROM THE SPECTATOR.

A SCENE FROM THE "SPECTATOR."

By W. P. FRITH, R.A.

Among the other tokens of affection which Sir Roger de Coverley's neighbours were frequently exhibiting for that most worthy of country-knights,—the Quixote of modern times,—the Spectator relates that a former servant of his who had set up a hostelry in that part of the country was struck with the idea of having a portrait of him painted for a sign, doubtless reckoning that such a mark of respect to this common friend of all the country round would be duly appreciated by Sir Roger's friends from far and near. This was done, and the portrait suspended from the appropriate post in front of the inn. There it hung a week, until the unexpected and most undesirable compliment came to the ears of the man so honoured; he, with that chivalric consideration which is one of the most subtle characteristics of Addison's greatest creations, went to see this work of art; and finding that it was really intended as the highest honour which could possibly be paid by his old servant to him, took no offence, but quietly said that he considered himself quite unworthy of such a compliment, and suggested that a few touches would sufficiently alter the face to something else, and promised to be at the cost of doing this. The artist was again called in; and by the addition of whiskers and an exaggerated expression to the countenance, turned it into a tolerable representation of the "Saracen's Head;" but the worst result of this was, that a strong resemblance remained to the good knight himself.

The scene Frith has chosen is where the Spectator and Sir Roger are inspecting the picture after its metamorphosis. This picture is one of the very best of this artist's works, in a class which he seems to have made almost his own by his perfect success therein. It will not fail to catch the observer's notice, how truly he has given the good old-gentlemanly aspect of the knight; not without a touch of vanity most becoming to the enslavers of the fair widow. Witness the black wig and feathered hat. How capitally the expression of nervous irresolute benevolence which belonged to him is shown by his way of standing, and the action of wiping the spectacles; the look of appeal, too, at the Spectator himself, not without a suggestion that his vanity had been secretly flattered by the mere fact of that outrageous compliment!

The Spectator's attitude is also most excellently characteristic; see the stoop of the shoulders, like that of an habitually observant and thoughtful man; the genial laugh. Notice the different manner in which his feet place themselves on the floor to the way in which Sir Roger has his, and the way of use with which he holds the whip behind him. The dog's half-dubious look of recognition is, however, one of the finest parts of the design of the picture, and one which the text does not suggest.

It is amusing to notice how the addition of whiskers, the change to a bare neck and dishevelled hair in the portrait, have metamorphosed Sir Roger into the Saracen; and also how even this could not entirely overcome the likeness, although the panther's skin thrown over the shoulders, and the bow and quiver, are far removed enough from an idea of the original. There is an excellent piece of humorous perception by the artist in putting flashes of lightning playing about the head of the ferocious Syrian. This is one of those points of wit which are so frequently found in Frith's works.

The host's half-conscious deprecatory look as he appeals with the eye to the Spectator, his hostile costume and attitude, as though he had got into an habitual start, with "Coming, sir, coming!" like the "Anon, anon!" of Shakspeare's Francis, is well marked.

The luncheon is set out on the table, and introduced in the picture in order to allow of the presence of the girl. See how healthily pretty she is, coming through the sunbeams. Frith's waiting-girls are always capital. Witness his "Sherry, sir?" which is so popular at present.

The county-map on the wall, the tea-board, arranged after the fashion of hostesses, behind the punch-bowl and coffee-pot, are points well made in the picture, as well as the look of the chairs and tables, evidently from some mansion, and perhaps Sir Roger's gifts to his old servant on starting in business; the footman drinking at the bar on the other side of the house-passage, the hostess behind, and the string of lemons suspended from the ceiling in the further room, are parts of character which we should be sorry to miss.

The Spectator, relating the story, says: "Sir Roger, upon seeing me laugh, desired me to tell him truly if I thought it possible for people to know him in that disguise. I at first kept my usual silence; but upon the knight's conjuring me to tell him whether it was not still more like himself than a Saracen, I composed my countenance in the best manner I could, and replied, 'that much might be said on both sides.'" This is one of the finest hits in all the series of papers, which is unquestionably Addison's *chef-d'œuvre*.

It may be remarked of Frith's paintings, that although it is to be regretted that his style of execution is not more solid, he is yet beyond doubt the most successful of the humorous painters of the day; that he deals with the vanities of men with a skill and delicacy of perception and gentlemanly feeling which is only inferior to the manner in which Hogarth dealt with their crimes and follies. Frith is to humorists what Hogarth is to satirists; and higher praise than this it would be difficult to give to any man.

The picture we have engraved is very brilliant and powerful,—of course not so rich in colour as some of Frith's other works; his excellent judgment would not allow him to indulge in this quality in a sober English scene; but, as the reader will see from the engraving, the expressions of the faces are as full of character and humour as they can be. He is one of the few painters who, having confined themselves to almost a single range of subjects, have not fallen into the besetting sin of mannerism. This work is one of the most solid of his pictures, far more so than one which attracted much more attention,—"The Coming of Age,"—and is one of his most excellent works in his best style. It was exhibited at the Royal Academy in 1847.

JOHN PIKE YAPP.

A TALE OF MAYO.

By THE AUTHOR OF "PAUL FERROLL."

IN THREE CHAPTERS.—CHAP. II.

THE few people in the neighbourhood who were above the rank of peasants themselves did what they could for the universal distress; but, after all, it was but prolonging death by starvation for the most part. Twice a-week some few gave to some few. Every body was poor, and they could do no more. Then the poor souls, with their wretched cans, or broken pitchers or cups, would crowd in hungry multitudes about the doors; and some would receive, and many would fail of receiving, the pittance which seemed necessary to keep life within them. Yet they lived on; and how? It would be hard to answer that question. But, for instance, Lewis had a lean and hungry dog, to which, except in the matter of giving him any thing to eat, all the family were kind. Even Lewis, when he was trying to doze on the stool, with his back to the wall, would call him to his knee; and hungry man and hungry dog would warm each other into a sleep that comforted both. The children, of course, were its companions; when not too miserable, they still played with it, and it still followed them as they toddled by the brook, looking over the bog for some remaining berry. This dog Lewis took one day from the sun, where it lay shivering, and without a word to any one killed it before them, as if he neither saw nor heard them. He was in a transport of hunger; and when the prospect of satisfying it occurred to him, he could see nothing but that one object. Timmy was

relieved from his own wretched life, skinned, cut in pieces, and laid over the smouldering turf, while the children yet screamed around; and then, like a savage, Lewis tore the unpalatable morsel with his teeth. The wife and children also ceased to lament; the irresistible smell and sight of food overpowered all the rest, and in silence they too partook of the half-cannibal meal.

When they had done, the wife prepared to lay by something that remained; but Lewis interfered:

"Tib," said he to the eldest child, "take the bit to Pike, with my sarvice; but mind you, Tib, don't say it was poor Timmy." And forth from the hut he walked leisurely, and lay himself down under the shelter of a wall, there to go profoundly to sleep.

Whether the meal did good or not, I cannot tell. However it may have been, Lewis's wife Nancy, a few days after, passed from active illness to passive; for, indeed, the change was little more than that she could no longer drag her weakened frame about, but sank down to perish. Pike heard of it, and came with a quarter-pint of his goat's-milk to do his neighbour good. "And I took it very kind of ye," said he, "sending us some of your own mate the day by; queer mate it was though; who give it ye?"

Lewis with his foot pushed something which lay on the floor towards the corner. Pike's eye fell upon it:

"Sure 'twasn't the dog we ate?" said he.

"Why not?" said Lewis.

"The mate had an unkind taste anyhow," said Pike, his eyes fixed on the paw, which nobody had thrown out of doors. "But the dog's aisy, and was born to help Christians, the poor baste. Notwithstanding here's a more humane potion like, for the poor 'oman, that I've spared ye the day."

"More of the illigant milk!" cried Lewis, his hands twitching, his mouth twisting, at the sight of it.

"Let alone—let alone!" said Pike; "not a drop except for Nancy only, the crone."

"Give it her, quick!" said Lewis; "I don't want to see it with my eye; take't away, lest it be too much for me." And squeezing his rags about him, he turned and went out of the cabin, picking up a bit of dry stick and chewing it, as if to employ the saliva which the delicious morsel had excited by its mere sight.

It comforted the poor woman for half an hour; perhaps for so much time it delayed her death; but death at that time was the familiar friend of those whom it took, though still hideous and dreaded by those whom it only threatened. She was the first in the immediate neighbourhood whom the famine destroyed, and she was buried with decency in the Catholic burial-ground; but a month after that, nearly all attempt to lay the dead respectfully to their long slumber ceased; and left to themselves, the perishing peasantry could but just remove out of sight, any where, the corpses which encumbered their cabins. There was none to bear them to the churchyard, none to receive them there, no power to invoke spiritual help; for the faint remains of life were employed in feeding its own flame, and all interests were absorbed in suffering, buried under the dead weight of famine.

Lewis's family soon dwindled to two children. Pike's at this time were down in the fever, as they termed it. None had died yet; but his little boy had been the first seized, and would plainly be the first to go. Honor held him in her lap, or sat by his side most of the day. Pike led out the goat, which they had never trusted far, when the children were its guides, since the day of Lewis's robbery. Pike's frame, accustomed to hardship, still fought bravely against famine; and he as yet felt no symptom of the famine-bred fever. He would take his little girl with him, —the fair-haired child, whose pretty locks so pleased his eye, and whom her parents had saved as yet from the worst extremities of hunger by sacrifices which destroyed themselves.

It chanced one day that the father and child had climbed

the hill above their cabin, and were slowly attending upon the goat by the side of the mountain-path which ran along the face of the ridge. It was the end of the third quarter since Pike had here parted from his wife, and since Mr. Threader, making his periodical round, had witnessed their tearful parting. Again Mr. Threader was taking the same route; and when he came upon Pike and his child he stopped, with some vague idea it might be the peasant whom he had then seen, and asked, "Did he remember him?"

"Ay, by token the three tinpennies," said Pike, scratching off the ragged remains of his hat, and joyfully recognising his benefactor.

"And were they lucky? Did they bring the luck you expected?" said the Englishman.

"In throth did they," said Pike. "I remember prospering terrible well."

"Remember?" said Mr. Threader; "why it's not so long since."

"It seems to me before time," said Pike.

"Did you get the three guineas?" asked Mr. Threader. "If so, you ought to be rich still."

"The rint," said Pike, "the rint swallowed all."

"Well, I must say your honesty was most commendable," said the Englishman, "to provide for your rent when you were in such want yourself. It's very honourable to you."

"But look ye there, yer honour," said Pike; and he pointed a little farther, where three small heaps of ruin lay together,—shattered walls without roof, grass growing in the windows, stanchions in the stones, but no doors. "My own full cousin, and my wife's half-cousin, and another, lived there; and the roofs were taken away as they laid on the floors—all for rint. I don't complain," added Pike; "but they had not got it, and I had."

"What became of them?" said Mr. Threader.

"Dead," said Pike; "and for that matter it wouldn't matter if we all was with 'em,—and shall be, some sooner, some later."

"Nay, I hope times may mend. Have you lost any friends yet, my poor fellow?"

"My boy's a-dying," said Pike, "and Honor's sickening this morn."

"I'm sorry to hear it," said Mr. Threader. "But the little maiden—no, no, she's well yet."

"Ay, bless her!" said Pike; "she was the last as ate any thing among us."

"Could you eat again, my pretty curly-pate?" said Mr. Threader, taking out a sandwich-case and a flask containing a slender glass of whisky.

The child's eager eyes answered.

"Take my luncheon," said Mr. Threader, reaching down to her a slice of bread and meat. "And you, my man, swallow this drop; it will keep up your pluck, and that you deserve."

Father and child eagerly seized the gift. Little Honor was comforted and inspirited; but poor Pike's exhausted frame was set on fire by the potent spirit. It did not inspire him; on the contrary, it seemed to sever all the bonds of habitual restraint, and set free the anguish that had collected and frozen in his heart. He caught Mr. Threader's hand, and tried to speak; but his speech turned all to water, as it were, deep sobs burst from him, and overcome with emotion, he struck his breast fiercely, and uttered the most dismal lamentation.

"O, my poor boy! his poor great eyes staring so piteous; poor Honor a-trying to carry him, and forced to catch at the chimney to steady herself; and the little one, the youngest little one, that the sun's shining on there, and that will be cold under the sod so soon. And all day and night to be yearning for a morsel, and the childer crying through the cowl, though the cowl is only starvation. Ochone, ochone, the Lord is departed, and not a saint to listen!"

Mr. Threader was shocked. He got off his horse, and supporting Pike to the bank, made him sit down. There

his passion exhausted itself; and again by degrees there shone out of him "the sacred patience of the poor." But he was shaken by the outbreak of passion, and Mr. Threader would take his own way about accompanying him down the bank to the cabin.

In this time of trouble he had given his services as one of the committee for the distribution of assistance; and as the present case was evidently one which claimed whatever could be done for it, he readily took the opportunity of examining into the misery of the family, and relieving it as far as the funds intrusted to him might be so employed.

Pike had said truly that his boy was dying. He lay on the floor, with the heather from the hills under him, his cheeks flushed, his eyes half-open, his almost naked body showing every bone under the skin. The mother had resigned him; misery, sickness, and custom had quite trained her to suffer, and she sat on the low stool near him, supporting her aching head on the wall, and half-stupefied with fever.

The scene was one which Mr. Threader had witnessed over and over again for weeks past, and which he knew existed wherever he should turn his steps. He looked on it very differently from what he would have done, had one individual instance of such misery been seen by him in better times. He gave what the funds could afford without wronging other poor wretches, and he authorised Pike to make a claim upon the food distributed at the town, if, when he should apply, there was any food to be distributed. Thus were those who could eat in the family kept alive for that time also, and a little comfort of their hearts bestowed by the notice taken of their great woe.

The boy died; and wrapped round in the branches which had been his bed, was carried in his father's arms to lie in the trench dug by his father in the enclosure of turf and stones which surrounded the cabin. The mother mean time lay struggling with the fever; the fire of it, which was feeding on her life, gave her as yet a false strength. She went on from day to day, moaning and tossing on the fresh heather which her husband had brought from the mountain. He did not stay by and watch her; he went out in the morning to feed his goat, the only hope left. The little curly-haired girl, at five years old, was her mother's nurse; she brought water,—for the spring hard by glistened and whispered on through all that deadly season; she pushed together the branches of heather, all scattered by the poor woman's uneasy movements; and when she herself was sleepy, she lay down by her mother's side, her lips, healthy as yet, parting and inhaling the hot pestilential breath of the nearly unconscious woman. Pike came back in the evenings, sometimes with an ounce of oatmeal, begged or given, or a cup of broth; often with nothing but the milk of the goat, now sadly diminishing. When that was the case, he himself tasted no food whatever; and his hollow cheeks and sunken eyes told how famine preyed on his frame.

One night his wife, who had not spoken all day, called him in a clear sharp voice, as those do who, suddenly aroused from slumber, imitate the tone they would have had if perfectly awake.

"I'm going a journey, Pike," she said. "I've been sent for by a great lady; but if she spares me, I'll be back."

"Are ye going indeed, Honor honey? Honor, my darling," said Pike, "is it you are going?"

"I'll see you perhaps again. Isn't Johnny ready yet? He came first among us, ye know, Pike."

"And he's gone first; then ye, Honor honey, and little Honor no doubt next, and me. Ah, Honor, tell them as ye're going amongst not to forget me." Thus spoke Pike; and the tears gathered and ran down upon her parched face, but she hardly seemed conscious of them.

"Lewis is always a-watching," she began again. "When I am away, mind him; I see his face at the winder when we're both out—I seed him just—"

"No, no, darling," said Pike soothingly; "I'm not thinking that—don't trouble for Lewis."

"Ay, but he was here," said the little girl.

"The thief!" cried Pike. "And what did he want?"

"You, daddy," said the child. "He said Tike was dead and Tib was dead."

"Both!" cried Pike; but his attention was more fixed on the dying woman.

She wandered still, but mildly and less distinctly every minute. Her words came by ones and twos. The name of her dead boy, whose death they thought she had not noticed, occurred often, and once she bade the little girl be good, and held her lips to kiss her. The child stooped for the deadly kiss. "So, good bye, Pike," said she; "good night;" for indeed the shades were darkening over her eyes, and after another half-hour's perhaps unconscious struggle for breath, she lay at ease on the cold couch of the dead.

Pike sat by in silence. He was hungry and tired; there was a crust on the table, which he meant to have soaked in water for his wife; and now the child, the little Honor, having fallen asleep during the stillness of her mother's death-struggle, it remained for him. But, though hungry, he could not eat; though tired, he could not sleep. He sat and waked by the dead: it was the old custom in the oldest natural shape. Towards midnight he heard a tap at the window; and presently Lewis, pushing open the door, stole in, and came up to where Pike was sitting.

"She's gone, is she?" said Lewis, fixing his eyes on the dead body, over which the moonlight shone. "So are mine—all gone."

"I wish we were the same," said Pike.

"No, no—not I. Who knows what the dead knows?" said Lewis. "I would rather be here, provided I could get one morsel of Christian food."

"Christian food," said Pike; "is not all that is, Christian?"

Lewis did not answer; his gloomy eyes fixed themselves on the floor. After a silence, he looked up. "It's the blessed male I want to taste; I want the taste of the herb, the oatmeal agin."

"I care not if ye eat *that*," said Pike rather disdainfully. Lewis required no more bidding, but took the morsel, and ate it slowly, tasting it as he did so.

"My dead lies close by me," said he at last, "beside the big stone where the first phatics used to come. I did the best I could for 'em."

"I must do the same by mine," said Pike; "for I've not the strength left, no more than you, to take them to chapel. Come, neighbour, ye are restless like me the night; ye shall help me to open the earth and put her in. I brought her to a poor home, but I didn't think to carry her out to such a last one."

Lewis silently assented, following his benefactor—for such he was—into the bit of ground where still the perished potato-stalks showed themselves, and with a broken pitchfork helped him to open a deep trench. They worked in silence. Both were feeble, and the drops of perspiration stood on their brows in the cold night air. When the space was large enough, they went together into the cabin, and bore the hapless mother from her hearth, no covering over her but the remains of the red petticoat, in which he had left her in the spring, when she had bade her husband farewell; and laying her down in mother-earth, heaped the clods over her. When they had done, Pike sank on his knees, and kneeling upright in the moonlight, prayed and wept aloud, mingling his wife's name with that of the saints.

Lewis stood beside in gloomy silence. "Ye've an aisy heart, Pike," said he, when the latter rose from prayer, and stood looking on the new-made grave.

Pike looked up. "It's the last convanience I may stand accused of," said he. "What mane you saying that?"

"Yer a good man," said Lewis, "and can pray near yer dead; for they can't cast nothing in yer teeth."

"Ah, neighbour, I understand you," said Pike. "Ye've not always been as tender as ye might; but ye see, tender or not, they all do but die. Mine are dead."

"I ate all from them," said Lewis, "and now I'm afraid of them."

"Art afraid?" cried Pike. "Mighty Father! speak a word man; say ye have not lifted yer hand—"

"By the powers, by the saints! have I never done any sich thing," said Lewis. "Father Humphrey knows it, like as I know it mine ownself. He come in, and held Tib in his arms to die, while Tikey lay dead. But they was starved—I ate all, Pike. Was that enough, or no?" and Lewis fixed his eyes on the ground in silence.

Pike also said nothing, but stood with the fork in his hand, leaning on it partly, and his eyes fixed on his neighbour. Many thoughts passed through his mind, but they all merged in one at last. "Lewis," he said, dropping the pitchfork, and going nearer to him with clasped hands, "I've got one left; and I've one way of saving her, maybe. O, by yer mother, Lewis, spare me the goat. How am I to watch the oratur now, how shall I keep the one drop o' milk, if yer will is to take the goat? I've gived you my own, and ye've tooked my own, and my mate's in yer mouth now, and welcome with it; therefore be a man, a human man, to me, and spare me the goat."

Lewis's heart was touched. Tears mingled with his words, as he took hold of his neighbour's hand. "I've been more villain nor man," said he; "but I won't be to you. I'll go away—I'll forget the look of her. Indeed, indeed, Pike, in my hunger I grow to be a dog—just a cur, that the nature of is to stale. If I'd been born a lord, and had my full of mate, I'd have been a good man."

"Even those lords have their trials," said Pike; "but, friend, I, that am sich a poor man, have been good to thee."

"And I shall think of it," cried Lewis; "and I'll do ye the best of kindness by taking myself clane away. Let me lie on yer floor till the morn's morn, and I'll throuble ye never more in this world."

"Lie down, if ye will," said Pike. "The morning's in the sky, and where shall we be in the eve?"

III.

The day which poor Pike saw breaking was one of those mild days of winter which can be found in no place like Ireland. Rain was far off; its heavy clouds gathered back in the horizon, and like a curtain rolled together, giving a sight of the pale blue sky overhead. Between the swellings of the ground on the bog were here and there little sheltered valleys, through the lowest part of which trickled a thread of water, and the sides were drained and dry. Here the sun shone through the mild damp air, collecting its warmth upon the steep slopes, and bringing out the fragrance of the earth; and here Pike and his little girl sat down the day after the mother's death, and their goat browsed among the tussocks before them. The child had followed her father up the bank; but as soon as they were seated, her eyes seemed to grow heavy, and though he woke her once or twice, she as often fell asleep again. He was glad of it. She did not feel hunger whilst she slept; and he sat by in inert repose collecting the sunbeams, and afraid to disturb the stillness that came over him. The little girl roused up once or twice, and went down to the brook to drink; came back, got close to her father, and again fell asleep.

When the evening came on, Pike roused her at last, and said they must go home. The child arose; but shivered so violently she could scarcely stand, and Pike laid hold of her. Alas, the burning skin, the parched lips, told him that the day's slumber had been but the first inroads of the fever! Before morning she was quite prostrate, sick as her brother and mother had been. Pike had believed that she would live; for no good reason, but he longed for this last tender life; and the human heart revolts from going over again the scenes of misery which it has just passed through. Yet she was there; on the same pallet with the same pain. He had no help either; he knew every cot was starving; and save he himself could aid her through, his darling must die.

He watched her continually: his few moments of relief were when he brought the goat to the spot where she lay, and there pressing the little supply of milk into the can, raised her head on one arm, and with the other hand held it to her lips, which gratefully received the comforting draught. This was done many times a-day; and the creature, growing familiar with the practice, would utter a low bleat when he gave the signal that she was wanted, and come of her own accord to yield her treasure, and offer her shaggy beard to Honor's thin fingers, if she was well enough to play with it. The only employment that took him away from the cabin was, to obtain a supply of food for the animal. He would fasten it within his door; and then going to the hill, tear up such herbs and grass as he could find, and return as hastily as was possible, fearing lest in that short absence something should be worse at home than when he left it. At the door he would pause an instant. The low bleat of the goat, acknowledging his return, was the first sound he heard; then he would hearken as he opened it for the sobbing breath of the little girl, dreading to hear that expression of pain, fearing still more the deadly stillness in which every hour it might be quenched. As yet, however, she struggled hard with the malady, and rewarded her patient father with signs of life more precious than the childless man knows how to believe.

It was nearly a week after the death of his wife, that he lay on the bare floor one midnight, stupefied by exhaustion, while the child dozed under the influence of the fever, half-conscious, on the few rags of the bed. The heat within her agitated her brain, so that it presented no clear image; a thousand phantoms hurried over it, and her low voice perpetually murmured sounds which, low as they were, yet were uttered with the exertion which would fain have made them loud. Pike's heavy slumber was unbroken by them; he had watched, he had given her the last drops of milk which he could collect as yet, and he lay silent and pale in a sleep that imitated death.

Presently, however, the child was aware that some one was standing at her side; it seemed to her that her father was in two places at once, *there* on the floor and *here* beside her. She thought there were candles in the hut; she thought the moonlight had lighted up candles, coping in as it suddenly did at the opened door. Then the figure went away from her; the father who was standing and awake stood by the father who was asleep. She spoke to it and said, or tried to say,

"Don't go from us, father;" for it seemed to her the soul of her father was stealing from the body.

But the standing figure did not move. There was a horror in its face which shot through the bewildered senses of little Honor; the staring open eyes were fixed on the prostrate figure, and terrified her weak consciousness; but at that moment, the father that lay on the floor groaned and stirred, and then the standing figure drew noiselessly back into the shadow. But Honor's consciousness was comforted by perceiving that the horror passed away from its face as the prostrate figure gave signs of life. Still she tried to call, to make a sound, to rise up; she stretched her hands to touch the shape that lay on the floor, and which she thought would rise and hold her in its arms, for she trembled; but when she did so, the other shape swiftly and silently rushed up to her, and, with threatening gestures and strange distorted face, terrified her to silence and inaction. Her pulse throbbed till there came a dizziness over her brain, in which twenty figures seemed to be threatening and grinning, and then to go reeling about the room. She heard a faint murmuring sound which made the goat's bleat come into her mind; there was a struggle going on; a heavy body seemed dragged about by those reeling figures. One of them seemed to pass out of the door, and the rest vanished at the same time, leaving her father alone on the floor, on whom her dizzy eyes fixed themselves in anxious uncertainty and dread, till the nightmare spell was dissolved, when he awoke and raised himself.

It was now daylight; and he came first to the side of the child, whose wandering words and beating pulses he tried to soothe with kind fond words.

"Jewel! is she bether? Hush, darling! what is it she's saying? Was I dead, was I angry? What's that all? Hush, hush! she shall have poor Nanny's comfort." And he turned to the dark corner where poor Nanny's bed of leaves was made; and there—unbelieved was the blank darkness at first—the goat was gone.

In vain was every corner searched, in vain the broken enclosure, in vain the hill-side; despair had never filled up his heart till now; and the gasping lips of his child, which he had used to wet with the precious milk, raised into fury the untamed passion of his heart. He seized a stone—a huge stone—which lay by his door, and uttering an imprecation and the name of Lewis in one, rushed with weak strength across the moor.

Lewis had not been seen in the country since the night they parted by Honor's grave; but Pike felt in his heart that there was none but he by whom this cruel deed could have been done; and, in fact, when he approached the cabin, Lewis was seen sitting on a heap of earth a little way from his own door. When he saw Pike running towards him, he also rose and rushed on the angry man, eluding the stone which was hurled at him, and with little difficulty bore his weak adversary to the earth. When down, however, there seemed no anger kindled at his attack; he let him rise again, and hanging his fingers as it were on his own collar-bones, stood looking him in the face with a dogged persisting look. Pike was confounded.

"Why don't you kill me at once?" said Pike. "If ye did not do it, ye've a right to kill me, for I would have killed ye; and if ye *did* steal her away, best, best kill me, not to see Honor die."

"Do it, ye say?" asked Lewis. "Do what, neighbour?" "Ye know, ye know," said Pike. "What is it but one thing?—the goat, the life of *her*!"

"Ye shall have lost your goat?" said Lewis composedly. "Shure, and have ye jist looked every where?"

"D'ye think I've got to be reminded to look for her?" said Pike. "I believe it's yourself; man, man," cried he, falling on his knees, "I pray to you give me the creature: the strength's gone by; I've none to fight for her."

"And is not it myself wishes I had her?" said Lewis. "If ye doubt, jist set your feet inside the hut, and see if moral be there, or has been these Sundays past."

"And it's I'll do it," said Pike, turning away, and eagerly entering the wretched cabin.

All was bare; no spark of fire, no remains of household stuff, no broken cup, no half-bowl. Pike went outside, and searched every where for the appearance of blood where the animal might have been killed—for hair, for any thing suspicious. But he found nothing; the ground was disturbed in one place, but that was beside the bit of rock where early potatoes used to come; and Pike remembered that the children were buried there.

"Neighbour," said he, "it's *not* you. O Lewis, had ye one little cratur left, ye could overlook my raving! She must die now, like poor Tike and Tibby have done."

"Never mind them," said Lewis; "we must all die one day."

"Never mind yer childer!" cried Pike; "and indeed to see the way the earth's scarce put down upon them, it might be said you minded little."

"Mind you less," said Lewis, pushing him away from the rough untidy ground under which he had said the bodies lay. "In these times there's but one thing we've need to think of—food, food, that's all; I *must* live."

"Where's the *must* to live?" said Pike. "That cruel villain that lives by stealing little Honor's goat had oughted to die far sooner, or he'll know the worse in yonder world."

Lewis answered nothing; he turned off with a sneer; but Pike took no notice of that, or any thing but his loss, and returned broken-hearted to his desolate cabin.

Hope now was over; nothing was to be done all the long day but watch and wait the fluttering life, which still was life, and while it lasted seemed as if it might have been saved from death. We all know the efforts we make to do *that*; how hoarded money is lavished; how there is no prudence thought of, no obstacles attended to: aid for the sick, though it be but imaginary aid, becomes an absolute necessity of our existence, or seems so; for there are thousands to whom it is such an impossibility as it is to the blind to see, or the old to be young. It was so impossible to Pike that he did not think of it; he thought only of the means he had yesterday, and had been deprived of to-day.

The winter sun shone in that day through the open space made for a window; the winter blast, too, made itself felt; and towards evening little Honor, who had not spoken for several hours, uttered a complaint of the cold. The father had sat all day in the dull despair which patience itself in untaught minds becomes. He had sunk this time into a half-slumber; but he rose and took her in his arms, and with what warmth remained in his thin frame, once more cherished the vital flame of his darling. The time for help was gone by. The world's wealth at that time could not have turned back the spirit of life which was slowly leaving its human dwelling-place; the little hands, though cherished in his bosom, froze by degrees; the lips, though he tenderly blew upon them, grew whiter and stiffer; a little froth gathered on the mouth, the father gently wiped it away with his torn sleeve; the golden curls were still the same as they had been in health, except that the scattered hairs were matted to the forehead by the dew that gathered there; he lifted them up softly, and shook his head.

It was now the evening, and every thing within the cabin grow dusky and indistinct. All was still also, except the breathing, which became slower and more laborious. It was the last time,—the time so sacred by the bedside of the rich, the time of such respectful silence.

But at the poor man's door there came the hasty sound of horses' feet, and then the rider's knock repeated, when it was not at first answered. The haggard man, carrying in his arms the dying child, obeyed the call, and undid the door. Mr. Threader stood without; he started at the ghastly faces and figures that met his eye as the door unclosed.

He uttered a low exclamation; and hanging his horse to the post, entered softly, saying, "I would not have disturbed you. Alas, this is a sad sight!"

Pike sat down again, answering nothing.

"She's gone almost," said Mr. Threader; "there's no help for her. But for you—"

"Be silent," said Pike. "Let her die." The spirit within him was worn out, and the further he was from human help the more out of sight was respect for human distinction.

The Englishman stood by compassionately. It was not for long; the breath had almost ceased to labour, the teeth no longer touched, and the cheeks had fallen in where the teeth parted; there was no more struggle, scarce any panting now; the body was clay, the spirit passed; all that had been Pike's child was gone, except the withered discoloured case.

When he saw how it was, he laid the body down on the wretched pallet; and throwing himself beside it, gave way to ungoverned sorrow. Mr. Threader was astonished, for he had seen his patience when first death visited his house. He tried to comfort him.

"Ay, but it's the last," said Pike; "and I'm weaker, and *this* might have lived;" and the passion of grief shook his gaunt frame almost to dissolution.

Mr. Threader had come to the cabin partly with the purpose of bringing to it, as well as to others, a portion of relief; and he now, cautiously remembering the effect of the over-potent draught he had last given, prevailed on the starving man to take some portion of nourishment. He ate; and like the Egyptian, his spirit came again; and though it seemed to grow stronger only to suffer, still the embers of life were at least rekindled.

Mr. Threader promised that the body of the child should be interred in Christian ground, and then went on: "I'm sorry to disturb you just at this moment; but the business I partly came upon is to lay hold of a culprit who has been robbing the whole neighbourhood, I've heard that you may perhaps help me. What are your neighbours here?"

"Most that were neighbours are dead," said Pike.

"But some remain, I suppose; for instance, here's the name of Lewis Callaghan."

"He was alive yesterday," said Pike.

"Is he a good neighbour to you?" asked Mr. Threader.

"I've no harm to say of him," answered Pike.

"Any good?"

"Very like," said Pike; "I'm unfit to judge since all my trouble; and I did him a wrong, thinking him to have stolen the goat."

"That's the very story," said Mr. Threader. "It was your goat, then?"

"What was mine?" said Pike, hopelessly and without interest.

"Well, there's been a strange story brought to me about the robbery of a goat, and many other things. I wish, Pike, if you've lost one, you could come with me for half an hour. I'd give a guinea to catch that fellow."

"Yesterday, would not I have died to have cotched whoever laid hands on her; but I care not now," said Pike, folding his arms. However, a request was enough to make him obey; and hanging his head, and laying his arms over his breast, he patiently went where Mr. Threader led him.

Mr. Threader had been roused that evening by a report of crimes committed; and when he came over with help among the cabins, he had at the same time taken measures to inquire into it. Lewis was the man accused; during his absence from his own cabin he was supposed to have been the perpetrator of a number of robberies, in none of which, however, he had been actually caught; but respecting one, there was evidence likely to commit him, supposing the owner could identify the remains of the animal whose hide he had been seen burying. Pike's robbery had been heard of; and it was conjectured that his loss and Lewis's crime might be found to relate to the same object.

When Pike entered the cabin, Lewis was standing at the other end, his face averted and his exit prevented by a man whom Mr. Threader had left as guard till he should himself return. He perceived his neighbour come in, and after a moment's doubt turned full upon him, and said:

"So ye're not yet contint, though yourself searched for yourself; ye are for making me guilty, though ye know the clane contrary."

"Is it mysell knows or cares?" said Pike. "Honor's dead."

"'Twas not the goat," exclaimed Lewis; quickly checking himself, however, when he had uttered half the last word; then he added in an artificial tone, "Arrah, neighbour, but I'm consarned to hear that news."

Pike took no notice of either part of what he said; but Mr. Threader was convinced by the first that the suspicions as to the theft were correct; and telling him what he was accused of, ordered a search to be made.

"And it is a credible story entirely," said Lewis, looking round the small bare cabin, with a look and tone of contempt, "that a big carcass will be here hidden, and jintlemen's eyes not see it."

"Suppose ye," said one of the men who had come in with Mr. Threader,—"jist ye suppose it might not be inside the walls we are going to sarch."

"And what's outside, save nothing at all at all?" said Lewis; "not a phatie-stalk even to hide as big's a mouse, let alone goats, which is bigger."

"Then what was yer hands a-tearing up earth for at the shriek of day, two morns since, and putting in bigger nor mice?" said the man.

"I was not doing so," said Lewis.

But heedless of this denial, they moved into what had been the garden, leading Pike with them; and Lewis, who, though watched, was at liberty, following at a little distance. He trembled while he did so, but kept silence during the time they went round the enclosure; for the man who said he had seen Lewis employed in moving the earth could not identify the exact spot. They observed that the ground was disturbed near the rock; but the man felt certain it was not there that he had seen Lewis; and they left it to examine other parts, but saw no evidence elsewhere that it had been moved.

It was now quite dark, and they were making their search by the light of lanterns. Pike's interest was gone; his thoughts were all in the cabin where he had left his dead child. But presently he felt his arm grasped, and heard a tremulous voice in his ear, Lewis himself having drawn close up to him; and while he held Pike with one hand, he pointed to the searchers with the other.

"Neighbour, stop them; they will turn up that awful ground. But you know what's there; I always told you it was my dead."

"I can't hinder them," said Pike.

Lewis watched them, and, in fact, after a few moments' consultation, they determined, as they could find nothing elsewhere, to search the stony ground where Pike knew the children were buried, though the man who had watched still persisted it was not there he had seen Lewis at work. But with the first stroke on that ground Lewis gave way. He could not bear it. "'Tis not there," he cried aloud; "you shall not break that earth at night. The dead will appear. Hold, hold!" And finding they did not heed him, he flung himself on the ground, crying, "I did it, if ye must wrench it forth; ye need not look there. I tell you 'tis here." He pointed to what seemed a piece of solid rock at some little distance from the spot where the children lay; and rolling it over, he pushed away the earth under it, and uncovered part of a shaggy hide.

Mr. Threader and the rest had run up when they saw what he was doing.

"Is it yours, Pike? Look at it," said one of the men, pulling it out from the earth; for Lewis had quitted his labour as soon as they left the grave.

In very truth there it was—the skin of the goat; the spots and marks Pike knew so well, the brown and white hairs, which Honor had so often twisted together. Dead as his feelings had become, they were all roused by this sight. He burst forth upon Lewis with a storm of indignation before which the wretch shrank as if the words had been thunderbolts. All that Lewis answered was, "I did it for life."

"And starving's better nor life," said Pike, "if life's so dear as you paid down for it. Murderer—the sweet soul's murderer."

"Ye may think life's little worth and say so, but not I," said Lewis. "Pike," said he, coming close to him, "I dare not die. Hear me. Ye *shall*; and none else shall hear; nor see neither," he added, glancing back at the children's grave. Then he went on, his voice lowering at every word: "A thing is on my soul, let alone the goat." And here he put his mouth upon Pike's ear, and his two hands, one on each side, so as to shut out the sound of his words from every creature else.

Pike heard, and his passion subsided in an instant; his hands fell by his side; the excited colour faded utterly from his face; he staggered back two paces, and murmured, "I forgive him; he's a more miserable wretch nor I."

"I did it for life," repeated Lewis, in a scarce audible voice.

There was a silence all about them; for every one was trying to make out what was passing; watching their gestures, catching at every sound. Mr. Threader was the first to speak.

OLIVIA AND THE SQUIRE [VICAR OF WAKEFIELD]. BY J. ABSOLON.

"This is not the time to make further inquiries," said he. "Enough is known to prosecute this fellow, and I shall take care it is done. Take him away. But you, kind-hearted Pike, you must live too. I've had the means furnished me of sending a few of you across the Atlantic. You shall have ten pounds—do you hear me, Pike?—five to take you over, and five to set you going when you get there."

"I thank your honour," said Pike languidly.

"You shall go to America, you know," said Mr. Threader. "Have not you heard of America?" he added, trying to rouse him.

"Yes, yes; we often talked of migrating," said Pike, "when there was we in the cabin."

"I can't bring *them* back; would I could, Pike," said Mr. Threader compassionately. "But take comfort; *you*, at least, shall go; *you* shall yet live and prosper."

"Thank you, sir," said Pike feebly; "blessings be on you!" And then getting into the conventional tone, he added in an unmeaning voice: "Hunder thousan blessings on yer honour; and may you never"—and now real natural feelings sprang up, and he took Mr. Threader's hand in both his—"and may you never know what it is to see your own childer die of hunger!"

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

It was said in the *Times* that at the Agricultural Exhibition in Paris of the past year the English peasant appeared in person, in manner, and in dress, the poorest-looking man of his class in Europe. We were, of course, inclined to treat the assertion as an abominable slander, and to deny every word of it. For all that, however, the statement has an awkward trick of rising up, confronting us, and defying us to disprove it.

Village-greens are being enclosed, rural sports are passing away; education is very very low; wages are low; there is more than enough *koò-tooing* to dignities; and too little manly independence,—for how can a poorly paid, hard-worked, ill-clad, ill-fed, untaught man hold up his head independently? Morally, he is a *serf*. He cannot be bought or sold, it is true; but he is bound down and fenced about by an incapacity as strong as prison-bars. He contains the

undeveloped elements of a man, while he toils as a machine. Hands to labour he has, and they are the only part of his organisation which has ample play; his mind lies fallow, his heart, his soul,—God only knows the mysteries of their working! We have often wondered what are the thoughts in the minds of these poor fellows as they tramp at the plough-tail, or gather in the harvest they have sown, but of which they eat so scantily. It is a relief to us to turn from these hard-worked realities to an estate which we possess in Utopia.

Our estate in that happy region comprises many thousands of acres—meadow, moor, corn-land, forest, marsh, and glistening streams; and it maintains some hundreds of men, women, and children. The wild creatures are as free to them as to ourselves; they prey on their little holdings, and ought to redeem the tax they levy. The fish in the river are free to them also. (We cannot quite understand why, even out of Utopia, the flowing rivers and the great sea should be held as individual property.) In our village there is a spacious green, or common, which we shall never enclose as a market-garden for a rental of five pounds. On the summer evenings it is merry with the voices of young men and maidens, old men and children; there obsolete sports and games go on till twilight; there the training of rural militia takes place; there the annual feast is held; there the poor man's donkey can browse, and the poor man's sickly child sit under the broad shadow of the green elms. At one side of this green is a spacious room—school by day, library and reading-room by night. A fair education can be had there free: it is a government school. The children attend it until they are fourteen years old. We hold that the great instrument to raise men in their stations is education, religious and secular; and till they get it, they will look poor, melancholy, and degraded. There is nothing that gives men a feeling of such true and honest self-respect as minds disenthralled of ignorance, and rising to the level for which God has given them capability. It is the dull consciousness of something starved within him that gives the downcast look to the peasant's countenance. Improve the race morally, and it will improve physically also. In support of this, I will instance the improvement education is working, and has worked, in the physique of other classes. What a coarse race in appearance, to judge from still extant portraits, were the country squires of a century ago; and what sweet minds and manners many of them had, and not they only—kings, queens, and "polite people," "the quality," would bear a poor comparison with many a citizen and a citizen's wife of now-a-days! In perusing the annals of courts scarcely a hundred years back, vulgar people may be thankful who know nothing about their great grandfathers and grandmothers; for then, at least, there is no need to blush for them, and there is room for a doubt whether such progenitors may not have been as decent as they were obscure. Now, if education and improved taste have raised nobility out of its slough of grossness,—if education has so far refined the middle classes that they severely gall the kibe of courtiers,—why cannot the hard-handed children of labour profit by the graduated scale of progress, and rise too? In our Utopian property the peasantry have been taught, and well taught; every man and woman amongst them can read, write, and cipher; they have had good maps of their own country, and other countries too, before their eyes on the school-walls, and have profited thereby to a considerable extent. History, both sacred and profane, has been offered to them; social and religious truths have been inculcated, and by one means and another the scales have fallen from their mental eyes. Knowledge has given them more self-confidence than an untaught clown can have; they bear themselves freely; there is nothing of that slouching, under-looking, reluctant courtesy to superiors, which stamps many rustics with an air of stolid malignity, or shrinking bashfulness, as if in the presence of the squire they saw an enemy or a despot.

They work the better for having an intellect awakened;

the head guides the hands. In times of unavoidable distress they are not like mere broken machines; they can devise expedients to help them through the evil day, which no illiterate boor can do. Self-respect is a better guardian than law; but the law that acts amongst them best is the law of public opinion. The whole moral tone of the class is elevated; they are not drudges merely, not so many mere hands to sow and reap that others may eat. Enjoyment, relaxation, ultimate rest from toil, are theirs. On the village-green may be heard, on summer nights, the strains of the band of rural musicians. There is the village flower-show, and due distribution of prizes to the cottage gardeners. Every tenant on our estate has a neat home and sufficient garden about it to grow a portion of his family's subsistence, besides a piece of land in the allotment field.

The wages are better than any body gets out of Utopia; but then we, the owners or stewards of these thousands of acres, are amply content with very moderate interest on the value of the land leased to our tenants, and with still less upon that of the simple cotters; thus, with providence and industry, a man may hope to rest from his hard labours before "the keepers of the house tremble, and the grasshopper becomes a burden;" in short, a time of independence and rest may be attained to by all who merit it, except in those isolated cases of trial, loss, and misfortune, of which every community will produce examples enough to keep alive human charity. We have less, our tenants have more; and thus the whole is fairly balanced, and every body in Utopia is content.

The minister of our parish is known to his people as the director and promoter of their temporal as well as spiritual good: he awards the prizes at the flower-shows, is an encourager of all manly sports, is president of the school and library, friend and adviser and comforter to all in distress, and general court of appeal in difficulty and disagreement,—a wise, honest, God-fearing man; and, what a good priest always is, the best-beloved and chief man in the place. It is very pleasant to walk about the village on festival-days—the cottages so fresh and clean; the gardens so bright and healthy; the green covered with holiday-folks, less rough and far more hearty in their civility to their superiors or masters than they are out of Utopia; children loud-voiced, rosy, large—not pined and stunted with insufficiency of food; and every body in spirits and enjoyment, free from the black shadow of to-morrow's poverty; happy themselves, and unenvied of those whom the Creator of ranks and orders of men has placed above them. They are raised in their station, but they are not lifted out of it. This is only in Utopia, in foolish dream-land!

Elsewhere I have seen wretched cabins,—property of men of thousands a-year,—cabins not fit to house a dog;—we wondered the very owners did not pull them down as cyssores, and build better. The British peasant is of good *pâte* (are not our soldiers the pick of the peasantry?); but he is born in poverty, bred in poverty, nurtured in ignorance, and left to grovel in it his life through; therefore his countenance is mean and mournful, his figure is bent and slouching, his manner is that of a poor overtasked serf rather than of a free man; and in the sight of Europe he is a satire on the vaunted wealth, charity, and liberal government of his country.

In my lifetime I have seen a good many plump squires and ladies, some very plump farmers and traders; but I scarcely ever saw a plump labourer—scarcely one middle-aged man who did not look too small for his clothes, and of a spare worn countenance. Other people may have been more fortunate in this respect; but generally speaking, the race is capable of much improvement in the matter of feeding, so far as I have observed. As children, they have been insufficiently fed and clad, and put to work too early; and the result is, what has been exhibited in Paris in company with fat cattle. Might it not be well if some of those noble lords and gentlemen who give such ardent interest to the producing of superlative beef would turn their ambition to

improving the peasantry? I am persuaded that the speculation, though it seems so little profitable, would prove a glorious mine to any who may work it, and that prizes would turn up, at least as valuable as those gained by ponderous swine.

TO THE AUTHORESS OF "AURORA LEIGH."

A SONNET BY SYDNEY DOBELL.

WERE Shakspeare born a twin, his lunar twin—
Not of the golden but the silver bow—
Should be like thee. So, with such eyes and brow,
Sweeten his looks; so, with her dear sex in
His voice,—a king's words writ out by the queen,—
Unman his bearded English, and, with flow
Of breastfull robes about her female snow,
Present the lordly brother. Oh East-of-kin,
There be ambitious women here on earth
Who will not thank thee to have sung so well!
Apollo and Diana are one birth,
Pollux and Helen break a single shell.
Who now may hope? While Adam was alone
Eve was to come. She came, God's work was done.

LIFE IN CHEAP LODGINGS.

LIFE in the large manufacturing city in which I dwell has many different aspects. Ephraim Hardcash, Esq., who rides in his handsome well-hung carriage from a spacious and well-appointed mansion in the suburbs to a palatial warehouse, teeming like a fair with almost every thing marketable, has a different look-out from Jem Ancoats, fustian-coated, cotton-flaked, and oily, in whose idea of rural scenery houses a-building and cindery footpaths are constant elements. What life is to these I can only guess at. Seeing that Ephraim Hardcash, Esq. is sleek, portly, and complacent, I infer that his life is pleasant. As I once saw him enter his mansion, closing the door behind him with a bang, I caught a glimpse of a stately matron in purple velvet; so I infer that it is likewise connubial. Of Jem Ancoats' life I infer from Jem's demeanour, which is generally a blending of exhaustion and doggedness, that it is not altogether a healthy one. I see Jem in the fields sometimes with "a lass," and charitably hope that if his life is not connubial at present, it will shortly become so. And from seeing Jem's excitement on a certain canine Derby-day, and the ardour with which he backed the favourite, by the name of "Mikil's Dog," I infer that even his life has its *agréments*. But the life which I *know* is something different from both of these. It is the life of the lonely bachelor in lodgings,—of the clerk, the warehouseman, the teacher of languages,—the life of many thousands. For a short term of years, as a chrysalis-state certain to unfold into the fluttering delights of family life, this sort of existence may be endurable,—nay, even pleasurable; but I say, in the words of Paracelsus,

"If this be all,
And other life await us not, for one
I say 'tis a poor cheat."

I may be bitter—indeed, I know I am; but if these lines should meet the eye of her with whom I danced at the last Parthenon ball (tickets five shillings; ladies three-and-six), she will understand the root of my bitterness. I will just explain enough to account for, if not to excuse, the somewhat querulous tone in which I am aware I write.

In the Milton Road, just opposite the cab-stand, there is a stationer's shop, which is also a circulating-library. It is just like other shops of its class. Its window contains the usual amount of packages of extra-superfine double-laid

cream note-paper and periodical literature; and in the early spring breaks out into the usual blossom of valentines, of the boisterously offensive sort, representing very rubicund cooks brandishing saucepans, or old gentlemen in blue coats, drab breeches, white stockings, and pigtails; and of the serious and sentimental sort, on white satin with real solid metal spangles, and verse at once touching and business-like:

"A constant heart I bear, and true,
And feelings warm as usual;
I really shall expect from you,
My love, the first refusal."

But if the shrine was but ordinary, how rare was the goddess! O, dimpled rosy little librarian, how much you have to answer for!—for the hungry foreigner's threepence, expended nominally upon *The Coming Struggle*, but really that he might obtain a fuller survey of you, whose chestnut curls he had got a glimpse of through the window; for the shilling of the young warehouseman, ambitious to shine in your blue eyes by the purchase of cheap treatises on abstract science, astonishingly clear in the first page, and unintelligible in the second without a knowledge of the Differential Calculus; for the useless hiring (for had we not read and re-read them?) by self and another gent of the *Pilgrims of the Rhine* and Thackeray's *Edmund*,—for so you most musically pronounced them; for profuse and reckless cab-fares; for Parthenon ball-tickets; for awakened hopes of leaving, and increased disgust at continuing, my solitary life in lodgings. O, the fatal evening when we gents, returning from the city, and beginning to revive in the fresher air and quiet of the suburbs, learnt with dismay that you had married a thriving salesman, and would never more sit behind the little red curtain, protective from admiring glance of passing butcher-boy! O, the dreary Milton Road, perambulated by tall policemen, unrelieved throughout its weary length by the prospect of a cheerful word or smile from you! O gents, O my brothers, the snowiest shirt-front may conceal an aching bosom, and the stiffest of all-rounders encircle a throat that has many a bitter pill to swallow!

Lodgings there are, I know, even in this city of my desolation, comfortable enough for the most fastidious bachelor,—quiet, airy, thick-walled rooms, with recesses for book-shelves, and depths of cool shade in the hottest weather—rooms in which a student may read and a Sybarite repose. But these are not for me to dwell in or to dwell on. I leave them to the unfortunate younger brothers of fashionable novels, stoically supporting existence on eight hundred a-year. Lodgers there are, too, with tranquillity proof against the annoyances of any lodgings; fellows of bovine health and iron nerves, who take possession of their apartments like conquerors, and test the resources of the establishment the very first evening of their arrival by entertaining a few friends, who sing and play the hughle, and two of whom stop to breakfast; or men with minds so concentrated on some abstract study as to be insensible to concrete discomforts. But I am blest with neither the overriding animal spirits of the former, nor the lofty insensibility of the latter. I am neither Bob Sawyer nor Isaac Newton. Life is to me neither an uproarious picnic nor a wrapt meditation. I am not superior to circumstances. I am very much acted on by my environment. I do not expect luxurious elegance; but I do complain of cheap and pretentious inconvenience. Why should every twopenny-halfpenny row of houses be stuccoed and glazed into absurd imitation of its betters? Why should one side of my little room be taken up by a great ill-fitting plate-glass window, exposing me to the pitiless rays of the afternoon-sun and the derision of street-boys? What comfort is there in these colossal knobs of earthenware screwed into door and shutter? Now-a-days a piece of plain, honest, unsophisticated, good old English wood dares not show its face in the humblest dwelling, but it must be painted, varnished, marbled, veined, stained, grained, or somehow hypocritically disguised. Tidiness before tawdri-

ness, bareness before *bad* ornament, is what I sigh for in cheap lodgings. To attain it, as far as rests with me, my first care on taking fresh rooms is to make a clean sweep of all shepherds and shepherdesses, all small marble peep-shows that work with a click, and strike the looker-in with dizziness; all hideous little green china-teapots (of great value); all wax fruit and flowers; all "presents for Mary Ann;" all moth-eaten, one-eyed, stuffed birds, frightfully off their legs; and, as I am not a conchologist, and object to those very prickly shells as dangerous, and to those rich brown smooth speckled ones as nauseous, "I'll thank you, Mrs.—Mrs.—" "Awkins, sir." "Yes; I'll thank you, Mrs. Hawkins, to remove them also." "You'll let them pictures bide, sir?" "Why, no, I think not. That lady in the lace-cap and blue-satin dress is yourself, of course—I should have known it any where; and that good-looking gentleman is Mr. Hawkins,—a speaking likeness I have no doubt, and very handsome pictures both; but I do not like pictures. (Art, forgive thy worshipper; Truth, thy votary!) That engraving of the Rev. Noah Walker you would naturally prefer to have in your own room; and, let me see, what's this? The Great Exhibition? No. I see; a lithographic view of an entertainment given to the workmen of Messrs. Horrocks and Jorrocks on occasion of the coming-of-age of Ralph Horrocks, jun. Esq., when upwards of four hundred sat down to a warm and sumptuous dinner. You *may* take that down as well."

There is always a Mr. Hawkins; but though he uncords your boxes, fetches your cabs, cleans your boots, and—Mrs. H.'s education having been neglected—casts up your weekly bills, you never see him. His entrance into and his exit from his own castle is by the postern. He leads a back-kitchen and knife-house sort of life. You hear a dull heavy chopping sound at a distance, and suppose he is amongst the coals. You guess his whereabouts by a subdued grumbling or a smell of strong tobacco, which occasionally ascends from the lower regions; till at length, one night, you are startled by the apparition of a man in shirt-sleeves and without his shoes creeping stealthily upstairs. The thought strikes you that it is a burglar; but you check yourself—that is Mr. Hawkins going to bed.

I am by no means an epicure, and have rather a dislike to "warm and sumptuous" dinners; but I like a meal of meat and vegetables tolerably cooked once a-day. Yet even this modest requirement is, in my experience, unattainable in cheap lodgings. The various wholesome and nutritious products of the garden which I see in the greengrocers' shops are forbidden fruit to me. If they require a little extra attention, an impassable barrier excludes them from my table. I am doomed to the everlasting potato, in a state of watery mash or stony hardness.

O, those mockeries of mutton-chops, those leathery beef-steaks, insoluble by any gastric energies save those of a fowl's gizzard! Do I dream, or was there in my childhood such a dish as boiled-beef with accompaniment of soft and delicious carrots? Perhaps pleasure in eating is a feeling peculiar to childhood, like the love of buttercups and daisies; and pain is the normal affection of the mature mind with reference to its meals. In my first revolt against the dreadful oppression of these dinners, I abolished, instead of endeavouring to reform, the system under which I suffered. I treated the custom of dining as an irrational and antiquated practice, kept up only by timid and conventional people. I ceased to dine. For a few days I exulted in my freedom. I felt an ascetic self-complacency; but I was soon convinced by unmistakable signs that, like most violent radicals, I had gone too far. Reaction set in. I began to think that, after all, our ancestors knew what they were about when they set up the institution of dining, and that I would resume it, at all events provisionally, until the discovery of something better. But as the dread of Mrs. Hawkins's cookery was still strong upon me, I took to living like a mariner on a North-Polar expedition. I procured certain soldered tin-cases, which would open only by the use of powerful levers,

and contained concentrated soups and meats of such essential strength, if the advertisement said true, that I was once horrified to find by accurate calculation that I had just consumed for one dinner as good as sixteen pounds of animal food. I fancied that my manners, in spite of my acquaintance with the ingenious arts, were becoming fierce. I had a secret dread of cannibalism. One day, after long fasting, I caught myself looking at my friend Lovesy, who is plump and rosy in an esculent point of view. He observed it, and grew cooler towards me. I would not lose my friend, so I abandoned the tin-cases. Then, though quite as averse as Jean Jacques to *la gêne de la bonne compagnie et la crapule du cabaret*, I tried Overdone's Universal Commercial Dining-Rooms. Every thing looked satisfactory,—baskets of bread, ample platefuls of meat, sufficient portions of tart. But the palate soon became aware that the viands had been prepared in some wholesale and summary manner. That meat was tender, but with a sodden and unnatural tenderness. The joint from which it came had been subjected to the influences of some powerful machinery. It had been educated along with dozens of its fellows by some wholesale and indiscriminating process, instead of having its individual character studied, and its peculiar excellences fostered by the judicious basting of a private cook. That tart, too; its fruit was too fruity and its paste too pasty. They had evidently met for the first time upon that plate. Where was that delightful intermediate substance, neither paste nor fruit, but partaking of the qualities of both, and better than either, offspring of warm and oven-born union, which I remember in the pies of other days? No good thing comes of crude and hasty alliances.

Candide, we are told, "found life most tolerable after meals." But then he did not know what it is to spend an afternoon in cheap lodgings after a dinner cooked by Overdone or Mrs. Hawkins. The afternoon, under all circumstances, is the most tedious part of the twenty-four hours. It is the dull, unbelieving, disenchanted middle-life of the day. You shrug your shoulders more frequently than is your custom. You begin to think you expressed your feelings rather too warmly in that letter which you wrote last night and posted this morning. But when to the natural influences of the time, and the miseries of a resentful digestive apparatus, are added the outcries of an importunate rag and bone merchant, painfully audible through the whole of his course down the street; a lugubrious barrel-organ playing deadly-lively tunes under your window; a chattering, stamping, shuffling nigger, with no more humour in him than a pulverised mummy-cloth; the squalling of two babies brought by a colony of children on your door-step, who have evidently come to stay, and have brought their bread-and-treacle with them; and through, and above all, that woman, who sings in a cracked, shrill, and yet pathetic voice, suggestive of other and severer ills of life—Well, I will write no more of mine.

DALTON, AND HISTORY OF THE ATOMIC THEORY.*

THEORETICAL, and practical, are two expressions by which the world seeks to discriminate between two antithetic phases of human knowledge—two opposite characteristics of mental energy. The phases themselves are well marked; they are mentally recognisable to all who, bringing adequate power of analysis to the task, contemplate the steps by which, the triumphs of mind over matter, and material laws, are effected. But though mental discrimination between the two antithetic phases be readily conceivable, the words employed to embody the conception are devoid of the clearness which a logician desires; nor are they free from the charge of leading the public mind astray,

* *Dalton, and History of the Atomic Theory.* By Dr. R. AUGUS SMITH. London: Baillière.

and committing an injustice to the so-called "abstract worker," or "theoretical man."

We doubt whether in the whole range of mathematical and physical science there be such an entity as a purely abstract truth; that is to say, a truth which could not find some practical application, if man only knew how to apply it. The time for such application may not come in a life, in a century—it may never come; still the truth may not necessarily be an abstraction. The laws of the properties of conic sections were not altered by the discovery of ships, and the necessity for navigating them which arose. Yet these laws were numbered in the category of so-called abstract truths, until they found a practical aim in the science of navigation. The discovery that we do not see the heavenly bodies in their true positions—in other words, the discovery of the aberration of light—was a so-called abstract truth, until it found its application in confirming what had already been adduced through other channels concerning the velocity of light. Oersted's discovery, again, of the law of magnetic deflection by an electric current was of the nature of abstract truth, until it found its application in the telegraph of Cooke and Wheatstone. And thus might we proceed in our citations of examples of so-called abstract truth made practical throughout the records of every physical science; giving weight at every step to the hypothesis which denies the existence of any such entity as an abstract truth.

Such is our faith; and entertaining it, we award all honour to the so-called worker-out of abstractions, the so-called theorist, ay, if the term must needs be used,—the unpractical man. Honour to him who reveres the pure spirit of truth for itself alone, because it is truthful; not for its immediate applications and the money it will bring. Nor let this be unjustly construed into a disparagement of the labours and a depreciation of the services of practical men. Both qualities are necessary to the development of human progress; that progress would be checked in its career by the destruction of either. A watch, as a keeper of time, would be no less destroyed by the annihilation of watch-mainsprings than by the destruction of mainspring-makers. Still the contingencies would differ in importance; and the case affords an apt illustration of the comparative rank of the men who discover laws or forces, and those who merely apply them.

In its essence, there is something unselfish in the prosecution of truth for its own sake; and amongst the workers of whom this attribute is typical, the records of all countries demonstrate how ill-requited the noble sentiment has been. The self-dependent principle, which lies at the foundation of England's political greatness, renders our system obnoxious to the tendency of giving an undue advantage to the mere utiliser of discovered truths. He who is fortunate enough to apply a truth second-hand to the improvement of some technical process subservient to the wants of man has seldom just reason to complain; he can obtain in England, better perhaps than elsewhere, the solid recompense he seeks. Far otherwise is it with the theorist, the man of original conceptions; the man, in short, of genius. For him, whilst alive, the praise of a scientific coterie is too often the only reward; when dead, an epitaph. By chance almost, and owing to the earnest solicitation of his friends, the illustrious originator of the atomic theory, or doctrine of chemical equivalents, had a small pension allotted to him on the civil list; but this not till late in life, nor until the period of highest mental activity had gone by. The best years of his existence had been given to the drudgery of teaching. What might we not have expected from his original genius, had early means been afforded him of giving it fair scope!

To mention the name of Dalton is to suggest the grandest day-dream made tangible, the greatest example of law made evident, which has occurred in modern times; assuredly the greatest since the discovery of the laws of gravitation, than which it appears to us in some respects more extraordinary. The atomic theory holds a position exceptional, and almost

exclusive, in the circumstance that it passed nearly at once from the domains of apparently the most abstract to those of the most practical departments of truth. Its deductions found practical application immediately; and what is still more strange, the atomic theory, exclusively accordant with facts though it be, admits of no final appeal, no *experimentum crucis*. The ultimate testimony would be a sight of the atoms; but their inconceivable smallness precludes that hope. A theory, then, it is, and must remain; but to use the language of Dumas, "A chemist speculating on the laws of definite combination is constrained to admit, that whether matter be composed of atoms or not, it could not act otherwise than it does, were it really atomic."

We have preferred to associate the name of Dalton with the name of the atomic theory rather than with the phrase "doctrine of equivalents," though the latter would have been more general in its scope. Nevertheless the evidence favouring the existence of atoms furnished by the laws of definite proportionalism is so strong, so practical, and moreover, it was so cherished by the great philosopher himself, that we unhesitatingly adopt it. Even those who object to the word "atom" as characterising a unit particle, admit it to the extent of signifying a unit force; and the latter term does not beget the more intelligible idea.

There are many persons who, unacquainted with chemical science, will, on first encountering the words "atomic theory," turn away from them as the representative of something difficult to understand, or something which, if understood, would be devoid of popular interest. Both assumptions are founded on error. Though the words "atomic theory" may sound harsh and technical, and the words "equivalent proportion" be still less popularly expressive, the genius of the thing can be made evident, even to persons totally ignorant of science. Firstly, what is an atom? To reply, "A very small particle of matter," is not enough. Granted that experience teaches us atoms are particles inconceivably small; but the derivation of the word "atom" (*a τειναι, incapable of division*) has no reference to size. Chemists are at this time acquainted with sixty-three different kinds of matter; and every testimony short of visual demonstration points to the inference that *all* matter is atomic. Nevertheless, testimony proves these atoms to be small beyond conception. We may therefore say, speaking of known matter, that atoms are particles inconceivably small; whence it has come to pass that the terms "atom" and "particle" have long been popularly used as synonymous. The thinker who would understand the doctrine of atoms as propounded by Dalton, and corroborated by all subsequent chemists, should carefully fall back upon the idea of indivisibility, regarding the quality of size as one altogether collateral. It is certainly not a probable, but nevertheless a possible assumption, that deep down towards the centre of our planet, farther beneath the superficial crust on which we stand than man has penetrated yet, not only another form of matter in addition to the sixty-three at present known may be found; but that the new matter may be composed of an aggregation of visible parts, all of equal weight and colour, shape and size. If these parts,—we need not say *particles*, for the assumption imposes no limit as to size,—if these parts were found to resist all human means to divide them, they would be, according to definition, atoms, notwithstanding their size. It so happens, however, that if matter at present known be atomic, we cannot hope to see these atoms, they are demonstrably so small. Newton did not despair of seeing them by the application of high microscopic power. No one entertains that hope at the present time. The question whether matter be or be not ultimately divisible was a favourite one with the ancients. Long and tedious were the arguments on both sides. The Grecian philosophic bent was the very antitype of our own. The Greeks contemned all applied philosophy; our tendency is to hold it in undue respect. The question of the ultimate divisibility or indivisibility of matter became too impractical for modern philosophy; it therefore died out. Strange

that an hypothesis so exclusively physical as it seemed to be should have received its strongest affirmative testimony, if not conclusive proof, from the hands of a chemist; stranger that the day-dreams of Leucippus, Democritus, and Lucretius, should now form the basis of all that is certain in practical chemistry, to whatever art applied!

The ancient advocates of material indivisibility failed to recognise the difference between matter, and the space which matter occupies. Taking any given ponderable mass—an apple, for example—a mathematician would be likely to affirm that the infinite divisibility of the atom must be accepted as obviously belonging to things possible in essence, though impossible in effect. The division might be continued, he would argue, so far as our senses, our time, and our manipulative dexterity permit; and that the possibility of still further division must be received as a corollary. Horcin lurks a fallacy. The idea has a contingent relation to the matter of the apple; but a direct and immediate relation to the space filled by that matter. Suppose each of the gigantic atoms, the existence of which we have already assumed, to equal the apple in size, then we perceive how fallacious is the ground taken by those who would deny the existence of atoms by geometric reasoning. Each of the newly-found atoms, though equal to an apple in size, would, being ~~an~~ atom, be indivisible; though the space filled by such atom would be capable of subdivision. Pass we now on to the task of examining how, by the labours of Dalton, the theory of atoms was rendered so probable, that no other theory squares with the chemical functions of matter. Addressing ourselves not to the chemist alone, we shall be sparing of chemical demonstrations, resting content with indicating the broad principles of the subject.

If A and B are two kinds of matter, capable of uniting chemically with each other, then the combining portions of the two, and necessarily the compounds formed, are either unlimited or limited. If unlimited, any number of parts by weight (say 1 part) of A may combine with any conceivable number of parts of B (say 8 parts); and in like manner with any fractional number above 8 and below 16, or finally above 16 and below 8. If limited, what are the limits and the conditions of limitation?

Of this kind were the questions which suggested themselves to Dalton. The unchemical reader may now translate A into hydrogen and B into oxygen; when our arbitrarily taken 1 and 8 respectively become 1 part by weight of hydrogen, and 8 parts by weight of oxygen. Now the combination of 1 part by weight of hydrogen with 8 of oxygen is water. There is one other, and only one other, compound of hydrogen and oxygen, resulting from the union of 16 parts of oxygen with 1 of hydrogen. Where are the intermediate compounds? Where the compounds of $8\frac{1}{2}$ to 1, 9 to 1, 9 to 2, and so on, up to 16 to 1? They are absent; they do not exist. Of such examples chemistry is full, and they unmistakably point to the atomic constitution of matter. If hydrogen and oxygen be not atomic, if the numbers 1 and 8 do not stand for the ratio of the weight of their atoms, wherefore this long absence of all compounds of the two between 1:8 and 1:16? Dr. Angus Smith has well acquitted himself of the task of making the atomic theory comprehensible. Still better, he has vindicated the memory of Dalton from the vague charge of plagiarism often brought against that philosopher; and has furnished an interesting biographical record of an extraordinary man.

POLYGLOT READINGS IN PROVERBS.

LAZE, HORSE, AND YOU'LL GET GRASS.—This is also Italian, —*Caval non morire, che erba da venire*. And it is even found in Turkish: "Dis not, O mine ass; for the spring is coming, and with it clover." Unfortunately, "While the grass grows the steed starves;" and "For the hungry, 'wait' is a hard word" (Germ.), —*Dem Hungerigen ist 'Harr' ein hart Wort*.

LUCK IS ALL.—A desperate doctrine, founded on that one-sided view of human affairs which is expressed in Byron's droll parody of a famous passage in Addison's *Cato*:

"Tis not in mortals to command success;
But do you more, Sompronius—don't deserve it;
And, take my word, you'll have no jot the less."

"The worst pig gets the best acorn" (Span.), —*Al mas ruin puerro la mejor bellota*. "A good bone never falls to the share of a good dog" (Fr.), —*A un bon chien n'échet jamais un bon os*. And "The horses eat the oats that don't earn them" (Germ.), —*Die Rosse fressen den Haber die ihn nicht verdienen*.
W. K. KELLY.

CORRESPONDENCE.

MADAM,—Having read in the last Number of the NATIONAL MAGAZINE your article on "Young Ladies' Work," I am induced to write to you in the hope of making known to the public through your pages, a new work for the good of suffering humanity. It is one which has already been tried with perfect success; and if entered into by the influential in all parishes, would take its place among the very finest efforts for the amelioration of crime and misery. One of the largest metropolitan parishes has lately sanctioned the visits of ladies to the different departments of the workhouse. The system was originated about six months ago by two ladies, and was found so efficacious in general and individual instances, that a committee was formed, consisting of the wives of the district clergymen and some of the most respectable ladies in the neighbourhood, to the number of fifteen. Every ward of the workhouse (except one, the casual poor) is visited twice a week; each lady taking a separate department. I will not intrude on your time or space by entering into details which would describe the great utility of this arrangement. Imagine the blessing to the poor sufferers from sickness, poverty, insanity, and old age, of thus receiving sympathy and kindness from those willing and able to give them help and comfort. Formerly their only experience was of cold harsh nurses and the officials of the establishment. Now they see kindly faces, and have ready help from private charity. Also suggestions for various improvements can be made to the proper authorities, offered, not with any impertinent intrusiveness, but respectfully urged. In many instances such suggestions have been adopted, to the great advantage of the suffering and helpless inmates.

This plan has now been in operation long enough to prove what a boon it would be, if it could be adopted in every parish. That the wives and daughters of the influential would readily give their help, there is no fear. What is wanted is, that those in parochial authority would consent to this arrangement throughout the land. It is the women of England who must exert their influence, and bestow a small portion of their time and thought, to the forwarding of this work of love and charity. They would need no other inducement, could they but see the gladdened faces, and hear the expressions of delight and gratitude with which "the ladies" are welcomed to the several wards by the poor inmates.

Few persons duly recognise the fact of what a vast mass of apparently hopeless wretchedness and vice fester in the workhouse of every large parish. Surely it behoves us to try at least, every means of alleviating both. In the instance where this system has been in operation, I have simply to say it has proved beneficial beyond our hopes: ameliorating

much misery, comforting much affliction, and exercising a most blessed influence alike on the vicious, the ignorant, and the suffering. I may add, that this beneficial influence extends to the nurses, who, aware of the check upon them, are far more careful and diligent in the execution of their duties.

I will now trespass no longer on your space, but remain, yours obediently,
S. P.

AN EPIQUEURE'S STEAK.

I GLORY in a steak. It is a microcosm of all that's good in the wide circle of edibilities. It delights the palate, invigorates the frame, makes life bearable, and—who can doubt it?—is a guarantee of longevity. See it broiling—what a sight to console a hungry stomach and gladden a heart capable of joyous tremblings! See the clear fire glowing with a new joy in the consciousness that it is doomed to make that bovine slice a diet fit for gods—ay, too good for gods, such as antiquity represents them, bolting thunder-balls and quaffing the steam of earthquakes! See the gridiron, with its geometric bars checking with black lines the ground-colour of incandescent charcoal; the steak itself nicely lined with oleaginous bark, frizzling for your good, and gradually changing from sanguinary red to palatable brown; then how the gravy runs from it in luscious streams, mingling with the creamy slice of butter, and acquiring a medicated perfume with the powdered produce of the Spice Islands! I never see the gridiron ready for a steak without thinking of those lines of Gerald Massey's, where he describes somebody who

"Trode the red-hot bars of fiery torture,
And went his rugged way with bleeding feet;"

which image must have been drawn from the spectacle of a steak undergoing martyrdom in behoof of appetised humanity. Then, when the broiling has commenced, Southey's lines on *Lodore* always come into my head as most appropriate to the convulsions of a steak, which always groans on the fire, as if a particle of the soul of the ox had been cut away with it:

"Shouting and frisking,
Turning and twisting
Around and around,
With endless rebound;
Grunting and fighting—
A sight to delight in—

Charming and telling the ear with its sound."

If a steak feeds one, it has its moral uses also; it suggests country, and calls to mind whole pages of Thomson, and Clare, and Carrington, and Tom Miller, and a hundred other hearty-brained men who have glorified the fat ox as the symbol of strength and endurance and patience, ay, and bodily cheer.

But how do you cook your steaks, eh? "There's the rub." Broil them? Good. Fry them? No, no. If you want to convert tender ox-flesh into leather, use the pan and a slow fire, and the experiment will be sure to succeed; but adopt my plan, and my head for it, you will eat nothing but steaks for the next three months.

Well then, fry it; but not in the vulgar way, with just a bit of fat to keep it simmering. A steak fried in the ordinary way ought to be carefully dished, trimmed up with parsley, and then—consigned to the dusthole. But I'll tell you how to fry a steak; and I do so tremblingly, for it is so grand, so original a recipe, that I think, if I were briske enough, I might get a million francs for it from the society of gourmands; and now, if I "let the delicious secret out," my prospective million will be lost for ever.

Have your steak cut in one large slice from the middle of the rump; thickness, *one inch*; superficial measurement, seventy square inches; weight, about one and a quarter pounds. See that it has a nice rim of yellowish bark—that

is, fat—along the outer side; and if it is not really handsome, call a poor woman and make it a present to her for her hungry ones, and liberally pay for another for yourself. Take it home yourself, and from that moment let no hand but your own touch it. Even obtrusive eyes should be "kept off;" for my plan of cooking it is not to be hackneyed and vulgarised. Hunt up all the pickle-jars, and take from each kind of pickle a little of the vinegar, say a teacupful each of onion, cauliflower, cabbage, and French-bean pickle,—home-made of course, and with plenty of spicy flavours. Lay the steak in a deep dish, and pour over it the whole of the vinegar. Let it lay an hour. Then take a clean frying-pan; throw in three ounces of butter, and pour into it some of the vinegar from the dish, sufficient just to stew the steak in the refreshing compound. Lay the steak in it; let it stew; turn it as judgment dictates; and if you manage it right as to the quantity of liquor, it will, when done, be found imbedded in a thickened gravy formed of its own juicy essences and the dried-up pickle. Put the steak into a *very hot* dish before the fire, and into the pan throw an ounce more butter, one chopped-up clove of garlic, and two tablespoonfuls of ketchup, and a spoonful of raw mustard. Fry up the gravy, butter, ketchup, &c. in the pan till it boils, and pour it over the steak; and presto! the whole house will be fragrant with a dish that, in the words of puffing traders, "needs only one trial," &c. Only *one trial*, ha, ha! EPIQUEURE.

THE STAFFORDSHIRE POTTERIES.

III.—THE MANUFACTURE OF ENCAUSTIC TILES.

OUR cursory inspection of the raw material being concluded, we proceeded to Minton's tile manufactory, where are made those beautiful encaustic tiles now so generally used as the flooring of churches and halls; in which, though chiefly prized as being ornamental and dry, they afford by their exquisite neatness and cleanness a contagious pattern of what should be the condition of the rest of the structure. Models of propriety as are the tiles, it would be unjust to withhold the same tribute from all Mr. Minton's workmen, who, though we were charged with no commission to purchase flooring for church or hall, took as much interest in showing and explaining all that we had any right to see and know, as if they, and not we, were the sole gainers by the examination. It being the dinner-hour, the men were not at work; but nevertheless, wherever we went, some skilled workman was at hand, who, with civility that would have graced a far higher rank, performed, for our special inspection, each his own share in the manufacture. We were taken first into a room where, affixed to a bench, was a screw-press, like that used in coining. A heap of pulverised dry clay lay beside. A portion of this was swept into a mould beneath the screw, and made level with a piece of wood; and the cover of the press being worked by the hand of the operator, the screw descended with a pressure (if we remember rightly) of a hundred and fifty hundredweight, and forced down the clay-dust into the mould; from which it was immediately afterwards raised, by a simple contrivance, no longer in the form of dust, but a solid earthenware tile, requiring only the action of fire to be fit for use. Some of the tiles were plain; others, into which various colours were to be *burnt in*, and which are therefore called *encaustic*, had a pattern sunk in them. These were passed on to other workmen, who poured into portions of the pattern variously-coloured compositions in a semi-fluid state: the groundwork of the whole, for instance, might be buff, with a blue pattern in the centre and a red pattern at the angles. The tiles thus filled are laid aside for a certain number of hours to dry, with the upper surface rough and unsightly. When the colours are sufficiently set, the upper surface is scraped with a smooth piece of iron, and the pattern reappears, defined with wonderful sharpness, and with all the colours distinct, but of a dull hue.

From this workshop we were taken to an empty kiln,—

a huge cone-shaped building open at the top, and having several openings below. In these the tiles are placed, packed in cases of rude fireproof earthenware, called saggars (safeguards), which are piled on each other until the oven is filled nearly to top of the dome. Fire is then applied externally at the openings described above, and the heat is conducted through flues round the inside and under the bottom of the oven. The fire is applied very gradually, and is continued for several days; when it is allowed to subside as gradually, and the saggars, with their contents, are withdrawn, the cracked or imperfect tiles destroyed, and the rest prepared for the market.

EMBOSSSED GLASS.

SIR,—Having perused with much pleasure the different useful articles you have introduced in your valuable publication under the head of "Home," and feeling that any little suggestion which can practically aid in promoting the improvement and comfort of that little world, dear to the hearts of all, may be received as an acceptable offering, I venture to intrude upon your space with a suggestion for the ornamentation of window-glass, simple in execution while it is beautiful in effect. Most persons know of the existence of what is termed embossed glass; an article expensive in its manufacture or preparation, and therefore out of the reach of many; while the attempts made to imitate it are in general meagre and uninteresting. The usual method of imitating ground-glass is by dabbing the surface with putty, or painting the glass with a thin coating of white paint.

This last is the mode employed by the writer for carrying out his process; and a few words are necessary to explain the proper manner of performing it, which requires some little practice. The glass being first well cleaned and free from grease, is then covered with a very thin and delicate coating of white, applied with a short-hair ordinary paint-brush, great care being required to have only sufficient colour on the tips of the hair to leave the smallest possible stain upon the glass. The paint so laid on must not be applied by a sweeping motion of the brush, but by dabbing the end of it gently and with equal pressure over the surface. To avoid the colour being too thick in the brush, it is best to rub most of it out on a piece of board previous to applying it to the glass; in fact, if this is done, the brush can be readily replenished by dabbing it on the board instead of dipping it every time into the paint.

If care and attention are paid to the manner of applying this coat of paint, a uniform shade is given, bearing the closest resemblance to ground-glass. While the paint is wet, take a sharp-pointed piece of wood; and where lines are required to be drawn, a rule should be employed to draw them with. The pointed stick will remove the wet paint, leaving the glass clear; but the stick must be carefully wiped previous to commencing a second line, as, if not, the mark required will be smeared; and it is difficult to clear it, unless drawn clear at the first instance. With the same piece of wood the ornament and patterns may be drawn; but in some instances it is well to provide several sticks of different widths at the end for drawing with (as shown by figs. 1, 2, 3), and these wider ones should be cut with flat ends like the edge of a chisel.

The advantage of these over the sharp point is, the removal of a broader surface of colour; and where great precision is required, a piece

less to attempt its restoration. The window to be ornamented should be painted on the inside; and if the paint is properly mixed, will, when dry, bear any amount of washing, provided no soap or alkali is employed, a sponge with some lukewarm water being all that is necessary. Of the durability of this kind of work the writer has had ample experience, having decorated the windows of his own studio in this manner, which remained unchanged for fifteen years. It is admirably adapted for windows near the street, or facing a disagreeable view; and is preferable to every other kind of blind, inasmuch as it admits the same amount of light as ground-glass, and may be made most elegant in appearance. It is well calculated for staircase-windows, hall-doors, and inner glass-doors; and has this great advantage, that if the occupant of the house have ingenuity, taste, and perseverance enough to try the experiment of doing it himself, the cost is insignificant, and the pleasure will be enhanced by its being the result of his own labour. The best vehicle for painting the glass with is very pure white-lead, or flake-white, such as is prepared by the artists' colourmen, and sold by them in collapsible tubes; and this should be mixed with very pale drying-oil diluted with pure spirits of turpentine.

The writer has employed with great success diluted copal varnish, which has the advantage of greater durability; but it requires considerable management, and dries so rapidly, that in the hands of an inexperienced person its use would be more difficult. Annexed are some designs for the decoration of the glass. That at the head of the page is suitable for a blind, when done on the three lower panes of a window; here is a design for a separate pane. Combinations of such designs will of course readily suggest themselves for a staircase, or any other window requiring to be covered entirely.

If difficulty in drawing the patterns on the glass at once, without something to guide the hand, be feared, take a piece of paper cut to the exact size of the pane of glass, and on that carefully draw the design to be executed; then with a fine needle or pin prick holes in all the lines of the pattern.

You must also prepare a little very finely-powdered dry colour (blue is the best), and tie it up in a fine piece of muslin; and having prepared your glass with the coat of paint, place the paper-pattern against it, holding it so as to avoid any pressure upon the glass, lest it should remove the surface; then gently dab with the powder-colour in the muslin over the lines of the pattern, and enough colour will pass through to make it sufficiently distinct for drawing with the point.

I am, &c.

ALPHA.

PAINTED BY A. SOLOMON.

CONTRAST.

PEASANTS OF THE ENGLISH SCHOOL: NO. IX.

"A CONTRAST."

By A. SOLOMON.

AT low-water, on the long low coast of Artois, with its dwarf earth-cliffs, a party of English visitors are attending upon a young invalid lady, who has been sketching from her wheel-chair. Two of the Boulonnais fishing-people,—in that costume which so astonishes fresh English tourists,—having encountered the party, are scrutinising them with a want of tact which is not very French. The commiserating kindness of the girl's regard is some sort of compensation for this: she is evidently making a comparison between her own robust figure and the delicate one of the invalid before her, not without admiration of the latter's surprising accomplishment of drawing; to the flattering result of which she is obviously aided by the whispered remarks of her companion, who is leaning upon the rolled-up shrimp-net. There is indeed a contrast between the bronzed healthiness of the one and the delicate pallor of the other—opposite results of such opposed courses of life. The lady's husband leans upon the chair paying his affectionate compliment to her skill, and is himself robust enough to be a fitter mate for the fish-girl than for the frail being upon whom he is attending. The observer will notice that the painter, with a sort of sarcasm, has given the palm, not only of healthiness and vigour, but of real beauty and nobleness of features, to the natural woman; her face is actually more refined and grander than that of the other, whose artificial life has not only weakened her health, but in some measure degraded the clear tone of her features. Her mother stands behind, with eyeglass in hand, entertaining some sort of indignation at the intruders, whose remarks are not of that order with which a genuine mamma could thoroughly sympathise. She has not escaped the contagion of French fashions in the dressing of her hair; which effect, however, the painter, with great judgment, has confined to herself, and not shown as extended to her daughters: for we presume that the girl reading is sister to the sketcher. She, too, shows the vitiating effect of modern dress, as well as of customs, by the rigid way in which she holds her most artificial of bodies; her face also, though prettier than that of her sister, has the same characteristics of the hothouse about it. The children are prettily grouped; though we might have wished that the head of the one who is playing with the crab had not been quite so large.

The picture itself requires brilliancy of colour and clearness of tone,—qualities which Solomon is somewhat deficient in. The regard which an artist has for his work is always shown by the way in which he pays attention to little things. In relation to this, we cannot but remark, that the handle of the wheel-chair could never be reached by the rider, being far too short. Observe how scant of spokes the wheels themselves are. The dog's action is ordinary and commonplace; and we should have liked the character of sex to have been more strongly marked in the farthest of the fishing-people. The motive of the picture is so unusually good for its class, that more serious faults might be pardoned in a less accomplished painter than A. Solomon.

THE FIRE-EATERS.

By BESSIE R. PARKES.

IT was a wet and windy night when we started off on our expedition to see the celebrated ceremony of fire-eating, which, with a few other amiable diversions of an equally salubrious nature, are practised by the tribe of the Ben Aissa at Algiers. We took P— with us as protector-in-chief, —large and burly enough to put to flight Arab garotters,—and toiled up the endless zigzags of the road leading, on the outside of the town-wall, to the Casbah, or ancient palace of the Deys, a huge pile now converted into barracks, an armoury, &c. Here lived Hussein, the last dey, for fifteen years, scarcely daring to put his head out of his windows for

fear of his janizaries; and various black memories connected with the fortress singularly increase its mysterious attraction upon a bleak stormy night. Ali Ben Ali, our handsome Moor, who sits to C— for a model, had promised to meet us at the Porte Neuve, and conduct us to the house where the fire-eaters were to assemble. So we picked our way with difficulty over the rough ground below the wall of the casbah, traversed by little streams swollen by the heavy showers of this unprecedented wet winter, and groped up to the arch of the Porte Neuve, which looks at least 300 years old, and fitted to conceal amidst its vast black recesses any number of Algerine pirates on shore for a holiday.

We three Europeans stood motionless in the shadow, calling out "Ali Ben Ali!" till the old stones rang; but no answer came, he was not there. We then went through into the street. A street in the old town of Algiers means a steep, narrow, winding passage, often breaking off into steps, often running under the projecting upper stories of the massive white houses in a tortuous tunnel. On a windy night, when the moaning breezes rush in and out of these so-called streets, crying like the pitiful plaining voices of all the poor prisoners enchained or put to death in Algiers, the place is really awful; and the lamps, suspended by chains, in the old French fashion, at fifty and a hundred feet distance from each other, do but add to the gloom; for as they swing in the wind they reveal the blackness of the holes and archways, and the huge shadows of the houses swing one across the other like some terrific natural phenomenon, the precursor of an earthquake. "Ali Ben Ali!" we shouted in vain; but the cry brought out a Frenchwoman with a candle in her hand, at the head of a flight of steps, who eyed us suspiciously when we asked her if she could tell us in what house the ceremony of the *Idrh* (pronounced *adra*) was to be held. "No," quoth she; "but Arabs live in all the houses round about here;" which information certainly did not add to our cheerful sense of civilised protection.

Up and down a few of the near streets we wandered, afraid of going far lest we should lose our way and find no exit till morning,—a misery almost as possible in Old Algiers as it would be in the catacombs; and doubly tantalised by fancying every now and then that we heard fitful strains of wild native music, or wilder drumming, borne upon the air, but in what exact direction we could not tell. At length I perceived a white figure stealing up one of the dark tunnels, at the far end of which faintly glimmered a lamp; and closing into phalanx with my two companions, I ejaculated, "*Idrh, idrh?*" "Oui, oui," replied the white ghost; and signing us to follow, he preceded us down the aforesaid tunnel to the low arched door, which led, so far as any external indication could show us, into the heart of the solid rock; for it is the great peculiarity of the Moorish houses that they are windowless on the outside (an occasional loophole of the smallest dimensions excepted), being lighted from the interior court which is to be found in every mansion. Ushered, not without internal tremblings as to the *bona fide* mission of our guide, through the little archway, we found ourselves in a small passage leading into a square court open to the stars, which had by this time begun to show their cheerful faces. Herein were at least thirty Arabs, seated cross-legged, or standing about the court, the arcade surrounding it, or the rooms to the side, of which the thick carved folding-doors stood open. I noticed that whenever they crossed the court they pulled off their slippers and walked barefoot, giving one the idea that for the nonce its marble pavement was consecrated.

We were accommodated with a bench under the arcade; and as it is never really cold at Algiers out of the wind,—which is an abominable breeze blowing from the Atlas mountains to the south,—I was not at all uncomfortable, and began to watch the strange scene before me, illuminated by one tall candle, which brought out the light and shadow of the court and its eight pillars into the strongest relief, tinting the wild swarthy faces of a group squatting in its immediate neighbourhood, one of whom was a negro, pre-

paring his huge tambour for the beginning of operations. They took uncommonly little notice of our presence, and talked and laughed and passed in and out for about half-an-hour; while those who were to perform on the great round tambours dried them over a brazier full of charcoal, that they might give out their fullest tone. Our faithless Ali Ben Ali was there,—the only Moor among them,—pattering about the court with his naked feet; also the sheik of the tribe,—a venerable old figure, exactly like Michael Angelo's Jeremiah. Among the Arabs, some were very handsome, and had faces full of spirit and vivacity; others had high foreheads and hooked noses, which in England would have denoted much intellectual endowment; several more were very young—boys of fifteen or sixteen.

When they were fully assembled, and all their preparations complete, the drummers seated themselves under the arcade to our right, backed by a lighted room containing Arab spectators, and with the charcoal-brazier in front of them, struck up the devil's own tattoo; if, as I have always understood, there be such a melody upon the musical catalogue of the world. The final burst of thunder as each in succession took up his instrument really partook of the sublime; and our friend the negro worked away with indefatigable energy, as if he felt himself conductor of the band to his Infernal Majesty. When this had gone on at least twenty minutes, so that the hubbub, at first startling to our surprised senses, had in some sort softened by habit into a background for any thing which might supervene, we were thrilled by hearing a loud human yelp, like no sound by civilised ears classified, and by seeing a youth, apparently in a condition of demoniacal possession, leap out from among the group under the arcade, and take up his position in the court immediately in front of the drummers, who set to work with redoubled energy at this proof of the success of their musical endeavours; while the youth began to roll his head violently, moving it from the upper vertebrae of the back, so that his neck seemed as a thick cord by which to swing the seat of his soul. Such a loose and rapid motion, "backwards and forwards and round and round," I did not think a human head, attached to its trunk, capable of performing. It made me sick and dizzy to watch him; a sensation which did not lessen when the motion gradually extended to his whole body, which swayed as if made of the warmest gutta-percha, or as if every joint were separately tied on with loose ribbons. At this astounding exercise he actually continued a full quarter of an hour, moving in time to the music, and increasing his velocity when it increased in speed. To see his features was as impossible as to discern the spokes of a carriage-wheel in rapid motion. He suddenly stopped, and began raging about the court, shrieking out in Arabic that he wanted "Fire, fire!" This strange demand was no sooner made than another Arab ran forward, bringing him a red-hot fire-shovel, glaring and sparkling with heat. The gentleman of the contortions took it by the handle; and then eyeing it with extreme satisfaction, deliberately licked the fiery shovel two or three times on its broad flat side; he then struck it heavily with the palm of his hand, howling vehemently at the same time; after which he gave it back to the attendant, and went raging about in quest of more food. His desire was gratified; for the magnificent old bearded sheik, seated on a bench under the arcade opposite to our own, held out to him a huge leaf of the thorny cactus, the size and shape of a large battle-dore, at least half-an-inch thick, and covered with strong prickly spines. Our friend crouched down before the sheik, and stretching out his mouth like a donkey intent upon a thistle, grasped with his teeth huge mouthfuls of this delectable food, howling all the time, not with pain or disgust, but with a queer sort of ceremonial satisfaction; the sheik meanwhile wearing a grim smile at the heroic piety of his follower. After which the latter got up, and walked pensively about the court with downcast eyes, while the drumming continued with indefatigable energy. Whether it had gone on all the time, I am really unable to say.

In a continuous roar, noise becomes at last no noise at all; the fatigued ear accustoms itself to the new medium,* and the whole attention is fixed on some more exciting point. (N.B. It is on this principle, applied to sight, that I understand the huge new clock at Westminster is to be faced with figures traced in points, as being visible at a greater distance than continuous lines.) Presently another Arab started up, and the same ceremonies were gone through, with this difference, that the latter had long hair, which was unbound for him as soon as the fit came on, and flew wildly about, greatly adding to the singularity of his appearance. The first Arab soon joined him; and linking their arms together, they rolled in unison, breaking off ever and anon into crazy dancing, backwards and forwards—a sort of desert polka. Two red-hot shovels were then called for, licked, and struck; then kneeling, with their arms across each other's shoulders, they placed themselves before the sheik, and together munched the cactus-leaf; after which they were joined by a third, who introduced a new element in the shape of a long green snake with a forked tongue, which he placed upon the floor, and played with, in dangerous proximity to our toes, which we tucked up instantly on to our bench. Then wreathing it round his neck and arms, he joined his companions in dancing vehemently as before; and as he happened to be next me, the wild motion occasionally brought the head of the reptile very near; he shook his forked tongue at me in a way that, as I was neither a snake-charmer nor a good Mahometan, was, to say the least of it, highly suggestive and unpleasant. Presently, however, they seemed to have had enough of it, or might have feared that snaky's temper was getting irritated and his digestion upset by the unwonted motion; for they unwound him, and put him up to bed in a wooden box with a sliding lid, where I have not the least doubt that he lay and ruminated upon whether or no the fair-skinned Frank and dog of a Christian would not have proved very good to eat. In this interlude we had three cups of very good coffee handed to us; of which refreshment we were quietly partaking, when we were thrilled with horror at seeing the second of the three Arabs transfix himself with a long iron skewer, passed through his cheek and out at his mouth. After which he very quietly worked a second through the other cheek, so that they crossed between his lips and stuck out like whiskers; then catching up a quantity of loose skin and flesh in front of his own throat, he stuck that also right through with a third skewer, and raged about the court howling; while a tambour turned upside down was handed to all present for a collection of coppers. By this time we had had enough of it; so dropping some money into the tambour, we made our salaam to the sheik, and sallied forth again into the quiet streets. It was now about ten o'clock; and groping our way again out of the Porte Neuve, we reached home without any misadventure.

We will add to this veritable recital of what we saw with our own eyes in 1857 a few paragraphs from a French book of travels.

Charles Marcolte de Luivieres says, in his *Deux Ans en Afrique*, p. 43: "One evening, having filled our pockets with cigars, we went to see the *Hdrh* (pronounce it *adra*), or fire-eaters. These are a Mahometan sect, who unite at certain seasons of the year to celebrate, after their fashion, a fête which seems to derive a remote origin from Christianity, since these individuals also call themselves *Beni Aissa*, which means to say, 'sons of Jesus.' It is said, that Aissa, being in the desert with his disciples, and these complaining and murmuring at having nothing to eat, he said to them, 'Why do you murmur? Have faith, and you will have what you desire also. Eat stones, insects, even fire; and if you have faith, this fire, these insects, these stones, will change into nourishment for your need.' It is this miracle which the *Beni Aissa* celebrate at the present day."

I have only to add the result of a few questions which I asked of Dr. Bodichon, a medical man long resident at Algiers, concerning the moral and physical effects of the

Hidrh. He told me that the sect is strictly Mahometan; the *Aissa* mentioned by De Luivieres not being intended for our Saviour, but for a prophet of the desert, and a true follower of Mahomet. That the state of violent excitement into which they are worked by the music and their own fanaticism prevents their suffering at the time from the effects of what they do; of which, however, the fire-eating part is but a trick, as it is easy to lick red-hot iron by covering the tongue with saliva in a sufficiently quick and dexterous manner; but that they are constantly ill a week after from the effects of their other experiments; and that the sheik will not permit any who are not robust in health to go through them, and turns back the delicate aspirants by putting his hand upon their heads when they leap out of the circle.

PROGRESS OF SCIENCE.

AMONGST the most curious, and certainly the most useful, facts of scientific information we have to lay before our readers this month is, the announcement recently communicated by Dr. Stenhouse, of St. Bartholomew's Hospital, that a cheap substitute has been found for animal charcoal; a substance so extensively used as a decoloriser, or bleaching agent, not only in the laboratory, but in various branches of manufacture. Granulated or rough animal charcoal, employed in the manufacture of sugar, of tartaric acid, and several other branches of technical chemistry, scarcely contains 10 per cent of real charcoal, and nevertheless costs some twelve or fourteen pounds per ton. The cost of pure animal charcoal, the substance employed in chemical laboratories, is at least fifteen times greater. The desideratum of supplying an efficient substitute has therefore long been felt. The general principle devised by Dr. Stenhouse is this: he prepares sulphate of alumina by digesting pipe-clay with oil of vitriol, and either evaporates it to dryness and mixes the result with finely-powdered vegetable charcoal, or mingles the fluid with the charcoal. In either case the mixture is burned for the purpose of driving off sulphuric acid, and leaving a mixture of charcoal with alumina. Dr. Stenhouse finds that $7\frac{1}{2}$ per cent of alumina affords the best result. Charcoal thus prepared is fully equal to bone-black for most purposes to which the latter is applied in the arts. We are curious to be informed on one point which Dr. Stenhouse does not touch upon. Can he render his artificial decolorising charcoal, in the granular form, capable of being used as a filtering mass, as charcoal is employed in the sugar manufacture? It may be well here to call attention to the fact, that though animal charcoal has long been considered the decolorising body *par excellence*, nevertheless vegetable charcoal was the first form of carbon employed for that purpose. The property was first discovered by Lowitz towards the latter part of the last century. Not until 1811 was it that the superior decolorising power of vegetable charcoal was discovered by Professor Figuier, of Montpellier. The rationale of the decolorising property remained unknown until 1822, when MM. Bussy Payen and Desfossez proved that the origin of the charcoal was immaterial, and that its decolorising effect was purely referable to the degree of its comminution. The efficacy of the new treatment devised by Dr. Stenhouse, therefore, depends on the alumina effecting a separation between the particles of charcoal employed. Dr. Stenhouse arrives at the conclusion that the artificial substance may be advantageously employed for the decolorising of any liquid which does not contain sulphuric acid; which latter would of course dissolve out a portion of alumina.

The preceding discovery, involving the employment of alumina, is suggestive of aluminium, that curious metal which is still under investigation by M. St. Clair Deville (the philosopher who first brought it to light *en masse*) and many others. M. Martin is conspicuous amongst the latter. He has recently sent in a memoir on aluminium to the Paris Academy of Sciences, making known the leading chemical

properties of that metal. When strongly heated, aluminium, it would appear, oxidises superficially. The crust of oxide does not penetrate to any great depth; but it is sufficient to remove aluminium from the companionship of noble metals, amongst which chemists were inclined, somewhat prematurely, as it would seem, to register it. Notwithstanding that aluminium does not support its original pretensions, it is still a very useful metal. Our readers will therefore learn with pleasure that various facilities of manufacturing it have been introduced, and that its price may be expected to fall considerably.

The Belgian agriculturists are on the *qui vive* respecting the discovery of enormous deposits of mineral phosphate of lime in the Ardennes; a substance which they somewhat prematurely, we fear, imagine will render them independent of bone superphosphate, if not of guano. We fear they are to be disappointed in this matter. In England there are also deposits of mineral phosphate of lime; but our attempts to employ the substance as a manure have been almost unavailing. It does not seem capable of assimilation by vegetables.

A very interesting paper has been read before the members of the Society of Arts by Mr. John Anderson, on the application of machinery in the war department. The author of the memoir, although shackled by official reticence, presents a suggestive glance at the mysteries of destruction enacted in our large military arsenal. Some time ago, Mr. Hale, the discoverer of the war-rocket without a stick, adopted the force of hydrostatic pressure for charging his rockets, instead of the process of monkey-ramming previously followed. It appears that hydrostatic pressure is now to be exclusively applied, not only in the construction of his own rockets, but those on the principle of Congreve as well. The operation of loam-casting for brass-cannon, as universally followed on the Continent, and until lately by ourselves, is now discontinued at Woolwich, and sand-casting adopted instead. When the Minié principle was first adopted in England, fears were entertained that the complexity of the bullet would interfere with the process of rapid manufacture. These fears are dissipated, as it now would seem, the Minié-bullet machinery now in operation at Woolwich being capable of turning out no less than 500 bullets per minute, or more than a quarter of a million daily. The manufacture of firearms and firearm-projectiles is now assuming a very interesting phase. On the one hand, attempts are being made to increase the calibre of cannon to a size unprecedentedly large; whilst on the other, the range of ordinary firearms is being extended to a marvellous distance by mere alteration of the form of the projectile. It would appear that non-military people expect too much from increase of the calibre of firearms, and underrate the value of increasing the range of cannon and small arms now in existence by modifying the construction of projectiles. Even the monster wrought-iron gun, of which the British Government has recently become possessed, lends but feeble support to the argument in favour of monster cannon. It is not considered safe to charge that piece of ordnance with a quantity of powder greater than one-sixth the weight of the ball; whereas the full charge of a long thirty-two-pounder is one-third the weight of its projectile. A very interesting report has recently been made to the American Government by Mr. Daniel Treadwell, on the practicability of constructing cannon of great calibre, capable of enduring long-continued use under full charges. This gentleman begins by assuming the capacity of bronze to withstand pressure to be equivalent to 30,000lbs on the square inch, and of the best sorts of cast iron, at 20,000lbs. He then goes on to express his belief that, so far as those materials are concerned, he conceives the limits of calibre to be nearly attained. Wrought-iron he looks upon as altogether an exceptional material. Not only is it too expensive for general use, but it is difficult to manufacture, difficult to be welded in large masses without flaws, and injuriously soft. Mr. Treadwell points to the fact well known to mechanics, and demonstrable

mathematically, that beyond a certain thickness no considerable amount of strength is imparted by increasing the weight of a cast cannon; and he suggests the following most ingenious plan for manufacturing ordnance of gigantic calibre capable of withstanding full charges of powder. Mr. Treadwell considers the softness of wrought-iron to be a fatal objection to the general use of that material for ordnance, even though the present difficulties of manufacture were removed. He proposes that the internal cannon, as we may denominate it, should be made of cast-iron, and reinforced externally by a system of wrought-iron rings, in the following manner. Fancy the outside of the cast-iron cylinder to be accurately turned, and indented with a screw-thread, upon which a series of external wrought-iron rings or nuts are to be screwed, and these last reinforced by similar screw-rings, or cylinders, and the reinforcement continued until the thickness necessary to withstand the explosion of a full charge of powder is attained; then we shall have a part of the idea of the American engineer. The main point of his proposition, however, is this: *each layer of wrought-iron cylinders is to be screwed on whilst expanded by heat*, so that their ultimate agency will be a continued and enormous pressure on the central cast-iron cylinder. In this way, it is assumed that ordnance of mixed composition can be made, possessing all the hardness of cast-iron where hardness is necessary (*i. e.* along the bore) and all the restraining toughness of wrought-iron. Whilst the Americans and our own home-authorities are endeavouring to increase the resources of warfare in this direction, Colonel Jacob is reducing to practice the idea long since mooted by Captain Norton, of making an efficient rifle-shell. Artillery and rifle practice are now being so rapidly pressed forward in parallel and emulative channels of development, that each by turn threatens to supplant the other in many applications for which each has been exclusively applied.

The daily increasing sunlight of the new year has seemed to exercise a sympathetic power on daguerreotypists, calotypists, and other heliographic philosophers; much having been recently accomplished in the way of improving the heliographic art. In the beginning of last month (January), Mr. Hardwick communicated to the Photographic Society some important remarks on impurities contained in commercial nitrate of silver, unfitting it for photographic purposes; also on some changes to which nitrate-baths are subject, and the best manner of dealing with them. These discoveries were made whilst endeavouring to improve the manufacture of collodion; in the course of which certain anomalous results were obtained when operating with commercial nitrate of silver. Mr. Heinnah, in his last edition of the collodion process, called attention to these anomalies, but was unable to explain them. He however arrived at the conclusion that the pictorial defects admitted of remedy by the use of ammonia and acetic acid. Mr. Hardwick attributes the peculiarities in question to the occasional existence of organic impurities in crystallised nitrate of silver. Impurities of this kind are evidently capable of being destroyed by fusion; but fused nitrate of silver is attended with its own objections. Firstly, it is liable to adulteration; secondly, if the fusing temperature be raised too high, or if it be too prolonged, a portion of the nitrate is decomposed, and lower nitrogen-acids of silver result. It is better, therefore, to recrystallise the fused nitrate carefully. Collaterally, Mr. Hardwick was led to investigate whether the gradual deterioration of nitrate-baths was not attributable to their becoming contaminated with organic matter, and he arrived at the affirmative conclusion. Most operators by the collodion process have noticed that nitrate-baths, after having remained a variable time in use, yield very bad results. Mr. Hardwick was led to develop collodion pictures with baths which had been purposely contaminated with known kinds of organic matter, in known quantities. The results were highly interesting. In the case of one organic body, he says, the plates immediately became covered with transparent markings, although nothing of the kind was noticed when

using a portion of the same bath purposely kept free from the organic addition. In a second instance, there was a peculiar iridescence of the film. In a third case, an intensified transparency of the developed image, with a dark solarisation of the high lights when looked down upon. In a fourth, great intensity of the blacks, with a loss of sensitiveness, and no gradation of tone. In a fifth, universal fogging. Some operators have suggested the filtration of nitrate-baths through kaolin when they have become thus inefficient. The process has not proved very successful. Far better, according to Mr. Hardwick, is it to remove the bath altogether, and extract the silver which it contains. Perhaps we may here do a service to the non-chemical heliographer in stating that silver can be extracted readily from nitrate by adding common salt until no more white precipitate (chloride of silver) is thrown down, washing the chloride well, adding a little hydrochloric acid, and agitating the mixture of acidulated chloride with some fragments of zinc. The reduced and pulverulent silver should next be thoroughly washed, and fused with a little nitre.

Mr. Sims has also communicated to the Photographic Society some remarks on the engraving of photographic delineations by hydrofluoric acid. Great attention must be given to the preparation of the collodion employed in this process. It must be thin, having as much alcohol in it as it will bear; ether only being added when it becomes too gelatinous. It must be iodised by solution of oxide of silver dissolved in excess of iodide of potassium. Much attention must be given to the selection of a proper kind of glass. Not only must it be free from specks and striae, but regard must be had to its chemical composition. After many trials, it would seem that British plate-glass is preferable to all other varieties; and each plate of glass should be cleansed previously to use with sulphuric acid and water. The bath should be made of thirty grains of nitrate of silver dissolved in six ounces of water. Great care must be taken in the developing process, the camera being timed to a nicety. Sulphate of iron is used for developing the picture, and hydrosulphate of soda as the fixing material. Every particle of iodide of silver must be scrupulously removed by abundance of ammonia and water. Finally, the plate must be dried with equal care to that necessary in conducting the daguerreotype process.

Mr. Babbage suggests whether photographers would not derive advantage from the investigation of the laws which regulate the darkness of coloured objects, especially of unchangeable colours, as those of porcelain; and M. Despretz presents a communication to the French Academy of Sciences on the preparation of a dry collodion which will receive images after many days, weeks, or even months.

In physical science, M. de Senarmont has been performing some curious experiments to determine the laws of refrangibility of light when transmitted through water. In employing a new differential refractor, which he substituted for that of Arago, and which has the great advantage of separating the rays much further from each other than can be accomplished by that instrument, he caused two rays of light—one transmitted through air, the other through water—to interfere mutually. The water, during the experiment, was progressively cooled until it fell below the freezing-point; and the experimenter, by noticing the phases of interference, determined that the refrangibility of the water went on increasing in direct ratio with the cold applied; that there was no correlation of maximum refraction with maximum density. At the moment of solidification, the refractive power suddenly decreased; presenting a phenomenon requiring further study to determine its law.

M. Andres Pöcy, already so well known as an astronomer and meteorologist, has been following up his previous investigations relative to shooting-stars and luminous meteors. According to him, there were observed in England, from 1841 to 1855, no less than 1065 of these meteoric phenomena. Amongst them the colour of 326 was pure blue; of 46 bluish; of 11 pale blue; 2 were blue inclining to red;

and 1 greenish-blue; giving a total of 886 meteors in which blue predominated. The number of yellow meteors was 151; of yellowish, 18; total, 169. The red meteors were 129; reddish, 48; total, 177. It consequently appears that the number of blue meteors is more than double the number of those coloured yellow or red. White or whitish meteors are represented by 195 cases; orange-coloured, by 111. Meteors, the colours of which are composed of tints belonging to the lower part of the spectrum between green and orange, are 465; whilst those comprehended in the limits between green and violet are only 401. M. Poey, we are glad to find, is appointed to the office of director of the observatory about to be established at Cuba.

Amongst the novelties in entomological science of great importance, are the facts contained in a paper sent by M. Guérin Menneville to the Paris Academy of Sciences, on the causes which have led to a deterioration of the silkworm in France contemporaneously with the outbreak of the disease of potatoes and vines. French silkworms began to languish, and the deterioration has continued to progress. M. Menneville attributes the malady to the same atmospheric conditions—whatever these may be—from which potatoes and vines have suffered so much. He believes that a succession of mild winters furnish the immediate explanation of the disease, by causing the eggs to assume a premature vitality; and recommends that not only should the eggs be those of carefully-selected worms, but that they should be sent out of France into some much colder country during the winter, and that a fresh race of worms should be imported.

Amongst foreign inventions having a domestic interest, we must not forget to echo the praises of our French neighbours in favour of the ventilating smokeless open fireplace of M. Foret Chambor. Without diagrams and a long description, we could not convey an accurate idea of this fireplace. Perhaps we may find space for a fuller description hereafter.

In physiological and medical science there is a great deal of new information; some of it good, we hope; but still more of it extraordinary, we fear, without being good. In the latter category we include a new project, gravely set forth in the *Gazette Médicale* by M. Papillaud, on the prevention of yellow fever by inoculation. It appears from the memoir of M. Papillaud, that some considerable time ago Dr. Guillaume de Humboldt testified to the existence, in Central America, of a little reptile of undetermined species, which frequently bites people in the feet. The bite is exceedingly dangerous; but persons bitten are in future protected against the infection of yellow fever. The undiluted poison of the little reptile being too dangerous to be used for artificial inoculation, the writer of the memoir hits upon the following ingenious expedient. He provokes one of the reptiles to bite a piece of liver, which serves as a receptacle for the poison; and with the lancet dipped in the liver he inoculates his patients. The virus takes effect in twelve hours, and the patient is well in about six days, after which he is as little liable to attack from yellow fever as persons who have been vaccinated from small-pox. The greater number of persons thus inoculated are not attacked; the majority of those who are attacked, experience the disease in a mild form; and finally, of the small portion who are attacked, and suffer from the disease in its most virulent character, about one-fourth of the number will die. Out of 2477 inoculations, only 288, or 10 per cent, have had the yellow fever at all; 68, or 2 per cent, have died; 2247, or 90 per cent, have been preserved. No less than 16 per cent on the total population of fever-districts are said to be capable of preservation by this treatment! Dr. Ozanan is still prosecuting his experiments, physical, physiological, and therapeutic, on carbonic oxide gas—more poisonous, as it now seems, than carbonic acid. MM. Joret and Homelle announce the discovery of a substitute for Quina in "Apiol," extracted from the *Aptium petroselinum*; and M. Chapelle is very sanguine concerning the efficacy of acetone or pyro-acetic spirit as a cure for Asiatic cholera.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

THE search into futurity is perhaps permitted to mankind as an antidote to their innate vain-glory. Every mortal soul joins the wild hunt as it sweeps by him; but few bring any trophies home, or come back with any thing to boast of in their memories. Man stands, indeed, "looking before and after;" but his forward look is into the middle of a mist; and though he can no more help assuring himself that he sees something, and knows what he sees, than he can keep from dreaming in the night, yet on the whole he is sure to be wrong—to find it out before he dies, or to leave the discovery as a safe legacy to his children. Let the subject of his prophecy be a man or a revolution, a law or an institute, the fact never falls out as he foresees it; the events of this world, like those of a better, come not with observation.

This is only true, however, concerning the forms of things. Their spirit and essence, like shadows in a cloud, may be seen in the dim future, while it reveals nothing of the shapes that are to appear hereafter. Here the patriot may take comfort, and the philanthropist refresh his zeal. The definite ends for which either of them is striving will rarely be attained; but no good end was ever striven for without a sure result of some kind or other, unlike in form, perhaps, but the same in spirit, with the hope and objects of its originator.

Mechanics' Institutes have not accomplished what was intended by their founders; their very name has ceased in most cases to be an appropriate and descriptive one. They are not specially or even chiefly associations of mechanics, but have drawn together a class something higher in the social scale; and if they should tell hereafter more expressly upon the labouring population, it will have to be through a different method from that originally proposed. But we are not, therefore, to reckon them among the failures of the day. The shaft appears to have been not quite deep enough to get at the lowest strata of society, but it has gone down to veins well worth the working. The system scarcely reaches what we call the mass of the people; but it has been taken up by a section of them who, in point of fact, had more need of it, inasmuch as they were better able to use it. Even thus they are not benefited alone. To drain the stagnant waters of ignorance from a single layer of human life, is imperceptibly to begin the drainage of all that lies below it. One of the chief effects of Mechanics' Institutes has been to wind up a little tighter the common springs of intellectual ambition; and a swarm of reading-rooms, libraries, and other educational helps, among even the most ignorant classes, bear witness to the assured success with which good seed may be cast upon the ground.

The founder of the first Mechanics' Institution was a Yorkshireman. He made his first experiment in London; but the plan seems to have done best in his own native air. Perhaps these Yorkshire folk have an institutional faculty among the many things good and whimsical that make up their individualism. At any rate, the great populous towns of the West Riding have a good deal to show in this way; and they have just given a culminating proof of what can be desired and achieved among them. Rather more than thirty years ago, a few working-men in the town of Halifax asked, in a way at once manly and respectful, for the assistance of their richer neighbours in founding a Mechanics' Institution. The help was given, and the institution formed, on a scale whose insignificance in the eyes of modern citizens is the best evidence of the prodigious progress that has been made. In three years the members occupied a room at the extravagant rental of four pounds sterling. In another couple of years, their numbers having swelled to a total of

eighty souls, it became necessary to take larger premises. This was in 1830. There is an engraving on the opposite page of the New Halifax Mechanics' Institution, opened on the 14th January 1857, in the presence of more than a thousand persons, who were able to stow themselves in the principal room. Besides the Great Hall, the building contains a saloon, a library, a drawing-room, and other apartments for class-instruction. It has cost eight thousand pounds. Less than half of this amount had been actually subscribed at the moment of opening; but before the enthusiastic company separated, the greater part of the debt was cleared away.

Efforts of this kind are worth much more than the figures that represent them, or the local good that is done. It remains for the men of Halifax to make the good example perfect by the future working of their noble institution. They have got a building equal to all their wants, and they have got it rent-free. The spirit of those who raised the money to build it with is an ample assurance that whatever the wealthy men of the place can do to secure success will be done abundantly.

The Halifax Mechanics' Institute ought to become a true people's college, and a model for the nation.

It must be remembered that the object in view is an educational one; that the people to be educated are not those who can give up their whole time for a certain number of years to the process, but chiefly young men and women who must work for their living in the day-time, and can only study in the evening. This of course is a difficulty; but the clerks, the shopmen, and the artisans of our time should be reminded, that after the age of childhood most men are in nearly the same position as themselves. The whole middle class of England are engaged all day in business of one kind or other. If they pursue intellectual studies, if they keep pace with the progress of science and the growth of literature, the work is necessarily done in the evening; and considering the difference in the social demands upon their time, in the amount of mental anxiety and the nature of their daily occupation, it is probable that most clerks have, if they please, at least as much leisure as their masters for the purposes of self-education. The chief advantage of the upper classes over those below them is in the nature of their earlier education; and even here it is not so much in the actual knowledge acquired in childhood, as in the habit of seeking and acquiring it, and the greater mental agility which is thus produced. An institution like the one established at Halifax offers to all who want it as much facility for evening-study as can be enjoyed by most men. What the people of Halifax have to do to make it as widely useful as possible is, by every means in their power to promote that early training of children in the rudiments of knowledge, and that habit of interest in its acquisition, which are the only essential preparation for the future work to be done in their great building.

It is mentioned in the Halifax Report, that while the number of members approaches 800, there are not quite 4000 books in the library of the institution; and of these only forty-three were added during the past year. This state of things is one great defect, often one fatal error, in Mechanics' Institutes generally. Their office can never properly be fulfilled without an ample supply of the best literature in the world. The difficulty is solely one of funds. From the experience of other libraries, we believe that such a supply as the present times require cannot be furnished at a less cost than ten shillings per head per annum, expended entirely in the purchase of books. The tenth part of this amount is perhaps nearer what is usually available. There is nothing in which the wealthy could do more important service to the cause of education than in contributing to the additional funds required for this great service. Nothing keeps men back intellectually and socially so much as a want of contact with the active thought of their own time. That thought is now embodied in books; and full access to the current literature of the day is the only door to it. The experiment of throwing it open to the poorer

classes as completely as to the rich has never yet been tried; and we feel satisfied that no time should be lost in making the experiment. Of course some selection must be made; but, with one of the speakers at Halifax, we most devoutly protest against the old-fashioned and thoroughly mistaken notion, that works of imagination are the least useful things that a poor man can read. Mere trash is good for nobody; but works of real excellence in fiction, poetry, and miscellaneous literature, should be regarded as essential parts of a poor man's education. They do for him exactly what nothing else has the opportunity of doing. They influence his taste through his feelings, and refine them both. The great gulf between the rich and poor is not nearly so much a gulf of learning, or of money, as of taste and feeling; and the true way to bridge it over is by elevating and refining these. We are not advocating excess either way; but the excess has all been one way hitherto, and the tide ought to be turned.

With such a building as they have just inaugurated, there seems no reason why the Halifax Mechanics' Institute should not sweep the whole circle of such human wants as can be supplied by social union. We should like to see a thoroughly well-considered plan of periodical recreation started in the new hall; a plan based upon none of those which have hitherto proved so unsuccessful in most places, but struck out afresh from the evident wants and wishes of the class who will meet together within the same walls. As membership is open to both sexes, there is no reason why those branches of domestic knowledge most needed by women should not be made a special part of their educational course. The instruction they receive at home is often of the worst kind, and entails a life-long disadvantage. Many other things suggest themselves; but good wishes are sometimes better than good advice. Those who have engaged so heartily in so excellent a work are doubtless busy enough in turning it to the best account; and our hope is, that the crown of future success may already be only a little way above their heads.

MY DIAMOND STUDS.

BY THE AUTHOR OF "MY BROTHER'S WIFE," "THE LADDER OF LIFE," &c.

"Diamonds of a most praised water."—PERICLES.

"Sir," said the stranger, "those studs are mine."

We were alone together, face to face. The train was flying on at the rate of thirty miles an hour. It was already verging towards evening, and we were about halfway between Liege and Brussels.

I shrank back into the farthest corner of my little compartment and stared at him. His hair was dark, and hung in long loose locks; his eyes were wild and brilliant; and he wore an ample cloak with a high fur-collar. I thought the man must be mad, and I turned cold all over.

"Did you speak, sir?" I found courage to say.

"I spoke, sir. You wear a set of studs—diamonds set in coloured gold—very graceful design—stones of an excellent water; but—they are not yours."

"Not mine, sir!"

The stranger nodded.

I had purchased them only a week before. They captivated me from the window of a jeweller's shop in Berlin; and they cost me—no, I dare not say what they cost me, for fear my wife should chauce to see this article.

I took out my pocket-book, and handed the bill to the stranger.

"Sir," I said, "be pleased to read this little paper, and convince yourself that the studs are mine, and mine only."

He just glanced it over, and returned it to me.

"I see," he said, shrugging his shoulders, "that they

THE NEW MECHANICS' INSTITUTION AT HALIFAX.

appear to be yours by right of purchase; but nevertheless they belong to me by right of inheritance. I can make this clear to you very easily, if you choose to hear my story; and no doubt we shall presently contrive some plan by which to settle the question of ownership."

My heart sank within me at the cool certainty of his voice and countenance.

"Shall I go on?" he asked, lighting a cigar.

"O, by all means," I replied. "I shall be delighted."

He smiled ominously to himself; then sighed and shook his head; passed his fingers twice or thrice through his elfin locks; crossed his feet deliberately on the opposite cushions; and fixing his eyes full upon me, thus began:

"Though a native of Russia and born in St. Petersburg, I am of Hindoo descent. My grandfather belonged to the province of Hyderabad; but, travelling thence while yet a young man, established himself at Balaghaut, and became a worker in the great diamond-mines commonly known as the mines of Golconda. A grave, silent, unsociable man was my grandfather, and little beloved by his fellow-miners. The superintendent, however, placed great confidence in him; and by and by, being promoted to the situation of overseer, he married. The only offspring of this union was Adjai Ghosal, my father. The Hindoos, as you must be aware, place a high value upon learning; and even the poorest evince such a respect for education as would do honour to the working-classes of a more enlightened community. Of this feeling no man in his position partook more largely than my grandfather. Uninstructed himself, he was ardently desirous that his son should benefit by advantages which, generally speaking, were accessible only to the wealthy; and in pursuance of this ambition, sent Adjai Ghosal at the age of eleven years to a large native academy at Benares. People wondered at first, and asked each other what the thing meant, and where the overseer found means to do it. 'Have you found a lac of rupees lately?' inquired one. 'Do you intend to make a diamond-

merchant of the little Adjai?' asked another. But my grandfather only held his peace; and after a time the marvel died away, and was forgotten. And thus eleven more years passed on; and my father, at the age of twenty-two, was summoned home to Balaghaut to receive the last benediction of his expiring parent. He found the old man stretched upon a mat, and almost speechless.

'Adjai,' he murmured,—'Adjai, my son, thou art arrived in time—in good time; for I could not have borne to die without seeing thee.'

My father pressed his hand in silence, and turned his face aside.

'Adjai,' said my grandfather, 'I have a terrible secret to confide to thee; one which my soul refused to carry to the grave. Canst thou endure to hear it?'

My father urged him to speak.

'It is to my own shame to reveal it to thee, Adjai; but I bow my head to the punishment. My son, I have sinned.'

My father became more curious than ever.

'Thou wilt not despise my memory, Adjai?'

'By Brahma, no!' said my father, raising his hand to his head.

'Then hearken.'

The old miner lifted himself upon his elbow, and collected all his strength. My father knelt down and listened.

'It happened,' said my grandfather, 'just three-and-twenty years ago, and I was then but a working-miner. I chanced one day upon a vein of extraordinary richness. My son, I was tempted; the evil one took possession of my soul;—I secreted five diamonds. One was incalculably valuable—larger than a walnut, and, as far as I could judge, of admirable water. The other four were about the size of peas. Alas, Adjai! From that hour I was a miserable man. Many and many a time I was on the point of confessing the theft; and was as frequently deterred by shame, fear, avarice, or ambition. I married, and a year after my marriage thou wert born. Then I resolved to dedicate this

wealth to thee, and thee alone; to educate thee; to enrich thee; to make thee prosperous and learned; and never, never to profit in my own person by my sin.'

'Generous parent!' exclaimed my father enthusiastically.

'When I took thee to Benares, Adjai,' continued my grandfather, 'I sold one of the four smaller diamonds; and with this I have defrayed the expenses of thy education. I never spent one fraction of the sum upon myself; and some few golden rupees of it are yet remaining.'

'Indeed!' said my father, who was listening with the greatest attention. 'And the rest of the gems?'

'The rest of the gems, Adjai, thou canst restore when I am gone.'

'Restore!' echoed my father.

'Yes, my child. Thou hast education. It will make thee far happier than the possession of ill-gotten riches; and I shall die in peace, knowing that reparation will be made. As for the few remaining rupees, I think, if thou art not over-scrupulous in the matter, thou mightest almost be justified in keeping them. They will help thee to begin the world.'

'Indeed!' said my father, with a curious sort of smile flitting about the corners of his mouth.

At this moment the old man changed colour, and a shudder passed over him.

'I—I have told thee just in time, Adjai,' he said falteringly. 'I feel that—that I have not many moments to live. Come hither that I may give thee my blessing.'

'My dear father,' said Adjai Ghosal, 'you have forgotten to tell me where the diamonds are hidden.'

'True,' gasped the dying man. 'You will find them, my son—you will find them—but thou wilt be sure to restore them as soon as I am dead?'

'How can I restore them,' said my father impatiently, 'unless you tell me where to find them?'

'True—very true, my Adjai. Look, then, in the roll of matting which I use for a pillow, and there thou wilt find the three smaller gems and the large one. See—see the superintendent—Adjai—my—my—'

A rapid convulsion, a moan, a heavy falling back of the outstretched hands, and my grandfather was dead.

The stranger broke off abruptly in his story, and laid his hand upon my sleeve.

'And now, sir,' said he, 'what do you suppose my father did?'

'Went into mourning, perhaps,' said I, deeply interested.

'Nonsense, sir. He went to the roll of matting.'

'And found the diamonds?'

'Not only found them, sir,' said the stranger, laying his finger on his nose, '—not only found them; but—can't you guess?'

'Well, really,' said I hesitatingly, 'I—that is—if I should not be offending you by the supposition, I should guess—that he kept them.'

'Kept them, sir! that's it,' said the stranger, rubbing his hands triumphantly; 'and, in my opinion, he was quite right too. Well, sir, to continue. As soon as my venerable ancestor had been consigned to the grave, my father left Balaghaut for Calcutta; and embarking there on board a Russian vessel, sailed for St. Petersburg. Arrived at that city, he consigned the gems to a skilful artist, by whom they were cut and polished. Sir, when cut and polished, it was found that the larger stone weighed no less than one hundred and ninety-three carats! My father knew that his fortune was made, and applied for an audience of the Empress Catherine II. The audience was granted, and the diamond shown; but the empress was unwilling to accede to my father's terms; and he, believing that in time he should obtain his price, suffered the matter to drop; took a beautiful mansion overlooking the Neva; naturalised himself as a Russian subject, under the name of Peter Petroffski, and patiently bided his time. Thus nearly a twelvemonth passed; and my father, who had long since parted with the

last of his golden rupees, began to feel nervous. The event proved, however, that he had done wisely; for he one morning received a summons to the palace of Count Orloff, and sold his diamond to that nobleman for the sum of one hundred and four thousand one hundred and sixty-six pounds, thirteen shillings, and fourpence. Count Orloff was then Catherine's favourite; and to her, on her birthday, he presented this royal gift, some few days after he had made the purchase.'

'Is it possible,' I exclaimed, almost breathless with astonishment, '—is it possible that these are all facts?'

'Facts!' echoed the stranger indignantly. 'Turn to the article on diamonds in any encyclopædia, and convince yourself. Facts, indeed! Why, sir, that inestimable gem now adorns the sceptre of Russia!'

'I beg your pardon,' I said humbly; 'pray go on, sir.'

He seemed vexed, and remained silent; so I spoke again.

'In what year did you say this happened?'

'In the year 1772,' he replied, falling back insensibly into his narrative. 'My father now found himself in a position to command immense commercial influence; so he embarked a portion of his wealth in the fur-trade, and became in process of time one of the foremost among the merchant-princes of Russia. During many years he devoted himself utterly to the pursuit of riches; for gold, I must confess, was my father's weak point. At last, when he had obtained the reputation of being at the same time a millionaire and an irreclaimable old bachelor, he married; married at sixty years of age, just thirty-eight years from the time when he left Balaghaut. The object of his choice was a rich widow, in every way suitable as regarded money and station; an excellent woman, and the best of mothers! I respect her memory.'

Here the stranger paused, and wiped his eyes with a very fine cambric handkerchief, which filled the carriage with an overpowering perfume of patchouli. Presently, conquering his emotions, he resumed:

'But for my birth, which took place within two years from the date of my father's wedding, the newly-created family of Petroffski must have become extinct. As it was, therefore, my appearance was hailed with extravagant rejoicings. I was christened after my father, Peter Petroffski. My schoolfellows called me Peter the Second. I remember little of my boyhood, excepting that I had always plenty of roubles in my pocket, a pony, and a mounted servant to attend me to and from school; and plenty of indulgence from all my teachers. No boy in the academy played so many pranks, or was so readily forgiven as myself; but money covers a multitude of sins, especially at St. Petersburg.'

He paused for a moment, and a question which had long suggested itself to my mind now rose to my lips.

'You have not yet told me,' said I, 'what your father did with the three smaller diamonds.'

'Sir,' replied the stranger, 'I am coming to that presently.'

So I bowed, and waited in silence.

'From school I went to college; and, as my father's position excluded me from the college of nobles, I travelled into Germany, and studied for five years at the University of Heidelberg.'

'Peter,' said my father, as we parted, 'remember what a priceless life is yours. Above all things, my darling son, be careful not to injure your health by over-application.'

Never was good advice more scrupulously followed. My studies at Heidelberg were pleasant rather than profound, and consisted chiefly of rowing, drinking, and fighting. By dint of strict attention to these duties I earned for myself the rank of a 'mossy-head'; and indeed I may say, that I graduated in Bavarian beer, and took out my degree in sabre-cuts. At length I reached the age of twenty-one, and returned to St. Petersburg, just in time for my birthday. On this occasion my father threw his house open for a succession of dinner-parties, balls, and suppers. On the morning of the actual day he called me into his study, signifying

that he had something to say and something to give to me. A small morocco case of triangular form was lying on his desk. From the moment I entered the room I felt convinced that this was intended for me; and my attention, I fear, wandered sadly away from the wise and affectionate discourse which my father (leaning back complacently in his great arm-chair) was pleased to bestow upon me. He said a great deal about the extent of his trade, and the satisfaction it was to him to have brought up a son who should succeed him in it; informed me that from this day I was to fill the position of junior partner, with a munificent share in the yearly profits; and finally, taking up the morocco case, bade me accept that as an earnest of his parental love. I opened it, and beheld a superb set of diamond-studs. Each stone was a brilliant of the purest water, and about the size of an ordinary pea. Their value, I feel convinced, could not be less than three hundred guineas of your English money. For some moments I was speechless with delight and astonishment, and could scarcely stammer forth a word of thanks. Then my father smiled, and told me the history, which I have just related to you. I had never heard any thing of this before. I knew only the common story current in the city, that my father had been a great Eastern merchant before he settled in Russia, and that he had sold a wonderful diamond to the Empress Catherine many years ago. If, therefore, I had been amazed before, I was now still more so, and listened to the narrative like a man in a dream.

'And now, my dear boy,' said my father in conclusion, 'these diamonds, as I daresay you have already guessed, are the three remaining stones which I took from your grandfather's pillow of matting just sixty years ago.'

From this time I led an enviable life. I owned the handsomest *droschky*, the finest horses, and the smallest tiger in St. Petersburg. My pleasure-yacht was the completest that lay alongside the quays of the Neva. My stall at the opera was next to that of young Count Skampsikoff, the great leader of fashion and folly, and close under the box of Prince Ruffantuff, who was at that time one of our most influential nobles, and generalissimo of the Russian army. It was not long before Skampsikoff and I became the firmest friends in the world; and before six months were over, I was known far and near as the fastest, the richest, and the most reckless scapegrace about town.

It was at this period, sir, that I first beheld the peerless Katrina."

The stranger paused, as if he expected me to be surprised; but finding that I only continued to listen with a countenance indicative of polite attention, he looked at his watch, ran his fingers through his hair, hemmed twice or thrice, and then went on with his story.

"You will ask me, perhaps,—who was the peerless Katrina? Sir, she was a violet blooming upon a rock; a rainbow born out of the bosom of a thunder-cloud. She was the dream, the poetry, the passion of my life! Katrina, sir, was the only child of Prince Ruffantuff, whose name I have already mentioned. Strange that the fairest, the most ethereal of beings should come of so stern a parentage! As Katrina was the gentlest of women, and the most loving, so was Ivan Ruffantuff the fiercest of soldiers and the severest of fathers. He carried the discipline of the camp into the privacy of his home, and made himself dreaded as much by his household as by his troops. I never saw so forbidding a countenance, or one more expressive of pride and defiance. Gazing upon the delicate creature seated beside him in his box, one wondered how nature could have played so strange a turn, and sought in vain for the faintest trace of apparent consanguinity between them. Prince Ivan was a giant in stature; Katrina was almost childlike in the graceful slightness of her proportions. Prince Ivan was swarthy of complexion, and his features were moulded after the flat unintellectual type of the Tartar tribes; Katrina's features were regular, classical, and Greek. Prince Ivan was proud and cruel; Katrina was loving, innocent—born for all purposes

of tenderness and womanly compassion. What marvel, then, that I loved her? Loved her, sir, as only few can love—loved her with all the force, and self-abandonment, and passion, of which man's nature is capable. I had never been in earnest before, but I was in earnest now—hopelessly in earnest, as I well knew; but despair itself fed my love with fresh energy, and obstacles only served to make me more determined. For a long time I loved her with my eyes and heart alone, as a devotee worships a saint upon an altar. I could but gaze upon her from afar. I had never even listened to the sound of her dear voice, though I would have died only to hear her pronounce my name. Night after night, during the whole opera-season, I sat and watched her from my stall. I heard no more of the music than if I had been in Siberia; I grew thin and pale and abstracted; I fell into a listless dreaming mood, and replied at random when spoken to; above all, I wandered like a ghost in and out of the *salons* and gaming-rooms where I had of late been so eager in the pursuit of pleasure. At last Skampsikoff came to my rooms one morning, and remonstrated with me upon my unaccountable despondency.

'You don't do justice to me, my dear fellow,' he said, twirling his moustachios. 'I have introduced you, set you going, made you, in point of fact, the fashion; and I take it rather unkindly that you should reflect so glaring a discredit upon my judgment. You might as well be at La Trappe, as far as your conversational powers go at present; and as for your looks, why, hang it, you know the least a man can do for society is to look pleasant. Are you in debt, and does the dear papa draw his purse-strings too closely?'

I shook my head. I had no debts but such as I could readily liquidate, and my father was as liberal to me as I could reasonably desire. It was not that.

'Not that!' exclaimed Skampsikoff, 'well, then, you must be in love. Why, man, you blush! The thing's as clear as the sunlight; and Peter, the magnificent Peter, is in love! Now, by all the saints, this is too ridiculous! Who's the girl?'

'The Princess Katrina,' I answered with a groan.

Skampsikoff started, and whistled dismally.

'The Princess Katrina!' he repeated.

I laid my head down upon the table, and burst into tears.

'I know that I am a fool,' I said, sobbing. 'I know that I have no chance—no hope—no resource but exile or death; and yet I love her, O, I love her, and I am dying—dying—dying day by day!'

My friend was moved.

'Cheer up, Petroffski,' he said, laying his hand upon my shoulder. 'Cheer up; for I think I know of a plan by which to gain you an interview with her; and that once done, why you must accomplish the rest for yourself. You will throw yourself at her feet. You will propose an elopement, or a secret marriage. She will not have the heart to refuse you. We will set relays of horses for you on the road to the nearest seaport; you will embark on board a schooner, ready hired for the purpose; and, once off and away, who is to follow? Come, come, I see nothing but success for you; and if you will but look a trifle more lively, I'll set out at once to see about the ways and means.'

I felt as if night had turned to day on hearing these words.

'Skampsikoff,' I said, 'you have saved my life!'

That evening, to my surprise, I saw him enter Prince Ruffantuff's box in company with a nobleman of his acquaintance, and be presented in due form both to Ivan and his daughter. He did not remain there very long, but contrived to enter into conversation with Katrina. Just before he left the box, he nodded to me and waved his hand. She instantly raised her glass. They exchanged a few sentences. She looked again; and I felt as if the whole theatre were turning round. In a few moments he had made his bow, taken his leave, and returned to his stall at my side.

'The ball is rolling,' he said, rubbing his hands gaily; 'the ball is rolling, and the game's begun. She saw me

recognise you, and naturally asked me who you were. "A fellow," said I, "with the best heart and the handsomest studs in St. Petersburg." "Of horses?" asked the fair Katrina. "No," said I; "of diamonds." Whereupon she looked again. "Not but that he has horses too," I added, "and plenty of them. He's a noble fellow, and my most intimate friend; but he is far from happy." She surveyed you with more interest than ever. There's nothing like telling a woman that a man's unhappy. She's sure to be half in love with you directly. "He looks pale," said the fair Katrina. "What is the cause of his sorrow?" I smiled and shook my head. "Princess Katrina," I said meaningly, "you are the very last person in the world to whom I could confide that secret." With this I took my leave; and I think you ought to be very much obliged to me.

And I was very much obliged to him, especially when I saw that Katrina's attention wandered continually that evening from the stage to myself. Once or twice our eyes met. The first time, she started; the second time, she blushed; and I thought myself the happiest fellow in the world.

Henceforth life assumed for me a new and beautiful aspect. Somehow or another (whether through the hints dropped by my friend, or her own attentive study of my eloquent glances, I know not) the fair Katrina became aware of my passion, and was not so cruel as to discourage it. Sometimes, when they stood near me in the crush-room, she would drop her handkerchief or her fan, that I might have the opportunity of handing it to her. Sometimes she left a flower from her bouquet lying upon the front of her box, that I might go round and take it when she and her father were gone. At last she accorded me an interview."

The stranger buried his face in his hands, and sighed heavily.

"Excuse me, sir," he said, in a broken voice. "My—my emotions on recalling this portion of my history are so overwhelming, that (with your permission) I must smoke a cigar."

I have, be it known, a particular aversion to the odour of tobacco. To speak plainly, it disagrees with me. However, in this instance I waived my objections; the stranger lit his Havannah; and presently the story of my diamond-studs went on.

"Those only who have loved," said the stranger, "can picture the condition of my mind during the hours that preceded that eventful interview. I could think of nothing, speak of nothing, but Katrina. To me the universe was all Katrina, and there was only nothingness beyond. Dusk came at last—the dusk of a winter's evening, when the tinkling bells of the *droshky*-horses, and the guttural 'Yukh, yukh!' of the drivers, rose from the streets and public squares, where the snow lay thickly on the ground, and on the bare branches of the trees, and upon the roofs and balconies of palaces. Then dusk turned rapidly to night, and the frosty stars came out; and I wrapped myself in my cloak of furs, and went out alone on foot.

Swiftly and silently I traversed the few thoroughfares that separated our dwellings; and, gliding along by the wall at the back of Prince Ivan's gardens, stationed myself in a deep angle of shadow, and waited patiently. Presently a small side-door opened, and an old woman, closely muffled, looked out.

"What art thou doing there?" she asked, in a shrill tremulous tone.

"Waiting for the sun to shine," I replied, in the words of the signal which we had previously agreed upon.

The woman extended her hand to me, led me in, closed the door, and so guided me in utter darkness through a long passage. Presently I saw a thread of brilliant light; then a door was thrown suddenly open, and I found myself in a brilliantly lighted apartment. Here my conductress desired me to wait, and hobbled out of the room. A quarter of an hour elapsed thus. I counted the seconds by a time-piece on a console-table; but every minute seemed to be the length

of an hour. At last the door opened. I turned; I fell on her feet; it was Katrina!

For some moments neither of us spoke. I do not now recollect which first broke the delicious silence; but I believe it was myself. The remembrance of what was said has altogether passed away from me. It seems to me now like a dream, or the dream of a dream, so bright, so far away, so unsubstantial!

There was a fauteuil close at hand. I placed her in it; I knelt down before her; I bent my head upon her knees, and covered her little hands with kisses. And so we told each other the story of our love,—a broken faltering story, interrupted by exclamations and questions, tears and kisses, but the sweetest that is told (once only during life) by human lips.

Suddenly,—while I was yet kneeling at her feet, while my arm clasped her waist, and one of her dear hands was resting on my head,—we heard voices close at hand.

"Her highness," said one, 'is in her boudoir overlooking the terrace.'

"Good," replied another, at which we both shuddered. 'You need not announce me.'

"Alas," cried Katrina, with trembling lips, 'it is my father!'

The heavy steps came nearer; I sprang to my feet; I encircled her with my arm, for she was about to fall; and before I could draw another breath the door flew open, and he entered.

For a brief instant surprise seemed to usurp every other feeling in Prince Ivan's breast. Then the stern features flushed beneath the swarthy skin, and a terrible expression glared from his cruel eye. He was in full uniform, and (never stirring a foot from the threshold where he had paused upon opening the door) plucked a pistol from his belt. Without a word, without a pause, he pointed the weapon at my head.

There was an explosion, a piercing shriek, and—

And Katrina—Katrina, my beloved, my adored, had flung herself between us, and received the deadly charge!

I caught her as she fell, senseless and bleeding; I uttered wild words of hatred, of love, of despair, of cursing; I threw myself upon the ground beside her, and strove to stay the purple stream that gushed from her bosom. Alas, it was in vain! Before the smoke had cleared away, before Ivan himself well knew the deed he had committed, all was over, and the beautiful Katrina had passed away to that heaven for—for which—"

The stranger's voice faltered;—and, letting down the window next to him, he leaned out for a few minutes in the evening-air. When he drew in his head again, I offered him my pocket-flask of brandy. He emptied it at a draught, returned it to me with a long-drawn sigh, threw away the end of his cigar, and resumed:

"You will forgive me, sir, if I hasten over this portion of my narrative. It is of a nature so agonising to my feelings, that I must content myself with merely stating a few leading facts, and passing on to subsequent events. Prince Ivan, struck with remorse and horror, solicited the emperor's leave to retire from the army, and entered a convent of monks near Moscow. I received an intimation from the government that I should do well to travel for the next eight or ten years. It was a polite form of exile, to which I was compelled to accede, greatly to the sorrow of my parents. For my own part, I was utterly heart-broken, and cared little what became of me. I went direct to Paris, and plunged into a course of the most reckless dissipation. Billiards, race-horses, dinner-parties, betting, and follies of every description, soon brought upon me the expostulations of my family. But I was careless of every thing—of health, fortune, reputation,—all. When my father refused any longer to supply my wilful extravagances, I incurred innumerable debts, and, giving no heed to the consequence, spent and drank and gambled still. At length, by some unaccountable chance, a rumour got about that my father had disinherited

me. From this moment I could find no more credit. The *éclat* by which my follies had been attended seemed to vanish away. My friends dropped off one by one; and, except by a few blacklegs, and two or three good-natured chums, I found myself deserted by every one. And still, such was my infatuation, instead of reforming—instead of meriting my father's aid and forgiveness—I only sank lower and lower, and continued to tread the downward path of vice.

An event, however, occurred which altogether changed the tendencies of my career. I had been dining with some wild fellows at the *Maison Dorée*. After dinner, when we were all very nearly intoxicated, we called as usual for cards and dice. I soon lost the contents of my purse; then I staked my cabriolet, and lost it; my favourite horse, and lost him; my watch, chain, and seals, and lost them. On this, somewhat startled, I paused.

'I'll play no more to-night,' I said doggedly.

'Pshaw!' cried my antagonist. 'Throw again; next time you'll be sure to win.'

But I shook my head, and rose from the table.

'I'm a beggar already,' said I, with a forced laugh.

De Lancy shrugged his shoulders. 'As you please,' he replied somewhat contemptuously. 'I only wanted you to have your revenge.'

I turned back irresolutely.

'Will you play for my house and furniture?' I asked.

'Willingly.'

So I sat down again, and in a few throws more found myself homeless. This time I was reckless. I poured out a bumper of wine, and tossed it off at a draught.

'If I had a wife,' I cried madly, 'I would stake her next; but I have nothing left now, gentlemen—nothing but wine and liberty, and myself. As this is no slave-country, you won't play, I suppose, for the latter?'

'Not I,' said De Lancy, sweeping his gains into his hat. 'I suppose you have no objection to make out that little affair of the house, cabriolet, &c. in writing, have you?'

There was an easy, satisfied, sarcastic triumph in his tone that irritated me more than the loss of all the rest. I made no reply; but, tearing a leaf from my pocket-book, wrote hastily, and half threw the paper at him.

'Take it, sir,' I said bitterly; 'and I wish you joy of your property.'

He surveyed the acknowledgment coolly, put it in his purse, and said with a sneering smile,

'Does it not seem a pity now that you should have absolutely nothing left whereby to retrieve these things? Another throw, another billet of a hundred francs, and perhaps they would all be yours again. By the way, you forgot your diamond-studs all this time. Will you try once more?'

And he threw the dice as he spoke. They turned up sixes.

'You might have thrown that, Petroffski,' he said, pointing to them.

I was sorely tempted; but I resisted.

'No, no,' I said, 'not my diamond-studs. They are an heir-loom; and—and I shall write to my father to-morrow.'

'Like a penitent good little boy,' said De Lancy, with an impatient gesture. 'Nonsense, man; throw for the studs. I feel convinced you'll win.'

'Say, rather, you feel convinced that *you'll* win, De Lancy. Have you not stripped me of enough already?'

'Insolent!' he cried. 'Do you think I value the paltry winnings?'

'I think you grasp all you can get.'

'Liar!'

The word had scarcely passed his lips, when I flung a glass of wine in his face. In another moment all was confusion. Blows were exchanged, the table was overturned, the lights extinguished. I received a severe wound upon the temple from falling against the open door, and fainted.

When I came to myself, I was stretched upon a sofa in

an adjoining room, with a surgeon bending over me. The morning-sun was streaming in at the windows. My companions were all gone, no one knew whither.

'What is the matter?' I asked faintly. 'Am I dying?'

The surgeon shook his head.

'You are severely hurt,' he said; 'but with care and quiet you will recover. Had I not better communicate with your friends?'

'Write to my father,' I murmured. 'You will find his—his address in my pocket-book.'

The surgeon took up pen and paper, and wrote immediately, partly from my dictation, and partly from his opinion of my condition. He then said that I must not be moved, and must, above all things, avoid excitement. As he uttered these words, and rose to take his leave, a sudden idea, or rather, a sudden presentiment, struck me.

I put up my hand to my bosom. *The diamond-studs were gone.*

After this I remember no more. The shock produced upon me that very effect which the surgeon had been so anxious to avoid. I lost consciousness again; and on being restored to life, passed into a state of delirious fever. For many weeks I lay upon the threshold of the grave; and when I at length recovered, it was to find my dear father and mother at my side. They had hastened over with succour and forgiveness, and to their tender cares I owed a second existence. As soon as my health was tolerably established, my father went back for a few weeks to Russia, disposed of his business, realised his fortune in money, and returned to France an independent man. The excellent man did not long survive this change. Within two years from the period of his establishment in Paris he died; and my mother survived him only a few months. They left me to the enjoyment of a princely fortune, which former experience has taught me to use worthily. I neither drink nor gamble. I pass my life chiefly in travelling. I am not married, and I do not think it likely that I ever shall be; for Katrina is ever present in my heart; and when I lost her, I lost the power of loving. Since that period fifteen years have elapsed. I have wandered through many lands: trodden the ruins of Thebes, and waked the echoes of Pompeii; shot the buffalo on the Western prairies, and pursued the wild-bear amid the forests of Westphalia. I am now on my way to Denmark; but purpose remaining a few days in Brussels, where probably I shall have the pleasure of meeting you again.'

The stranger bowed as he said this, and I bowed in return.

'And now, sir,' he continued, 'from the night that I lost them in a scuffle at the *Maison Dorée* till this evening, when I beheld them upon your shirt-front, I never saw those diamond studs again. I have sought for them, advertised them, offered rewards innumerable for them, during the space of fifteen years,—up to the present moment all was in vain. Not for their intrinsic worth,—for I could purchase plenty like them,—but for the associations connected with them, do I place so high a value upon those stones. They are the same which my grandfather concealed in his pillow of mating, which my father gave to me upon my birthday, which first drew upon me the eyes of my lost Katrina. Surely, sir, you will acknowledge that this is a pardonable weakness, and also that the studs are really mine?'

'Your tale, sir,' said I, politely but firmly, 'is indeed very surprising, and I may say very conclusive; but the case is so singular, the studs belong with so much apparent right to both of us, that I really think we must refer all decision on the point of ownership to the law. You cannot expect me to relinquish any thing so valuable without first ascertaining whether I really am compelled legally to do so.'

'My dear sir,' replied the stranger, 'I had no idea of asking you to relinquish the studs. If you will do me the favour once more to show me that little bill (the amount of which I have forgotten), I shall be delighted to give you a cheque for the same sum.'

But I had no wish to part from my studs.

"Excuse me, sir," I said somewhat uneasily, "but you have not yet proved to me that these stones are those of which you were robbed in the *Maison Dorée*. Make it evident to me that this is not a case of accidental resemblance, and—"

"Sir," interrupted the stranger, "when my father gave me the studs on my birthday, he caused my initials to be engraved in minute characters upon one of the facets at the back. To do this was a great expense. When done, it deteriorated perhaps from the market-value of the gems; but it made them infinitely more precious to me. If, sir, you will have the goodness to take them out of your shirt, I will show you the initials P. P. upon the under side."

By this time the train had reached the suburbs of Brussels, and in a few moments more we should arrive, I well knew, at the station.

"I think, sir," said I, "we had better defer this examination till to-morrow. We have almost gained our destination; and by the feeble light of this roof-lamp I—"

The stranger brought out a small silver-box filled with wax-matches.

"By the light of one of these convenient little articles, sir," he said, "I will engage that you shall see the letters. I am most anxious to convince you of the identity of the stones. Pray, oblige me by taking them out."

I could no longer find any pretence for refusal. The studs were attached each to each by a slender chain, and to examine one I was forced to take out all. As I was doing this the motion of the train slackened.

The stranger lit one of his matches, and I examined the stones in tremulous impatience.

"Upon my honour, sir," I said very earnestly, "I can perceive nothing upon them."

"Had you not better put on your glasses?" asked the stranger.

"*Bruxelles!*" shouted the guard. "*Changement de convole pour Gand, Bruges, et Ostend!*"

Hang the glasses! they were so misty I could not see an inch before me.

"Allow me to hold the studs for you while you rub them up," said the stranger politely.

I thanked him, polished the glasses with my sleeve, held them up to the light, put them on.

"Now, sir," I said, "you may light another match, and give me the diamonds."

The stranger made no reply.

"I will not trouble you, sir, to hold them any longer," I said.

I turned; I uttered a shriek of dismay; I stumbled over my own portmanteau, which stood between me and the doorway.

"*Monsieur veut descendre?*" said the guard, with a grin.

"Where is the stranger?" I cried, leaping out and dancing frantically about the platform. "Where is the stranger? where is Peter Petroffski? where are my diamond-studs?"

"Has monsieur lost any thing?" asked the railway-interpreter, touching his cap.

"He had my studs in his hand! I turned my back for a moment, and he was off! Did any one see him?"

"Will monsieur have the goodness to describe the person of this thief?"

"He was tall, thin, very dark, with black eyes and an aquiline nose."

"And long hair hanging to his shoulders?" asked the interpreter.

"Yes, yes."

"And he wore a large cloak with a high fur-collar?"

"The same; the very same."

The porters and bystanders smiled, and glanced meaningfully at one another. The interpreter shrugged his shoulders.

"Every effort shall be made," he said, shaking his head; "but I regret to say that we have little prospect of success."

This man's name is Vaudon. He is an experienced swindler, and evades capture with surprising dexterity. It is not three weeks since he committed a similar robbery on this very line, and the police have been in pursuit of him ever since without effect."

"Then his name is not Peter Petroffski?"

"Certainly not, monsieur."

"And he is no Russian?"

"No more than I am."

"And—his grandfather, who was a Hindoo—and the Empress Catherine—and the beautiful princess who was shot—and—and—"

"And monsieur may be convinced," said the interpreter with a smile, "that whatever story was related to him by Pierre Vaudon was from beginning to end—a fiction!"

Quite chopfallen, I groaned aloud, and took my melancholy way to the Hotel de Ville. There I stated my case, and was assured that no pains would be spared on the part of the police to apprehend the offender.

No pains were spared, nor money either; but all was in vain. From that day to this I never laid eyes upon my diamond-studs.

MARE'S-NESTS IN PARNASSUS.

THERE is a class of individuals who make the most wonderful discoveries, and contrive to make a stir about them, too, whose findings are all "open secrets," only surprising to others as seeming noticeable to the finders themselves. A "superfluous gentleman" of this kind (to quote a phrase from an old *Quarterly Review*) has lately told the world that a certain new poet is a plagiarist, because he has borrowed various images and bits of imagery from preceding poets. As if no poet had ever done the same before! Are not Milton, Shakspeare, Dante, Virgil, perhaps even Homer himself, full of imitations? And is not every great poet in a state of indebtedness to some previous ballad-monger, whose untaught strains have furnished many of the materials of his more elaborate epic, didactic, or dramatic work? How many old things have become new, when touched by the magic finger of genius! Poetry as an art grows even in this way: the later bard stands on the shoulders of the elder, and sees farther. Wordsworth shows the influence of his reading in his better passages; there are in them a learned style, classic allusions, German philosophy, and certain techniques, which in *The Farmer's Boy* are not traceable. Is, therefore, this poem more original than *The Prelude* or *The Excursion*? The great mind becomes greater by communion with other great minds, and the learned poet has the advantage of the simple minstrel.

If "these be truths," why should the "Life-Drama" of Alexander Smith be called over the coals by any "unnecessary Z" or other more serviceable letter of the alphabet, whose commonplace book teems with extracts from the bard of Rydal Mount, Campbell, Shelley, Keats, Tennyson, Leigh Hunt, Bailey, Spenser, Coleridge, and Lemprière? The poetic accountant would make commonplaces of Mr. Smith's choice figures; nay, the experienced arithmetician can count the repetitions on his digits, and tires of looking at his own finger-ends. If he had ever looked much farther, there would be no need to tell him now that his discoveries are all "mare's-nests."

These appropriations of Mr. Smith's, as appearing in the first poem of one who had at the time scarcely attained his majority, indicate nothing more than that plastic sensibility to beauty which, in such a case, is rather a credential to the embryo poet than a bar to his title. All young poets are prone to imitation. The all-important question is, Are the appropriators really poets? Is there, in spite of all their borrowings, a distinctive character in their productions? If they have this mint-stamp, all is well. We have read carefully all the parallel passages on which "Z's" charge of plagiarism is based; and in almost every instance we find

some addition or modification by Mr. Smith, amply sufficient to prove his poetic endowments. That the various beauties of many other writers could have been fused into harmony by one with no corresponding genius, is an assumption purely ridiculous. That a young writer should partially imitate and repeat such beauties, and combine them with his own, is at once feasible as a theory, and in this case, we believe, indisputable as a fact.

In some instances, Mr. Smith is accused of stealing from more than one poet, the same image. For instance, the "mysterious voids, throbbing with star-like pulses," is traced both to Keats and Wordsworth. Then perhaps one of these poets borrowed from the other. Which? Either! Well, then, let Keats or Wordsworth suffer the charge as well as Mr. Smith, and all alike claim the privilege of the poetic fellowship—a community of goods. The disciples of Pope used a common language; and though more modern poets have enlarged the vocabulary that contented them, the diction of poetry is still peculiar. The garb of thought in verse is different from that which it wears in prose. It has its "singing robes" as well as its work-day clothes.

Having learned how to wear these, having acquired the sacred language, and mastery in its application, Mr. Smith is fully equipped for an independent course of action. He has qualified himself to add to the treasury of poetic expression; and more individual conception and execution will follow on these 'prentice doings of the muse's son.

In conclusion, may we not venture to suggest, that in the poem contributed by Mr. Alexander Smith to our own pages—"The Night before the Wedding"—there is a freshness of feeling, and an originality of phrase, which already shows maturity in the artist, and an ability to depend for the main body of his composition on his own resources? To whatever extent he may be able to do this hereafter, still at all times he will have the privilege,—and there is no reason why he should forego it,—to receive and appropriate glancing lights and illustrative reminiscences from preceding poets. Inspiration, however pure, is not clear of association, and will be qualified by the channel through which it issues. The mind has its memories as well as its imaginings; and both will blend in the result, and make it more beautiful from the union.

A HOME OF CLOUDS AND SUNSHINE;

OR, NOTES OF A RECENT VISIT TO COLNEY HATCH.

MELANCHOLY pleasures, although not popular with the multitude, may yet be profitably indulged in now and then by those who would realise the value of life.

"Half the world," it is said, "do not know how the other half live; neither do they care." I am disposed, however, to believe, that if they *did* know they would care. Many people appear callous, simply from the want of "opportunities" for reflection. In *all* human hearts there is an impres-sible place to be found—if it be sought for.

Let me, then, try for a few moments to interest the readers of the NATIONAL MAGAZINE in one especial class of unfortunates, who, from various painful circumstances, have lost the image of their Maker; and who, being deprived of the invaluable blessing of Reason, are placed under kind (but needful) restraint.

I have just returned from a visit to Colney Hatch, after having passed a most pleasant evening in the best of company,—all delighted to share with the inmates in their

annual Christmas festivities. It is of this I propose to speak.

I would observe, *en passant*, that the causes of insanity and mental aberration are as various as the phenomena of life itself; but some present themselves in special prominence. Drunkenness,—now, alas! alarmingly on the increase,—is of course the principal. The want of the actual necessities of life, and a deficiency of clothing, come next. Religious enthusiasm, over-study, undue excitement, the want of sleep, and hereditary taint,—these follow in the direful catalogue.

It is a subject for rejoicing, that all harsh modes of treatment are now discarded. I can remember the time when the lash was heard daily resounding through the walls of our lunatic asylums, followed by piercing shrieks and hideous howlings. These are silenced—let us hope for ever.

Insanity, at the time I speak of, was regarded as a crime, and treated accordingly. It is now viewed as a misfortune, and creates general sympathy, cruelty being superseded by mercy. With rare exceptions, and for very brief periods (when the patients are refractory), all is done, and well done, by gentle and soothing words. The patients *feel* this, and the influence at once subdues them. A powerful suggestion have we here, for universal adoption *beyond* the walls of places like these.

Let our readers now imagine us at Colney Hatch; the date, Wednesday, January 14; the hour, 6 p.m.; and the occasion, "The Grand Annual Christmas Entertainment and Fancy Ball."

The scene is laid in the Great Hall of Exercise, which, on all state occasions, is brilliantly lighted up, and fancifully decorated with flying flags, banners, evergreens, festoons, &c. &c.; three colossal twelfth-cakes (to be described presently) standing out in "high" relief, and completing the tableau of varied attractions.

The clock has chimed the hour of six. And hark! what are those sounds? They tell of a little army of anxious feet, all marching towards the doors of entrance. Here they come—in couples, triplets, and quartets. How pleased they look while taking their seats upon the numerous wooden (movable) benches that fill the hall—the males on one side, and the females on the other!

And what countenances! Oh, for the vivid pencil of a Hogarth to depict them faithfully! They present a deeply, painfully interesting study. The bystanders are affected; they sigh; and more than one tear is seen trembling in many an eye.

And now begin the evening's festivities in good earnest. First comes a charming series of Dissolving Views, accompanied by suitable airs. But how is this? Where is the band? Oh, it has missed the earlier train, and (for the moment) we must rest content with the piano. What matters? There is music enough in every heart to supply all deficiency.

A voice exultingly exclaims, "The band is come!" A moment more, and we hear as well as see it. A fresh gladness springs up. The instruments seem inspired, and all is mirth and jollity. How spirit-stirring to mark the effect now produced on those twelve hundred arms, legs, heads, and voices,—all roused into the most amusing state of grotesque activity!

From close observation, it is evident that the familiar airs and well-known strains, as they fall upon the ear, awaken in the minds of these poor creatures thoughts of happier days, when scenes like the present were little dreamt of.

But *sed*, the Chromatropé is in full play, with its millions of artificial fireworks, exhibiting an endless variety of changes, forms, and colours. To suppress the laughter, cheers, and shouts of the spectators, might be attempted; but succeed it could not. All are in irrepressible ecstasies, and in the best of humour to make acquaintance with the next part of the performances, viz. the distribution of the twelfth-cakes. Previous to this, the room (hitherto darkened) undergoes a magical change. The Chinese lanterns with which the hall is bountifully decorated are quickly illuminated.

Lamps, too, out of number, pour out a flood of light. Harlequin's wand has been at work. We have an entirely new scene, and new effects,—a *tableau vivant* at once novel and picturesque.

The twelfth cakes are but three in number; but they are of a "sensible" size. The centre one (some six feet in diameter) weighs *only* 3 cwt.; the other two average 1½ cwt. *each*! All were made and baked in the establishment, and were (of their kind) pictures of beauty, being very prettily as well as profusely decorated.

It was better than any play to view the upraised arm of the operator, when wielding the glittering blade that sliced away at those monster cakes. Nor was it a matter for less merriment while remarking how mysteriously and quickly the slices disappeared when cut. It was, with many of the sly old ladies, "cut—and come again."

But quick there! Clear away the benches! The time has come for the Ball. Dancing, waltzing, polking, pirouetting, flirting, &c. are now the order of the night. Oh, to look at those delighted performers in this little drama of life! Some evidently fancy themselves kings, queens, princesses, shepherds, and shepherdesses; others are harlequins, columbines, and coryphæes. Away they fly! The hall resounds with sounds of joy and harmony. I was highly amused with some of the "ladies' head-dresses." How purely original and grotesque! It must have occupied hours of time, and weeks of ingenuity, to invent and complete *such* a toilet!

Among the assembled visitors—several hundreds—it gave me unfeigned pleasure to observe a goodly number of the gentle sex, who took great interest in the evening's amusements, sympathising freely with the inmates in their harmless amusements. It is woman's mission to be kind and gentle. She is an "angel of mercy," where her heart is enlisted.—But the scene has closed. The railway-whistle summons me home.

How much sorrow, mused I, whilst flying before the wind, exists in this world of ours, that might (with only a slight effort) be alleviated, if not altogether removed!

What a lesson, both as to the past (to be shunned), and the future (to be realised), is presented to us by Colney Hatch! We here view the irresistible power of kindness. This is the magician who has changed, as by a move of his arm, the old into the new lunatic asylum,—given a fitting home to the saddest of the sad, and who thinks it no trouble or condescension to amuse these poor creatures by such festivals as we have described. Who, after this, shall deny that little kindnesses *do* produce great results; and that many a passing cloud of darkness may be fringed with gold and lined with silver?

WILLIAM KIDD.

AN AQUARIAN IN TROUBLE.

To the Editors of the National Magazine.

GENTLEMEN,—I saw the aquarium first at the Regent's Park Gardens, then in a shop-window in the City Road, and then—every where. It is just the thing to arrest a wandering eye, and it arrested mine; and I at once determined to be the happy possessor of a tank. Alas, I knew not the penalties attendant on this worship of Neptune.

First of all, I bought a sixteen-inch bell-glass, fitted it with mud and rock-work, and stocked it with an abundance of British fishes. A slight frost came, and one morning, only a fortnight after my commencement, I was petrified at beholding the wreck of my toy; it was fractured into a dozen pieces, eight or nine gallons of water and a few quarts of fluid mud had saturated and spoilt the carpet, and all my pretty fishes were sprinkled about like dead sprats on the pavement at Billingsgate. I cooked two fine dace for breakfast, and gave the rest to the cat. Vile sacrifice!

Well, I began again, and avoided rock-work, thinking the weight too much for a *blown-vessel*. I made a mud bottom as before, fixed my *Vallisneria* into it, and about half-a-dozen other weeds, and then completed the stock with roach,

bleak, minnows, dace, chub, carp,—altogether thirty very fine fishes. In a week my fishes began to die, and I at once changed the water; still no better; every morning I found one or two silver-bellied pets "floating on their watery bier." Then the snails ate up my *Vallisneria*; the sides of the vessel got coated with filthy green scum; and as to the slopping of the room in frequent changing of the water, I dare not even reflect upon it for a moment without a shrug of horror. Chapped hands, broken jugs and pitchers, spoilt carpet, frightful waste of time, and the result—dead fishes, shabby plants, opaque glass, the bottom black and fetid, and the whole thing a bore.

Now what shall I do?—fling the vessel to old Harry, and bid adieu to the noble sport of aquatics, or *try again*? There must be some grand secret, known to the few adepts in these matters, else how are the tanks managed that are every where exhibited?

J. PAUL, Chertsey.

["*Try again!*" Decidedly; and when you do try, proceed as follows: Empty out the vessel, and clean the sides with fine sand, so as to remove the green growth from it. In laying down the bottom, use *pebbles only*, and of these not more than two inches. Take some tufts of *Anacharis* and *Starwort*, and tie a pebble to each tuft by means of a strip of bass, and pitch them in; add a few heads of *Water-Soldier*, and any other common weed you can get. Be content with a dozen fishes, and those mostly small. Use spring-water, and not a particle of sand or mould; and lastly, do not change the water at all; and you will be as much or more pleased than if you had never known a failure. Feed twice a week with small red worms, or minced beef or mutton."

SHIRLEY HIBBERD.]

GARDEN NOVELTIES.

OBLONG-LEAVED ST. JOHN'S WORT.

THIS is a new and beautiful example of the *Hypericum* tribe, of which we have a notable representative in our English Flora

—the common St. John's Wort. It was sent to Messrs. Veitch, of the Chelsea and Exeter Nurseries, by their indefatigable collector, Mr. Lobb. Its botanical name is *Hypericum oblongifolium*; it is evergreen, and forms a handsome garden or shrubby plant; it flowers freely, the blooms being large and of a splendid yellow. It is quite hardy, as might have been expected, from its having been found on the Himalayas, as high up as 12,000 feet. It is a native of Northern India, Nepal, and the Himalayas; and on its native mountain-slopes presents many a gladdening picture of floral beauty and luxurious shrubby growth to the eye of the explorer.

Those who are now busy in completing their plantations of shrubs will do well to include this *Hypericum* in their list of new and pretty things. Sir W. Hooker says, "It will soon find its way into every garden and every shrubbery."

SHIRLEY HIBBERD.

HENRY LINCOLN.

DON QUIXOTE IN HIS STUDY.

FROM A PHOTOGRAPH BY LARK PRICE.

DON QUIXOTE IN HIS STUDY.

FROM A PHOTOGRAPH BY LAKE PRICE.

THE worthy, old, great-hearted Don Quixote sits before us here absorbed in thought. What far-off unearthly land lies in his imagination? Has he settled the respective merits of Palmerin of England and Amadis de Gaul; or is it merely some Lindamira whose distresses he is, in fancy, alleviating? The position of Sancho's island perhaps has to be decided upon; but, whatever it may be, we can rest sure that this Lord of the Land of Dreams is thinking how to benefit some other than himself; for, although men have made his name a synonym for folly, yet his heart was higher than that of any of the knights whom he sought to emulate.

Of the merits of the picture as a work of art, we can only say, that any observer will see at once what is the subject, so admirably suggestive is the figure; and that the pieces of armour and furniture about have been rendered with a careful affection which does Mr. Lake Price the highest honour.

A VANISHED APPARITION.

THAT this world is not a palace, but a caravanserai, is a truth we all admit in theory. It ordinarily takes its place, as an article in our creed, exactly like other matters-of-course. We entertain it with a sincerer faith after wandering through the streets of Rome or the environs of Naples, and still more while descending to the lava-vaults of Herculaneum, or while gazing at Pompeii unearthed in its burial-place. But to feel it deeply, we must witness some Mirza-like vision; must behold the torrent of human life rush across a magic mirror, act out its drama, and disappear, leaving a blank and an empty frame; or, as in Mirza's trance of second-sight, concluding in a drop-scene of verdant pastures, and sheep and cattle grazing tranquilly.

"Talk about apparitions!" exclaims Herr Teufelsdröckh. "It is *we* who are the apparitions. We make our appearance on earth, we know not whence; we flit to and fro, haunting certain spots for a given time, and then, at cock-crow, at our summons from a higher Power, we vanish."

I write thus because a phantom-scene of apparitions in the flesh has lately swept before me. The theatre of the vision has been beheld, first, still and empty; then busy, noisy, and crowded; and now, has sunk into stillness again, that is, into the quiet of nature and the repose of the elements, who, after all, are the only earthly agents who never tire, and are never still.

Within sight of the English coast there is a line of cliffs and a range of sandhills, to one of whose nooks I once retired, in search of health for others and rest for myself. We found both in a grassy solitude, where the sound of the waves lulled us to sleep at night, and the lowing of the cattle was our *réveil* in the morning. We left it with the feeling of returning to the world as if out of the depths of the wilderness.

But an evil spirit of the north practised enchantments and incantations, and there arose against him a host of better spirits, whom his black art was powerless to lay. I returned to look again at our calm retreat, and lo! the air was filled with martial music; active sprites were hurrying to and fro, not disorderly, but in well-marshalled phalanx; the green hill, whereon mushrooms used to grow, was covered with white tents that quivered in the morning breeze; camp-fires blazed and smoked on the slopes where the kiné used to search for the sweetest grass: the apparition of an army had arisen from the earth.

One morning I looked off from my hermitage to watch the movements of the merry elves,—and they were gone. The turf was simply marked with fairy rings and squares, and silence reigned on the deserted knoll. Had the evil

spirit worked a counter-spell? Perhaps so. The elf-doctors declared the presence of some baneful influence of a secret nature, which they could not counteract; so "Presto!" was the word. "Quick, pass, strike your tents, goblins all!"

But no triumph was this for the snow-girt magician. The antagonist whom he thought he had hewn in pieces instantly became multiplied into four complete and perfect individualities. The divided portions marvellously closed their wounds and recruited their missing members. Four threatening camps instead of one arose, not built of fragile canvas, but erected of solid materials contributed by the woods, the fields, and the bowels of the earth itself. These four phantasmagoric camps, although their camera-lucida image was spread over a long strip of territory which coasts the sea-shore, were, in point of fact, still in union. Their life might literally be said to hang on one enchanted thread; for they were traversed by a single-wired electric telegraph,—a monochord musical instrument which sighed out its single note as the breeze passed by it, instead of sending forth an Æolian harmony, after the fashion of its brethren, who are rich in a multitudinous provision of strings.

The gnomes, when summoned, fulfilled their work. In each camp some eleven hundred and fifty huts, or *barraques*,—resembling savage cabins or Indian wigwams, but comprising stables for their phantom-horses, and requisite outbuildings,—started from the ground like an exhalation. Elves, called *sapeurs du génie*, toiled ceaselessly, inspired by the friendship of the great Britannia. They were the mighty genii who fetched wood from the same forest (gifted by the guardian-angel of France with eternal vigorous reproduction) whence other genii, their predecessors, had slaved at the same task in bitter hostility to Albion. For—mark the variable aspect of all terrestrial apparitions—a grand imperial spectre had haunted this very spot in years gone by. A fragment of rock around which he used to hover is still traditionally called the "Pierre Napoléon." His hour has long since struck; and another imperial form has arisen, whose sincerity to Albion has nobly stood the test. When Britannia raised her arms to struggle with the evil spirit, she felt them grasped by the friendly hand of a Gallic fellow-warrior.

Busily, busily worked the gnomes. The soil of the fairy-haunt is light; and, before their appearance there, was covered with short turf, heath, and furze. Countless mole-hills tripped you up, if you went out to ramble on moonlight nights. But Robin Goodfellow's spade and pickaxe soon smoothed all asperities, filled up all hollows, paved and levelled roads. To show the spirit in which these friendly bogies toiled, on the first completion of the shadowy town fanciful names were given to the streets—such as Victoria Street, Napoleon Street, Albert Street; and on one extreme northern corner, Road to Russia! But, as the icy enchanter refused to yield, and gave earnest resistance to his spells became needful to success, those laughing labels were displaced for more practical guides to topography,—for ciphers relating to brigades and regiments, for hieroglyphics denoting secret words of power.

And thus solid-looking artillery-waggons were incessantly employed to fetch poles, small trees, straw-thatch, and other necessities for completing the huts. The passage of the apparitions to and fro was without intermission. Almost every morning one or two battalions came, who proceeded to the spot they were temporarily to occupy under canvas. As soon as each detachment of soldier-apparitions became a little settled, they gave their aid to the *sapeurs genii*. Some played the part of woodcutters, others of carpenters; some were architects, some were labourers, some prepared the clay to plaster the walls, while some made ready the straw to cover the roof. These soldier-workmen, toiling at their tasks, were constantly industrious, intelligent, and gay. With them, often and often, change of work stood in stead of diversion. They left off hut-building at intervals, to take their turn at rifle-practice, drill, muster-roll, or provision-

fetching; and returned to modest architectural attempts when those duties were over, with no other complaint than a joke or a song. The principal foreign aid they called in was the help of the native thatcher; otherwise, these winter dwellings were completely the work of the apparitions' own hands, as if they were trying to learn the readiest way of making a temporary shelter, and of availing themselves of whatever appliances they might find within reach,—supposing that a time of material need could possibly arrive to such ethereal beings.

The little *barraques* of the officer-elves often offered encouraging and instructive examples to men of the art of making the best of a bad bargain, both in their interior and their exterior. A little paint or varnish, a few yards of paper-hangings, a bit or two of stained glass, or a bucketful of plaster, were made to work wonders in the way of decoration. A knife, a trowel, or a brush, under the guidance of elfin taste, converted deformities into ornaments. Here and there miniature gardens appeared, with tables, sofas, or arm-chairs, built of green living turf, such as fairies delight in; flowering-plants in vases lent their aid; obelisks and statuary, in chalk or plaster, helped to give a magic finish; and the very ground was paved with pebbles or shells, disposed in patterns, representing spread-eagles, crosses of honour, combined or separate initials of the imperial form and his consort, canons, ciphers, fortifications, any thing, in short, which could recall a past glory of the goblin race, or incite their successors to future conquest. About the centre of the shadowy brigade stood the general's hut, with greater architectural pretensions than the rest, but still on a modest and tiny scale, as becomes an apparition's dwelling, even when of highest rank.

Neither were the means of amusement, refreshment, nor even of devotion, neglected. At a hundred metres distance in front of each camp, close to the sea, a rustic open chapel was erected, where high mass was said every Sabbath morning, weather permitting. As with other fairy assemblies, unpropitious skies, with moon and planets of malignant aspect, sometimes forbade the meeting; but on a fine autumnal day, when the oblique rays of morning tinged every object with silver, it was a gorgeous spectacle to behold nine or ten thousand glittering apparitions congregated in their peculiar worship, with the dazzling sunshine falling full upon the unscreened altar; while the vocal and instrumental parts of the service were admirably executed by the ghostly band.

The whole of this grand spectral picture reposed upon the deep-blue background of the distant sea. Cafés, too, started up as if by magic, rivalling each other in the attraction of their names. The "*Estaminet de Bomarsund*," "*Au salut des Braves*," the "*Café de l'Amitié*," the "*Café de France et d'Angleterre*," the "*Estaminet de Silistrie*," and a crowd of others, tried hard which should decoy the densest throng within the fascinating circuit of their theatrically-decorated walls.

It was policy, good sense, and real kindness, on the part of the master-spirits to encourage all these appendages to their encampment. The great point, with apparitions as with men, is to keep them employed and amused; otherwise they become home-sick, discontented, and despondent; they ponder too much on their ephemeral existence here, longing to burst the spell that binds them, and to wander to other earthly haunts; in short, losing their *morale*, as French arch-apparitions express it. Blue-devils, as well as their great leader Satan himself, are sure to find some mischief still for idle hands to do. Therefore the imperial form, with his habitual foresight, organised theatrical performances, at regular intervals, out of his own private store of treasure; providing also warming-places and assembly-rooms for the gnomes to meet in and indulge their predilection for shelter and fire. In fine, the rule was strictly acted on, that a good soldier-apparition is worth a little care. Indeed, had such not been the case, the military ardour of the conscript goblins would have rapidly cooled, or might have taken some

very inconvenient direction, changing friendly spirits into malevolent demons.

Amongst the fixed scenery belonging to this moving ghostly panorama, my hermitage remained standing, certainly, where it did, and so did most of the other houses; but strange intruders forced themselves into our company whom we little expected to see amongst us a twelvemonth ago. Thus, there started up an *estaminet* and a bakery on a bit of land that used to look like a fragment of the desert, and which let for I don't know how many hundred francs a-year. In our garden,—which might represent a rather sterile oasis, but which produced excellent potatoes and kidney-beans nevertheless,—there dropped from the skies an *entrepôt* of wines and *eaux-de-vie*, of fine and half-fine liqueurs,—absinthe, kirsch, vermouth, cognac, and gin, sirops of orgeat and gooseberries,—besides something that looked like Seltzer-water externally, but internally more nearly resembling Scheidam. Then, on a bit of coast-guard's garden that skirts the little river's edge, there sprouted up a *Café de la Rotonde*, like a great misshapen puff-ball, or even more analogous to the enlarged pumpkin which served as Cinderella's state-carriage, because its existence was as glittering and as transitory. Herein you might witness,—supposing the apparitions allowed you to join their festivals,—a well-acted vaudeville; might listen to a real *rigolo* comic song, and eat pork-chops and fried potatoes, washing them down with a bowl of blazing punch. But its flash of glory went out like an exploded meteor. It took root, burst into full bloom, and was pulled up and down again, all in no time. The gratuitous theatres extinguished it. It departed to the limbo of some unknown suburb of some outlandish provincial town, or started possibly for an Algerian exile. There was a little bridge, just wide enough to let a donkey or a wheelbarrow pass, over which the imperial form and his brilliant suite were obliged at first to follow each other in Indian file, with the nose of one charger reposing on the tail of the next preceding. But, by pulling up the piles of the port, originally constructed to receive flat-bottomed boats for the invasion of England, a bridge with double footpath and central carriage-way was constructed. Good apparitions! English and French passengers trotted amicably backwards and forwards thereon; and I could arrive comfortably at my hermitage-observatory in a one-horse *cariole* with all my luggage, yea, even in a two-horse fly, without being stopped by the rivulet of the Wimereux. Progress and improvement made astounding strides, urged on night and day by the phantom-troops.

Of course slight changes took place among the natives, and village-gossip had news to tell. Our fat Tom-cat, Minet, disappeared; shadowy soldiers are fond of rabbit-civet and its substitutes. Julie's (the waiting-maid's) lofty perpendicular Adonis deserted her for the present, having found better work to do elsewhere. Would he return to his old love as soon as he had furnished his pocket with five-franc pieces? It seemed all one to her, the she-stoic! Her beloved object once out of sight, she was as good-natured, slatternly, and forgetful as ever. She brought me a bottle of Bordeaux wine, uncorked it, and left me to empty it without the aid of a glass. She gave me soap and a towel to wash with, but treated the water as a superfluous element. She placed a tureen full of soup on the table, supposing that I could eat it with the assistance of a fork.

Yes, New Year's Day and winter came; summer joys had fled. I thanked heaven that we—the apparitions and myself—were at that moment in France, and not in the Crimea.

And how do you manage to get through a winter's day in camp, supposing you are one of the spritely army? Drum and trumpet practice at early morn is now impossible; military music even, out of doors, is not easy of execution in a temperature which freezes the pistons fast in the corners. All that can be done is, to blow a tune into them (as did Baron Munchausen's celebrated horn-player) which shall escape slowly in sweetest tones when the instrument is hung up in the chimney-corner. Active exercise is the order

of the day. Standing still is the hardest work that one can have to do.

Therefore you are not required to keep guard and strut as sentinel for a longer time at once than a single hour. You most unwillingly take your turn to be planted by the edge of a frozen pool, to prevent frolicsome apparitions from sliding thereon and falling in, and also from using up their shoes too fast. You would much rather have had the task of overseeing the notorious children who slid upon the ice "all on a summer's day; when the ice it broke, they all fell in, the rest they ran away." Perhaps, by way of warning your blood, you trot at gymnastic step with a troop of other spirits shod with sabots,—making the earth shake as if a herd of wild horses were rushing by,—to fetch the wood to cook your soup. I may here observe, as a note on the word "sabot," that one important consequence of the Anglo-Gallic alliance, and of the spiritual intercourse between the respective legions, will be the introduction of wooden shoes, if not into fashionable circles, at least into all sensible families at home. The wooden shoes of Franco have rendered as much good service in preserving the national health, as the wooden walls of England have in maintaining the state invulnerable.

Perhaps you run up and down stairs, not in my lady's chamber, but in a path cut in the face of the cliff, carrying stones on your head, on your shoulders, or in your arms, to help to pave the streets of your camp; or, instead of running up and down, you form one of a living ladder, up which the said stones are mounted by the catch-ball method; or you help to raise a bank of earth along the edge of the dangerous precipice;—for, the other night, a comrade apparition, walking outside the camp in the dark, and proceeding in the direction of the sea, advanced exactly one step too far, set his foot upon nothing, and vanished before his time;—or you bear your part in a *corvée* of snow-cleaning, to avoid slush and wet when the great thaw sets in. You carry the white-fated intruder out of the camp on biers, in wheelbarrows, in baskets, or in palanquins, mounting Jack Frost high on your shoulders, as though you were chairing an English member of parliament. The work proceeding but slowly thus, you seize sundry carts and waggons belonging to the military equipage, and convert yourselves cheerfully into beasts of draught. "Ugh! Parosseux!" or, "Come up, Neddy!" says a French civilian as he passes by. You take the joke kindly, without offence at the comparison implied, and mimic the actions of a frolicsome horse.

Variety is ever-charming; so says the copy. Consequently you may be sent on a distant errand, if only for the purpose of buying mousetraps. Mice, rats, and cocks and hens follow the apparition of man wherever he goes. You well know that though sentinels pass the night in the bread-rooms of the *Manutention*, purposely to prevent depredation, the greatest depredators are the rats, who burrow into the inside of a loaf, and eat out all the crumb, leaving the crust entire; so that if the loaf, thus filled with rats, could be suddenly replaced in the heated oven, there would be a complete rat-pie, or murine *vol-au-vent*, at once, without further preparation. And as to fowls, I have seen a little cockerel, spared from slaughter, go to roost in a tent on the footrail of an apparition-officer's iron bedstead; and another apparition, who served in Africa, had a hen that rode behind him on horseback throughout the whole campaign, and every morning laid him an egg.

Then, busy elves, you have to go to the slaughter-house, to fetch your own and your comrades' beef, and to the *paneterie*, or bread-store, for your loaves to eat. An idle hour may be occupied in searching amongst the rocks for flattened bullets, after a day or two's sharp rifle-practice; they will sell for old lead, and so purchase strong drink or tobacco. Sometimes a shipwreck rivets your gaze;—your whole army of thirty thousand genii cannot rescue a single drowning man who sinks into the waves before your eyes;—teaching you that there are more awful forms of exorcising apparitions even than that from the cannon's mouth. Or you watch, almost with equal interest, the flittings to and fro,

the boundings over the waves, and the exits and the entrances, of adventurous fishing-boats. Or you amuse yourself with catching larks, by means of a long line of horse-hair with living decoy-birds attached to it,—a tempting sport, when the ground is covered with snow.

But the shades of evening draw on apace. What can you do, in the thickening gloom, to while the dreary hours away? The ball-season is completely over,—though *La Danse* is never quite dead in France. In summer, the open-air balls were charming: apparitions of ladies, officers, grisettes, and common soldiers, had quadrilling and waltzing to their hearts' content. In autumn, they gradually waned away; no sylphs or nymphs would travel so far from their grottoes and bowers on the understanding that, after capering for two or three hours, they would have to flit back again through the chilly air. The male apparitions got tired of dancing with one another in the absence of sylphs, though it certainly was very good fun at first; and now, my poor deserted phantoms, your brilliant balls have dwindled down to a few snug little "assaults of dance," or competitions of the best dancers of the regiments, performing before an admiring knot in a warm estaminet—saving the draughts—to the sound of a single violin. If you have fairy-coined sous in your pocket, you can enjoy these Terpsichorean pitched battles, in which warriors contend with legs instead of arms; you can go and play a round game at cards, using haricot beans instead of ivory-counters; or you can even enjoy a snug little supper in the company of your bosom-friend. But no money, no public-house pleasures for you. All you can do is, to retire to bed in your hut at seven o'clock, and amuse your fellow-apparitions by story-telling. A military promenade, or a long walk in marching order, over the hills and through the town, with the band playing and the banners streaming, is an excellent day's diversion now and then; for it helps you to go to sleep, especially if, as soon as you reach home, you have to make one of a *corvée* of wood, and have to fetch your dinner before you eat it.

Such, O fleeting elves, were your transitory delights; not but what grumblers, too, were found on your ghostly roll-call. A few lazy wandering hobgoblins, who strolled through the neighbouring villages, and sometimes proved to be deserters, or worse, tried to excite the pity of the simple peasants by complaining that they had not enough to eat and drink. The truth was, that such apostate spirits sold their bread to buy brandy with. What would they have said if they had had a week's taste of what other apparitions suffered in the Crimea? But their grumbling is over, as are their ephemeral joys. A talismanic syllable—*PEACE*—has caused encampments and apparitions to vanish utterly. Native weeds sprout up where the tiny gardens bloomed; the huts are demolished; the hills are putting on their old garment of verdant turf; the sheep are calculating the day when they shall browse there with a good bite of grass; and mushrooms again spring where apparitions circled in the dance. My warlike vision has ended, like Mirza's, with a calm picture of rural seclusion. The streamlet runs on, the cattle march slowly to and fro, the shepherd signals and whistles his dog, and wild flowers begin to grow where they grew before. But still there are symptoms that the apparitions are only laid, should a master-magician need to call them again. The road remains, the broad bridge still spans the brook; the forest has wood, the earth clay, and the fields thatch, at the service of the gnomes. And if—But I had rather not suppose the possibility of any "if"; and will bound my powers of second-sight on these charmed hills to the splendid crops of grass and corn which I behold waving in the summer breeze.

Some few persons have made their fortunes by picking up the treasure which the apparitions scattered about during their fleeting visit; but very many more have ruined themselves by reckoning on the stability of the weird edifices which met their view, and believing that the shower of fairy-gold would fall for ever continuously.

E. S. DIXON.

THE DEAF AND DUMB COURTSHIP OF HARRY MARTINSON.

BY HOLME LEE.

MR. HARRY MARTINSON, the high-art painter, was a son of old Betty Martinson, at the toll-gate on the north road, about a mile and a half from Milverston. He was a school-fellow and bosom-friend of my cousin Davie; they sympathised with each other profoundly, for both were *geniuses* in their way, both were misunderstood individuals, and both lacked encouragement in their vocations. Harry Martinson interested some benevolent character by the early exhibition of artistic taste in defacing his mother's tables and whitewashed walls with sketches, and was provided with a small allowance to enable him to pursue his studies under a painter in London. We heard great reports of his wonderful genius, and such prophecies of future success, that Milverston began to think that it had produced a second Michael Angelo. Miss Fernley, Mr. Riversdale, and Sir Bertram Sinclair, each gave him a commission for a picture; and the three, when completed, were exhibited in the town-hall. We all flocked to see them. I proceed to a description.

The first, intended to be presented as an altar-piece to the new church by Miss Fernley, represented a great council held by King Ahasuerus and his nobles to advise upon the means of counteracting the evil example of conjugal disobedience set by Queen Vashti. Much care had been bestowed on the composition of this piece,—the subject had never been treated before; but the results were more ludicrous than grand. The second work, destined for the hall of Riversdale Manor, was a still more extraordinary production. It represented the Judgment of Solomon, and the brilliance of the flesh tints was marvellous. This was not, perhaps, unnatural in the disputed baby, which was being held up by one foot, and violently objecting to such treatment; but why should the king, the courtiers, and the witnesses, all look flushed, as if in a high state of vinous excitement? Why should so many of the figures be deformed or foreshortened into impossible attitudes? Why, finally, should the king have a painful obliquity of vision, and every body such a paucity of clothing? The third perpetration was a martyrdom. In the centre it exhibited a hideous old man chained to a post; a horrible wretch in the foreground was dragging forward a purple and reluctant damsel, into whose hand he had thrust a torch for the purpose, apparently, of making her set fire to the pile. I had the nightmare after seeing that picture. Sir Bertram presented it to the Mechanics' Institute, where it now hangs, covering half one side of the lecture-room. There is talk of having a green curtain before it. We tried to say the artist was young, and would improve; but we saw no evidence of a Milverston Buonarrotti in his present efforts. Perhaps what now aggravated those interested in him was, that he should persist in daubing atrocities over acres of canvas, when he could really paint delicious little pictures of a less ambitious order. I have seen exquisite bits of his outdoor scenery: his brooks seem to flow, his shadows of trees to waver in the air-currents; woody nooks, where you might almost fancy you feel the summer sultry heat, have come from his easel; quaint village churches and old halls, mossed and gray with antiquity, are the fruits of his saner hours. Children in hobnailed shoes, rustic women, and picturesque street-figures, he can render to the life; but when his inspirations run mad, he paints high-art subjects, such as I have described, for *fame*; it is by the others, and by portraits, that he lives, and supports his poor paralysed mother. He is a most excellent son. But this is not telling about his courtship.

Harry was perpetually falling in love; he was out of one passion and into another as quickly as some luckless mortals who appear to extricate themselves from one bad dilemma for the sole purpose of being free to fall into a worse.

Good resolutions were of no avail; Harry *could not* resist the temptation of a bright eye or a neat foot. Then he made confidants of all his acquaintance, who occasionally supplanted him: but losing a flame now and then was of less consequence, for he could always supply her place in a day or two; there surely never was a man before or since who met with so many goddesses in omnibuses, divinities in steamboats, or lovely maidens in his suburban walks, as did the susceptible Harry. At one season, however, it happened that for a whole fortnight he had no fair damsel to dream or rave about; he had undergone a severe disappointment, and his disconsolate state was deplorable. He spent half his days in fidgeting about from place to place in search of adventures. Davie, missing him for eight-and-forty consecutive hours, and feeling alarmed, went to look after him. He found him singing and working away at a great picture of Herodias's Daughter with the Charger, in a gleeful frame of mind. A lady-love had been found, and one, too, the pursuit of whom promised to be envired with more difficulty and romance than had ever before attended an affair of the kind. Harry described her as possessing every personal grace, but unhappily he did not yet know her name, and had not been able to speak to her; he was, however, devotedly attached.

"And where does she live?" asked Davie, constrained through ignorance to represent the new divinity by a personal pronoun.

"In the opposite house; but she only lodges there, I fancy, with her mother and sisters; they arrived yesterday morning. I wish she would come to the window, and then you would see her. She's a beautiful girl, Cleverboots; and I'll tell you how it happened. I have seen her for a week past in the street. I followed her once, and admired her walk,—she is a Juno for height,—then I caught a glimpse of a pair of flashing black eyes and some long ringlets: you know my taste—large Roman-looking women?"

"Yes; go on, what next?"

"Well, yesterday morning an omnibus drove up to the house across the way, and deposited a cargo of luggage, my inamorata, and three other ladies. I watched the windows all day, and saw them moving about in the drawing-room. Once *she* came forward to pull down the blind, but when she saw me she bashfully retired; I could have sworn I saw her blush."

"And is that all?"

"No; listen. This morning I was at my post of observation, when she came to look out into the street: our eyes met; she smiled. O, Cleverboots, her face looked radiant as the east when the sun is rising! I ventured to bow, and she returned it,—such frankness, such courtesy!"

"Remarkably quick work. Is there any more?"

"You are so impatient, Cleverboots. Can't you let a man tell his tale in his own way?"

"O, certainly; there is no hurry. Get on, Harry."

"At noon she brought her easel to the window for more light, and I could distinguish flowers that she was painting—a fellow-feeling for art, you see; and I very cautiously ventured on a sentence in the dumb alphabet. She responded gracefully; indeed, she seems as much an adept in it as myself. We held a conversation for a few minutes, and I asked permission to call upon her."

"And was it granted?"

"Yes; and for this very evening at eight o'clock. There's encouragement, Cleverboots!"

"You are to be envied, Harry. She is not uncertain, coy, and hard to please."

"No, that's the cream of it. There is far more satisfaction in a woman of beauty and experience than in a little missish thing just released from back-boards and bread-and-butter."

While Davie was with his friend, the lady in the opposite house came to the window, hung up a birdcage, and arranged some flowers in a basket. Harry commended her elegant and feminine tastes, while Davie scrutinised her

claims to beauty with the eye of a poet. He saw a tall amply-developed woman in chintz barège, whose full rosy face had the charms of maturity,—say seven-and-thirty,—rather than the modest bloom of maidenhood and youth. He was not rapturous in his praises, and Harry seemed rather huffed. He was twenty-two, and very fiery in temper; but Davie could trust him; for, if susceptible, Harry was fickle also.

Still the affair waxed serious. In a few days Davie learnt from his friend that he paid daily visits to the lady of his affections, and that he had been introduced to her mother and sisters—all charming women. The lady's name was Hannah; she played and sang, and her domestic virtues surpassed her personal fascinations.

The next news was, that she was not a portionless damsel, and that Harry had proposed and been accepted. Hannah's family did not approve of long engagements, and the marriage was to take place within a fortnight.

Harry had no relatives to interfere, and the important day approached. Davie fancied that the happy man's elation diminished as his brief bachelorhood drew to a close; and that, if a way had offered, he would have been glad to elude the bonds preparing for him. At last, unable to restrain his pent feelings in his bosom, Harry confessed his fears.

"I am going to marry four women instead of one, Cleverboots!" he began, with a lamentable effort at being jocular. "The mother and sisters are to live with us. I cannot endure a mother-in-law. And—and, Davie, yesterday I saw a suspicious little boy about ten years old: I could be certain I heard him call Hannah 'ma' as I went in; but she laughed it off. I cannot find out either where her money is lodged. Altogether I don't like the look of things. That boy is as like Hannah as one pin is like another. What shall I do?"

This was a delicate case to advise on, and Davie was mute.

"I'll catch the influenza, and go to bed, and stay there till the boy is accounted for. The day must be put off; manage it for a poor fellow, Cleverboots."

Davie did not relish his office, but he undertook to break the ice; and Harry kept his bed ten days, his friends relieving guard over him, lest any of the family from over-the-way should come in. During the interval the school-holidays began, and more suspicious little boys came to light—five in all. Hannah, the blithe and buxom, was an Irish widow, and these were her promising offspring. One of them, stimulated by alecumpane, pointed out his mother to Davie, who instantly went and harrowed up the feelings of his imprisoned friend by a relation of the facts the boy had told. Harry groaned; so extensive a family was an undertaking even his love for the mother could not cover. He furnished Davie with powers to the extent of a fifty-pound bank-note to negotiate a truce and a separation of interests. But Hannah wept, scolded, threatened; she had letters and verses sent her two or three times a-day by the recusant which would support her cause in any court of law in the kingdom, and he should learn that a weak unprotected woman was not to be trifled with and trodden upon with impunity. Davie brought all the battery of his eloquence to bear upon the family now collected in deadly array against him; but they had taken their stand on the law, and were not to be moved. He asked, would twenty pounds compromise the matter? The mother said no. Would twenty-five? Hannah grew less hysterical and listened. It was *love*, not *money*, she said, and gasped. David saw he had gained an advantage, and with a bold stroke of diplomacy, said that if twenty-five pounds would be acceptable, his friend would pay it; but that deception had been practised on his confiding and magnanimous heart, and to that a just law would look. The woman instantly closed with the bargain; and, in returning the balance to Harry, Davie told him he considered that he had got off remarkably cheap. The influenza was cured that very moment.

Harry Martinson lived a bachelor until forty-five, when

he married a pretty girl "just emancipated from back-boards and bread-and-butter," and he never showed better taste than in making that selection.

PASSION PAST.

By ASHTON KER.

WERE I a boy, with a boy's heart-beat,
At glimpse of her, passing a-down the street,
Of a room where she had entered and gone,
Or a page her hand had written on,—
Would all be with me as it was before?
O no, never! no, no, never!
Never any more!

WERE I a man, with a man's pulse-throb,
Breath hard and fierce, kept down like a sob,
Dumb, yet hearing *her* lightest word;
Blind, save if only *her* garment stirred,—
Would I pour my life as wine on her floor?
Ah no, never! never, never,
Never any more!

Gray and withered, wrinkled and marred,
I have gone thro' the fire, and come out unscarred,
With the image of manhood on me yet,
No shame to remember, no wish to forget;
But could she rekindle the pangs I bore?
O no, never! Thank God, never—
Never any more!

Old and withered, wrinkled and gray;
And yet if her light steps passed this way,
I should see her face all faces among,—
"God love thee, lady, whom I loved long!
Thou hast lost the key of my heart's door;
Lost it ever and for ever,
Ay, for evermore!"

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

CONCERNING art at present, we are a nation of infidels; not of the dogmatic order, but of the order of King Peradventure, who neither affirmed any thing nor denied it, but only doubted. We have an inorganic belief in the existence of art, an automatic habit of praising it, a most superior notion of any body who gets a name by it; but as to faith, as to putting our trust in it, we are free from this national extravagance, and have perhaps a singular bad idea of what such an act of fidelity might be. This has not been so every where and always. There have been men, nay nations, who had as much faith in art as they had in any thing; who trusted it, in fact, implicitly, as a man trusts his friend.

We are not a faithless generation in all things. We can trust prodigiously here and there:—in money, for instance; in station; in beef and fashion. Who hesitates about getting rich, if he can? Who stands on the social ladder and fears to put his foot on the next step higher? Who doubts in dinners or in dress, being English-born? No man can deny an Anglo-Saxon's power of trusting. At all events, and to the last extremity, he thoroughly trusts himself. This is a grand attribute. The power of holding fast to something, of sleeping soundly somewhere, is the very power that moves mountains and conquers worlds. We have got it in us. Let us see if we cannot make another good use of it.

Putting technicalities aside, art is the choice of what is grand or beautiful, because it is so; and faith in art is faith in the goodness of such a choice. As a nation, we have no

such faith at present. We don't accept the doctrine that grandeur and beauty have an inestimable value in themselves. We think they are pleasant, but not important; desirable, but not indispensable. To call a thing useful is perfect praise; to call it ornamental is partial disparagement. Yet there is no bold denial, no sturdy turning of our backs, when the claims of art are in question; for we are in the happy state of neither knowing our own mind, nor knowing that we do not know it.

Look at our literature. Its daily volumes fall like manna on the land, and are devoured as quickly. Of these, the great majority are works of imagination; their excellence, if they have any, is an artistic excellence. We read them by the ton, and cry over them by the hour. We can't resist them, and have no wish to try. Yet there is a sort of shame in it; and when a book is merely beautiful, it almost needs to be excused. We feel much more comfortable if there is a moral in it. It is not the moral that we read it for. By no means. But then we have faith in morals, though not in beauty, and can imagine that it might be.

Look at our houses. Two rational principles there are on which houses may be built. They are to give shelter, warmth, and privacy, and may be so designed as to serve these purposes simply and solely. They are also to be continually before our eyes, and may be made, therefore, to a certain extent objects of artistic excellence. But we build on neither of these principles. We are not content to have our houses simply serviceable, and are not resolved to make them really beautiful. So, having made the walls and the windows, covered in the roof and spoilt the chimneys, we paint and carve and pilaster. We think of Switzerland, and widen our caves; of Athens, and enrich our capitals; of Queen Elizabeth, and put Tudor flowers on our mouldings. On the whole we make a mess of it, and establish what may be called the Macaronic style in architecture, or Modern English befoiled.

Consider our costume. The human shape is not altogether disgusting, nor quite the very worst thing in the world to hang garments on. We are not, in fact, without a decided notion that dress is to be looked at. But see how we treat it. Look at this fair damsel with warm cheeks and golden hair. She is dressed in blue, and you see at once that it becomes her. As far as colour goes, she looks her best in it; will never look so well in any thing else. Now her dear heart's desire is to look her best continually; but try, if you dare, to get her into that robe of blue two evenings together. Marry her, for example. Use the thunders of a husband armed with the bolts of law to compass this dreadful end. You will succeed, of course. For once in your life the blue dress will flutter through two consecutive evenings. But would any woman with a tongue in her head be asked to do the same thing a second time? We should think not. The warm cheeks and golden curls have no faith even in their own beauty. They will be set by turns in yellow, pink, green, crimson, and amethyst; and then, indeed, but not sooner, you may look for them again in blue. The case of man masculine is of course a little different. His vast design in dressing himself at all is to make himself as ugly as he can. We don't want Apollos now-a-days. We have a demand for scarecrows; and as Englishmen answer very well in this respect, there is nothing to complain of. But though this demand does not extend to the other sex, there is an increasing prospect of a supply from that side also; the last fair feminine work of supererogation. In point of fact, our ladies have already ceased to wear their dresses because they are beautiful; they wear them because they are the fashion, and they are the fashion because they are new. Now as a string of sausages round the waist would be a novelty, and may be suggested any day by a milliner at her wits' end, there is no telling how soon these intestinal delicacies may be found among

"The ribbons, jewels, and the rings,
The lace, the paint, and warlike things"

of modern toilets. There have been objects in the shop-windows that look uncommonly like them, though they have not yet assumed the mottled flesh-colour of savoury meats; and when a goddess passes in a round cloud of immeasurable haberdashery, we suppose she must have got them underneath.

There are, meanwhile, reasons as serious as they are conclusive for believing that among our chief solicitudes the desire after beauty and grandeur deserves a higher place than we have granted to it. The Maker of earth and heaven can hardly be supposed to have laid much stress upon indifferent things; and yet if there is one thing in heaven or earth more evident than another, it is that they are inconceivably grand and indescribably beautiful. Why are the depths of space so dark and awful, the rolling worlds so countless in such a silent sky? Why are their common aspects so grand and calm, their exceptional ones so strange and thrilling? The white moon, when her hour is come, drops into a blood-red shadow; and in the sun's eclipse his light turns ghastly as the grave. Why are those bold black masses given to the thunder-clouds; this terrible voice to the thunder? There are many sounds in nature, and it might have uttered any one of them. It might have sighed, it might have laughed; but instead of that, it thunders. How comes it that the chasms of the hills are grim bare precipices, marked with the lines and shadows of sublimity? that torrents break in fury and roar in the hollow tones of anger? that there is a shriek in the wild midnight wind, and a rush on stormy seas, as if more even than the waves went by?

And beneath the heavens, below the rocks, by placid waters, in sunshine and balmy air,—who has counted the world's wealth of beauty?

Behold the fair earth waking out of sleep. Her days are years; winter has gone past; her night is over; she rises with the spring morning, and dresses for another day. Her robe is green; it suits her, and she will have no other, though a hundred thousand worlds are looking on. Only in her ornaments she makes some change to suit the changing of the hours. See how beautiful they are! Fresh flowers for the morning, floating mists, young leaves, and rainbows. A richer toilet for the midsummer noon,—red roses and darker leaves, bright feathers, the wings of butterflies, and all about her the fragrance of the hay. Last, her evening triumph,—the pale and the ruddy gold, purple fruits, bright berries, and ears of corn. An Indian splendour, worn till, her day being over, nature, with a mother's hand, unclasps the jewels and takes her child to bed.

If grandeur so pierces the heavens and overhangs the world, can we think it matters little whether any thing is grand? If God so clothes the fields with beauty, are we to look at beauty with indifferent eyes, and ask what is the use of it? Yet if the utilitarian question should be put, it is very quickly answered. Grandeur and beauty are useful in the most technical and narrow sense of the word. Their use is to raise men above the dust they tread on; to fill them with thoughts and interests a little higher than their sandals. Half our vices, and all that coarseness of thought and habit which is the paved road down to them, are direct offences against the spirit of art; and in correcting these, we can bring no better aid to the still higher motives of religion than a habit of love and admiration for whatever is beautiful or grand. Rely upon it, it is no trifling loss to a human soul when in any form it grows content with ugliness or indifferent to beauty. To become so is to withdraw our sympathy from the plan and pattern of the universe, and to part with one of our best antidotes against the slow but mortal poison of material cares. Nor are we to listen an instant to the adverse doctrine which is sometimes drawn from the lives and histories of artists themselves. It is not in poets or novelists, in painters or sculptors, that the influence of art on our common manhood can be seen. To have an intense love for all grandeur and all beauty is one of the best helps to human nature. To be a professional

THE BATHING POOL. BY H. GAVIN, A.R.S.A.
[Purchased by the Glasgow Art-Union.]

artist of any kind is one of the severest trials. The strong and unavoidable tendency of artistic labour is to upset the balance of the mind by destroying its right proportions. It leads to narrowness, by demanding a fixed devotion to one single object of study; and to weakness, by the habit it engenders of considering solely what man is able to accomplish, instead of what he is able to aspire after. Happy is he who can meet this trial and overcome it. He, indeed, has reached one of the mountain-tops of life, and gained a new victory for his species. But the way is always through the wilderness; the tempter is for ever there, and perhaps while the world lasts his vanquishers will be fewer than his victims. From such perils mankind at large are free. With them the love of beauty leads only upwards towards its source; and what they have to do is to give it all the passion they can spare. To be of any value to our lives, it must become a habit and an instinct. An occasional rhapsody, a fit of taste once in a way,—this is no use at all. It is here that our want of faith in art tells with prodigious and most injurious power. Having no confidence in it as a thing of vital excellence, we miss and neglect the means by which alone a national habit can be acquired; and so it happens that, in this nineteenth century, when art should find among us, not patrons, but worshippers, not historians, but priests, we still stand gazing on the ruins of former temples, instead of building one of our own.

THE PIATTO DI POMPA.

A MINIATURE ROMANCE.

BY THE AUTHOR OF "STORIES BY AN ARCHEOLOGIST AND HIS FRIENDS."

In a certain "locanda" of Florence, from the front windows of which might be obtained a general view of the picturesque Piazza del Palazzo Vecchio, were four guests. They were seated at three separate tables in the public room, near the windows that opened towards the piazza. The one nearest the corner-window was a young Englishman, who appeared devoured by the national ennui as he looked listlessly towards the "loggia" of Orcagna, with its bronze Perseus, the work of Cellini; and that noble group, the *chef-d'œuvre* of Donatello; and yet he was a sincere lover of art, and in the collection of a series of specimens in one of its most interesting departments was a real enthusiast. But he had been accustomed to gratify every wish with so little difficulty,—wealth is a wonderful facilitator,—that every pursuit had lost its zest. Nothing but an unforeseen accident or difficulty could rouse him from a kind of nonchalant lethargy which had become habitual to him.

At the corresponding window at the other side of the room sat an Italian,—a respectable citizen of Florence, who generally took his evening luxuries at that "locanda" in the form of a frugal cup of coffee and a single cigar. He was a dealer in works of art and articles of vertu; and had grown rich in the diligent practice of his craft. Indeed, the Signor Pietro Coltroni had become a personage of some importance

even as a critic, and was the appointed agent of the court of Russia for the purchase of pictures, antiquities, &c.

At another table, near the central window, were seated two French tourists, who had evidently just arrived, and were in the act of finishing a tolerably copious repast.

"We have steered our course pretty clear of the migratory flock of English in the wild country about Urbino."

"Fortunately; for they spoil the markets and ruin the inns. One cannot compete with their British ostentation."

"And yet there ought to have been an Englishman at St. Leo. I admit that. For he might have rescued from its unworthy interment that matchless plateau of Majolica."

The ears of the Signor Coltroni tingled with excited curiosity.

And here the speakers began to speak louder, and the second answered,

"Bah! I do not believe that even English gold could purchase it. The old marchese, though evidently as poor as a briefless advocate, did not mean selling at any price. The Mazzolari are a very ancient and illustrious family, the very poorest members of which are as proud of their descent as a Bourbon or a Hapsburgher."

"That may be; but the offer of an English price,—such a one as would serve to put his old *baraque* of a castle-villa into something like the appearance of external repair, or, at all events, set up the tumble-down gates, and scrape away the moss from the marble escutcheons of the family arms,—would have settled the matter. Why even your fifty louis, my dear Auguste, which you so politely offered, made the eyes of the old marchese twinkle with a strange expression of longing, though he refused them."

"Do you really imagine it to have been actually painted by the Duke Guidobaldi himself? It appeared to me more like the mezzo-Majolica of the earlier period, judging from the few colours employed; though, it is true, it had not that metallic lustre in the glaze, making the whites look like silver and the yellows like gold, which belongs to the earlier periods; nor the nacreous *madre-perla* effects met with in earlier specimens; nor that iridescent ruby-tone in the reds, which is found in the works executed at Gubbio and Persaro, especially in those of the Maestro Georgio."

"It had certainly none of your last-named characteristics, because it is evident to me that it is a work of the court-manufactory at Urbino itself; and the breadth of character in the different subjects, which I know you were about to urge again as proof of its earlier origin, arises, in my opinion, from their being directly and closely copied from drawings by Raphael or some of his pupils, which may have been preserved in the ducal collection, and reproduced on the plateau by the hand of the dilettante prince. The work is, in short, in my opinion, as the marchese stated, one of the grand "Piatti di Pompa," or plateaux of ceremony, executed as presents to reigning princes, or native noble families who had rendered great services to the state, many of which, in the reign of the weak but accomplished Guidobaldi II., were painted wholly or in part by the hand of the prince himself, as we know by contemporary memoirs."

Here the Signor Pietro Coltroni threw the remnant of his cigar under the table, and precipitately quitted the room; and the Englishman, who was an enthusiastic collector of Majolica,—the only branch of his enthusiasm left,—greedily drank in every word of the dialogue, utterly regardless of the charge he was laying himself open to of being an uninvited listener.

The conversation, however, though still concerning the subject which had begun to interest him so strongly, did not again refer to the marchese, or to that special "Piatto di Pompa," but only to the subject of Majolica-ware and its history. They spoke of the art of the potter among the ancients, and how, except in its rudest applications, it had disappeared from Western Europe at the fall of the Western Roman Empire; and how in the beginning of the twelfth century the Pisans organised a crusade against a piratical Moorish sovereign of Majorca, and came back victorious

and loaded with treasure, among which were glazed plates of painted earthenware, such as had never been seen in modern Italy; and how they were enshrined as sacred trophies in the churches of the Church of S. Apollonia and other venerated places; and how, after two centuries, imitations of these trophies were manufactured at Faenza,* first for the decoration of buildings, in a similar manner to the original trophies, and eventually for other uses, the latest of which, perhaps, was that of the table; and how the Dukes of Urbino encouraged the manufacture; and how the ware copied from the trophies of Majorca came to be called Majolica.

This and much more was discussed by the French travellers over their "orvièto," for they were well-informed connoisseurs, as most French tourists are; but the subject no longer interested the Englishman, who, as an exception to the general rule, was better informed on that especial matter than they were; and finding that the conversation was not likely to revert to the plateau of Guidobaldi II., or to the marchese, or to the whereabouts of his old castle-villa, he left the room.

Calling the "padrone" into the centre of the great courtyard of the "locanda," and looking round with an air that appeared somewhat mysterious before he spoke, in order to ascertain that no one was within hearing, he said in an undertone,—for his excitement was giving him the airs of an actor of melodrama:

"Padrone, I must have post-horses on the road to St. Leo."

"Benissimo, eccellenza," was the reply, with an involuntary law bow to the combined influence of the aristocratic bearing and plentiful scudi of his English guest. "They shall be ready the first thing in the morning."

"But I must have them immediately."

The "padrone" bowed again still lower, as he muttered to himself, "What in the name of the devil and all the saints can be in the wind about St. Leo? Another madman off to those mountain hovels at this time of night!"

Then turning to the Englishman, he expressed his deep regret that the matter was simply impossible, as his last pair of post-horses had started within a quarter of an hour for the same place.

"The same place!" exclaimed the Englishman. "What can any one else want in that direction?"

"Per Bacco, that is more than I know, eccellenza," replied the "padrone," scratching his ear in considerable perplexity. "It was my respected neighbour, the good Signor Pietro Coltroni, who ordered the horses. He is the well-known dealer in pictures and antiquities over the way. Some great toe of a Venus has been dug up, I suppose; or a broken nose of Hercules; or some sort of thing which our cognoscenti buy up a *prezzo d'oro*; and friend Coltroni, maybe, wants to get there the first. It may be that, or it may be something else; what should I know?"

Here the Englishman interrupted this wandering loquacity with a proposition which produced its immediate effect, and secured the appearance of a calash and post-horses within two short hours from that time. In a few minutes afterwards, the horses were dragging the vehicle at a furious rate over the great irregular-shaped flagstones of the pavement of Florence; and in the first dark hours of the night our Englishman found himself rattling along the unfrequented and dreary mountain-road that led towards one of the wildest parts of the ancient duchy of Urbino. It was the first excitement that had varied the monotony of his ennui for many months; and as he urged the driver with continual bribes, inquiring at every stage whether another traveller had passed that way before him, he experienced the healthy effects of energetic action in a manner that had been long unknown to him.

When he learned, too, that the traveller he dreaded was indeed in advance of him, having passed full two hours before, his excitement knew no bounds, and the scudi pro-

* From which the modern French term *foyer*, for all kinds of earthenware, is derived.

mised to postillions for increase of speed came forth at every half-league; but horse-flesh has only certain limited capacities, and the distance between the Englishman and his precursor remained much the same as the night advanced. Still he gained a little; and eventually, about five in the morning, triumphantly passed his rival, while in the act of knocking up a slumbering postmaster for change of horses. At the next relay, the Englishman secured the only two horses belonging to the establishment, and his triumph seemed secure. St. Leo was but three leagues distant, and there was no sign of his pursuer, who must have either remained at the last "osteria" of the post, or have come on at a snail's pace with the already jaded horses of the previous relay.

But the road became exceedingly mountainous and rugged; and just as he considered his success certain, the calash gave a strange kind of a lurch. There was a crash; and in another instant the vehicle was lying on its side, irretrievably fixed in a muddy ditch at the side of the deeply-rutted road. An axle had broken; there was no sign of any kind of habitation near from which assistance could be obtained; and an hour passed in vain endeavours to repair the consequences of the catastrophe.

At last a sound of wheels was heard approaching; assistance was near; he should still be the first at St. Leo, and consequently certain of securing the grand "Piatto di Pompa;" for that was plainly the prize which lay at the goal of his sudden enterprise, as it was also that of the rival whom he had now left so far behind.

As the approaching vehicle neared them, however, all his rising hopes vanished. It was the carriage of the Signor Pietro Coltroni himself, drawn by two stout farm-horses, freshly taken from the fields. The sturdy animals passed the broken-down vehicle at a spanking trot, notwithstanding the fearful inequalities of the road; while the picture-merchant and dealer in Majolica to his Imperial Majesty the Emperor of Russia and Grand Duke of Warsaw made our discomfited Englishman a most polite and smiling bow from the window of his post-calash as he whisked by at a glorious pace.

The mountain village-town of St. Leo was reached on foot by the distanced competitor, heated and tired, soon after nine o'clock. And despite his fatigue and hunger, and many other impediments, he made his way by the aid of a guide to the half-dismantled residence of the marchese, which he reached about an hour later.

As he approached the ruined gates, and perceived the moss-grown escutcheons that crowned the massive piers from which the heavy wooden gates had crumbled for want of timely care and paint,—the rusty hinges still clinging to the walls, from which they stood out like the arms of an iron skeleton,—he at once recognised the entrance described by the two French tourists. Secure now of the locality, he hoped that he might still be first, as it was with no little difficulty that he had found out the old mountain-villa; and there was just a shadow of chance that his rival might have lost his way or been otherwise delayed, as the last part of the road could only be traversed on foot or on horseback.

Such hopes were, however, suddenly dispelled as he perceived the figure of the Signor Pietro Coltroni emerging from the shadow of a group of gigantic and venerable cypresses that still screened the residence from view. As the figure approached, however, there was no sign of triumph in its step, which was of that slinking, almost sneaking, character that distinguishes the gait of humiliation and defeat. But he regained his coolness, and raising his hat, said: "It is of no use, eccellenza; if money could have managed the matter, my commissions from Russia, in the execution of which I do not regard price, would have settled it. I offered first a hundred gold florins of Florence for the 'piatto,' which is indeed neither more nor less than superb; and then, will you believe me, eccellenza, I named five hundred, for I was determined to have it; but the old dotard must be mad. At any rate, he is the first Italian

I ever met with who was foolish enough to refuse double its value for any thing whatsoever, even his honour! Per Bacco, there are not many of us such fools." And he passed on with another salutation, while the Englishman, shrugging his shoulders by way of reply, advanced silently towards the house.

The marchese, who was an Italian noble of the old régime, polished and courtly in every movement, even in the midst of sadly evident poverty, at once perceived, by the natural freemasonry of class, that he had to do with a "gentleman," and, receiving his second visitor with the greatest urbanity, inquired, with an elaborated smile worthy of a *petit-maitre* of the court of Louis XV., whether he was in his case also indebted to the talismanic qualities of his plateau of Raphael-ware for so early and unexpected a visit.

The explanation was brief; and the marchese presently introduced his visitor to his own sanctum, or private study; where among a few richly-bound volumes, some exquisitely chiselled urns, and a few pictures, principally family portraits, the only remains of the former importance of the family, stood the famous plateau, the "Piatto di Pompa," which had excited the artistic interest of the French tourists, the cupidity of the Florentine dealer, and the strong desire of immediate possession, at any cost, of the Englishman.

It formed the sole but magnificent ornament of an ancient console-table placed between two narrow semi-Gothic casements which pierced the wall of one of the most strongly-built towers of this once splendid residence. The Englishman stood amazed at the vast dimensions of the superb plateau—nearly three feet in diameter—and with the gorgeous richness of the design; and remained riveted to the spot where he had first caught a glimpse of that exquisite monument of the arts of the *Renaissance*; while the marchese took care not to disturb the ecstacy of his visitor, which seemed to excuse his own deep attachment to his almost solitary treasure.

The Englishman was the first to break the silence with an exclamation of delight, as he advanced to examine the noble piece more closely. The centre of the plateau was occupied by a magnificently designed quadriga; the elaborately-wrought ornaments of the car and the foreshortening of the galloping white horses, four abreast, bearing evidence at the first glance of the highest kind of art. It was indeed a noble group of objects, the crowning interest of which centred in the stern figure of Achilles in the chariot. The body attached to its rear, and trailing ignominiously behind it, though but faintly discernible in the veil of shadow, showed the subjects to be, Achilles dragging the body of the dead Hector round the walls of Troy, the nobly-designed battlements of which formed the background of this composition. Every detail was painted with the greatest accuracy and precision, yet boldness, denoting at once the work of a master-hand; while this partial concealment of the painful part of the subject in the shadow of the car indicated superiority of conception as well as skilful execution. The picture was enclosed by a rich architectural ornament of creamy white, shaded with orange, on a ground of ultramarine; and the broad flat margin of the plateau, with the exception of a deep edge of green, was adorned with festoons of flowers tied with white fillets, among which exquisitely-designed loves were sporting in many playful attitudes full of the highest graces of design,—here pursuing insects, there toying with arms or pieces of armour too large for them to lift, in other places affecting to alight each other with tragic or comic masks, and many other ingenious devices.

"You will perceive," said the marchese, as soon as his new visitor's surprise had partially subsided,—“you will perceive at once that the splendid subject and decorations are in the manner of Giulio Romano; but a little closer observation will show you that the touch of the actual execution is inferior in firmness and freedom and facility to the style of the composition. The fact is, it is a copy of the

great master by the hand of our ancestral benefactor, the good Duke Guidobaldi II. This is known by our family archives, among which the original letter of the duke's secretary still exists, in which the nature of the service, of which that munificent present was a gracious and magnificent recognition, is fully stated, with the addition that the execution of the painting was by the duke's own hand after original drawings by Giulio Romano in the Urbinian collection. An additional proof, if such were needed," continued the marchese, "is afforded by the signature at the back. You are aware that the different artists of the ducal manufactory placed their initials, sometimes their names in full, at the backs of the objects which they had decorated. Orazio Fontana, for instance, signing O. F. U. F. for Orazio Fontana Urbanite fecit. And here we have G. D. U. F.; Guidobaldi, a true lover of art, signing his work as another artist, simply—Guidobaldi, the Duke, &c. But I have other proofs," continued the speaker. "In the first place, works of such large dimensions, and such complication of ornament, were not executed at any previous period; and within the next reign, as you know, the independence of the Duchy of Urbino, and the existence of the manufacture of Majolica, ended together by the bequest of the last duke, Francesco Maria II., who willed away his patrimony to the Church; from which time the territory of Urbino became part of the papal dominions."

The young Englishman was almost as much delighted with his host as with his splendid plateau of Majolica.

But the contemplation of the plateau had its bitters as well as its sweets; for he scarcely hoped to secure it for any amount of mere lucre. Yet he could not tear himself away from the splendours of the coveted prize. What *moreau* in the Blenheim or even Soulague collections, or even in the great enamel gallery of the Louvre itself, could compare with it? And so he lingered still in the old apartment, listening to the discourse of his host, who never seemed to tire of discussing the beauties and peculiarities of that noble family monument, and the connection of his ancestors with its donor the good Duke Guidobaldi II.

"Majolica and horses were his two passions, as you may perceive by the loving treatment of every outline, and the shade of every muscle in that noble group. And here is another document," cried the marchese, growing excited by his theme, "a copy of a letter to Rome after he became reigning duke, and which I have obtained from the records of the Vatican, in which he minutely describes various housings and caparisons which had been made for him in that city."

"Observe," he continued, "the delicate care with which those four noble horses of Giulio Romano have been harnessed with just such trappings—very peculiar in their character. Do you perceive the interlacing bands of azure, and the embroidery of the serpents, the badge of Urbino, and the depending tassels of mingled blue and gold, just as described in the letter? Is it not curious?"

And the Englishman agreed entirely with the views of the marchese; and the dialogue might have gone on much longer, had not an old housekeeper announced that the noon-meal was waiting the leisure of the signor marchese. And the Englishman took his leave, requesting permission to return, for further inspection of the plateau, on the following day; a permission that was at once courteously granted.

Our traveller found the day at the wretched "osteria" of St. Leo almost endless; but it passed at last, and the night too, and he was again at the mountain-villa of the marchese. The visit was a third and fourth time repeated, by the courteous permission of the marchese, and yet the young Englishman had not once found courage to openly propose the offer of the thousand guineas with which he had determined to secure the matchless work, from the neighbourhood of which he could not tear himself away.

And many other visits followed, till at last the daily meeting in the chamber of the gigantic plateau seemed growing as necessary to the marchese as to the Englishman.

In fact, after each parting, they both began to look forward, counting the hours, till their discussions upon the plateau and Majolica in general, and the romantic story of the Dukes of Urbino, could be renewed.

On a certain morning, after many weeks of this daily intercourse, the dialogue had become so fascinating to both,—for the Englishman, too, was well up in the subject,—that when dinner was announced, the marchese prayed his guest not to leave him, but stay and continue the discourse over what he truly described as his "frugal repast."

The meal was served in a scantily-furnished but spacious room, at the upper end of which was still the signorial canopy or throne,—an interesting relic of disused feudal customs often found in old Italian palazzi. At the table was placed a third chair, on the left of that of the marchese, and opposite to the one just placed on the right for himself. The marchese perceived the glance of his visitor towards the third seat, and said deprecatingly: "You must excuse the presence of my child,—a little girl, who ought to have been receiving her education in a convent, or at all events in retirement in a separate suite of apartments; but the fact is, I have not the requisite means for the one arrangement or the necessary attendants for the other; and so little Camilla always dines with her father. I had forgotten the inconvenience when I invited you to stay; but you will excuse it. She will not trouble or interrupt us, and we can continue our little dispute about the characteristics of mezzo-Majolica previous to 1500, and concerning the letter of Raphael mentioned by Keysler, by means of which you seek to prove that the great painter actually adorned some of the Majolian ware with his own pencil."

Here the marchese was interrupted by the entrance of Camilla, who, though described as a child, looked more like a girl of eighteen or nineteen, being already in the full bloom of her glowing Italian beauty. She took her place silently, with a slight inclination to the stranger. And the marchese went on with the discussion, as the simple repast was served; but the young Englishman found himself less able than usual to cope with the ingenious arguments of his antagonist; and the quadriga and cupids of the famous "Piatto di Pompa" strangely confused themselves in his mind with the lustrous black hair and eyes of his *vis-à-vis*. But she left the room as silently as she came, at the moment the pretence for a dessert was placed upon the table; and then, the discussion went on more glibly, and more to the advantage of the visitor.

Neither the marchese nor the Englishman could now get through a single day without a "talk," to which the great plateau formed the invariable text; and several months passed in this way, during which the family of our English friend were much astonished to find all his letters dated from that obscure village among the Apennines—that strange St. Leo, which no one had ever heard of. At last, however, his perseverance was crowned with success, and he carried off his treasure; but that treasure was not the grand "piatto;" it was the beautiful dark-eyed Camilla,—the "little girl" of the marchese, who gave his paternal blessing as the young stranger carried off his lovely Italian bride from the chapel of the English embassy at Florence.

Thus was the young Italian flower of the ruined gardens of the old villa-castle of the Apennines transplanted to those of an Elizabethan mansion, embowered among the rich woods of south Devon.

But the "Piatto di Pompa," the other and almost equally cherished treasure of the old marchese, remained behind. It will never go to St. Petersburg; that is now certain, notwithstanding a second attempt to secure it at any cost by the worthy Signor Pietro Coltroni. No; when it leaves its present abode in the old turret-chamber, it will be to form the crowning glory of the already noble collection of Mainford Manor, whose youthful heir made so bold an attempt to secure it, but who is yet far from regretting the substitution of the treasure which he accepted in its place.

CHIEF CAUSE OF PHOTOGRAPHIC FAILURE.

A GENERAL impression prevails that photographic pictures are accurate representations of the human face and form, provided the sitter has been steady, and the artist has known the resources of his art. The momentary flush which animates the cheek of youthful beauty even, it is generally believed, can be arrested, and fixed for ever. But whilst such impressions prevail, the hideous representations of humanity that too often issue from the studio of the photographer prove that they are any thing but correct. The victim who grumblingly surveys his caricature, or ventures to doubt the faithfulness of the likeness handed to him, is assured that *the art is perfect*, and the fault (if any) must be ascribed to his involuntary nervousness, or to his personal deficiencies.

It is disappointing, notwithstanding the multitude of amateur and professional photographers employed, to perceive so little real progress made in the direction in which the highest success is attainable, namely, *a mathematical accuracy* in the delineation of nature—a *perfect copying* of her exquisite beauties. Great progress is being made in the manipulatory and chemical departments of the art of photography. Almost every week some improvement of the existing processes is announced. New substances,—as in the case of Mr. Mayall's discovery—are being employed. The highest chemical and mechanical skill has been enlisted, and a perfection in those departments has been attained, which, without a method for fixing the colours of nature, we can hardly conceive of being surpassed. What we lament is, that the optical laws involved in the art have not been sufficiently studied; that the same amount of patient induction has not been applied to the perfecting of the photographic camera which has been expended on the arresting and preserving of the pictures it forms. How many engaged in photography have only a vague notion that the picture is painted *somehow or other* by the agency of light on the sensitised plate, without having any thing like a tangible conception of the rationale of the wonderful process! How many have no idea of the existence of the *actinic fluid*, on which the whole process depends, and without which the most sensitive surface might be exposed to the action of *light proper* for ever without being impressed! How many have never even thought of the solution of the problem, What form and size of lens will give the most faithful representation of nature? We do not assert that these subjects have not been examined, and considerable discoveries made in regard to them; but we assert that they have not received the attention to which they are entitled, and which, considering their importance, might have been expected. The consequence of this neglect of the study of the optical department of photography has been the adoption of instruments of an unscientific character, and the production of pictures destitute of the perfection which alone can entitle them to be regarded as works of high art.

What is aimed at by the photographic artist in his picture? It is a *faithful delineation* of the object, whether portrait or landscape; or, to speak optically, it is enabling us to see, when we survey the picture, what we would have seen had our *eye* been in the place of the *lens* with which the picture was taken. Such being the artist's aim, his first object ought unquestionably to be the obtaining of a perfect picture in his instrument before endeavouring to fix it. Until such is obtained, it is manifest the results cannot be satisfactory. It has been taken for granted that an achromatic lens of any size or form, in which the chromatic and spherical aberrations have been corrected, can give such a picture,—a most gratuitous and unfortunate assumption, since it has greatly retarded the right progress of the art. The impossibility of lenses of large aperture giving perfect photographic pictures has been repeatedly pointed out by Sir David Brewster in the different scientific journals, at the meetings of the learned associations, and more especially

in a recent Number of the NATIONAL MAGAZINE; but, strange as it may appear, although several of these papers and addresses have been before the world for years, and their soundness has never been impugned, it is *only now* that prejudice and interest are beginning to yield, and the higher class of photographers are employing instruments which can be called scientific.

Photographers, ignorant of the optical principles involved in their art, when unsuccessful, naturally blame their lenses. They lay aside French sets, dreaming that Voightlander's or Ross's combinations will give the perfection desired. But although it is certain that some sets of lenses will perform much better than others, yet none of them, it is demonstrable, can give the perfection sought. The skill of the optician, or the wealth of the richest amateur will be alike inadequate to improve the present instrument, so as to represent nature as she is. The *principle* is *unsound*, and consequently the *performance* must be imperfect. That these remarks are true, any one will acknowledge who will follow the argument of Sir David Brewster. That philosopher set out in his investigation of this subject with the palpable fact, that we have been accustomed to see every object in nature through an aperture of about one-fourth of an inch in diameter—the average diameter of the pupil of the eye. The faces of our friends, the familiar features of the landscape, have been painted on the retina by the light flowing through such an aperture, and as perceived by the mind, have been impressed on the memory. Now it is obvious that a portrait or a landscape formed by a lens four, six, or twelve inches* in diameter is not the picture of our friend, or of the familiar scene which we have been accustomed to see; but such a picture as we would have seen with a monstrous eye of either of the above dimensions. Can any one wonder when such lenses are employed (and they actually are employed) that portraits are not recognised, and that landscapes are distorted and unnatural? By the employment of a lens only three inches in diameter, Sir David has shown that no less than 130 *dissimilar* pictures of the sitter are all huddled and jumbled together; while opaque objects of smaller diameter than itself are rendered virtually transparent. We do not intend to enter upon Sir David's elaborate and elegant investigation of this important subject, since it has already appeared in this Journal, from his own pen; but content ourselves with enforcing his conclusion, in the firm assurance that until it is adopted and acted upon, the triumphs which photography is destined to accomplish cannot be achieved.

After the demonstrations to which we have referred, we might ask, What purpose is served by a lens of large aperture which is not better fulfilled by one of small? The only advantage which can possibly be alleged as gained by a large is, the formation of the picture by a greater amount of light, and consequently by a much shorter time of exposure. This is undoubtedly a great advantage for portraiture; but to obtain it, every thing like perfection must be sacrificed; and it is an advantage for which no such sacrifices ought to be made. In the present state of the art, surfaces of the highest sensibility can be prepared, so that, even with very small lenses, a very moderate exposure is sufficient. To illustrate the argument we would enforce, let us suppose that two gentlemen resolve to procure photographic cameras, which shall be suitable for landscapes or portraiture, and that to both the question of expense is of small consideration. The one individual procures from Lerebours, or Ross, or Voightlander, a double set of lenses, four inches aperture, and fifteen inches focus, which will cost from 25*l.* to 40*l.*, and has them fitted into a suitable box, with slides, &c. The other obtains from either of the above admirable artists a single achromatic lens, half-an-inch in diameter and fifteen inches focus, which will cost a few shillings, and which he also fits into a suitable camera, with the

* We lately saw a monstrous camera, mounted on wheels like an omnibus, with an object-lens thirteen inches in diameter, and which cost the magnificent sum of 600*l.*

requisite slides. They commence operations with the same collodion, developing and fixing solutions, &c. After a few experiments, what are the results? The gentleman with the large lenses can produce pictures after a few seconds of exposure,—pictures possessed of great sharpness and intensity; but his portraits will generally fail to be recognised, and his landscapes will contain the exaggerations we formerly pointed out. He will find, after repeated experiments, that it is only when his lenses are stopped down to half or three-quarters of an inch aperture that pictures of any thing like excellence can be procured. The other gentleman, with the small single lens, finds that from thirty seconds to a minute are necessary to obtain his portrait; but then, if the manipulation has been carefully conducted, his portraits are pleasing and lifelike; and when even the small aperture of his lens is reduced to three-tenths of an inch, the most rigid examination will not be able to discover the slightest exaggeration or distortion. We are aware that many practical photographers cling with the greatest pertinacity to the employment of large lenses, for no reason which they can assign unless their rapidity; while others imagine that because they are more expensive they must necessarily be more excellent. But that they are not only *unnecessary*, but even *injurious*, we can assert from repeated experiments. The other day we took a portrait of a nobleman with lenses of four inches stopped down to three inches aperture; and although the picture was in every way sharp, it was not recognised by a lady who had known his lordship for years. Out of a dozen portraits taken the same day, not one could be regarded as a really successful likeness. The above lenses were manufactured by Ross, London.

That large and expensive lenses are not necessary is illustrated by the fact, that a beautiful portrait of an illustrious savant was recently taken by an artist in Edinburgh, with a spectacle-eye of rock-crystal stopped down to half-an-inch, and for which the sum of *one shilling* would be charged. This portrait we had the pleasure of examining, and of comparing with another likeness of the same individual taken with large lenses by a first-rate artist, to which it was manifestly superior both in point of expression and resemblance.

We recently fitted up a binocular camera on the principle suggested by Sir David Brewster. The lenses were produced in the following simple way. A spectacle-eye, of rock-crystal, of six inches focus, was cut into quadrants; two of them were chipped into circles of about three-eighths of an inch diameter, mounted in short tubes, and fixed in the end of the camera, with their centres two inches and a half apart; and with these simple lenses we have taken a series of stereoscopic views and portraits, which we consider decidedly superior to those taken by one of Lerebours' quarter-plate combinations.

We regard, then, these facts as not only showing that large lenses are unnecessary, but as proving that no real progress in the beautiful art of photography can be made until suitable lenses are employed. No doubt there are prejudices and interests which must be got rid of ere a really philosophical apparatus come into general use. Some men have a great regard for appearances. In their eyes a beautifully-polished camera, of walnut or mahogany, with large horn and beautifully-lacquered brasswork, looks much more scientific than a plain box, with a small lens, hardly discernible, in the end of it. And we may expect that practical opticians will not approve of a change which lays aside lenses for which 20*l.* and 50*l.* are charged, and which brings into use those for which not more than a few shillings can be asked. But although a change in the construction of the instrument is imperatively demanded, and must speedily take place, there is ample field on which the scientific artist may expend his genius and his skill, in order that the perfection attainable may be reached:—the formation of the picture *on a curved* instead of a *flat* surface; the obtaining of *more sensitive plates*; and, above all, *the arresting of the colours of nature*, and thus making the picture the perfect

representation of that which we see with the eye. The field which has been recently opened up is ample and noble, and one in which the greatest triumphs may be confidently anticipated, so soon as high artistic art is united to a thorough acquaintance with the scientific laws involved in photographic manipulation. Such men as Reynolds and Raeburn and Watson, who could seize the *mind* of their sitters, and transfer it to their pictures, will arise in photography; and the miserable caricatures which disgrace the art will to a great extent disappear. At all times true genius will be able to seize upon those felicitous postures, and accessories, and expressions of character, which ordinary manipulators cannot even perceive, but upon which the chief excellence and value of the picture must ever depend; and photographic pictures will become valuable chiefly from the genius of the artist they discover.

But apart from the value of such pictures as works of art, they are associated with their originals by sensibilities peculiarly tender. It was the *very light* which radiated from the brow of the loved one, the *identical gleam* which lighted up the eye, which pencilled the cherished images, and fixed themselves for ever there.

The future of the art is hopeful in the highest degree; and the time is not far distant when the studios of our artists, our galleries, and our habitations, will be adorned with such works as the inimitable pencil of Nature can alone portray.

CORRESPONDENCE.

MY DEAR YOUNG LADIES,—Having once been one of your esteemed sisterhood myself, and having since that delightful period gained much practical experience, I propose to make you the recipients of my scraps of (what I consider) very useful knowledge; and I hope you will excuse me, if you should deem my communications worthless or uninteresting.

I shall begin with what very nearly concerns your sex and age, viz. the preservation of your youthful attractions. *Your* sex and age, did I say? What a mistake! When I firmly believe that from the days of Adam and Eve both men and women, old and young, have with some exceptions run a neck-and-neck race in the art of self-adornment. For who does not remember having seen a perfect lane of bottles and gallipots, with flaming labels, redolent of otto of roses, on the toilet of some revered old bachelor-uncle or relative, whose well-burnished and scant *chevelure* bore ample testimony to his unwearied efforts to increase the crop?

Be this spoken in all kindness and charity. We do not sneer and laugh at the harmless vanity; we only state it as a fact.

Now if our revered relative loves his well-kempt locks, there are certainly more reasons why you should; as any thing unpleasant and neglected in a woman may materially interfere with her prospects in life; while downright ugliness in the other sex really seems fraught with advantages, if one may judge from the fact, that "the plainest men obtain the handsomest wives."

And now let us come to the plain practical question: What is best to preserve the bloom of the complexion? I reply,—simply, but most certainly,—*cold water*, the purer, the colder, and the softer, the better.

I know that many young ladies are afflicted with the notion, that water in any shape is bad for the complexion; and so, between their native sense of cleanliness, and their great anxiety to preserve their complexion, they are sorely puzzled; and I have—yes, I have—seen the triumphs of the

latter notion in a very slight but palpable enamel of almost invisible—dirt! Faugh!

Now, my dear young friends, no beauty can be long maintained without health; and I leave to your natural shrewd sense to determine whether dirt in any shape can be either healthy or attractive.

No woman on record ever preserved her bloom longer than the famous, or infamous, Diana of Poitiers; and the secret of it was, a copious and thorough ablution in cold water night and morning, all through the year, with friction afterwards. Nothing, I repeat, is better, either for the skin, the eyes, or the general health, than a good wash in cold water after the fatigues of the day. In very cold weather, tepid water can be used, but it is best to rinse in cold; it prevents many evils. If the skin be dry and inclined to chap in frosty or windy weather, it is very easy to apply a little cold cream, of the simplest kind, well rubbed into the skin. If you should be teased with pimples, I know of no better remedy than to bathe them with eau de Cologne and water, in the proportion of a teaspoonful of the former to a wineglassful of the latter. But how, in the matter of pimples, they depend much on the general health; and the young lady who maintains a simple and regular diet, takes regular exercise, keeps regular hours, and totally eschews *night-lacing*, is very seldom, I should think *never*, afflicted thereby.

I believe there are instances on record of young ladies swallowing all sorts of deleterious articles with a view to making themselves thin, or white and delicate. I have heard of such things, nay, I am bound to confess that I have witnessed such proofs of temporary insanity. Shall I reveal such folly?—swallowing handfuls of raw rice to destroy the healthy appetite, vinegar to make them thin, and even small quantities of raw gin to give a sickly languor, &c.

I dare scarcely express my opinion of these things, because, as I consider good health one of the *greatest blessings* bestowed by the Giver of all good, I think that to tamper with it argues, not only a weak and silly, but also a wicked and ill-regulated mind.

And now I come to a very important portion of my subject—the hair.

Do you know, that if I were a hair-dresser, I believe I should quite make my fortune by publishing in a pamphlet my experiences in this highly ornamental appendage to beauty. I have had some thoughts of it without being a member of that highly honourable fraternity. Judge, then, of my generosity in bestowing thus freely on you, Misses Brown, Smith, and Jones, whom I have never seen in my life, the grand arcana, the very mystery of toilet mysteries.

The hair, like the skin, must be kept clean—must be washed. I believe it to be a mistake to suppose that washing injures it. Once a-week, or at any rate once in two weeks, the skin of the head should be washed. A strong decoction of rosemary is a capital thing, as it stimulates the roots of the hair, while it cleanses the skin, and forms, in fact, the basis of half the hair-washes. The yolk and white of an egg washes the hair beautifully, used as a soap: of course it must be perfectly rinsed out again. But if the hair be really oily and dirty, perhaps the very best thing in the world is, to wash the head entirely in a basin of water, in which about a teaspoonful of hartshorn has been mixed. After well rinsing and drying, nothing can be better than simple almond-oil, scented with plain otto of roses. The Italians use plain almond, or even olive oil; and they are renowned for their beautiful hair.

But the grand arcana of which I spoke is, the combing the hair for a few minutes every day with a common galvanised gutta-percha comb. The electricity therefrom communicated to the hair has a wonderful effect, in case of hair falling off or becoming discoloured. It gives great vigour to the roots; and I am convinced is a secret well worth the knowing.

For teeth, again, simple cleanliness is all-sufficient. There are many useful tooth-powders, composed of rhubarb, orris-root, &c., or plain camphor and chalk. I have faith in

the teeth being carefully brushed every night; for all the tooth-powder in the world cannot make up for habitual slovenliness. Whereas a careful brushing every night and morning, even without the aid of any auxiliary, will keep the teeth and gums in health.

And now, my young friends, I have only one word more to say before I close this epistle; it is a word of warning. Beware how you play foolish tricks with the health and beauty intrusted to you, and intended as the most precious of gifts; use them thankfully and well, as you will have to give account of them hereafter.

THE METAMORPHOSES OF BRITISH INSECTS.

THE RED ADMIRAL BUTTERFLY (*Vanessa Atalanta*).

By HENRY NOEL HUMPHREYS,

AUTHOR OF "BRITISH MOTHS, AND THEIR TRANSFORMATIONS," "INSECT CHANGES," "OCEAN GARDENS," ETC.

A MORE intimate acquaintance with the humbler forms of animal creation would often fill our country-rambles with unexpected interest and attractions such as the uninitiated never dream of. To those accustomed only to the ordinary associations of town-life, the woods and fields have but little to offer when the charm of change and novelty is over. They are pronounced wearisome; "a tree is a tree, and a field is a field," is the verdict of the cockney; "they are all alike," he exclaims. But he is not aware that this seeming monotony is the result of his own blindness. A vast and closely-written page is spread before him, and he deems it blank because he cannot read it. He has not learnt to interpret, or even perceive, the characters—often exquisitely minute—in which many of the most delightful passages of the book of nature are written, and therefore neither sees nor understands them. But let him learn only to spell the few first words, and the story will at once assume a charm that will inevitably lure him on to learn and to read more; for he will discover that the seeming monotony is teeming variety in a thousand novel forms, and that a single oak is a miniature universe in itself, swarming with above a hundred distinct forms of animated life, whose structure, habits, and instincts are full of interest.

I well remember the day when my own attention was first roused to the perception and study of insects and their singular transformations. I had been walking with a friend in a vineyard in the outskirts of Rome, and was rather vaguely admiring the general beauty of the scene, when I perceived my companion occupied in the close examination of a bed of stinging-nettles. With the azure blossoms of the alpine anemone and the rich crimson of the graceful flowers of the cyclamen scattered around, I could not conceive the nature of the attraction that was holding my friend over that tangled mass of stinging-nettles. My curiosity being excited, I bent forward, and he pointed to a caterpillar suspended by the tail to one of the leaves. "Well," I remarked, in answer to his indication,—"well, I only see a caterpillar—a common caterpillar—seemingly dead."

I was quickly informed that it was not dead; and though it was a common caterpillar, it was most probable that I did not know what insect form it would assume when in its perfect state. "It is the larva of the beautiful butterfly *Vanessa Atalanta*," replied my friend triumphantly, and I thought him a prodigy of learning.

My curiosity was fairly roused; and under his direction, I cut off the piece of nettle to which the caterpillar was suspended, and carrying it home, placed the lower portion of the stalk in a bottle of water; for there was another caterpillar of the same species feeding upon another leaf. I waited patiently the time named by my friend for the wonderful metamorphosis that was, as I was assured, to ensue. The caterpillar was that of the Red Admiral Butterfly; and the changes I then observed—the interest of which at once made me an entomologist—were those which I am about to describe.

The caterpillar of the Red Admiral Butterfly, as I noticed in that,—the first specimen with which I ever became acquainted,—is of a dull and dark-green colour, covered with minute tubercles, the apex of each of which is of a brighter tone of the same colour. From each of the segments into which the body is divided, except the one next the head, issue curious black spines nearly a quarter of an inch high, from the sides of each of which project smaller and more delicate points of the same colour,—these branching, thorns, as they may be termed, giving the creature a very singular appearance. (See No. 1 in Engraving.) When the second caterpillar was full-grown, which it was at the age of about five weeks, I had the pleasure to observe the method in which he suspended himself, by means of a secretion resembling the web of a spider. In this position the insect became rapidly torpid, which had caused me to believe the other specimen dead when first pointed out to me. I next observed the body shorten and thicken; and a few days from the first suspension, the skin opened up the back, and was cast off, leaving in place of the caterpillar a curiously angulated chrysalis. The metamorphosis, to a novice in natural history, was very surprising; every vestige and characteristic of the preceding form of existence had disappeared; the pulpy body, the soft fleshy skin, the curious spines,—all were gone; the crisp horny shell of the chrysalis forming to all those features the most opposite contrast. It was of a deep-brown colour, spotted here and there with bright metallic markings resembling specks of gold; from which circumstance chrysalides have been termed "aurelias," and the collectors of them "aurelians." These shining spots were early perceived by the alchemists, who imagined them to be gold, and deemed them a singular proof of their favourite theory concerning what they termed the transmutation of metals. (See No. 2 in Engraving.)

When the necessary time had elapsed for the final metamorphosis, the secret preparations for which had been taking place within the horny shell of the chrysalis, the back of that case, or envelope, was rent asunder by the efforts of the imprisoned creature, instinct with the energies of a new form of existence, and a winged butterfly issued from the opening. At first its wings were soft and limp as delicate linen, curiously folded, and not more than half-an-inch long, though all their exquisitely-painted markings were quite perfect. They rapidly expanded, however, to their full size; their growth, conspicuously perceptible, being a most surprising example of rapid animal development. Still they were unfit for the purposes of flight; but as the new-born creature lifted and expanded them,—at first with effort and difficulty, and then with a more rapid motion,—they became quickly hardened, and wafted him forth,—I was going to add, to his banquet of nectar among the flowers and sunshine; but I feel somewhat ashamed to state that such was not the case, and that, under the instructions of my friend

the naturalist, his existence was cut short, and he was duly "set out" and "prepared," and formed the first beautiful specimen of my now extensive collection.

Vanessa Atalanta is also an English species, and is one of the most finely marked of the beautiful genus to which it belongs. (See No. 3 in Engraving.)

The upper side of the wings are magnificent with red, purple, blue, and flakes of snowy white; and the under surface most exquisitely marked with many tones of silky brown, as shown in the Engraving, No. 4.

The colouring of many of our native butterflies is as varied in the different sexes as the plumage of male and female birds, the small scales which form the clothing of the transparent membrane of their wings being frequently much brighter in the males than the females, as we shall have opportunities of showing in other examples. In *Vanessa Atalanta*, however, the sexes appear to be clothed in array of equal and identical brightness, and are therefore indistinguishable to the ordinary observer. There is nevertheless a small white spot near the hinder extremity of the red band in the fore-wings, which Mr. Haworth considers peculiar to the females, though this distinction has not been admitted by other lepidopterists.

The Red Admiral, commencing his existence towards autumn, survives the winter; the female depositing her eggs early in the spring. This beautiful insect is often seen boldly on the wing on sunny days even in December, settling on a gravel path and expanding its gorgeous pinions in evident enjoyment of the genial rays of the bright morning sunshine, or busy upon some late autumnal flower—that of the ivy, for instance—where the berries are not already formed. It is very curious to watch it unfold and insert its trunk deeply into the nectaries of the flowers to seek its delicate repast. In this action its movements would induce the observer to suppose that the sense of sight was not used, as it appears to feel about with the trunk for the opening of the flower, as though guided by the sense of touch alone. This may under some modification be the case, being a result of the singular hairy covering of the eyes,—a characteristic of the entire genus to which it belongs,—and which may possibly restrict the range of the sight to an upward direction.

The genus *Vanessa* is very widely distributed, being found both in Asia and America, as well as in most parts of Europe; but none of the exotic species surpass our own in brilliancy, especially those species popularly known as the Tortoiseshell Nettle, the Camberwell Beauty, or the well-known Peacock, which we may have occasion to allude to hereafter.

I may add, in conclusion, that the collecting of caterpillars and the furnishing them with proper food till the epoch of their metamorphosis, if nicely managed, forms a most delightful pursuit for leisure-hours,—one full of instruction and agreeable surprises.

Edw D. Balwer Lybster

FROM A PHOTOGRAPH BY MAYALL.

SIR EDWARD BULWER LYTTON

If a stranger to our national literature, but not to letters, were set to read for the first time (without any information about their origin or their author) the half-hundred works which we owe to Edward Bulwer Lytton, he would probably say at the end of that "curriculum" that he had not conceived it possible that one country, in one generation, should be able to boast the possession of fifty contemporary writers endowed with powers so strikingly original, so often nearly equal in degree, and at the same time so varied in style and kind,—so contrasted, indeed, in their respective idiosyncrasies.

"Now name me these men," he would add; "recount me their several histories; let me meditate on the singular diversities of their personal antecedents; and deduce lessons from methods of education and plans of study so multifarious in their difference, and yet so similar in their success."

Those various writers, he would then be told, are Edward Bulwer Lytton; unquestionably his name is Many. Nay, he has made several distinct reputations, recommencing anonymously over and over again,—like the same knight re-entering the arena in new armour and visor closed.

Our readers are not in the assumed position of this learned foreigner; and, for that reason, it would be a mere loss of time to prelude the remarks we have to make with any thrice-familiar biographical details; these have been recounted of late in every direction with incessant iteration. It is, at the same time, equally impossible, within the space we can command, to undertake a minute critical analysis of the holograph library which has thus issued from a single hand. We must content ourselves, in short, with the design (and even this upon a smaller scale) expressed by Tully in his *Optimo Genere Oratorum*; where he tells us that, in the rules, lessons, artifices, and means of high oratorical and literary success which he is about to deduce from the examples of the mighty, the multiplicity of them "despairs" him; and that, not being able to count down for us the infinite particulars, he will just weigh them, instead: "*Non enim ea me annumerare lectori putavi oportere, sed tanquam appendere.*"

They will do the same for you at your banker's, if your account with him is good. Half the day would go in "telling" the bright *rouleaux*, which a turn of the scales can as well announce.

First, then, a single glance at what Bulwer Lytton, as an author, is; then a word or two about how he became what he is.

There is hardly one of his works in which a page or two, nay, a sentence or two, cannot be found, out of which most ordinary writers would be able to make a biggish volume. Gold is very ductile; beat the ingot, and it will cover a field with its sheet, or engirdle the earth with its filaments. Thought, to drop the metaphor, original thought, is lavished throughout his works. Some of his observations are virtually books; some of his books are virtually libraries; and there is, notwithstanding, a large actual library of them. That library would be no bad education of itself; and it has, in fact, very considerably entered into the education and contributed to the development of many able minds, both in our own and in other countries. This is not all; in more extent, so great is what he has produced, that to read it would seem to ask for good part of a life; and yet he who has written it has but attained about the age at which Sir Walter Scott began to labour, and is not only in the full vigour of his puissant faculties, but, to judge by his last efforts in comparison with his earlier, he is in the impetus, the mid-career of evident and very high progress. And while the plane of thought which he commands, and the sphere of scholarship to which he has lifted a whole world of familiar things, render his intellectual companionship profitable to the most cultivated minds, he has had the art of interesting the many with a spell scarcely less enthralling.

The most *obvious* literary characteristic of Bulwer Lytton is that which we implied at starting,—his versatility, or rather his comprehensiveness, the prodigious range of his labours, and the diversity of those enterprises which have all but one report to make, one account to give, of the labourer "who passed that way," viz. the uniformity of his ultimate success.

Here, in this word *ultimate*, however, lies a deeper secret, and a far more precious, as well as interesting lesson. A few years ago an ingenious critic, in one of our periodicals, said something to this effect, that if a foreigner were to ask us who were our most eminent men in specific departments of literature, we might cite various names; such a one as the greatest poet, such another as the greatest historian, such and such as the chief orators, critics; and thus the rest,—each noted in some particular species of liberal toil, and indeed the more noted for having never dared to quit it. But if the same foreigner were to say, "True; yet besides these literary *specialties*, so to speak, have you any one man who has made all literature his own in your language and generation, and who represents you collectively in the states-general of letters?"—if the foreigner, we say, thus framed his inquiry, would not one name occur in answer to every body's mind,—the name of Bulwer Lytton?

Such, or to this purport, was the observation of the ingenious critic to whom we allude. Years have since elapsed; and if the sentence of honour was true then, it is far truer now. But while it is a very striking, and certainly not an unwarranted criticism, it leaves much unsaid altogether.

Bulwer Lytton, who on the whole has achieved this omnigenic, *ultimate* success, has by no means either prospered in every individual attempt which his life has known, nor exhibited in each of his productions an equal merit. In certain instances he has experienced what it is to fail signally.

Here, then, we begin to feel the latent existence of a truly valuable moral in Bulwer Lytton's very career itself. Let us note the actual facts as they stand, and compare them with the materials out of which they have been wrought,—wrought as the steel watch-spring, *more precious in market overt than its own weight of the purest gold*, is wrought out of pig-iron at so many pence a-pound.

First, then, the facts: how stands the actual case? Were Bulwer Lytton nothing but a novelist, still even in his novels alone there would be found that sustained variety, that comprehensive range both of manner and of matter, which would have fully entitled their author to the remark we just now quoted. But he is far from being such a novelist. There is literally not one department of literature, and not one kind of writing, which he has not tried, and in which he has not acquired additions of reputation. Always thus ending with success, he has almost always begun with failure. That one fact would of itself stamp the character. Such thorough-bred pluck is never found alone. But a more curious thing still is this, that Sir Bulwer Lytton has not only almost invariably failed at first in the undertakings in which he triumphed afterwards, but that his greatest triumphs have been achieved precisely where his greatest difficulties originally lay—precisely in the departments to which all his natural bias gave him the greatest disinclination.

If ever there was an example calculated to cheer the despondent courage and revive the fainting energies of struggling, defeated, baffled genius, it is this before us. Buffon used to say, *Le génie c'est la patience*; 'tis but half the truth. Had Buffon said, that genius was patient, not a word of denial, question, or even doubt, could be breathed by any person of the slightest intelligence. Genius is patient, "and something more." Patience is not genius; patience is an inestimable passive quality, but genius is a working quality. Buffon spoke of the buckler, not of that sword whose strokes flashed from behind it.

No; the grand quality of Bulwer Lytton's intellect is its instinctive regard for the practicable above every thing else.

An enemy's judgment sits in his own head to pass sentence for him on every design which he has most loved and cherished; and the award is without appeal.

Thus, for instance, his taste, his inclination, his ambition, his passion, is poetry. This passion, which never quitted him, came early. The first literary attempts of his childhood were in verse. They gained him the praises he most valued and earliest earned—those of his mother; and then his first public honour. Had he consulted the strong prepossessions of his natural taste, which, despite of him, subsequently coloured the style, the spirit of his prose, he would never have written prose at all. He did not like it, he had no facility for it; on the contrary, he felt the walking foot as much encumbered as the wing seemed free. He could not write prose without singular trouble and exertion; it cost him no such pain to indulge his passion for writing poetry, and, above all, for reading, and for thinking it. But there was no career open for a poet, no fair hearing amidst the rapture with which the public greeted the strains of Byron. In the blaze of that meridian glory, no other light seemed then able to shine with effect. Bulwer Lytton resigned at once that kind of literature for which he had naturally a vehement passion, and embraced that for which he felt a positive distaste, and no heaven-born facility. This was practical. Here was the first signal exercise of that intellectual peculiarity which more than any other distinguishes his mind, and which, in truth, has uninterruptedly governed its movements. Perhaps, however, what we are accustomed, for convenience, to term judgment, is not so much a distinct faculty as it is the equipoise of all the faculties.

Be this as it may, what accounts for the whole career of Bulwer Lytton, which twice his genius would not otherwise account for, is this predominating and governing regard for the practicable. There are two sorts of failure: failure, because the work accomplished is not in demand; and failure, because the work itself is not duly accomplished. The former kind Bulwer has always held in horror, and has never suffered it, for he would never risk it. A very clever man, who is now dead, when asked his opinion about Bulwer, replied: "*He is one who knows how things should be done, and what things to do.*"

This is the very soul of practicality; of business, whether public or private; of statesmanship, and of what Lord Bacon quaintly terms "wisdom for a man's self." And thus a man of vivid temperament, of "bright and translucent" imagination, of ardent and enthusiastic genius, has shown himself a very personification of steadfast, well-calculated, plodding, unswerving, indomitably executed action. It is, in truth, the character for action, and that character pre-eminently. The strange old fact (proved by many a striking example), that, in circumstances of extraordinary delicacy and difficulty, where a man knows not how to advise himself, he will get the best counsel, not from the most cunning or pettifogging, but from the most genuinely poetic mind among his acquaintance, is a fact peculiarly appertaining to the history of those poets whose genius bears the apparently incongruous impress to which we are now adverting.

So much for this author's power to do; yet where is the success, if, after triumphing in the accomplishment of a thing, the thing accomplished will not itself be allowed to succeed?

Such has been the question almost always, indeed with but one exception, present to Bulwer Lytton in his intellectual undertakings. A practical, a pre-eminently practical mind, we repeat. Dread of the first kind of failure, just now described, has always deterred Bulwer; dread of the second, never. To risk the first is to war against influences stronger than man; to risk the other is but to test one's own powers.

On no occasion has Bulwer (who invariably has declined attempting to do that which, when well done, is not wanted) found his powers unequal ultimately to that which he has attempted. But his final success has generally been a ladder, the steps of which seemed to be all so many defeats.

A first check often repels and disheartens for ever a mind intellectually deficient in the requisite faculty, if morally wanting in some that are essential. It is here that the gallant, the all-daring, all-enduring, all-accomplishing spirit of the thorough-bred must show itself. Here occur those immortal exertions, here flash out those inextinguishable ardours, which made Buffon (not waiting long enough for the right word) term patience genius. And here it is that Bulwer surpasses nearly all writers—former or contemporary; here it is that he will leave the most precious and the most inspiring of the lessons to be hereafter bequeathed in his imperishable example.

It would not be in nature that a mind psychologically such as we have described should not be able well to counsel others, having counselled itself so well and wisely, having lived, as it were, a very existence of masculine logic reduced instinctively to action. Thus his books abound in the practical wisdom of private life and of every-day intercourse.

But they are themselves,—with the speeches and addresses which form altogether but one great career,—a still better lesson than any which their pages contain or their eloquence conveys.

"*He will never be a speaker,*" it was said when he first entered the House of Commons. He shortly afterwards decided the House on a memorable occasion, and on a vital question, by a speech which electrified all who heard it, elicited from a great orator, and one of the best oratorical critics that ever lived, enthusiastic encomiums, and still rings in the memory of Parliament. He has not belied the promise of that brilliant day; and Edinburgh will not easily forget that in 1854, nor Glasgow that in 1857, it was he whose accents made their crowded academic halls vibrate—wondrous combination!—to eloquence at once the most ornate and the most impassioned with which they had ever echoed.

"*He will never be a dramatist,*" said they, when his first play was produced. It had cost him a far longer period of toil than that fortnight which sufficed to begin and finish the most skilful and pathetic of all modern sentimental comedies—the *Lady of Lyons*. Money surpassed even Sheridan's *School for Scandal* in its first "run." In fine, there is only Shakspeare who more frequently commands occupancy of the acting stage. The more esoteric merits were all along conceded to Bulwer's dramatic compositions; it was popularity which the prophets denied him. His popularity presently eclipsed every precedent.

Poetry, as we have said, he always loved; to poetry he would, by choice, have devoted all his time. Public speaking he, on the other hand, always abhorred. Yet we doubt whether the public would not set in far higher respective and proportionate rank many a passage which we could cite from his political and academical discourses, than they would the choicest satire of the *New Timon*, or the sweetest effusions of *King Arthur*.

"*He will never figure as a politician,*" men exclaimed, when he first hazarded himself in that capacity. Yet he soon played a distinguished part in the House of Commons; and at this very moment occupies a conspicuous position among the foremost political thinkers and actual chiefs of the grand palæstra. Only the gentleman still reigns over the politician, the knight over the mere warrior; witness the chivalrous tenderness to the fallen leader, never shown to the Lord John Russell of prouder and more palmy times.

To the subject of this paper a predominant sleepless common sense has never ceased to whisper amid the transports of genius, and no false "heading away" has ever led him far. The brilliant foppery of *Pelham* has dissolved into the mellow and radiant philosophy of the greatest of quiet fictions. Here we would briefly mark what we could, but for our limits, copiously illustrate—the self-purifying force of his genius. He appeared with, not indeed personal, but mental egotism, colouring all the views of life,—sometimes effervescingly, as in *Pelham*; sometimes with a less volatile and a darker tincture of morbid and inadmissible sentiment,

as in *Maltravers*. All this has worked itself pure and bright into the genial sympathies of *My Novel*, where the author as an individual is utterly lost, absorbed in the wide and permanent human interests which he evokes, and to which all his thoughts address themselves.

No labour has deterred him. Were it necessary, for the perfection of some minor but essential passage in some minor but incumbent work, to learn Hebrew and Cyro-Chaldaic (assuming that he knows nothing of the former), he would stop the press—or we do not else understand the man—till he had mastered the requisite preliminary.

He has what the French call *la conscience du travail*, and this kills personal vanity. Often has he been told that he possessed not the genius necessary for various enterprises which he had undertaken. "Very likely," has he said; "but I have at least the talent of labour, and I must make what I have serve for what I have not." It was like telling a digger that he had not the right tool, when the digger with the tool in his hand was fairly accomplishing his work. If scythe would answer, he would contrive to dispense with the more orthodox sickle, need compelling.

From this main quality, as from a trunk-railway, many other qualities flowed,—inflexible performance of promises, words kept like bonds, courage unconquerable.

And with all these high characteristics are combined pride in his "order,"—that "order" of literature in which men earn, not inherit distinction,—sympathy for its less fortunate members, genial and cordial encouragement for its younger aspirants, a gentleman's courtesy in antagonism, and a true man's sincerity in friendship.

FRIENDS TILL DEATH.

THERE are some men's lives that might be written in a single page, so even has been the tenor of their career, so unchecked the course of their existence. Take for example old Gilliflower and his friend Bardsley. I knew Gilliflower and Bardsley when they first set up in business in Toocum Street; the one as a grocer, and the other in the ironmongery line. They came into the street about the same time, and opened shop next door to one another. They were not then personally acquainted; and like many other next-door neighbours in a large city, they passed years in sight of each other without contracting any closer acquaintanceship than that of neighbourly civility. They would say, "A fine day, sir," as they took down their shutters of a morning; or, "A fine evening, sir," as they put them up again at night. If these morning and evening civilities were ever varied, it was simply by a change of the adjective. Toocum Street being an English street, the variation was doubtless frequent.

But Gilliflower and Bardsley were destined to become fast friends; indeed, friends till death. There was nothing romantic in the way in which this friendship was contracted. It was not through Gilliflower's house catching fire, and Bardsley making superhuman efforts to rescue Gilliflower from the flames. Nor *vice versa*. Nor did Bardsley plunge into any river after Gilliflower; nor did Gilliflower plunge in after Bardsley. It arose, I am bound to say, entirely out of a question of beer. Both shopkeepers were unmarried and without incumbance. When the labours of the day were over, Bardsley was wont to adjourn to the Green Dragon, to smoke his pipe and drink his flagon of ale. Gilliflower patronised another house—the Boar. A great point in the character of both men was constancy, or what in politics would be called conservatism. A practice once adopted was never, or rarely, departed from. Once having established a corner in the parlour of the Green Dragon, Bardsley would as soon have thought of changing his wholesale dealer as of going to the Lion or the King's Head. Gilliflower, on his part, was as closely attached to his corner at the Boar. It happened, however, some three or four years after his first visit to the Boar, that the landlord of that

establishment was induced to change his brewer. Gilliflower was one of the first to be served with the new tap. He didn't like it. It might have been very good beer; it might have been better beer than that formerly supplied; but it was not the kind of beer he had been accustomed to. Gilliflower was a patient man, and he bore it as long as he could; but there was a limit even to Gilliflower's patience; and with something of a pang at parting from his old corner and particular Windsor chair, the worthy grocer at length transferred his patronage to the Dragon. On his first visit to that establishment, he found his neighbour Bardsley ensconced by the chimney-corner, smoking his pipe.

"Good evening, sir," said Gilliflower.

"Good evening, sir," returned Bardsley.

"Coldish to-night, sir," said Gilliflower, taking a chair.

"Coldish, indeed, sir," said Bardsley.

Here there was a pause of some duration. It was at length broken by Gilliflower ringing for the waiter.

"I think," said Gilliflower, half to himself and half to Bardsley, "I'll try a drop of their ale."

"You'll find it to your taste, sir, I think," said Bardsley.

The ale was placed on the table, flanked by a pipe and a paper of tobacco.

"Your good health, sir," said Gilliflower, eyeing the liquor knowingly.

"The same to you, sir," said Bardsley.

"Body there, sir?"

"And hops, sir!"

"And hops, sir!"

Bardsley and Gilliflower puffed in silence for the next ten minutes. At length Bardsley said:

"Seasonable weather."

Gilliflower said, "Very seasonable."

Another long silence, broken only by puffs. Then Gilliflower:

"How do you find business, sir?"

"Well, I can't complain. How do *you* find it, sir?"

"Pretty tidyish, as things go: no reason to complain neither," said Gilliflower.

"Will you take a glass with me, sir?" said Bardsley.

"Well, thank you sir, I will."

"Will you take a glass with me?" said Gilliflower by and by.

"Most happy, sir, I am sure," replied Bardsley.

That night, as Gilliflower retired to his bachelor-couch, he expressed (to himself) an opinion highly favourable of Bardsley: "A very agreeable man is that Bardsley—very agreeable man."

About the same moment, Bardsley was tying on his nightcap, and saying: "An uncommon nice man, that Gilliflower."

Thirty years after, it was said by Bardsley himself, that he had never missed passing an evening in Gilliflower's company until that evening. But on that evening Gilliflower's chair was empty. The sight of it touched poor Bardsley's heart. The friend of his bosom was not there. "And why?" said Bardsley to himself, as he gazed at the empty chair with misty eyes. "Because he is ill a-bed, and is not able to toddle so far. Shall I sit here, then," said Bardsley, "a-drinking and a-smoking and enjoying of myself, while Gilliflower is ill a-bed?" Bardsley answered the question by pushing away his pipe and pot with a reproachful air, and going to see his friend.

Thirty years had made Bardsley and Gilliflower fast friends. From the evening of their first meeting in the parlour of the Dragon, their attachment grew day by day and increased with every pipe and pot, until in feeling, in tastes, and in habits, they became as one man. Such was the identity of all spirituality in the two men, that the same body might have served for both. Knowing and reading those two minds, it might have occurred to an observer that nature had displayed a sad want of economy in making Bardsley and Gilliflower various. There was no corner of Bardsley's mind that was not known to Gilliflower; nor was there a

cranny of Gilliflower's that was not revealed to Bardsley. Nor is this ascribing any great amount of acuteness to either party. Bardsley had taken as many bad shillings as any man, and Gilliflower's name was enrolled on the list of more than one begging-letter writer. It was not, then, the acuteness of Gilliflower's perception that discovered the profound depths of Bardsley's mind; but it was Bardsley's single and simple mind that displayed itself like a proclamation in large letters to Gilliflower's modest vision. And *vice versa*. Innocence, honesty, kindness of heart, and the most charming stupidity, distinguished them both. They were just children, who could smoke a pipe and drink a glass, and help each other on in the world, and sympathise with each other, without outgrowing either their clothes or their mutual attachment. In the first week of their acquaintance they had seen and known as much of each other as they ever saw and knew till death; because in that week all that was to be seen and known of both was fully laid open. And it was a very child's lesson, all in the easiest words of one syllable.

Business prospered moderately with both men. They had their struggles, as most people have. But Bardsley and Gilliflower were both wont to say, "I have always a friend." I may tell the reader privately, that Bardsley's friend was Gilliflower, and that Gilliflower's friend was Bardsley. By a strange but happy coincidence, when Bardsley wanted ten pounds to make up a bill, Gilliflower always had it to lend him; and when Gilliflower wanted ten pounds, Bardsley could always help Gilliflower. Fate had mortified their exigencies to a nicety in every respect. Their troubles and joys were so exactly alternated, that the one was always in a position to console or rejoice with the other. Did any mischance in business befall Gilliflower, would he go to his lawyer? Not he. He would say, "Send for Bardsley." Did Bardsley fall ill, would he send for the doctor? By no means. He sent for Gilliflower. And so they lived from youth to manhood, and from manhood to old age. I had the honour to be on pretty friendly terms with both of them (though much their junior), and I may say I grew old in their company. But I was never to Bardsley what Gilliflower was, nor to Gilliflower what Bardsley was. Far from it. I think I spoil my claim to their full confidence by letting out early in our acquaintance that I knew something of Greek. I have wished from the bottom of my heart that Greece and Greek had never existed, or been known, rather than I should have been deprived of the honour of sitting in the upper and inner chamber of two such hearts. I would have given all history to be Bardsley, all the glory of antiquity to be Gilliflower.

Both men remained bachelors to the end of their days. People often wondered that they did not marry, they being both ardent though respectful admirers of the other sex, and strongly attached to children. Many a time have I seen Bardsley sitting at his own door, on a fine summer's evening, playing with some curly-headed boy or rosy-cheeked girl. He could repeat all the stories and rhymes that they delighted in; and Bardsley's knee was the cockhorse of many and many a journey to the famed cross of Banbury. Nor was that journey ever made in vain; for at the end of it there was always a halfpenny or a penny forthcoming from Bardsley's capacious pocket to reward the youthful rider. And then Bardsley would say, "Now run away to Gilliflower's, my dear, and buy yourself some barley-sugar." And Gilliflower was known to the rising generation thereabouts to give the largest halfpennyworth of barley-sugar of any grocer far or near. And so fond were the children of the two old men,—I am speaking of their latter days now,—that they called them by the name of "uncle." Many a child of that neighbourhood grew up to man's estate, still calling them Uncle Bardsley and Uncle Gilliflower,—never doubting but that the two old men were as much their uncles in relationship as they were in kindness and affection.

The reader may wonder, therefore, as the neighbours did,

why two men so well adapted for the holy state of matrimony had never entered that state. I think I know why they did not. When Bardsley and Gilliflower first became acquainted (as the reader knows how), the latter was beginning to have "serious thoughts" about a certain Jessy Ward, the niece of a well-to-do wax-chandler in Toocum Street. He had seen Jessy at church on several occasions, and once he had walked home with her and her uncle. Old Ward asked him to tea, and he went and feasted upon Jessy's good looks and winning ways—having no appetite for the muffins—until, on coming away, he felt as if his heart was too big for his bosom. He could not sleep for several nights afterwards; and what seemed to keep him wakeful was, the image of sweet Jessy Ward, and that strange bigness about the heart. But shortly after this, Jessy went away to reside with an invalid aunt in the country, and did not come back for nearly a year. In the mean time Bardsley had got acquainted, and become friendly, with Gilliflower. When Jessy returned, he thought of going to call at old Ward's, and he mentioned his intention to Gilliflower. What Gilliflower said I don't know; but at any rate he didn't go. I am sure that Gilliflower did not discourage him in any way; but my opinion is, that Bardsley conceived the idea that Gilliflower was not an advocate for matrimony, so he gave up all thoughts of Jessy Ward. Bardsley, however, was for once mistaken in his estimate of Gilliflower's views. I have reason to know that Gilliflower meditated matrimony at the same time that Bardsley did, but that he gave up the idea, fearful, lest by taking a wife he should lose his friend.

And so they remained bachelors for each other's sake to the end. Alas that the end should ever come to such friendship as theirs! But it did come. The winter of life overtook them together as they wandered onward hand in hand. Its snows fell upon them equally yet gently. No longer able to walk to their nightly resort, they now passed the evening at home, Bardsley going next door to Gilliflower, or Gilliflower going to Bardsley; or of a summer's evening they sat side by side at their doors, faithful to the last to the pipe and the flagon of ale. There, as they smoked and chatted as of old time, the children played round them, like flowerets twinkling about the roots of withered and decaying oaks. But an evening came when Gilliflower was no longer able to toddle out to meet his friend. Bardsley sat awaiting him, but he came not. Gilliflower's old housekeeper came to tell Bardsley that her master was very ill, and that she had helped him up to bed. The flagon of ale remained on the bench untasted, the pipes unused, the two chairs empty. Gilliflower had smoked his last pipe and drunk his last pint. He grew feebler day by day, and at last his mind wandered. He raved about Bardsley: "Where is Bardsley? O, will some one send for Bardsley?" Bardsley was there by his side almost day and night; but his friend no longer knew him. I went in by Bardsley's request to do what I could for his poor old friend, and I tried to make him understand that Bardsley was sitting by him, that it was Bardsley who was holding his hand.

"Go away, go away," he said; "you are not Bardsley. What use are you to me? it is Bardsley I want. O, if you will only send for him, I know he will come."

Then he raved about a bill that was coming due to-morrow, and for which he was not prepared.

"I must go to Bardsley," he said. "Bardsley will help me out, I know he will. Give me my hat and stick."

"Hush, hush!" I cried; "Bardsley is here. Speak to him, Bardsley; let him hear your voice."

The old man called his friend by name. "Gilliflower, Gilliflower, it's me, Gilliflower; it's Bardsley, your old friend."

"Eh? are you Bardsley?" he said at length. "Give me your hand. Ah, yes it is Bardsley, my old friend, my good friend." He sank for a short time into a slumber; but when he awoke he still called for Bardsley. He was with him again, in thought, at the Dragon.

"The pot is empty, Bardsley," he said; "shall we have

another; or shall we go home? I'll take a light, if you please—no, no, I won't trouble you, my pipe is out; we'll go home. Good night, Bardsley, good night; I shall see you again to-morrow."

As these words were uttered, the hands of the two friends were clasped upon the bed. It was the clasp of death! "I shall see you again to-morrow." That to-morrow soon came. Poor Bardsley went on his earthly pilgrimage for a little while, seeking up and down for his friend Gilliflower. And one winter's night he made a long journey, and found him—where there was no more parting.

ANDREW HALLIDAY.

THE BRITISH INSTITUTION.

As the earliest to open of all the London art-exhibitions of the year, artists, amateurs, and critics, rush to the British Institution with much the same feeling as a man takes his first spring walk in the fields. Its rank as an exhibition of pictures, though far inferior to that of the Royal Academy, is, as a rule, next immediately beneath it; besides which, it is generally looked forward to with interest, because many popular artists continue to send the most remarkable of their pictures to be hung upon its walls.

Prompted by such considerations as these, we proceeded to Pall Mall on the opening day, and looked round, as of old, for the ancient *habitués* of the place. Sadly disappointing was the search. What, no Roberts, no Creswick, no Lee; and Sant missing from his accustomed corner; Frank Dillon (not unworthily) in the place of honour! There are the usual imitations of the artists we have named, and others in the same relation to Millais, Frith, Egg, Eastlake, and the whole round of well-known names. The picture that first arrested us was, "A Florentine Holiday," by Wingfield; and examination showed it to be one of the best works of this artist, who has frequently a truer feeling for his subject than many men of greater name. But call you this a holiday? That group seated at the foot of the steps are not happy, nor those who (as before) descend from the terrace, and point to the wrangling dogs; that expression cannot be joy which is upon their faces, surely. We turn from the picture, convinced that it is intended for a lament over the hollowness of human happiness. Browning's "Toccata of Galuppi" is not more sad; and muttering, *Vanitas, vanitas!* we pass forward.

Mr. Frank Dillon's picture, No. 1, "The Colossal Pair, Thebes," shows those colossi whom the Arabs call "Shamy and Dany," the nearest being the vocal Memnon, also named "Salamat" (the saluter). We see these great statues, which have sat facing the stream of time for so many centuries, with the sun just sunk below the horizon behind them, while the light of the moon is slowly covering their fronts, and great mixed shadows from both lights clustering about their feet; over the lurid horizon a blush of purple mist-like cloud is hanging. The idea of impressiveness, which Mr. Dillon has certainly succeeded in rendering, might have been enhanced if he had chosen a more novel effect; the statues would have gained, we think, in this quality, if they had been shown sitting black and opaque against a firmament full of stars, or in broad sun or moon light, with their gigantic shadows on the ground. Should Mr. Dillon go to Egypt again, we recommend to his study Holman Hunt's "Back of the Sphinx" (a sunlight of intensest glare), exhibited at the Royal Academy last year, as an example of what may be produced by strict adherence to nature only. The statues here stand against the darkening sky, and an appearance of height is much assisted by placing a star in a line below their shoulders; but this is not new, and if the star were Canopus himself, the effect would not be worth while repeating twice.

Nos. 272 and 347, "A Midsummer Afternoon," and "An Autumn Afternoon," by J. Raven, are not more in contrast in point of excellence than are the phases of nature they

represent. The first is very admirable,—a modest truthful little sketch, with the dreamy softness of the reality,—just the crest of a verdant hill, with a windmill on the top against the sky; the latter is violent, coarse, and opaque to such a degree, that one is surprised to find that two such pictures could come from the same hand.

Incomparably the best landscape in the rooms is No. 547, "Caerhŷn. Low-water," by J. W. Oakes. A mountain-scene, with a river just reaching the lowlands, and a weir in front, and the rocky base of the hills coming into the foreground; the whole of this is clear, true, fresh, and rich, and more powerful than most of its competitors. The arrangement of clouds is extremely fine; their fault, however, being a certain want of depth, yet they show a whole cloud-land. The observer should notice the care and knowledge with which the nearer side of the weir is painted; the misty cloud which lies high up in the hollows of the hill-tops is a very poetical passage. In short, this is almost the only scientifically-painted landscape in the exhibition; and in scale of merit can only be compared with No. 255, "The Covey," J. Wolf: a number of partridges clustering under a dwarf-evergreen shrub, with snow over the whole scene. It hangs on the branches, again frozen where it had half congealed. The birds are huddled close together, and look snug and cosy in spite of the cold, having that knowing kind of expression about the eye which the artist so frequently gives to his birds; the texture of their feathers is admirable. Some goldfinches are perched on a bough behind, the wings of one who has just alighted spreading out; a very pretty idea, which is spoilt by the clumsy way in which the wings are drawn. Close by him is a little Falstaff of a goldfinch, who is excessively funny. The frosty glare of the sunlight is perfectly represented.

Mr. Jutsum's pictures, Nos. 3 and 197, "The Devonshire Coast," and "The Hay-field," have the ordinary qualities of his work, but are extremely weak, and very unlike nature. It is to be regretted that so skilful an executant should so neglect faithful representation. The same may be said of W. T. Danby, whose pictures, Nos. 65, 164, and 364, exhibit his usual choice of one phase of nature, and his peculiarly excellent skies. More thought is, however, required to maintain him in that place which he has held so long. No. 173, "A tranquil Stream in Autumn, North Wales," by C. Branwhite, is a more palpable example of the effect of carelessness in producing manner. All who remember his exquisite frost-scenes of a few years back will regret that his talent should be so lost in the insincerity which this example shows. Not a single portion of the whole picture can be said to resemble nature; the trees look like moss under the microscope; the scene might be in dream-land, but is certainly not in North Wales. In "Rain clearing off," H. Dawson, No. 82, it will be well to notice an excellent point of truth in the gray sheen of the trees which stand on the river's bank. This alone will elevate the picture above its pendant, No. 65, T. Danby, though in execution it is far inferior to the latter. Mr. E. W. Cooke's marine pieces are apparently a return to an earlier style, lower in key, and more carefully executed than his works have been of late. No. 181, "Riva degli Schiavoni, Venice," is an especially agreeable little picture. No. 116, "Venice, the Porto," has some excellent points of tender colour about it. "The Banks of the Machno," by J. Dearle, No. 491,—some trees on the banks of a full still stream in sunlight,—is by an artist who suddenly rose into fame on Mr. Ruskin's notice of an exquisite little picture in the Royal Academy. That was indeed admirable; but from the fact of habit becoming manner, the present is by no means so; the trees here are woolly, and the waters like glass. Mr. Dearle must not expect to maintain a reputation by repeating a single effect of nature: these walls are thronged with such examples. Let him consider their number, and endeavour to avoid like results.

If Mr. Lance, when painting his "Beautiful in Death," a peacock dead at the foot of a tree, had shown us how such a bird really would lie just after the death-agony, with

his crest broken, and argus-tail disarranged and dust-be-smirched, he might not only have had an opportunity of displaying his exquisite skill, but also something more valuable than is presented by this very orderly-looking bird, who appears as if laid out for his funeral, evidently having died in the most genteel manner, and without a struggle. As mere lay-figure painting the bird himself is a marvellous triumph; so much so that we regret such transcendent skill should have no other object than (like the peacock) to display itself.

Of the figure-pictures which this exhibition contains, there are few which can come up to the average of a year's display. Mr. Frost's "Boy's Head" No. 315, has a delightful truth of character which we seldom see in his greater works, being more solidly and truthfully painted than usual. "The Plant Hour," W. P. Frith, R.A., is the well-known subject of Othello stating his love to Desdemona,—"Upon this hint I spake." There appears to be a mistake in the physical characters of both figures; Desdemona here is a somewhat riant-looking young lady, whose head, as painted, would stand well as a portrait, but by no means represents Shakspeare's sweet creation. The picture shows so much brilliant execution, that we must lament that more consideration was not given to the just representation of the characters chosen. "Molière reading to his Housekeeper," No. 458, by T. P. Hall, is another stock-subject (when will painters extend their reading in the search for new ones?), but we have seldom seen it better treated. The head of the laughing housekeeper, who has abandoned herself to her mirth, is peculiarly successful; indeed, one of the best things in the exhibition. The figure of Molière himself shows a capital reading of character, although looking, from some fault in the execution, rather distorted. We look upon this work as one of high promise, and hope much from the painter, if he will but avoid even the suspicion of imitating Frith, &c. W. Maw Egley's picture, "The Talking Oak," No. 499, from Tenyson, is a piece of false Pre-Raphaelitism, an utter mistake in the nature of his models, the P.R.B.; an error which the more surprises us who remember his very excellent picture of "Charles V. in the Cloister," at the Royal Academy the year before last. The painter's "Taming of the Shrew," No. 318, a sketch for a picture, is very brilliant. We hoped a better thing from Mr. Cave Thomas than No. 539, "A Letter requiring an Answer,"—a very unpleasant-looking lady, who is lost in reverie, while at her feet lies an open letter. The picture looks as if it had been painted from a photograph, and the lady is really ugly.

J. Gilbert's picture, "A Regiment of Royalist Cavalry at the Battle of Edgehill," No. 76, is full of life and motion; the figures seem to swerve about in a disorderly wave; they are as fine a collection of swaggering troopers as we should wish to see. In front some officers have dismounted to look over a map; the black horse of one of them, held by a page, is capably introduced and most skilfully painted. This is a subject which suits Mr. Gilbert most perfectly, and altogether we have never seen a picture of his which pleased us more. Mr. G. Smith's "Spending a Ha'penny," No. 296, is a capital subject, and the picture most cleverly painted in some respects. It shows a boy, who has found El Dorado, making an investment in sweets at a dame's shop; through the window a crowd of children look in anxious hope of a share. The hesitating action of the boy, puzzled in the choice of dainties, is excellent. We should have liked to have seen more variety in the expressions of the other children, and a very great deal more solid painting throughout. We commend to the visitor's notice Mr. Frank Wyburd's "Janet Foster," from *Kenilworth*, No. 407, as a capital little sketch, which will improve upon acquaintance. The same may be said of No. 423, "Say, Thank you," by J. E. Hodgson, showing a child who has gained admittance to her home by the courtesy of a woman passing by. The door is open, and the child's elder sister bids her to say, "Thank you." The sister's head is really

very beautiful indeed; and the whole of the little picture (though deficient in brilliancy) shows much promise. "The Old Cavalier," No. 457, by T. Morten, an uproarious-looking old gentleman drinking, is capital; so skilfully done, that it might almost be taken for a Frith. The textures of the dress, &c. are well rendered. No. 226, "The Dead Rabbit," by J. Clark, will be found to be a vigorous transcript of boy-emotion under exciting circumstances.

We must give a word of sincere commendation to Mr. Wingfield's "Cottage Interior," No. 9, wishing he would always paint with so much affection for humble nature.

We do not pretend to have noticed all the excellent pictures which are here exhibited; it is rather our aim to comment upon those which have attracted our attention in a manner that shall put the spectator into a way of examining for himself; that is, by trying them with the touchstone of a comparison with nature. In conclusion, we may say, that in executing the duty of criticism we have never found fault with an artist's work unless it appeared to exhibit the power of doing better things. Of the vast mass of crudities which these walls support we have said nothing. The chief cause for regret which we observe is, that the landscape-painters appear to have formed themselves into a company ("limited"), for the purpose of imitating one another, and so to amalgamate their several styles into one manner, that in a few years unfortunate critics will have to receive a special education to enable them to distinguish one man's work from that of another.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

COMMENCING at the Commencement, we Commence to say that language is as old as Adam. Like Adam, it has had a very numerous progeny; and following still the fortunes of that luckless spouse, there are divers of its offspring of whom it has every reason to be ashamed. Not among these is the brave old language of England,—the great family of Anglo-Saxon words. Born beside Persian rivers and hardened on Gothic coasts, these children of noble tongues combine, in this latter day, an Indian passion with the strong simplicity of the north. Long ages of intercourse with the whole world of human speech have added grace, filled up defects, and worn away blemishes, till the tribe has reached a point of dignity and just supremacy unknown to any other tongue since the great hubbub in the Tower of Babel.

But to get a particularly good name for any thing is forthwith to become one of those precious pegs for which the whole race of hangers-on lie praying. Such a peg is our English tongue; such parasites are at its heels, and if it did not turn now and then like a bulldog, with a shake and a growl, the very marrow would be sucked out of it in a generation or two by a set of sneaking discreditable vagrants from every other language under heaven, who catch at its skirts, tumble in its way, and are ready to sell their souls and cut off their foreign noses for the sake of its adoption and patronage. Some of these lingual Bohemians, too bold and forward for success, get taken by the shoulders pretty quickly and turned out of the language. But others are far too clever; they manage matters with an admirable tact, and a very different result. These begin, perhaps, by making themselves generally useful to some highly respectable booby, who introduces them to society as pleasant foreigners in their native costume. By and by the dress is changed for a British one, the rogue still retaining his foreign accent for a while. Then the accent itself is dropped. He sounds like English, swears himself the son of a Smith, curries favour with an author hard up for another word, and finally gets into the dictionary. Many of these poor

FROM "LALLA ROOKH." BY F. WYBERT.

Beautiful are the maids that glide,
On summer-eves, through Yemen's dales,
And bright the glancing looks they hide
Behind their litters' roseate veils. *Lalla Rookh.*

vagrants may be passed by in silent contempt. Expressing some feeble thing which a true Briton never cares to think of, they do little harm, and may be left to those who like them; but there are others on whom all the wrath in all the vials of indignation and fury deserves to be poured. We speak of those bold usurpers who, finding a place in our language well and nobly filled by a word of true native breeding, take upon themselves to oust him out of it, succeed foully in their design, set their own foreign gristle in the place of Anglo-Saxon bones, turn British blood to milk-and-water, and do our speech a mischief which it may need another Shakspeare to repair. This pest increases. The time for indifference is past. We call up one of these varlets for summary justice. Let the rest take warning.

Time was when things *BEGAN* in England, as they did in the Beginning. The word is a thorough native one; a strong sounding word, with a B and a G in it. Was it not good enough for us? Was there any better word for the purpose any where under the sun? There was not. But there was a worse one beyond comparison, and we have taken him to our lips, if not to our bosoms; to our finger-ends, if not to our arms. Things *BEGAN* with us no longer; they *COMMENCE* instead. "*Commence*" is the precious poodle that is to turn our home-bred mastiff out of doors. *Commence*, forsooth! What do we want in England with this tip-toe dandy of a word? Look at him, Britons; mouth him, and see what you can make of him. A French-Spanish-Italian mongrel; an illegitimate mouthful of effeminate letters; a word without an ancestry, descended from nothing, found wandering

on the Continent without father, mother, or native home. Two Latin words have indeed been accused of his bad parentage; but there is nothing to show that they ever came together for such a purpose; if they did, they ought to have been ashamed of themselves; and, in point of fact, they are both far too respectable for the idea to be entertained. "*Commence*," indeed! A mincing mealy-mouthed rascal; a fellow without a bone in his body, made up of three liquids and three vowels, with a double-tongued unnecessary letter for the crown of his head and the joint of his tail. When he first put his soppy little foot in England would be hard to say. It was doubtless in the blackest of dark ages, when slimy and sneaking things could move about unseen. Whenever it was, he found two fitting hiding-places,—in the courts of law and under the forms of colleges. There he lay for ages, snug and simpering; venturing now and then into the good-natured unsuspecting Anglo-Saxon world; tripping into good society; making fine acquaintances, but getting nothing from them beyond the privilege of doing an errand or two. The little scoundrel was hatching mischief all the time. He watched and waited; caught us in the Castle of Indolence at last; set his pretty pasty cheeks by the brown ones of his natural enemy; vowed they were the comelier; and in an evil day got us to believe him.

Here is an old English play-bill; the date is June 4, without the year; but the year was about 1770: "A comedy called *Much Ado about Nothing*, written by Shakspeare, will be performed. It will *BEGAN* exactly at seven."

Here is another, no farther back than 1812: "Mr. Kemble will appear in Shakespeare's tragedy of *Coriolanus*, and the performance will begin at seven o'clock." There was some stuff in us then. We were fighting the French, and had a respect for our Bs and our Gs. We knew we were Britons, and felt we were Great; we had to talk of Bullets and Bayonets, of Guns and Gashes, of Badajoz and Gibraltar, of Grape-shot and Battles, of Banners, Breezes, the Bay of Biscay, and St. George. We had Grappled with Gaul; we were Beating Boney; we were marching through Bloody Breaches to the Gates of Glory. That was no time to put a slight on the two most stalwart letters in the alphabet—the very initials of Great Britain's name. But peace came, with soft narcotics and luxurious joys. The tired sinews yielded; the tongue forgot its grand old battle-songs, and began to babble of mild music and eider-down. Alas, not so! Beginnings had grown too hard and strong for it. It Began no longer—it COMMENCED.

We owe this precious word immediately to France; and it established its present usurpation by something of a *coup d'état*. On the morning of Wednesday, the 20th of March, 1820, the following announcement appeared at the head of the leading column in the *Times*:

"As we have received several complaints respecting the publication of the *Times* from the Secretary of the Society of News-venders, we shall for the future, in order to exculpate him and ourselves, publish every morning the hour at which the journal of the preceding day was delivered. We shall BEGIN to-morrow."

They never Began. On the following day this fatal sentence was read:

"The publication of the *Times* COMMENCED yesterday at six o'clock, and was finished by nine."

The blow was struck. The brave old Saxon word had been elbowed out. He turned nevertheless astonished and expostulating, and even held his ground for the space of eight-and-forty hours. On the next day and the next, the publication of the *Times* "Began" according to the official paragraph. Then all was over. On Monday, April 3, it was once more announced that "the publication of the *Times* COMMENCED at six o'clock on Saturday morning." Now Saturday was the 1st of April.

As far as we know, with the exception of one single day, about a week afterwards, the base intruder has kept his place above the leading article of the first journal in the world ever since that Festival of Fools; and under cover of this distinguished patronage, he has wormed his way into general society. We meet him every where, plump and smirking, polished and prim. He is likely enough to lord it over our entire literature, from our Bibles to our nursery-rhymes. A few years longer, and our children's children may learn in wonderment, that when the pie was opened the birds commenced to sing, and that the little old woman on the king's highway commenced to shiver and commenced to shake, while her little dog he commenced to bark. They may be taught to sing, "Commence, my soul," at morning service; and, as a climax of horrors, to read at last in the Book of Genesis, that in the commencement God created the heavens and the earth.

Out upon these finikin soft syllables—this mollusk of a word! Rely upon it, any thing that Commences has some rascally affectation about it. Operas Commence, and so do modern dramas—*Peter Wilkins*, or the *Flying Indians*, for example. Fashionable schools always Commence; fashionable services do the same. But think of a British oak Commencing to grow. It might grow into a fiddlestick perhaps, but never into the wooden walls of England. Let France take back her own and keep him. A Frenchman, *parbleu!* may Commence an affair with a good conscience; John Bull can do nothing of the kind. He Commences no affairs, not he. He Begins his business like an Anglo-Saxon, and in the same likeness brings it to an end. Let it not even be said, that John Bull forgets his origin in his oaths, and swears after all in Latin. He swears in Indo-European; and though

he had better not swear any more, his national bad word, with little difference in sound or sense, may have been heard on the plains of Iran before Romulus was born.

Let us look to it betimes, or this foreign usurpation will not stop here or any where till it has gagged every manly word in our native language. We mean no disrespect to the tongues of other lands. They are well enough for their own purposes, but they were never made for ours. French for France, and English for ourselves. They are like a man and his sister. Kiss and be two they may; marry and be one they never can. We took what we wanted from our neighbours centuries ago. We may still be beholden to them for a new word where we lack an old one; but to bring words across the Channel for the mere supplanting of our own better ones, is to have a second Norman conquest, another battle of Hastings, and Edith once more seeking Harold among the slain.

Wake up, sons and daughters of old England; rid yourselves of this pitiful weak word! "Words," said Bacon, "as a Tartar's bow, do shoot back upon the understanding." When the words are feeble, their imbecility returns upon your thoughts themselves. Never think you can go on Commencing with the vigour with which your forefathers Began; you may as soon do a day's work on a frog and an omelette. Renounce this pet picaninny of modern speech; or, if you must needs have a last word with him, why then Commence at once to say that henceforth you are going to BEGIN.

AN EPISODE FROM NORWEGIAN PEASANT-LIFE.

By FREDERICA ROWAN.

I HAD spent the day on one of the beautiful fjords that indent the coast of Norway, "thrusting their many-fingered arms into the very heart of the country." Towards evening, the breeze, which, coming from the open sea, had tempered the previous heat, fell; and as the sultriness of the atmosphere now seemed to weigh with double heaviness on my Norwegian boatmen, who had plied their oars lustily during the whole day, I determined to give them a rest. We put to land at the nearest point, a little promontory projecting into the bay, close to where a mountain-stream, or *elva*, leaped into its bosom. The promontory was covered with a soft and verdant carpet of moss, which offered a welcome couch to our cramped limbs; and a mighty oak, overspreading a little thicket of dwarfed hazel-bushes, brier-roses, and gigantic crimson-belled foxgloves, afforded pleasant protection against the rays of the sun, which was still high in the heavens, notwithstanding the advanced hour. The dark dome of the oak stood out in fine relief against the brighter verdure of the hanging birches, the wild apple-trees, and the alders that covered the hill-sides which closed in around us, and which, rising ridge above ridge further inland, ended in snow-capped fjelds. While two of my men were engaged in bringing up from the boat such things as we might require, and others busied themselves in lighting a fire to boil the coffee, which is the favourite beverage of the Norwegian *bonde*, or peasant, and which they had been looking forward to with much pleasure, I stretched myself on the soft moss-carpet, and contemplated the beautiful landscape that surrounded me. In front, far as my eye could reach, the waters of the fjord lay extended like a mirror, reflecting on its polished surface the colours and outlines of the mighty fjelds and the clear blue of the heavens. The rush of the *elva* as they came foaming down from the high ridges sounded louder in the deep stillness of the evening, broken by their voices only, and by the short sharp bark of a dog that was driving a flock of sheep up one of the slopes. In a little while the sun went down behind the snowy crests, leaving only a remembrance of himself in the golden clouds that hung above them, and in the rosy hues that tinged the

glaciers. The voice of the dog was now lost in the distance; but a faint echo of it still came down to us with the stronger and deeper murmur of the *elvs*, which, together with the gathering clouds and the increasing sultriness of the air, announced a coming storm.

The "brown nectar" had been made and partaken of; and the men, gathered in a circle round the fire, which exercised its powers of attraction over them in spite of the summer-heat, were fixing expectant looks on one of their number, whose natural superiority was recognised by his comrades in the leadership they had tacitly assigned to him. Björn Halvorsen,—such was the name of this fine specimen of a Norwegian, half-peasant, half-fisherman, who was as experienced in combating the dangers of the deep, as in tracking the bear on the mountain-slopes and felling the rein-deer on the snowy peaks,—was a tall broad-shouldered fellow, with a prominent nose, bushy eyebrows, hair like a shaggy mane, and a pair of open clear blue eyes that seemed to let you look into the depths of his honest heart. Björn had travelled far and wide in his native land, was acquainted with the folk-lore of the coast-dwellers as well as of the mountaineers, and could not only tell a tale of the *nikke** of every creek, turn, or *cln*; and the *huldref*† of every mountain-valley, but knew the private history of the inmates of every cottage under whose roof he had passed a night. During the period we had spent together, visiting all the inlets of the beautiful *fjord*, he was welcomed as a friend wherever we landed; and hardly a boat passed us that he could not name every man of the crew, and give a sketch of his character and history. When I say, that to this universal knowledge was joined a voice unusually sonorous and flexible, great volubility of speech, and a lively temperament, with a goodly admixture of humour, no one will be surprised that Björn should be the favourite storyteller wherever he appeared, and that he was not loth to exhibit his talent. The locality in which we were taking our present siesta was as well known to him as every other point on the *fjord*; and pointing to a farm that lay some way up the valley, or rather ravine, on the bank of the *elv* that I have mentioned, he informed his listeners that it belonged to Helge Halvorsen; adding, "But for all that it looks so snug and so cheery amid the cornfields, there is gloom enough within, I trow; for a dead bride brings no sunshine into a man's house."

"A dead bride, Björn! what do you mean?" asked I, hoping that his answer might afford me some further insight into the life and character of the hardy Norwegian race, who, like their forefathers, whose history is recorded in the ancient Scandinavian Sagas, conceal deep and fiery passions under an appearance of calm and self-possession almost amounting to phlegma.

My inquiry evidently pleased Björn, for it gave him an opportunity of indulging his love for narrative. Having filled his pipe, and lighted it with a brand from the fire, which was still burning, he took a long whiff, and then began as follows, with an unction which plainly indicated that he meant to spare us no details:

"This is how it came about. Do you see, some mile or so further up the *elv* lives Sigrid Olaf's daughter, from Guldbrandsdal. Sigrid belongs to one of those peasant-families who say that they descend from our ancient kings, and who are ever too proud to cross their blood with any less noble. How, therefore, she came to marry Björn Embretsen is more than I can tell; for I never heard that Björn had other than common peasant-blood in his veins. Mayhap, however, when Sigrid was young she thought more of a comely face and a loving heart than of a long pedigree, and didn't ask her parents what they thought; but certain it is, that after she was left a widow in sole possession of a good farm, and a handsome penny besides, she held up her head as high as if she had been only one generation removed from King Harald

Haarfager (the Fairhaired), her ancestor, and was ever telling people of what kin she came. This was probably the reason why she was so long in deciding among the many suitors who used to dangle about her pretty daughter Ragnhild, on the Saturday eve, when the young people come together for pastime,—in winter at the different farmhouses, in summer outside the *saters** in the mountain-pastures. But though Sigrid would not decide for any of the young men, there was one against whom she had all along made up her mind, and this was the very one Ragnhild had let into her young heart. Eysten Arnesen and she had been playfellows in childhood; and when they grew up they did not learn to like each other's company less. When it was Ragnhild's turn to be at the *sater* in summer to milk the cows and attend to the churning of butter and making of cheese, Eysten was always the first of the young men on the spot on the Saturday evening; and he would help her to scour the wooden milk-bowls and arrange them neatly on the shelves, to drive in the cattle† from the evening bite, to light the smouldering smoky fires to scare away the gnats that would otherwise leave the poor brutes no peace, and to wreathe the window of the *sater* with flowers from the mountain-glens, and to strew the floor with fragrant sprigs of pine against the coming Sunday. And when all the young men and maidens assembled on the grassy dikes outside the *saters* after sunset, to amuse themselves with singing and playing on the Jews'-harp, it was always observed that Ragnhild and Eysten's voices blended more sweetly than any others. Then, at new year, Ragnhild always took care that Eysten should be her *rokman*,‡ and he never would buy himself off with a spinning-wheel, though the skeins§ of yarn Ragnhild presented him with at Christmas were always thicker and more artfully plaited than those she gave the other boys; but then the wooden bowls and spoons he gave in return for these were so beautifully carved round the borders and on the handles, and all by his own hand, that it excited the envy of the other maidens of the *bygd*||.

"Though, in addition to his powers of pleasing, Eysten was a good son to his aged mother, and a more industrious worker than any other young man in the *bygd*, yet Sigrid set her face against him because his father had left his farm in debt, and until this debt was paid, hard work and small cheer must be the lot of Eysten and his belongings; and when she found that, in spite of her remonstrances, the two young people sought each other's company as much as ever, she at last forbid Ragnhild to speak to Eysten, and led the poor girl a sad life. On one occasion, even when some of Björn's kin, touched by Ragnhild's pale cheeks and Eysten's dejected looks, and the hopeless way he went about his work, put in a good word for them, saying, that where there was youth and strength, and industry and love, and honest hearts and a right good-will, greater difficulties might be overcome than those that beset Eysten, old Sigrid was so incensed, that she swore in anger that rather would she know her daughter at the bottom of the *elv* than she would see her married to that beggarly fellow, and to the son of a man who knew not how to take care of his own.

"Thus stood matters when Helge Halvorsen came forward as a suitor. Helge is a good-looking fellow enough; and having no sisters or brothers to share with him, he fol-

* *Châlets*.

† It is the women exclusively who tend the cattle in the mountain-pastures, and attend to the dairy-work; and the women of a household generally take it by turns to be there. The cows are brought into the enclosure round the *sater* three times a-day to be milked, and remain there at night. The three periods of the day with reference to the cattle are distinguished as the morning, the midday, and the evening bite.

‡ The first young man who sees a maiden at her spinning-wheel on New Year's Day is called her *rokman*, and is believed to be destined to marry her, if he do not buy himself off with the present of a spinning-wheel.

§ It is customary for the maidens to give the young men, as a Christmas-gift, skeins of woollen and linen thread, with which "the boys" mend their own clothes.

|| The rural population in Norway is not gathered in villages; but people living within a certain distance of each other are said to belong to the same *bygd*, or populated tract, form a kind of community, and cultivate much kindly intercourse.

* Water-sprite.

† Mountain-spirit, bearing the appearance of a woman with a cow's tail.

lowed his father in the farm without having to pay out a farthing,* and few young men in the *bygd* could be considered his equal in wealth. But what, above all things, found him favour in Sigrid's eyes was, that Helge was descended from one of the families of the ancient *jarls* (earls), that were as good as kings in the olden times Sigrid loved so much to dwell upon; and it was as if she thought that, in compelling Ragnhild to marry him, she would make good again what she had done amiss when she married Björn Embretsen; and so, though Ragnhild wept and wrung her hands, and Eysten spoke words of sorrow that would have melted a stone, the wedding was fixed for last Whitsuntide.

"When the day came round, the sun shone brightly, and the earth looked as joyous in its fresh green spring-dress as if it were itself a happy bride; but not so looked poor Ragnhild. In Sigrid's house every thing had been made clean and bright for the festive occasion. Round the fireplace were wreathed branches of fresh-blown birch; bunches of wild flowers stood in jars on a large chest of drawers richly decorated with brass,—one of those heirlooms which we Norwegian peasants prize so highly, and hand down from generation to generation with so much pride. Outside the door stood the two slender silver-stemmed birches, indispensable at weddings; and within the floor was strewn with pine-twigs, and a white sheet was spread as a baldachin above the seat to be occupied by the bride at the festive meal, which is always partaken of before starting for church. And there sat Ragnhild already decked out in the bridal-gear. Her stomacher was spangled with silver and gold; her waist encircled by a silver belt; her glossy brown hair, usually braided smoothly over her forehead and tucked up behind under the close-fitting hood, was frizzled in front, and bedizened with tinsel-flowers, and tied up behind with silver and red ribbons that streamed down her back, as the women will have it on these occasions; and on the top of all was the virgin-coronet, which virtuous brides only may wear. But all this finery could not restore to Ragnhild the fresh roses on her cheeks, the merry flash in her eye, and the bright smile round her little mouth, that had made her the pride of the *bygd*; these had withered and fled with her hopes, and now she sat there drooping and pale, like the flowers in the mountain-glens when a sudden frost has nipped them; and though the house was full of guests, who had come early to bring their wedding-offerings of thick cream, new cheese, and sweet cake and bread, to help towards the feast, and the tables were spread with good cheer, we all walked about as quietly and stealthily as if we had come to a funeral instead of to a wedding, hardly venturing to speak above our breath. Each time the sound of a horse's hoofs were heard outside Ragnhild started as if from a dream. She did not weep, but she did not speak, and would take no part in the packing of the large wooden chest which generally accompanies a bride to her new home; and when she was asked any question about it, she would say: 'O never mind; do as you like.' Once, however, when one of the bridesmaids showed her a piece of finery, and asked where it was to go, she caught her friend round the arm, and bursting into tears, said: 'O, don't ask me, don't; I shall never, never wear it.' No one knew what to make of her; for latterly she had seemed so resigned, that every one thought she had made up her mind to put a good face upon what could not be helped; yet now that the moment had come, it seemed as if all life had been crushed out of her. Mother Sigrid, who was bustling in and out of the kitchen, as if her only care was about the meat and drink, said that Ragnhild had caught cold and had a pain in her head; but one of the women whispered to me that Eysten had been there the night before, and she dare say that was the reason Ragnhild hung her head so.

"Every thing was ready, and we were only waiting for

* The Norwegian peasant-farmers are all proprietors; and, as the right of primogeniture does not prevail in the country, to prevent the subdivision of land, it is usual for the eldest son to follow his father in possession of this, on condition of paying his brothers and sisters their share in cash.

the bridegroom. It was in the flood-time; and as the current in the *elv* runs very high at this period, and it was hard work to row up against it, it was decided that Helge should ride up along the horse-track that makes a considerable circuit; but that the young couple should go home down the river in Sigrid's boat. At length the young men who were on the look-out gave notice that the bridegroom was coming; and Helge and his bridesman soon made their appearance in proper style, the forelocks of their horses tied up with red and green ribbons. When Helge entered, the guests had already taken their seats on the narrow wooden benches around the tables, and his eye fell at once on Ragnhild, who sat pale, like a corpse, in the high seat. He had known full well all the time that she was not willing to marry him; but he had thought, as so many a man has thought before him, that when once she was his wife she would make up her mind to like him, and all would go on well. But now, when he saw her sitting there more like one ready to be borne to the grave than like one going to the altar, and remarked that when he gave her his hand and greeted her with a few kind words, her lips seemed to cleave together, and she could bring out no word in return, a sharp pain seemed to shoot through him, and no doubt he began to repent that he had not taken more account of the girl's feelings; for after standing a little while as if in deep thought, he asked Sigrid to go into the next room with him, and probably spoke to her on the subject,—for their voices grew louder and louder, and Sigrid was heard to say, that it was too late now, and that they could not be making themselves the talk and the laughing-stock of the *bygd*. Most likely Helge felt that he had not the courage to do so, even though poor Ragnhild's happiness was at stake; for when he came back with Sigrid, both took their seats at the table, and no more was said about the matter. But a gloom had settled upon us all, and hardly a word was spoken at the beginning of the festive repast. Presently, however, the draughts of beer and brandy with which the rich cream-porridge was washed down began to loosen the tongues of the guests, and something like the usual mirthful chat of a wedding-feast buzzed round the table; though Ragnhild still sat stiff and cold like a stone statue, raising her spoon mechanically to her mouth, in obedience to her mother's winks and nudges, but without ever letting the food pass her lips. At length the foreman (chairman), an important personage at our wedding-feasts, rapped his spoon against his wooden platter,—the usual signal for silence. Then followed the customary speech, inviting the guests to contribute a gift towards the future housekeeping of the young couple, and each guest proclaimed aloud what he or she intended to give. Some gave money, one a goat, another a pig, and so on. When this was over, grace was said; and after the so-called dinner-hymn and farewell-hymn were sung, the whole assembly put itself in motion to proceed to the church, which stands on a hill at some distance from Sigrid's house.

"While we were waiting outside for the parson, who had not yet arrived, I saw Ragnhild make her way into the churchyard and up to her father's grave, where she stood some time with her hands folded over her prayer-book. The kerchief that covered her head concealed her face from prying eyes; and what may have been her thoughts while she stood there, no one knows. Maybe she sent up a prayer to Him who is the master of life and death, to grant to her also soon a quiet resting-place under that simple stone, and maybe a feeling told her that her prayer was heard; for when, roused by the rumbling of the pastor's old chaise that was drawing nigh, she joined us again, we all remarked that her step was firmer, and that a slight colour tinged her cheek.

"You have seen some of the new churches in our country, sir, which I think ugly enough,—all gray slate, roof and walls; but the church of yonder *bygd* is one of the old-fashioned ones that seem to be part and parcel of the land,—for they are built entirely of the pine-trees that cover our

high mountain-slopes; the pillars that uphold the galleries within are some of the tallest and straightest stems that have ever been cut in our forests. The ornaments round the tops of the pillars are of the cones of these same pine-trees; and the angels' heads and other carved ornaments are the handywork of the lads of each tract: for the Norwegians were ever clever carvers in wood. The little windows, high up under the eaves, let in the daylight so sparingly, that a mysterious twilight always reigns within; and somehow or other, to me, the psalms never sound half so hearty and solemn in the large stone-churches, with their grand organs, as they do in these little log-churches in the mountains, where each man and woman sings to the best of the voice God has given them, and never mind how much it may grate on the ear here below so that it reaches on high the One for whom it is intended. But to come back to Ragnhild's wedding.

"The church seemed dismal-like with the candles burning on the altar, and the air struck cold against us as we entered from the bright sunlight and the scorching heat outside. But the ceremony proceeded as usual; and nothing remarkable happened until the parson pronounced the words, 'And thus I proclaim you, before God and man, united in the bonds of holy wedlock'—when a deep groan sounded through the church. To me it seemed to come from a part of the gallery which lay in deep shade, but others said afterwards that they were sure it came from the vaults below. On Ragnhild it made a fearful impression; she had to be carried out of church half-fainting, and when she was put into the saddle again, she was hardly able to keep her seat.

"The usual dancing and merrymaking after the wedding was given up on this occasion, for Ragnhild had begged so hard not to be forced to dance when her heart was so heavy; but the 'singing the black hood on,' as it is called, was to be gone through. The marriage-rite would hardly have been deemed complete without it. In general this ceremony does not take place until towards the end of the evening's dance; when the report of a rifle gives the signal for the guests, headed by bridesmaids and bridesmen, to enter in procession the room where the bride, having taken off her bridal gear, stands ready to have the dark hood, worn by married women alone, put on her head by the bridegroom, while the bystanders, forming a circle around them, sing an appropriate song. But at Ragnhild's wedding we had neither procession nor song, every thing seemed to be done in a tremble and a flutter; and to Mother Sigrid, with her pride of ancestry and her constant talk about the royal state that used to reign in her family, it must have been a dire disappointment to see even our usual time-honoured customs partly set aside at her daughter's wedding. Perhaps it may have made her reflect how she was sacrificing the reality to a dream; for she seemed anxious at last to get the young couple off as soon as might be; and while Helge was lingering at the refreshment-tables with his friends, she hurried Ragnhild down to the river-side, where the boat lay ready loaded with the maiden's large chest, and the numberless wooden bowls and platters and pails and churns that belong to a Norwegian *gjente's* dowry. The tears were running down Sigrid's cheeks by this time; but Ragnhild seemed in a kind of stupor. She took her seat in the boat without even noticing the people assembled on the high banks, who were waving a farewell with hats and kerchiefs. Among the rest was a knot of young men who had not been among the invited guests; and amid whom, to the astonishment of all, Eysten had been observed for some time giving way to explosions of wild and boisterous mirth. Mother Sigrid had left the landing-place, and was standing on the bank with the rest, and Helge was just seen coming from the house to join Ragnhild, when Eysten darted from the group that surrounded him. In one bound he was down on a level with the boat; an energetic push with his foot set it afloat, and vaulting into it and seizing the oars, he was in the middle of the current before the bystanders had time to recover from their surprise. 'No need to hurry; it is my turn now;

I'll take the bride home,' cried he, with a wild laugh, to the amazed Helge; and in a few minutes the boat shot round a bend in the river and was lost sight of.

"The young folks seemed inclined to laugh at the bewildered Helge; the old ones shook their heads, and said it was a silly joke; for no one thought it was any thing but that, except perhaps Mother Sigrid, on whose face gathered a dark cloud as of a dreadful foreboding. As for Helge, there was nothing for him to do but to get to horse and ride home as he had come; and many of us followed him to see the end, never doubting but that we should find Ragnhild at the farmhouse by the time we got there. And there indeed we found her; but, God help us, it was only her corpse. Some hundred yards above Helge's place, a tongue of land, on which stands one of those Bauta stones, with runic inscriptions that keep alive the memories of olden times, juts out into the river, and round it runs a fearful current. Here the boat lay, keel upwards; and further down, in the rushes, close to Helge's landing-place, were the bodies of the lovers locked in each other's arms. Whether it was accident, or whether it was made up between them, is only known to Him to whom there are no secrets in heaven or on earth."

THE THEATRES

It is not in these columns that the pretensions of Mr. Westland Marston's new play at the Lyceum can be discussed. The production of the work and its results have been amply dealt with by the general press, and to its testimony we refer our readers.

Still the obvious motives which enforce silence as to the author must not prejudice the claims of the actors to our full and fair recognition. The proof furnished of Mr. Dillon's capacity to carry to a successful issue a character perfectly distinct from any that he has yet attempted, shows an extent of range in the performer of the highest interest to all who are concerned in the maintenance of a national drama. The part confided to him is that of one whose pride and passion in the earlier scenes have to be subsequently expiated by intense suffering and self-immolation; and so to render the character as at once plainly to set forth its error, and yet to enlist the full sympathy of the audience for its struggles, is a task which demands, not only the fire and pathos so often commended in Mr. Dillon, but a fine discrimination, which is amongst the last graces of the accomplished artist. The wild energy with which the scorn of a proud and impetuous spirit was developed by Mr. Dillon; the sudden transition from rage at his supposed enemy to scorn of the tempter who counsels his betrayal; the terrible earnestness with which the victim's escape is urged; the cry of heartbroken agony with which the erring man falls when his friend and sister are arrested; his torpor changing to the might of despair when he seizes the arch-machinator; his touching parting with those whom he rescues, and the grand exultation with which he surrenders himself to their former doom, must be ranked amongst the most brilliant of this actor's achievements. Mrs. Dillon, who on the first night had to struggle with severe indisposition, converted her very difficulties into a foil that brought out more vividly her genuine feeling and passion. She took the house by surprise, and proved that for the performance of the emotional drama the Lyceum could boast of an actress worthy to share with her husband those honours which have been awarded to him by the unanimous voice of criticism.

Mr. Stuart, by the judgment and vigour with which he interpreted a repulsive character; Mr. Barrett, by his genial heartiness and unrestrained humour—worthy of a far more important part; and Mr. McLoim, as the young lover, contributed materially to the common result. The way in which the piece was put upon the stage merits the highest praise. We would particularly instance, among the scenic effects, the hall of Revesdale Castle, with its gallery, its massive staircase, and those ancestral figures, amidst which the

daughter of the house takes her stand at the close of the fourth act, spiritualised, as it were, by the moonlight into another family-picture amongst those of her line. The concluding scene, representing the landing of William III. and the fleet in the bay, was a masterpiece of scenic art. It need scarcely be observed, that some of the most striking proofs of histrionic power have at times been displayed in very faulty plays, and that the admitted merits of the performers in the present one leave those of the dramatist fully open to question.

We must not conclude our notice of this theatre without stating, that *Othello* has been successively repeated to crowded houses; a fact the more gratifying, because the scenery, though adequate, presents no special attraction, and leaves the poet's genius to the only aid on which it can rightfully depend—that of the actor.

At the Haymarket a most effective little *drame*, entitled *A Wicked Wife*, an adaptation from a posthumous work of Madame Girardin, has been produced with deserved success. The heroine, to protect her husband from suspicion during the Reign of Terror, assumes the character of a fierce republican, and feigns to trample on all the instincts that endear and consecrate woman in favour of those heartless abstractions which were in vogue during the first French Revolution. The interest is derived from the contrast between the feminine devotion of the wife in her real character, and her counterfeited adoption of those principles which scoff at all social bonds and domestic ties, and which, if generally embraced, would have eminently entitled her to the designation "a wicked wife." The little drama is of the best class, relying as it does upon the development of human emotion rather than upon forced incidents and mere stage-contrivances. The personation of the heroine by Miss Reynolds was distinguished by a true dramatic feeling of the contrasts which the character presents. Her acting was at once simple and striking. Mr. Howe and Mr. Rogers were more than usually individual in their respective parts, and Mr. Compton, by his droll terror at the possibility of accidentally committing treason against the ruling powers, capably relieved the serious interest.

Before these remarks are printed, another version of Madame Girardin's work will probably have been produced at the Lyceum.

An original farce, entitled *A Splendid Investment*, has been produced at the Olympic. The author is Mr. Bayle Bernard, one of the few undebated English writers for the stage who still remain to us. His latest work is full of event and interest, and gives capital opportunities of a new kind to Robson, who avails himself of them to exhibit in its utmost force that extraordinary blending of the humorous and tragic elements peculiar to himself. Still later, a new adaptation from the drama of Madame Girardin has been put upon the boards of this popular little theatre. The English version is from the pen of Mr. Tom Taylor. The word *version*, indeed, must be accepted in its widest sense; for the work is so thoroughly Anglicised, and bears so plain a stamp of Mr. Taylor's power to blend the more intellectual qualities of his art with stage-effect, that we think we might attribute to him personally much that is excellent in dialogue and in the working-up of situation. The mainspring of the interest here is the successful endeavour of a wife in the period of the Monmouth Insurrection to save her husband by diplomatising with Kirke, whom her beauty has captivated. The part of the wife, very dramatic in itself, is rendered by Mrs. Stirling with admirable tact and power.

Mr. Phelps may refer with honest pride to the production, at Sadler's Wells, of his thirtieth Shaksperian play, *The Two Gentlemen of Verona*. This charming exposition of Shakspeare's mind in its youth is mounted with great beauty, and acted with all that equality of talent which insures the fit representation of even the smallest character.

At the Princess's there is no change to chronicle; the most satisfactory record of all, we should apprehend, to a management. No pages of Mr. Kean's "Pictorial Shak-

spere" have been found more attractive than those which illustrate the *Midsummer Night's Dream*. *Richard II.*, we hear, is to be the next of the gorgeous and tasteful pageants for which this house is celebrated.

Our present chronicle looks more eulogistic than critical; but as the facts it narrates happen to be true, we must be content simply to say so.

PHILANTHROPY AD CRUMENAM.

To the Editors of the National Magazine.

DEAR MRS. HOME,—In reading the amusing record of a "Flitting," in No. XVI. of your noble NATIONAL MAGAZINE, I came upon a passage concerning the relations of rich and poor, which, from its plausible appearance, is sure to be so acceptable to the foibles of some readers, the ignorance of others, and the ill-balanced constitutions of that great majority of us, who are neither so good nor so bad as to escape the reproofs of conscience, and in whom therefore the continual business of the intellect is to find excuse for the misbehaviours of the heart, that I cannot refrain from a few words of commentary.

And as the "Home" is precisely that department of life, and of the Magazine, in which the great principles of social intercourse may most fitly be considered, to you, madam, these few words shall be addressed.

The passage I have alluded to is, the declaration of the heroine of the "Flitting" with regard to a certain suburban milkboy, who had, with great patience, good humour, and intelligence, been, several times in the course of one morning, of important service to two "ladies" who were hunting for lodgings in his neighbourhood. It runs thus: "Heartily thanking him,—and I beg to observe, ONLY thanking him, as we consider it a great error and a great insult to the poorer classes that they should be taught to do solely for lucre's sake little civilities which the richer do from simple kindness,—we left our milkboy."

Neither authoress nor heroine gives us the milkboy's *sotto voce* as the "ladies" turned their smiling faces homeward. I happened to be by at the time, and am sorry to testify that it was as follows:

"Vell, if them ain't the hartfull dodgers, I'm blowed!"

Now in justice, madam, to those of the more fortunate classes who are sincerely desirous to assist in the moral and mental amelioration of society, and in justice also to *amigo mi*, the milkboy, who is, I assure you, at heart quite as good-natured, kindly, and honest-blooded a fellow as the "ladies" supposed, let me offer my small contribution towards that right conduct of the intercourse between rich and poor which must result from just notions, not of their possible and ideal, but of their positive and real relations. An eminent modern writer has called those great mutual debtors "the two nations." That they should be "two" is indeed a grievous fact, and their fusion into a great whole is among the noblest of ambitions; but meanwhile our success in making them in future one depends on our perception that they are at present two. Having recognised this twoness (duality is not the word), we must place ourselves by turns in each nation, and contemplate the other from without, before we can understand the action and reaction between them. For when separate nationalities turn their eyes upon each other there is always a certain moral perspective at any difference of elevation by which the true features of each are foreshortened and unbalanced; and wherever interaction is regulated by mutual necessities, the

wants of either party will value in the other only those qualities which minister supply, and will magnify the presence or absence of such qualities to the rank of characteristic virtues and vices. Consequently it often happens in alliances of all kinds, that the evils in the contractors which are the greatest obstructions to union are by no means those which are most serious *per se*; and in any attempt to bring about a coaction, your success, my benevolent friend, will depend, not on your perception of the absolute truth respecting them, but upon your knowledge of the shape in which each appears to the other, and of the feelings, on either side resulting from that appearance.

"We English have a scornful insular way
Of calling the French light."

To us, standing outside, their lightness is the quality which circumstances have made most obvious. The French look across the Channel with as little chance of getting at the sum-total of England. The French may not be "light;" but a wise France wishing to ally with England would take care not to show the suspected foible; and what should we say of that statesman of "*perfidie Albion*" who began his negotiations for a French alliance with any thing that looked like a breach of faith? A really cordial union must always be preceded by mutual confidence, and mutual confidence can only follow mutual respect. And respect in the popular mind is accorded more to negative than to positive virtue: it is useless to display your good qualities, if you have not first removed suspicion of your bad. Probably no modern man has been so much respected as the late Duke of Wellington; but we respected him, not because no man possessed more talents, but because no man made so few mistakes.

Let France show that she is steadfast, and we will learn her other virtues; let England prove that she is sincere, and France is prepared to see the remainder of her goodness. What is true of the two nations on opposite shores of the Channel is true also of the two nations which from generation to generation have been divided by the sea of worldly circumstances,

"and all that roar."

The rich never speak of the poor, nor the poor of the rich, as the rich of the rich and the poor of the poor. Each class sees the other from without instead of from within; and relative vices and relative virtues have shaped the whole idiom of social language. "A good servant" is one who is obedient, honest, and respectful: we do not ask if he be pure, benevolent, or devout, and only inquire if he is religious, because religion is in some indefinite way supposed to be connected with honesty. The habitual phrases of the poor regarding the rich are similarly special and incomprehensive; and on both sides, as might be expected, these peculiarities of language are the outcomes of thoughts and feelings equally partial selfish and unjust which have become to the "two nations," in the lapse of hereditary ages, native and involuntary attitudes of mind. It is precisely because the opinions, fears, and suspicions of the two parties have become thus innate and involuntary that no calculation concerning them can be successful which does not begin with assuming these as fixed quantities. You must neutralise your crude chemicals before you can hold them in common and peaceful solution. You must "rectify the globe" to the given meridian, if you expect your theory to accord with nature's practice. Your instruments must be brought to concert-pitch before you commence your concerto. You must restore the balance of your unequal scales before you can expect your pound-weight to answer for a pound.

Now in that creed concerning the rich, with which experience has indoctrinated the poor, there is one clause, fundamental and omenical, from which nearly all others are the mere logical conclusions. It is this: that the money-holding is naturally and legitimately the money-

paying "nation"—a kind of Providential mechanism for the dispensation of gold and silver. The first result of this clause is, that the acceptance of benefits by one party from the other is accompanied by no sense of degradation in the recipient. Don't hold up your hands, Mrs. Home,—do you feel any humiliation in taking your daily sunshine? nay, in getting crops from the earth, or fruit from the trees? nay, in drawing your prize in the Art-Union, or digging your thimble out of a twelfth-cake? Once let there be unquestioning belief that any thing is in the inevitable order of nature, and we lose the sense of humiliation in submitting to it. How far such a belief in the present instance is admirable is not the question. It is an existing fact, and a fact which you can only remove, if you wish to remove it, by means which must begin by an accommodation to its existence and a recognition of its results.

The next consequence of that fundamental clause is the division of the rich by the eyes of the poor into two great classes of very unequal size; those who exact one-half of the social contract, Work, without a full performance of the other, Pay, and those who in such matters are just or generous; in other words (the poor man's words), into the "mean" and the "frechanded."

And because of those peculiarities of all judgments *ab extra*, which I alluded to at the beginning of these remarks, "meanness" has come with the poor to be typical of all vice, and liberality to be representative of all virtue.

Why, you yourself, *mon cher* (I'm not speaking to you, of course, dear Mrs. Home, but to young Broadlands here, who had got as far as "curse their—" before I could remind him you are an editress), you yourself act on the same principle every day. If you suspect your groom of dishonesty, are you relieved by learning that he is an expert fiddle-player? And when you find a lad of the right pluck and inches, orthodox in horseflesh and scrupulous in oats, does it trouble you to know he hasn't an ear for psalmody, and is somewhat behind in Lindley Murray? You tell me your James is a good fellow, and I know you mean primarily that he is honest; you spoke of Tom as a bad one, and I understood him to be a knave. Don't blame honest James, then, if when he calls you a good master he is chiefly thinking of your generosity; and that his notion of a bad one would be, "mean, sir, mean—that's what he is."

Therefore, in every attempt of the stranger rich—believed to be superabundant and suspected to be "mean"—to gain the confidence of the stranger poor—conscious of deficiency, and fearful of polite extortion—the first preliminary must be some unquestionable evidence of disinterestedness and self-sacrifice. All the kindness and courtesy of the most radiant and "fraternising" face and manner are useless, my fair Signora Spilorcia, while there is the possibility of a selfish interest, or any thing which the quickness of inherited ingenuity may twist into an intention of substituting smiles for cash. And this not because the poor prefer cash to smiles, and loaves and fishes to fraternity. First "butter the parsnips," and then be sure that your "fine words" are infinitely more precious than your "butter."

Put your character beyond doubt,—as I'm sure you always do, dear Mrs. Home,—by those plain practical evidences which they understand, and nowhere may you feel more certainly of your friendship that it is "twice blessed" than with those whose daily toil it will dignify and sweeten, and who—you being you, and beyond suspicion—would not exchange one of your sympathising looks and words for a thousand times the sum that originally certified your sincerity. But till this sincerity is established, you may as well go to stroke a horse at grass with a whip in your hand as enter a cottage with your insignia of ladyhood, and expect the confidence of the "poor bodies" within; who may justly doubt your desire to extend to them the highest benefits when they find that out of your superfluity you grudge them sixpenn'orth of the lowest.

It is vain to say, "Peace, peace," where there is no peace;

to cry, "Brother, brother," where there is no genuine reciprocity. It is mere outrage for King Bomba to thuck Porio under the chin; and when Czar Nicholas kissed the patriot he was sending to Siberia, the philosopher standing by might see the theoretical virtue of the action, but to the miserable exile it seemed adding insult to injury. The lady who requests her men-servants and maid-servants to call her by her Christian name, who invites the peasantry of her neighbourhood to the equality of her evening-parties, who expects the cottager's wife to return her domiciliary visits and reciprocate her household and other advice, may afterwards, if she pleases, make gratuitous use of the time and knowledge of the poor, and allow a delicate and economical avoidance of any thing that might suggest inequality of fortune to save at once her conscience and—her pocket.

Till then the sufferers by one portion of social custom have a right to claim such benefits as result from an adherence to the other; and I shall never hear the fine-drawn sophistry of such canny philanthropists as the "fitting" "lady" without mentally repeating—in *variazioni* more or less civilised—the frank aside of my friend the milkboy—"Vell, if them ain't the hartfull dodgers, I'm blowed!"—I remain, &c.

S. D.

GARDEN NOVELTIES.

THE WINGED PEA AND THE EGYPTIAN PEA.

HERE are two curiosities of the pea-tribe, to which we call the attention of every lover of a garden. The first is a pretty ornament of very curious growth, the second a valuable addition to our list of esculents, the history of which is truly wonderful.

The Winged Pea is known to botanists as *Tetragonolobus purpurea*; it is an annual of low shrubby habit, does not require sticking or training, and is destitute of tendrils. It is very hardy, and may be sown at any time from November to May. In its early stages of growth, it is of a pleasant glaucous green; but as soon as its season of blooming arrives, it becomes, literally covered with butterfly-blossoms of the richest tints of crimson and maroon, the wings having a soft velvety look, similar to the petals of a well-grown pansy. It continues to bloom profusely for about four months; and if the pods are removed as fast as they appear, it will continue gay till the frost of autumn cuts it off. But to remove the pods would be to sacrifice one of its most interesting features; for these, unlike other peas, are *winged*; that is, each pod has four membranous fringes extending its whole length, and though the true pericarp is tubular in shape, the wings give the seed-vessel while it remains green the appearance of being four-sided. We grew a large patch of this last summer, and it was admired by all who saw it for its gay profusion of richly-coloured flowers, no less than for its very curiously-formed seed-vessel.

It thrives in any ordinary soil, but prefers a generous depth of well-manured loam; like other peas, a moist climate brings it to greatest perfection. It should be sown in a four-inch trench drawn with a hoe, the seeds at least four inches apart alternately, thus, As it gets above the trench, the earth should be drawn to its stems, and the trench filled up by degrees. It has some characteristics which seem favourable to its use as a bedding-plant; but as we have never used it in masses, we cannot speak positively on that head. As a border-ornament and curiosity it deserves to be better known.

The Egyptian Pea is an instance of vegetable resurrection, or at least resuscitation. It is a fragment of the old

THE WINGED PEA.

life of Egypt,—a true type of the luxurious fertility of the classic country of the Nile, and unquestionably the most truly historical of any esculent we possess. The circumstances that led to the discovery of this companion of mummies, and inhabitants of pyramids, are in themselves as interesting as the plant itself is distinct from every known member of its useful family. During the explorations of Egypt by Sir Gardiner Wilkinson, a vase was found in a mummy-pit; the age of which was computed at about three thousand years. This vase, hermetically sealed, was presented to the British Museum; Mr. Pettigrew, the librarian to the late Duke of Sussex, proceeded to open the vase to ascertain its contents, and in so doing unfortunately broke it in pieces. The interior contained a mass of dust, and a few grains of wheat and vetches, and on examining further a few peas were found, entirely shrivelled, of a resin-yellow colour, and as hard as stone. It was known that mummy-wheat had been resuscitated after an interment of five thousand years; and it was determined that the first peas ever found in a mummy-vase should be subjected to the experiment of revival. Mr. Pettigrew accordingly distributed amongst his learned friends these desiccated peas, reserving three for himself as mere curiosities. Those who tried to grow the peas failed, and no

more was thought about them, till the remaining three were given to Mr. Grimstone, of Highgate. Mr. Grimstone tried his hand at them, subjected them to heat and moisture, and after thirty days, one miserable plant appeared above ground. By patient care and ingenious culture this plant was brought to produce nineteen pods, which were ripened, and planted the next year; and this was the foundation of the stock which is just beginning to be known as the Egyptian Pea.

Botanists were as much delighted as antiquarians at the success of the experiment; for it gave them a new variety of the greatest value and most distinct character. Its blossom is unlike every other pea; it more nearly resembles a bell than the wings of a butterfly, and is veined with green lines on a white ground. The blossoms break at every joint in clusters of two, four, and eight, and are succeeded by pods that protrude crookedly through them, each pod containing from five to ten peas, which when cooked are deliciously flavoured, and melt in the mouth like marrow; in fact there is no pea to equal it; so that dusty Egypt has conferred upon us through those few shrivelled seeds a *palatial* benediction.

We should add, that the Egyptian Pea is amazingly prolific, quite hardy, and may be sown in succession from February to June, and should be treated in the same way as described for the culture of the Winged Pea. Genuine seed can be obtained only of Mr. Grimstone. As far as we are aware, seed of the Winged Pea is not obtainable from any ordinary source; it seems to be unknown to florists, and is not entered in any catalogue that we are acquainted with. As we have about half-a-peck saved from last season, we shall gladly distribute it amongst any readers of the "NATIONAL" who may like to forward to the office a stamped and directed envelope, and an additional stamp to cover the postage of the envelope to us. We will put twenty seeds into every envelope, as far as it will go, reserving twenty for ourselves.

SPECIMENS OF FOREIGN SCHOOLS: NO. IV.

PAINTED BY COUTURE.

THE DECADENCE OF ITALY.

THE DECADENCE OF ITALY.

By COUTURE. (FRANCE.)

THE pictorial method of telling a story has frequently this great advantage over a written or spoken narration of it, that not only does it bring before us the thing itself, but also presents to our view many, if not all the circumstances by which the result has been brought about. The picture we engrave is an example of the superiority which painting thus possesses. The decadence of Italy resulted, as every one knows, from the corruption and licentious indolence of the descendants of those men who built up her greatness. Of all the countries of the earth, Italy presents the only example known to us wherein two periods of greatness have been vouchsafed to the same land—in the martial glories of the Romans, and in the more permanent intellectual achievements of the Italians of the middle ages. Both of these were lost from the same causes,—indolence and consequent corruption.

Couture's picture illustrates both, though dealing only with the latter period. A change of costume and physical character would, however, adapt this painting to the former subject as perfectly as it is fitted to the one which the artist has chosen to set before us.

The indolent Italian noble of the fifteenth century, who occupies the principal position in the engraving, seems to have been meant for a higher fate than that of languid debauchery, which has become the habit of his life. The heavy eyelids and relaxed mouth show how long this habit has been his master; yet still the long, refined face, and broad forehead, relate that such was not his original destiny. How utterly lost and sunk he is now, let the nerveless right hand tell, which is too feeble and purposeless to grasp even the empty wine-cup unless by dividing its weight upon his knee. The very effeminacy of his robes is part of him, falling as they do into flat and hollow folds. His dreaming, listless, hopeless eyes, without soul and without spirit; his wasted and sunken face, over which the locks of his hair are falling—nay, the very hair itself, relaxed and clammy as it is, as though heavy with wine-dews,—are all parts of the same tale. The feeble half-recumbent attitude in which he sits enhances the general expression.

This man has crowned himself with broad leaves of the vine; his fellow-debauchee behind wears ivy upon his hair; both being typical plants, indicative of their several pursuits. Look at the eyes of the latter, and see how vague they are; for that embrace is without passion, pallid from use, and impure. The graceful back, and the whole tournure of the lady, are in excellent keeping with the elegant dressing of her hair.

The wing of the building at the side of the picture shows an example of the cinque-cento style of Italian villas. The landscape is a vineyard-crowned land, rich in oil and wine.

An idea of the general merits of the picture in carrying out its subject, may be gathered from the foregoing remarks. As a work of art, technically speaking, it may be considered as an excellent specimen of a certain class of the French school, where considerable dramatic force is arrived at by the use of such detail as we have pointed out. It exhibits much of that peculiar character of drawing for which the school is so famous, resulting from severe early training of the artist in this part of the practice of art, which, being afterwards allowed to set itself free from the rule of exact imitation, results at last in a skilful generalisation of conventional form; gaining less, we think, than it loses by the consequent neglect of individuality of character. In colour, this picture is as deficient as most others of its class, so much so, that it is perceptible the artist has not even attempted to produce any signal excellence in that direction.

The picture is at present in the gallery of the Crystal Palace.
L. L.

A FRENCH LADY OF THE OLDEN TIME.*

EVERY body knows what charming things, in the main, are French letters and French memoirs. By this time, too, we are willing to admit, with a passably good grace, how much our lively neighbours have the advantage of us in this fascinating class of productions. All the grand epochs in French history have their gallery of illustration in contemporary memoirs of great men, witty men, or small men, who usually make names for themselves by writing about those who have names of their own. The seventeenth century has its full share of such contributions to the mosaic work of national history; and we will not be so wanting in politeness as to suppose that our readers do not already know all about the best of them. They are stories of court-intrigues and Paris mobs, with their attendant incidents. Madame de la Guette gives us a vivid picture of life in the provinces, in social quiet, or under military despotism. We find it a pleasure, real as it is rare, to meet with an autobiography so little disfigured by egotism. Madame de la Guette is, moreover, incapable of any digression. She will not even go out of her way to give you facts or fictions concerning great people, as is the manner of many perpetrators of memoirs, however little they may in reality have had to do with any such elevated personages. Her simple and vivacious descriptions deal with occurrences in which she took part, and persons with whom she veritably came in contact. Every thing is real and lifelike; no reflections, no laborious introspections, after our nineteenth-century-novel fashion—in fact, no prose.

Under her maiden-name of Catherine Meurdrac, our heroine led a pleasant country-life, not very far from Paris. Her mother early initiated her into the great mysteries of housekeeping,—mysteries which in those days far transcended any encountered in our times, even by the enterprising pupils of Mrs. Ellis. M. Meurdrac experiences much paternal solicitude respecting the settlement of this his second daughter, laying before her various proposals, all equally distasteful to the fair lady concerned; and the old gentleman is fain at length to promise silence on the unwelcome subject of marriage for some time to come. One fine and fateful morning, Catherine accompanies her mother on a visit to the Duchess d'Angoulême. In the room is a tall handsome man, whose eyes turn repeatedly towards the young lady; and she also is sufficiently interested in him to ask his name from her sister, who resides in the chateau. M. de la Guette is a gentleman of the Duke d'Angoulême's household, and held by him in much estimation. After this silent interview, he procures the acquaintance of Mademoiselle Meurdrac's brother-in-law and also of her father. The house of the latter he visits frequently; and the silent looks are followed by passionate words. The young lady expresses herself not altogether averse to the suit,—a concession received by her impulsive lover with the liveliest demonstrations of joy. This hero has now two deities, Love as well as Mars; the one calling him to the army in Lorraine, the other whispering to him the direst of possibilities, that M. Meurdrac might marry his daughter to some upstart suitor before his return. Mars gains the day; and the brave damsel commends the decision, rightly judging that a man must be little worth who cannot face any danger or disappointment in obedience to his sense of duty.

The cavalier on his return seeks an interview with M. de Meurdrac, and the following scene is the result:

"My father listened attentively, and at length thanked him in the politest manner; said he was very sorry to be unable to accept him, but he had pledged his word elsewhere; begged him not to give the matter another thought. He was under infinite obligation; it was more, indeed, than I deserved. The Sieur de la Guette, being one of the most passionate men in the world, received this refusal in an extraordinary manner. He began to storm and swear horribly, saying he would soon find a way to release my father from his word. My father, not in the

* *Mémoires de Madame de la Guette*. Nouvelle édition, revue, annotée et précédée d'une Notice par M. MOREAU. Paris, 1850.

mood to hear these paroxysms, declared that nothing should change his resolution. This uproar lasted for more than an hour in my father's cabinet, the one expressing his feelings, the other repeating his refusal. My mother and I were in the adjoining room, when the cavalier entered in the greatest fury, saying my father had refused him, but that he would have satisfaction; that he was resolved to kill, even to the seventh generation, and to begin with me. These flowers of speech might not have been altogether agreeable to a person of timid disposition; they only made me think the more of him, because I thought he loved me to such an extraordinary degree, that it was the excess of his affection which made him speak thus." (p. 19.)

The discomfited suitor rode off in great indignation, and for a time contented himself with talking over his troubles to a patient widow, and writing volumes of letters. One day, however, in spite of all the precautions taken for his exclusion, he forced his way into the cabinet of M. Meurdrac, presented a pistol, and throw himself at his feet, demanding the daughter's hand or the father's life.

This relentless parent nevertheless remains invincible, for what reason we do not at all see, except that sort of destiny which seems to compel so many other amiable parents to fulfil the dictum of Shakspeare about "true love,"—so hackneyed a verdict now-a-days that one ought almost to apologise for referring to it.

Our heroine now tries what can be done by a pretended submission, and appears to have forgotten her cavalier, who is again absent. Her mother saves her from a forced marriage with a very rich nobody. La Guette returns. A private marriage is resolved upon, and effected with her mother's permission. Her mother-in-law is present at the ceremony, which takes place two hours after midnight in the neighbouring church. All return separately to their homes; Catherine calm and collected, cheering the waiting-maid, who seems to have been far more terrified at the step than her mistress. The Duke d'Angoulême befriends La Guette, and himself tells the enraged father of the private marriage. The bride is successfully carried off to her husband's home at Sussy; but it is some time before a complete reconciliation is effected, through the interposition of the good Duchess d'Angoulême.

"I was very happy," writes Madame de la Guette, "in my husband's home. We amused ourselves most agreeably: we rode out every day, either to hunt or to visit among the neighbouring nobility, all of whom received us in the most obliging manner. But this happiness did not last long; for my husband was obliged to return to the army. It was the campaign of the siege of Spiros, in Germany. Our separation was hard; for I can say truly that he loved me to an extraordinary degree, and that I idolised him. For this first time I had leisure to shed tears at my ease, and to play the woman in contradiction to my nobler inclinations, and the firmness of soul which was natural to me, and which made me feel something like aversion for those of my sex who had too much of such weakness. In fact, I have always had a tendency rather towards war than the keeping of chickens and the use of my distaff; though that is all which it is considered proper for a woman to know."

The next campaign, in 1635, is in the Low Countries, against the Spaniards. M. de la Guette forbids tears, and if one is shed, threatens never to come back. His wife, therefore, wisely makes up her mind once for all to take these partings cheerfully; and as some thirty of them had to be faced, it was decidedly the right plan. On his return, M. de la Guette is introduced to the first of his ten children, who subsequently distinguished himself in Holland, and died early.

Madame de la Guette first took part in the civil wars of the Fronde during the blockade of Paris. Condé posted a few of his guards at Afort, near the bridge of Charenton, to intercept supplies. A convoy on its way to Lagny, where the Marquis de Persan was commanding for the king, had to pass through Sussy, where Madame de la Guette lived. The villagers, with the mayor at their head, attacked them, and took possession of the castle. Our heroine, not at all approving of this proceeding, went in person to remonstrate with one of the leaders, who then made some effort to restrain the people; but they only shouted,

"*Madame de la Guette est Mazarin; il ne faut pas la croire!*"

At last, however, they consented to let them pass on showing their order, and moreover hospitably regaled them with a few bottles of wine outside the gates. Meantime an energetic owner of some of the cattle had set off to the Duke d'Elbeuf, at Paris, for assistance; and the convivial party was broken in upon by the arrival of sixty or eighty *parlementaires*, as the king's enemies were called. The villagers hurried away behind their walls, leaving outside the seven unfortunate guards. They shouted "*Vive le Roi!*" and were answered by "*Vive le Parlement!*" so the peasants thought it prudent to shout with the majority; and Madame de la Guette's indignation reached its highest pitch at the sound of a general "*Vive le Parlement!*" The new-comers fired a few awkward shots, and the guards entreated to be taken within the walls. Four were admitted, and three, mixing adroitly in the crowd without, made their escape. The villagers then fell valiantly upon the four defenceless guards, attacking them with every variety of weapon, until two escaped into the house of Madame de la Guette's nurse, whither she herself hurried. The *parlementaires* entered Paris in triumph with abundance of veal and pork. This achievement, Madame de la Guette quietly remarks, was about the greatest in the history of the Fronde, since its tangible result to the Parisians appeared in the form of good dinners.

These troubles over, others come, disturbing, if not shaking, the brave soul of Madame de la Guette. She bears unmoved all injury, suffering, or loss; indeed, her indifference respecting property of any sort amounts almost to contempt; these things do not touch her heart. The death of those dear to her,—of her father and a beautiful boy of seven years old,—is her first great trial. But her whole temperament is of that enviable elasticity which soon recovers lost vigour, and bravely stands erect again to face new sorrows. Such unconquerable cheerfulness is Heaven's own gift: it is neither stoicism nor fortitude; for they meet the shocks of this mortal life as the immovable phalanx of a disciplined army will withstand the onslaught of an enemy; but this cheerful faith stands in God's sunlight, like a mountain-brow, unharmed, whilst below it drifts the storm, and the avalanche falls among the precipices.

Passing over several incidents, and among them a deliberate case of match-making on the part of Madame de la Guette (though, to do her justice, we ought to say, she was promoted to the office by the bridegroom-prospective), we come to the most strong-minded and masculine undertaking in her whole story. We do not profess clearly to understand which of the nine hundred and ninety-nine disputes between the King of France and the Duke of Lorraine brought the army of the latter into the neighbourhood, indeed into the very house, of our heroine. A battle is about to take place; and a certain Major Grosbois invites Madame de la Guette to accompany him to a spot from whence they can overlook the discomfiture of the royal forces, which he predicts as inevitable. Against about seven thousand royalists under Turenne are eighteen thousand under Lorraine. Madame de la Guette, seeing it to be a desperate case, instantly fabricates a few ingenious statements concerning the peculiar position of certain cannon, of ten thousand armed peasantry in the park, and a perfectly apocryphal band of infantry in a wood. The major flies with this information to the Duke of Lorraine, who sends word to Turenne and Condé that he shall not meet them on that day. To Madame de la Guette he sends most courteous messages of gratitude and obligation, begging also one more favour of her. The high esteem in which she is held will doubtless enable her to find a suitable cavalier willing to go into the camp of the royalists, and report the state of matters there, for the benefit of his highness of Lorraine. A staunch royalist is chosen and despatched. But in reply to the questions put on his return, he merely says: "I was not in the humour for being hung, so I thought the matter well over, and—did nothing."

The time gained by this stratagem proves of great service to the royalists; and after the danger is over, M. Philippe, *maître d'hôtel* to the king, reports the affair to the queen. Madame de la Guette is then at Paris, and takes a three-days' journey to Val de Grâce for the honour of an interview with her Majesty. The result is a mysterious commission to Bordeaux; and it is not easy now-a-days to understand all the hardships implied in a long journey in those times. She returned with her husband, who then retires from the army; and this quaint and affectionate couple lead a very calm and happy life, until the dark day on which the brave wife receives the sentence of widowhood. Their eldest son is in the service of the Prince of Orange; and the widow joins him in Holland, where he loses his life not long afterwards. Left thus doubly desolate, the old lady cheers her lonely hours by giving to posterity this lively *naïve* story of her adventurous life. It is impossible to read it without admiring and coveting her courage, her devotion, her patriotism, her patience. There is an invigorating freshness about the book which seems to come upon the reader like a pleasant sea-breeze; so that for a time we confidently held the belief that we too were wonderfully energetic people, destined for some grand achievements in an extremely hazy future. This charming hallucination was rudely dissipated by the entrance of a domestic, of very aged and crusty fidelity, with "her warning." We were crushed, and then felt instinctively that life was one too many for us. From all we know of the manners and the morality of the seventeenth century, the strong mutual attachment and confidence which existed between Madame de la Guette and her husband must have been a much more extraordinary thing than we should now consider it. Doubtless such affection was then looked upon by many as a monotonous and commonplace state of affairs, if not positively vulgar, yet decidedly provincial. But they were the last people in the world to be troubled at the opinions others held about them. They were as well matched as Petruchio and Katherine; and in some points are not unlike them. He is just as violent, and the lady almost as spirited, and makes quite as good a wife as any Petruchio ever ought to have. What does a man deserve who one day sent a servant up to his wife among some friends, mildly requesting her to come down-stairs, as he wished to shoot her? The lady descends without a tremor, to find her husband mounted in the courtyard with a loaded pistol, surrounded by people vainly endeavouring to calm him. Madame walks quietly up to him, saying: "Mon cavalier, dismount; I have a word to say to you; and about the pistol we will talk another time." Petruchio obeys, receives the mysterious whisper, and springs again into the saddle with the best humour in the world. His motive for this peculiar, and not altogether agreeable, line of conduct we do not clearly perceive. There are one or two amiable eccentricities of the same sort which we might quote; but we have said enough to prove Madame de la Guette a heroine of domestic as well as military life; and we trust our readers will have imbibed some of the hearty liking with which we cannot but regard a character so original, so unselfish, and so true.

A DAY IN THE RHONDDA VALLEY.

DR. MACKAY told us some time ago that it was unwise to think that there was no poetry in railways. If there is not poetry in them, there is occasionally on them; and if there is a poetical railway any where, verily it is that of the Taff Vale in Wales. Why, it takes its name from the river Taff, and the beautiful valley through which that river flows; and for almost its entire length it runs side by side with the gentle Taff, as if it were a lover of hers, and would follow her closely wherever she went. It may be that he appears an unfit suitor, that he is too burly and hard, too much of a big bully, in fact, and she a timid, soft, and beau-

tiful being; but "in joining contrasts lieth love's delight," and Ingomar falls in love with Parthenia, and is happy with her, moreover. If the river and the rail are lovers in this instance, the former is a coquette; and though rail sticks pretty closely and jealously to her, she, in a wild merry way, evades him now and then, and loses herself among thick bushes and beautiful green trees that spread their rich arms over her, as though they understood the fun, and would humour her.

On your way from Cardiff to Pontypridd you pass towns and villages besides—Llandaff, Pentyrch, Taff's Well, Tre-forest. You run at the foot of high wild-looking hills, with cottages midway up them, standing there without falling in some unaccountable manner, and looking down upon dreary iron-works below, at which their occupants are employed. You pass by little whitewashed cottages with rose-trees at the door, and a little garden that has steps leading down to the edge of the river. You get buried among thick bushes and avenues of trees that shut out every thing else till you get clearly away from them; when a wide expanse of scenery, really natural,—though not uncultivated, be it understood,—breaks upon you. You catch a glimpse anon of some ruined tower that has a history of its own, and is now overhung with wild foliage; or on the brow of a lofty hill, that you might be pardoned for calling a mountain, you see an ancient pile of stones erected, whereby hangs a tale, which perchance some fellow-passenger can tell you. During the minute or two that you are detained at the various stations, you see little groups of very Welsh faces, especially as regards the women, with bodies attired in Welsh fashion, and with mouths that speak a language which is not English, and which makes you feel yourself abroad.

But while I am thus admiring the scenery and enjoying the ride, do not let me forget that my mission is not one of pleasure, and that I am likely soon to be made sad enough, if I have a spark of thought or feeling in me. But there is little chance of my forgetting whither or why I am journeying. My fellow-passengers have been talking upon what at present occupies all minds hereabouts. During the short time we have stopped at a station, I have heard the words "Cymmer," "terrible colliery explosion," and "killed," uttered by people on the platform. Last night, at the inn at Cardiff where I staid, the people in the bar, among whom I dropped for an hour or two, talked about little else than the accident, and it has formed the staple of conversation among the railway-passengers.

The train stopped at Pontypridd, and I got out. On proceeding into the town, the signs of mourning lay very thick. Cymmer is but three miles off; and it was the day of the funerals. Nearly all the shops in Pontypridd were closed, and the streets were deserted excepting at certain points, where you saw numbers of working-people, with sad earnest faces, proceeding towards Cymmer. From the windows of several of the public-houses I saw a black flag suspended, and waving heavily in the breeze; and this, when one saw the dreariness of the town, and remembered that within half an hour's walk lay one hundred and fourteen men who had in one moment been snatched into eternity, had an effect wonderfully appalling for so simple a thing. On inquiry I found that at these houses clubs, such as Foresters' or Odd Fellows', were held, and that the flags were hung out as a token of mourning and respect for some of the order who had perished in the colliery; and that it was an old and ordinary custom.

Cymmer is situated in the Rhondda Valley, about three miles from Pontypridd, as I have said before; and is almost entirely surrounded by lofty hills, abounding with winding and rugged paths, and exhibiting much of the general wildness of Welsh scenery. From Pontypridd to Cymmer, besides the ordinary road, which is rather circuitous, there is a tramway along which coal is conveyed from the Cymmer colliery to the railway-station at Pontypridd. This tramway, being the directest cut, is generally chosen by the people for walking upon, in preference to the highway; and

along it all day on that Thursday, coffins, at sadly quick intervals, were passing—still passing, being conveyed for burial at Pontypridd or the little villages in the way. When I reached the village, a short distance from the last-named town, and where the Great Western pit, as it is called, is situated, I met the first funeral procession slowly winding its way, among some of the loveliest scenery the eye ever beheld, to the little church that nestles at the foot of the hill there. There were two coffins, one containing the body of a father, the other that of his son; and they were accompanied by certainly not less than two hundred people, principally colliers and their wives, most of whom preceded the coffins, which were carried shoulder-height each by four men. Another little procession followed close upon this one, bearing one body; and all the way dark moving masses kept constantly revealing themselves to us as we turned some corner in the road, or ascended some steep that gave us a view of the way beyond us. At the scattered cottages or little clusters of cottages that hung by the wayside, it was evident here and there, from the sorrowful groups around the doors, that death was there, and that they were only waiting to form processions such as those we were meeting; whilst we kept overtaking hosts of passengers on foot, colliers and their wives mostly, who were going to Cymmer to attend the burial of an acquaintance or a friend.

Every body knows what a picture of dreariness and desolation the vicinity of the mouth of a coal-pit is; and the colliery at Cymmer must at any time be a sad and miserable place to look at. I was glad to get away from it. It was not deserted; neither were its frequenters curiosity-seekers alone. A couple of days before all its workers had been killed; but above ground there was yet a crowd of busy workmen, who covered that black and weary spot, and who were making coffins by dozens and by scores for the dead. Here, in those two days, coffins almost to the number of the killed had been made; and such coffins! but any thing to be buried in: four deal boards, four brass handles, a little ornamental work to look like silver-braid and go round the edges, and a tin-plate to scribble the name and age of the deceased upon, and it was quite sufficient.

During that day the funerals never ceased. The large numbers that attended each procession, which generally conveyed two or three bodies, were very striking, and gave one a pretty good idea of the vast numbers employed as colliers in and about the Rhondda Valley. I saw a very great number of funerals, and on the average each body could not be accompanied by less than forty persons. The character of the procession spoke plainly of sudden death and a quick burial, in no respect more so than in the absence of black apparel, particularly as regards the females, in the relatives of the deceased who followed. It was sad indeed to see some of the young women following the body of a father or a brother in attire that betrayed a simple and rude attempt at finery and fashion, and spoke of happier days not long gone by. Many of the funerals left Cymmer to travel some miles to another churchyard; and in these instances I observed that the mourners proper generally rode on horseback, in the pillion-fashion, a man and a woman being on the same animal. I in no instance saw a vehicle of any kind. The old-fashioned custom of singing hymns as the funeral-procession travelled towards the churchyard seemed very prevalent; and from all sides some simple sacred melody kept falling upon the ear, chanted by some scores of voices that resounded along the hills. Every hour during the day each burial-ground in or about the village had its two or three separate groups clustered in it, each bespeaking so many funerals; and unceasingly the long black masses were moving slowly up the hills or along the roads in the valley.

Surely not the least sad of the sights was the appearance of the cottages at Cymmer. There were entire rows of them, not one of which, it appeared, but had been visited by death. Nearly all the doors stood open, and in some, as you passed, you could see the joiners fastening up the coffins; in others

the friends of the deceased were gathered ready for starting with their load; and in others again, a bed was visible, and you could see, notwithstanding the white sheet thrown over it, that more than one dead body rested upon it.

Here I will pause. Before I left Cymmer I imagined the poverty and desolation in the village that would follow, and the change that must speedily occur in the population. The place was then filled with widows and young fatherless children. I saw all these swept away, many of them into workhouses and unions; whilst an entirely new class of people came and inhabited their homes. And I also thought, if some men, with greater power to do good and to remedy evil than I, had seen what I saw that day, that when they read of 114 lives "lost in the pit," they would not regard them as so many dry numerals, but as so many men with living blood and souls, snatched with cruel suddenness from life to eternity, and act accordingly.

J. N. ALLEN.

TO MY FOURTH SON

ON HIS TWENTY-FIRST BIRTHDAY, FEBRUARY 24, 1857.

Once Autumn rose from out his golden vale,
And, on a cloud of heavenly vision, saw
(Beyond the glittering mount where Summer stood)
Young Spring advancing up the budding slope.
No even course was his, yet on he came;
No summer radiance to gild his path,
Or strength mature for sultry toil, had he;
Nor had he clustering vines or fruitful bowers,
In which, like Autumn, he could pause and rest;
Yet on he came, and gain'd new strength by toil.
To-day bright beams of hope would cheer his way,
Then clouds would disappoint; yet on he came,—
For God had made him fitted for his work.
And Autumn smiled with love, and hailed young Spring.

J. J.

NEW BOOKS.

HASSALL ON ADULTERATIONS.*

WHEN the *Lancet*, a few years since, established a so-called commission to inquire into the adulterations of food and drink, publishing the composition of articles, and the names of those who sold them, there was an end to the gustatory and digestive peace of many of us. The headaches, and heartburns, and vague fallings-away,—symptoms for which we had consulted our doctors, and lightened our purses by some guineas, besides inflicting on ourselves the annoyance of pills, draughts, and other pharmaceutical tortures,—were traced, mentally at least, to dietetic sources. Our green-pickles were imbued with copper; so were our green bottled fruits. Our bread was aluminised, if not worse; our beer a narcotic mixture of liquorice, quassia, and cocculus indicus; our gin was first weakened by addition of water, then brought up to the mark again by oil-of-vitriol and Cayenne-pepper. Even the snuff-taker, according to Dr. Hassall, could not solace himself with the probability of coming off scotfree; the titillating powder, besides minor contaminations, being mixed with lead oxide, from which, absorbed in this way, some dangerous cases of paralysis have arisen. The régime of most civilised countries furnishes methods of preventing fraud in articles of food and drink. The laws and regulations of this country only affords protection partially and collaterally. As regards the major number of

* *Adulterations Detected.* By ARTHUR HILL HASSALL, M.D. London: Longmans.

articles of food and drink, *caveat emptor* is the watchword; and when the law does interfere, this is not so often in behalf of hygiene as of the inland revenue.

To Dr. Hassall must be awarded the merit of applying the microscope to systematic detection of extraneous bodies of certain kinds, when present where they ought not to be. He was the first to develop a system of microscopic as contradistinguished to chemical analysis, and in this he has done good service. We fear, however, that there is a tendency prevalent to set up the microscope in antagonism to chemistry, rather than to consider them in the sense of mutual aids. Unquestionably the weak part of analytical chemistry is, that which concerns the discovery of animal and vegetable bodies; and here, provided tissues, or crystals, or other characteristic form be present, the microscope is strong. Dr. Hassall's book contains the most valuable record which exists, in our own or any other language, of microscopic characteristics in one particular department. As a guide to future microscopic analysts, Dr. Hassall's book will be invaluable; but his chemistry is not to be commended. In proof of this, we need only say, that Dr. Hassall, under the head of the discovery of antimony, recommends it to be sublimed from the sulphide in a test-tube. Now, though this *can* be done partially and with difficulty, as a sort of feat, every practical chemist is aware of the extreme difficulty of accomplishing it, and has recourse in preference to the decomposition of sulphide of antimony by heating it in a glass-tube, and transmitting hydrogen over it when thus heated.

It seems a matter of regret that Dr. Hassall limited his inquiries to the discovery of adulterations; having previously defined adulteration to signify the addition of a body purposely and in a fraudulent sense. Circumscribed by this limiting definition, to which perhaps, as a definition, no valid exception can be taken, the author excludes from his category such a case as the accidental presence of arsenic in unfermented bread. Surely, whether arsenic exist in bread accidentally or by design, the public is equally interested in being aware of its presence. The ground taken by Dr. Hassall is needlessly circumscribed, and his efficiency as a scientific expositor is lessened by importing as he does the idea of a motive into cases where the public want fact. Surely a scientific analyst would do well to speak to the existence or nonexistence of things sought for in the first instance. He might then subsequently, but rather as an enlightened member of society than in his scientific capacity, try to discover motives, and refer the irregular things he might have discovered to the category of contaminations or adulterations according to the evidence before him. When Parliament legislates on this matter, we trust a normal standard will be laid down for articles of food, drink, and still more of medicine; every deviation from such standard, whether by accident or design, to be considered a deterioration. This is absolutely necessary for the Act of Parliament to be efficacious. Nothing is more common than to meet with people who speak of "purity" and "impurity" as though these were terms of fixed meaning and self-evident application. Are we to understand by "purity" chemical purity? In that case how few articles of food, drink, and medicine, are not impure! There is no such thing as pure water, for example, in all nature. Are we to understand by "purity" "conventional purity"? If so, the Act of Parliament will be rendered nugatory at once; for nothing can be more arbitrary than popular appreciation in this matter. Frequently the term purity is considered synonymous with strength, as in the case of alcoholic liquors; but how would it fare with a patient who should swallow pure prussic acid, instead of the two-per-cent prussic acid legalised by our pharmacopœia? These examples will serve to explain our meaning as to the necessity which exists for the Legislature to define a standard of purity for each kind of food, drink, and medicine, to be enumerated in any Act of Parliament which may spring from Dr. Hassall's labours and Mr. Scholefield's committee.

HAPPILY for mankind, the true spirit of chivalry is indestructible. Chivalry, as the principle of honour and compassion, redressing wrong and protecting helplessness, was never perhaps more benignly active than in the present time. It has passed from land to land, from age to age, surviving every possible change, disdaining no imaginable costume. It was not the ideal of knight-errantry which Cervantes slew; it was a fantastic counterfeit—a false Duesna. True knighthood, with its courage and its mercy, is still the same when the casque has been exchanged for a broad-brim, and the gorget for a perpendicular collar. The gas-light and champagne of drawing-rooms cannot transmute its essence. It doth not merely live, but triumph, in the lecture-room of a Mechanics' Institute, beside a water-bottle, and behind a table covered with green baize. So far back as the twelfth century, we hear old Peter of Blois complaining that the knights of his day were burdened, "not with weapons but with wine, with cheeses instead of javelins, bottles instead of bludgeons, spits instead of spears." Utilitarian, truly. But suppose the utilitarianism to be of the unselfish kind. Let the wine be for a sick labourer; let the cheese be set on a poor man's table; and let the spit turn something savoury for a distressed workman's dinner. Now something like this has come to pass in our nineteenth century. With a scheme for baths and washhouses, one knight of high degree rides forth to slay the pestilence-breathing dragon of dirt, scaly with accumulated filth. Another sallies out in quest of Giant Ignorance, whose dungeons are filled with all manner of delour; while a third winds his horn, and would fain hunt down the "blatant beast" of Drink. It is a good thing when separated classes of society are brought nearer by community of danger. Such an approach has been effected abroad, upon the heights of Alma, in the trenches before Sebastopol. It is a still better thing when a higher order and a lower are approximated by community of thought. Such a link of common sympathy and aim is being fashioned at home, on platforms and in lecture-rooms. A worthier firmer bond this, surely, than that one famous in the good old times,—the touching for the King's Evil, which some enthusiasts for the middle age have sighed after, as a graceful superstition, linking the summit of society with its base. It is goodly to see the man of rank, of wealth, of leisure, vanquishing the seductive temptations of his estate, and toiling with the busiest to reform, instruct, or recreate the people. The man of the middle class, who has looked forward from boyhood to hard work as his necessary heritage, can but imperfectly compute how much his high-born brother must have resisted before such philanthropy could be thoroughly transformed within him from a wish into a work. A society in which such self-sacrifice and such fellowship is both possible and frequent must be sound at heart. With the still-walking peasants who inhabit the marshes of the Landes, it is considered a sign of full confidence when a man takes off his stilts and gets into his neighbour's boat. When aristocracy has, in like manner, laid aside its stilts, it has laid aside fear with them, disarmed jealousy, invited love. How impossible such association to a corrupt despotism like that of the later Roman empire, like that of modern Austria! There statecraft has but one rule—*panem et circenses*. Let the people be lulled in a pleasurable dream, while their energies are drained,—as the vampire-bat is said to fan its victim to slumber with its wings while sucking his heart's blood. How impossible also, to ancient feudalism, where the peasant reckoned the seasons by the exactions of the seigneur, somewhat as the natives of South America calcu-

late the hour by the particular species of mosquito whose turn it is to occupy, with its work of torment, the earlier or the later portions of the night! So frequent of late has become the appearance of our statesmen and men of rank as lecturers, that it would seem as though a long pent-up utterance were welling forth, abundant in proportion to the duration of the silence. It makes us think of those northern people, of whom Mandeville is said to report, that their speech, frozen up at times by the severity of the cold, will occasionally, on a relaxation of the weather, come pouring forth from their loosened lips with an uncontrollable volubility.

But now another kind of aristocracy is pressing also into the field. Our foremost men of letters are every where addressing the masses by word of mouth. Mr. Dickens has read his *Christmas Carol* to large and delighted audiences. Sir James Stephen has not confined his wise thoughts and exquisite style to the lecture-halls of Cambridge. And, most lately, Mr. Thackeray has been repeating to an audience of not less than a thousand persons his lectures on the *Four Georges*. The success of these lectures speaks well for the taste of the day. The applause which followed many of the lecturer's remarks attests not less a certain elevation and liberality of principle yet more important. Never was our loyalty more ardent than at present, never more reasonable and more enlightened. It is by the lustre of that virtue and that goodness which adorn the throne of to-day that we discern so clearly some traits less favourable in the *memorabilia* of courts now passed away. We acquiesce no longer so readily as did our grandfathers in the severance between public and private virtue. We feel more than ever that we may fairly demand, in those of public station and exalted rank, that kind of excellency which makes the safeguard of home and the happiness of the fireside. We feel that the sentiment of loyalty should be elevated, by involving the respect which is due to character as well as the homage which is due to rank. What we feel we can without hesitation say, for the ideal has become a reality. It is a pleasant consciousness to know we live in a land where to pass candid moral judgment on the royalties of the past is accounted the fair exercise of freedom, not its licentious abuse. The Egyptians held solemn tribunal over the body of their dead kings, before they were laid beside their fathers, in the heart of the pyramid. The phantom ceremonial of an ancient despotism has reappeared in a new form, as a part of the popular speech and common life of modern liberty. We leave it, now-a-days, to the Tartar dynasty of China to make it high treason to paint the portrait of a monarch. Our governors are not afraid when the foibles of a government have filled the eyes of the governed with tears of laughter, and not its fury with tears of rage. When Adrian VI. was much annoyed by pasquinades, he proposed to throw into the Tiber the statue of Pasquin, to which the irritating documents were secretly affixed. "Let your holiness beware," said a sagacious cardinal; "for Pasquin would turn to frogs at the bottom of the river, and their croaking would be worse than all." "Let them hate, so they fear," was the maxim of a despot. May our British sovereigns ever say, "Let them laugh, so they love."

THE POSITIVE AND COMPARATIVE DEGREES OF WRONGHEADEDNESS.

THE Spanish caricaturists, to give an idea of the obstinacy of the Biscayans, represent a man knocking a nail into a wall by butting at it with his forehead; but when they want to express the extent to which perverseness is carried by the Arragonese, they sketch a person in the same attitude, but with the head of the nail against the wall, and the point turned to the performer's forehead. E. S. D.

THE ROMAIC BALLADS.—No. II.

By PROFESSOR BLACKIE.

WE have said the brigands in the Greek ballads were rather respectable characters, of a much higher grade certainly than he who sang

"In a box of the stone-jug I was born,
Of a hempon widow the kid forlorn,"

or however the thievish ditties may run, with which a popular novelist some dozen years ago caused the general ear in this country to ring. But it must not be supposed that the profession of robbery could be carried on, even among Greek mountains and on the banks of the lonely Achelous, without causing considerable discomfort to some parties, and those often the most innocent and the most worthy of poetical sympathy. While, therefore, as we would naturally expect, the praise of the adventurous brigand in his capacity of Turk-hater and Turk-killer forms the main staple of the strictly "klepthic ballad," we shall not be surprised to find that a voice from the poor Greek shepherd, who sometimes suffered from the rapacity of a Turk-hating κλεφτης, was occasionally heard. Here are a few very characteristic utterances from that quarter.

THE KLEPHTS.*

From the hills the Klephts came down,
Seeking horses to their mind.
Horses none when they could find,
All my pretty lambs they stole.
Lambs and kids, they took the whole.
And away, away they go!
O woe's me! woe's me, waly wo!
My lambs away,
And my kids, took they;
O woe's me, wo!

And the pail in which I pour
The creaming milk, away they bore;
And the pipe on which I sing
Rudely from my hands they wring.
And away, away they go!
O woe's me! woe's me, waly wo!
My lambs away,
And my kids, took they;
O woe's me, wo!

And they took away outright,
With its horns of silver white,
My brave bell-wether, that outrolled
Its shaggy fleece of flowing gold.
And away, away they go!
O woe's me! woe's me, waly wo!
My lambs and my wether
They stole together,
O woe's me, wo!

Would to God some vengeful hand
Might seize the lawless robber-band
In their dens, and sheer undo
Them, and all their thievish crew!
That I might see my brave bell-wether
And my lambs again together
In the fold. O waly woe!
My lambs away,
And my kids, took they;
O woe's me, wo!

If the Allholy in the skies†
The ruthless robbers will chastise,
I will roast a lamb till it
Fall in pieces from the spit.
Mid flowers that tell of coming May,
On holy George's festal day,
I'll feast, and bless the Queen Allholy
That laid the ruthless robbers lowly.
O woe's me! woe's me, waly wo!
My lambs away,
And my kids, took they!
O woe's me, wo!

But pieces of this description are rare; the present, taken from Kind's collection,‡ is perhaps a solitary instance; and

* This song is reprinted from an article in the *North British Review*, No. XXXIX., by the present writer.

† That is, the Virgin Mary, or *παρθένα*, as she is always called by the Greeks.

‡ *Neugriechische Anthologie*. Von THEODOR KIND. Leipzig, 1847.

SATAN. BY STOTHARD.—FROM MILTON'S "PARADISE LOST."

"his way oblique,
Among innumerable stars."

no wonder; for the Klepht, in his capacity of a vulgar depredator, never could have become a hero of popular song; it was as the champion of the Virgin Mary and the terror of terrible pashas that he was celebrated. Nay, there were men, not a few, especially in the great epoch of the Liberation war, who, though associated habitually with men of very fierce character and lawless habits, were themselves as good specimens of an heroic humanity as the time and place was capable of producing—as virtuous as Achilles or Sir William Wallace every whit, there can be no doubt. Of Marco Botzares in particular General Gordon testifies, that he was distinguished by "a greatness of soul and a depth of feeling seldom found in the history of the world;" and unquestionably both he and Diacos will go down to posterity associated, not with Italian Mazzaronis or English Turpins, but with Leonidas and Themistocles. To draw the line between the Greek patriot and the freebooter is in many cases impossible; but that among those who lived in a state of habitual rebellion against Turkish despotism, there were mingled together men of the noblest self-devotion with others of the most savage and unsanctified selfishness, cannot be doubted. This the Greek people well knew; and it is to this profound feeling of who the real heroes were, in the midst of multitudes who talked heroism and practised robbery, that we owe the following simple popular testimony to the heroic adventurer whom we have just named. The "Death of Marco Botzares" is, like many of the ballads, a simple recital of an historical fact, put together by some popular ballad-maker who was altogether innocent of the wish or the ability to make the story tell better than it would do in the records of a common newspaper-column. In fact, such ballads supplied to the modern Greek people, as they no doubt did to the forerunners of Homer, the place of our newspaper-columns; and any attempt to lift them by high poetical ornamentation above the level of the actual fact as it lived in the popular mind would have been resented by the popular taste, which accepted these simple songs, not as an artistical treat, but as the common nourishment of the national memory and of the Greek heart.

THE DEATH OF MARCO BOTZARES.

Three little birds came lighting down upon the meadow green,
And warbled there a sweet lament from eve to morning sheen:
"Ye children mine, fell Scondras comes from the north with a
mighty power,
And brings with him Tzeladin Bey, and Niagiapha the Glaour,
And Nicotheos, the dog that loves the Christians to devour.
He comes, and writes a letter bold to the captains great and
small:
'Come yield ye, captains, to my will, and hearken to my call;
Bring Marco Botzares to me alive, and show no pity,
That I may send the craven hound to the sultan in the city.'"

This when he heard, his black moustache brave Marco twirled;
and then

This private word to Lampros spake, the bravest of his men:
"Come, Lampros, gather my brave men, my gallant Pallicarios;
To Carpenes this night we go, and woe betide who tarries!"
To Carpenes that night he went, and to the meadows far,
Then to his Pallicarios told the order of the war.
"My gallant boys, though we are few to meet in open fight
Fell Scondras' power, by swift surprise we'll put his men to
flight!"

Two hundred chosen men he took; and sword in hand they went
With furious speed to the Turkish camp, and to the pasha's tent:
A thousand and two hundred Turks to gloomy death were sent.
A Latin dog—would that his hand had rotted on the spot!—
Levelled his gun at Marco's head, and dealt a fatal shot.
He raised his voice, and cried aloud, as loud as he could cry:
"Where art thou, Costas, brother mine? let not the warfare die
With me! Ye Souliotes, weep not, nor wear black suits for me;
But to the wife that my heart loves write ye a line for me.
That where in Frankish land she lives, at Ancona by the sea,
She teach my son to read, and serve his country, when 'tis free."

The event celebrated in this ballad took place on the
21st of August 1823. The "Scondras" talked of is the
Pasha of Scondra, or Scutari, on the boundaries of Dal-
matia, who, after the first repulse of the Turks from Mes-
solonghi, was advancing to renew the investment along
with Omer Briones by different routes over Arta, and down
the vale of the Achelous. At this juncture Botzares, with
the intrepidity and celerity of a Napoleon, suddenly formed
the resolution of breaking into the camp of one division of
the enemy, and thus striking confusion into their ranks
before they could have time to concentrate their strength.
The attack was successful; but the death of the heroic
leader, along with the inability of his brother Constantine
to turn the victory to account, made the brilliant achieve-
ment utterly barren of results. Simple as this ballad is,
it gives us a beautiful glimpse in the dying words of the
dashing soldier of what since the days of Homer has always
been a ruling passion of the Greek people—the love of
learning. The Greeks in the days of St. Paul "sought
after wisdom;" the schools in Athens at the present mo-
ment are the best things in it; and the last words of a
modern Greek soldier are a request to his wife,

Νὰ μ' ἔχῃ ὁ υἱός μου τὸ αὐτὸ, γράμματα καὶ τὸ μάθη,
to take care of his son, and "teach the boy his letters."
Not even Scotland, where every shepherd's son must go to
the University, and learn to conjugate ἴσμεν, could show
an educational instinct more truly national.

A more beautiful historical ballad, though relating to a
name not so widely known, is that entitled

TSAMADOS.

Were I a bird with wings, to Messolonghi I would go,
To see how there, with sword and shot, they lay the Glaours low,

And swoop the brave Roumeliotes like hawks upon the foe.
Thus thought Giorgaki to himself; but while he thinketh so
A little bird with golden wings thus whispered to him low:
"Have patience, brave Giorgaki; if for Arab blood thou thirst,
Enough thou'lt find to butcher hore of Moslem race accurst,
Soast thou those lines of Turkish ships far floating on the sea?
Destruction's anchored where they ride, and ashes they shall be."
"Thou little bird, how dost thou know the things thou say'st to me?"

"No bird am I, although I seem a little bird to thee.
There is an island in the sea, by Navarino; *there*
I bravely fought, and breathed my last for kin and country there.
The name of Tsamados thou knowest: from heaven, where now
I dwell,
I came the things that soon shall be to sons of earth to tell.
Here on the earth to watch your deeds, in sooth it likes me well."
"Here on the earth what wouldst thou see? In heaven didst
thou not know

How all Morea groans beneath a cloud of murky woe?"
"Look cheerly up, Giorgaki mine, and dark despair eschew;
Though now Morea's weak and faint, the fight she'll soon renew,
And like a wild-bonst tear the foe that looked so proud before;
And black-burnt bones shall scattered lie on Messolonghi's shore,
And Souli's lions shall be there with triumph in their eye."
Thus spake the bird, and flew away, and mingled with the sky.

The event here celebrated belongs to the month of April 1825, when Ibrahim Pasha was rapidly recovering from the Greeks of the Morea all the ground they had so bravely won at the commencement of the war. Tsamados was a Hydriote ship-captain, who, along with other patriots, had taken up a position in the island of Sphacteria, famous in the history of the Peloponnesian war, and in the old castle of Navarino on the Messenian coast; but the strength of their position proved vain against the superior numbers of the foe; and Tsamados, with other illustrious champions of Greek nationality, was slain. The appearance of the shade of the great naval commander in the form of a bird is a characteristic trait of the Romaic ballads; and learned men will no doubt be eager to trace the imagery back to Homer, in whose pages the gods often appear and disappear in certain winged incarnations. But in what age or country were birds and flowers not a favourite instrument of poetic presentation?

We conclude the present Number with the translation of a short but striking ballad, where the picture glares with a fine Rembrandtesque effect through the darkness, entitled

THE VOICE OF THE TOMB.

On Saturday we quaffed the wine, and drained the cup on Sunday,
And drank the liquor to the dregs till none remained on Monday.
Our jovial captain, when he saw that we had drained the whole,
Cried, "Haste thee to the khan, brave youth, bring fuel to our bowl."
The place was strange, the night was dark; I wandered from the way,
Through many a footpath lone and drear my wildered foot did stray,
Till to a ruined church I came, a church and churchyard lone,
Where there was many a holy cross, and many an old gray stone.
One grave there was from all the rest apart,—with hasty tread
Unwitting through the gloomy night I trampled on its head;
And from the inmost grave I heard a groan beneath the stone.
"What ails thee, grave; and through the night what means that dismal moan?"
Say, doth the green sod press thee sore, or the old and heavy stone?
"Not the green sod doth press me sore, nor the old and heavy stone;
Say, hast thou lack of room above, no road where thou may'st trend,
That from thy heel I have must feel such trespass on my head?
Was I not young as thou art now, a lusty Pallicari,
That loved in bright and breezy night beneath the moon to carry
A glancing blade six spans in length, and six feet long a gun?
Was I not seen among the first where the battle's spears were run?
Thrice ten doughty foes I slew in one night and a day,
And forty more with wounds from me stunk from the field away,
Till my good blade in sunder broke, and fell in pieces twain.
This saw a Turk, a faithless dog; and spurring o'er the plain,
Drew forth his shining yatagan, and waved it o'er my head.

With sudden clutch I seized the blade* before it reached my head;
Then from his belt the pistol flew, and aimed the dog so well,
He stretched me low and lifeless here, where 'neath the turf I dwell,
Weep, stranger, weep for me!"

HOW MR. LAMBKIN WAS GAROTTED—AND LIKED IT.

By THE AUTHOR OF "A SUBALTERN'S STORY."

IN these days—and nights—of insecurity to person and property, when respectable old gentlemen cannot walk from the City to St. John's Wood without having their neck-cloths disarranged and their pockets emptied by ill-looking ruffians with broken noses and fur-caps,—when equally respectable old ladies cannot do their little shopping in Oxford Street without being rumbled and robbed under a gas-lamp in a most audacious manner,—when the daily papers are filled with letters signed by all sorts of deadly weapons, recommending us what to do when we feel a bunch of muscular fingers compressing our windpipes,—when decent and peaceably disposed passengers, meeting in the parks after dusk, give each other a wide berth, and glance suspiciously over their respective shoulders like a couple of lions in the Zoological Gardens at feeding-time,—when, in fact, a universal panic appears to prevail in society, and the nervous system of the British public is in a very shaky and unsatisfactory state, it behoves every good citizen to raise his voice as loud as his lungs will permit him, if, by so doing, he imagines he can in any way contribute towards the general good, or benefit the interests of suffering humanity.

Inspired by sentiments of the purest philanthropy, and knowing that publicity is now-a-days the great redresser of evils, I have thought it my duty as a man and a bachelor to come forward, and make known through the columns of this periodical the circumstances connected with one of the most determined cases of garotting it has ever been my lot to become acquainted with. When an innocent and amiable little gentleman cannot pursue his meditations on the hearth-rug of a private dwelling-house without—But I am anticipating matters; perhaps I had better begin my story at the beginning.

Mr. Nicholas Lambkin was a young gentleman from the country, who, after the manner of young gentlemen in general, whether rustic or otherwise, had fallen deeply in love. In his case, however, there appeared to be no earthly reason why the course of his love should not run as smooth as a macadamised road. He was descended in a direct line from Reginald de Lambkynne, who, it is very well known, came over with the Conqueror. He was the proprietor of Lambkin Hall and a snug estate in Yorkshire; he was good-looking, affectionate, and domestic. What could the most aspiring mamma or fastidious young lady require more? And yet, to all appearance, Mr. Lambkin was the victim of an unrequited attachment. His love was a blank, because he had not the courage to tell it. The silver-spoon with which he had been born seemed in some measure to have entered into his nature. His bashfulness, however, was not so much constitutional as the result of education. Being an only child, and having lost his father when very young, he had been brought up entirely by his mother; and his character, though exemplary to a degree, exhibited in some points the mollifying influence of the maternal apron-string.

Mrs. Lambkin was a proud and reserved woman, who, since her husband's death, had lived entirely in the country, caring for no society but that of her son, and only anxious, like Norval's father, that he should remain at home, and be contented with the life of a quiet country-gentleman. Up till very lately Nicholas had dutifully indulged his mother's wish; but it suddenly occurred to him, on reaching his twenty-sixth birthday, that he could not perform the character of an English squire to perfection without the assist

ance of a wife. This desirable commodity not being obtainable in the neighbourhood, and as Mrs. Lambkin looked upon London as a grand emporium where a choice assortment of wives were kept constantly on view, she had taken a house in Berkeley Square with a view of giving her son a better opportunity for a selection. On this important point, however, Nicholas and his mother, for the first time in their lives, had a difference of opinion. Mrs. Lambkin, who was constructed, both mentally and physically, on the most diminutive scale, was smitten with the majestic person and intellectual attainments of a Miss Virginia Crabtree; while Nicholas had tumbled helplessly, hopelessly, speechlessly in love with a wicked, bright-eyed, golden-haired little cousin, named Amy Carlton.

The first-mentioned young lady, who was six feet high and wore spectacles, had condescended to look with an eye of favour on Mr. Lambkin; and having satisfactorily ascertained the amount of his income, and holding peculiar opinions on the subject of the rights of women, she did not scruple to take the initiative in making known her admiration both by word and deed. Amy, on the contrary,—a provoking, satirical, bewitching little puss,—though perfectly aware of the effects her charms had wrought on the unsophisticated heart of her country-cousin, pretended, in the hypocritical way common to wicked young ladies, totally to misunderstand his bashful attempts to inform her of the havoc she was causing in the susceptible organ that palpitated beneath his waistcoat.

Since his arrival in town, Mr. Lambkin had managed to rub off much of his rustic shyness. At clubs and other profane places of resort in the metropolis he had picked up a considerable amount of confidence, and in the society of men he was sufficiently self-possessed. Even with a number of ladies he felt tolerably safe, and did not altogether lose his presence of mind; but if by any unfortunate chance he found himself alone, in a room, with the door shut, *tête-à-tête* with a marriageable member of the fair sex, and if, more particularly, that member happened to be his cousin Amy, then did poor Mr. Lambkin blush, stutter, perform extraordinary evolutions with his arms and legs, and get himself generally into such an inextricable state of confusion, as to render an ignominious flight his only means of recovery.

After a three-months' residence in London, affairs were in this unsatisfactory condition; when, one afternoon last November, Mr. Lambkin,—driven to desperation by the attentions of Miss Crabtree, whose demonstrations of affection were becoming every day more alarming,—determined to put an end to them, and his own suspense at the same time, by concentrating his very limited brazen capabilities for one grand effort, and making an offer of his hand and fortune to the aforesaid wicked little cousin who had already taken possession of his heart.

And now, having given the reader as much of Mr. Lambkin's antecedental biography as is necessary to the development of my tragical story, I will let that gentleman speak for himself; merely premising that, with the exception of the interesting weakness I have mentioned, you would not find a warmer-hearted, better-humoured, more thoroughly good and honourable little fellow, if you were to search all over Epsom Downs on a Derby-day, which is, I fancy, giving you the largest assemblage in England to pick from.

"Good-bye, mother," cried Mr. Lambkin, on the afternoon in question, as he put his head in at the drawing-room door, and nodded to a sedate-looking little lady in a widow's cap, who was sitting by the fire, reading a newspaper. "Wish me success; I'm going to Kensington, to see my cousin Amy."

"My dearest Nicholas," answered Mrs. Lambkin, whose life was embittered by the presence of imaginary burglars, and who lived in hourly expectation of being garrotted as she sat in her arm-chair, "let me implore you not to think of going out so late. The evenings are very dark, and the accounts of people being robbed and murdered in the streets are becoming every day more dreadful. Do, my love, put off your visit till to-morrow before luncheon."

"No, mother," said Mr. Lambkin, entering the room. "You want to get home again; so I've screwed my courage up to the sticking-point, and have determined to speak out like a man to-day; if I wait till to-morrow, all my resolution may have evaporated."

"Ah, Nicholas," returned Mrs. Lambkin, "I fear your cousin is too volatile to make a good wife. She is not worthy of you, my dear. I wish I could persuade you to think more of Miss Crabtree."

"I wish I could persuade Miss Crabtree to think less of me," cried Nicholas in disgust. "Why surely, mother," he added, assuming the favourite argumentative position of an Englishman, viz. with his back to the fire, his hands in his pockets, and a coat-tail under each arm,—“surely you would not have me marry a woman who shaves her forehead and writes letters to the *Times* about the income-tax?"

"I should wish your wife, my dear, to possess some firmness of character, which I fear is not the case with your cousin Amy."

"She's a little darling," exclaimed Nicholas parenthetically.

"Now Miss Crabtree," continued Mrs. Lambkin, "is a young lady with a powerful intellect—"

"O, if you want a strong-minded woman for a daughter-in-law, I grant you, mother, you can't have a more perfect specimen than Virginia Crabtree. But as for being young, why, she's double my age, and wears moustache."

"Miss Crabtree, my dear, was only thirty-two last birthday," said Mrs. Lambkin, not condescending to notice her son's insinuation concerning the military appendage that graced her favourite's upper lip.

"Thirty-two!" cried Nicholas; "she's forty, if she's a day. I wish she'd shave her chin as well as her forehead. I declare, she's quite a Crimean hero."

"Nicholas, I'm ashamed of you," said Mrs. Lambkin with severity. "Miss Crabtree is a very superior young lady, and has twenty thousand pounds entirely under her own control. I beg you'll speak of her with respect, if it's only as my friend."

"O, as your friend, I respect her immensely. Besides, it's due to her age,—I beg your pardon, mother, I mean her money. But as for any thing else, it's quite out of the question. Why, I'm not twenty-seven yet."

"Five years, my dear, is no such great difference."

"But you must admit, mother, that if there be any disparity of age, the gentleman ought to have the benefit of it, in right of his sex,—and Amy's only twenty-two."

"I was older than your father, Nicholas; and our happiness was never affected by the circumstance."

"Ah, but then I don't love Miss Crabtree," returned Mr. Lambkin.

"Esteem, my dear, would ripen into a warmer sentiment."

"I'm afraid it would take a long time to ripen, mother. Besides, I love Amy already."

"But has your cousin given you any reason to suppose that she returns your affection?" asked Mrs. Lambkin.

"No, mother, because she doesn't know of it. I've tried to tell her half-a-dozen times; but I've always got ridiculously nervous, and ended by making some silly remark about its being a fine day."

"I never observed your being nervous with Miss Crabtree," said Mrs. Lambkin.

"No; because I never tried to tell her I loved her. She's a good deal more likely to tell me that. She was very near it yesterday. I was never so frightened in my life. So I resolved to propose to Amy to-day; and, if she'll have me, we'll get married at once, and be back at Lambkin Hall in less than a month."

"And if she refuses you?" inquired Mrs. Lambkin.

"Why then," replied Nicholas with a sigh, "it's a matter of indifference to me whom I marry; and to please you, mother, I'll try and like Virginia Crabtree. Good-bye."

"Good-bye, my dear; but if you must go to-day, let me

beg of you to take some weapon with you. I have just been reading a very sensible letter in the paper, written by an eccentric person who signs himself 'Knuckleduster,' recommending every one to walk about armed."

"Well, mother, if it will afford you the slightest gratification, I'll put a life-preserver in my pocket. But don't be alarmed. When I first came up from the country there might have been some danger; but now," said Mr. Lambkin, who thought himself quite a knowing man about town,—"now, I'm a great deal too wide-awake to let myself be gartotted. Good-bye."

While my small hero is speeding to Kensington,—figuratively, on the wings of love, but literally, on a pair of exceedingly well-made little legs,—I might improve the occasion by making several profound observations on the uncertainty of human affairs, as exemplified in Mr. Lambkin's closing speech; but as I do not wish to lose sight of that gentleman for a moment, I shall accompany him on his expedition, and leave the moral I have hinted at to point itself.

When the hall-door in Berkeley Square closed behind him, Mr. Lambkin felt as bold as a lion. Pressing his hat firmly on his head, and shouldering his umbrella with a conquering-hero kind of air, he started off at the rate of about five miles an hour. At the turning into Piccadilly, he nearly ran over a gigantic policeman who imprudently got in his way. He determined that when he saw his cousin he would speak out manfully as became a Lambkin, and composed a short, sharp, and decisive address to be delivered on the momentous occasion. His proposal should be none of your sentimental, down-on-one-knee kind of declarations, but a straightforward come-to-the-point yes-or-no sort of speech that would settle the question. The idea of feeling nervous at such a moment was really quite preposterous; and Mr. Lambkin laughed so heartily, that an irreproachably got-up individual, with a miraculous collar, supposing himself to be the object of the little gentleman's mirth, turned round and scowled frightfully after him for the space of two minutes. Mr. Lambkin, happily unconscious of his offence, and the indignant glances that were following him, went on his way rejoicing.

By the time, however, that he arrived at the entrance to Hyde Park, a change had come o'er the spirit of his dream. As he remembered his cousin's mocking face and laughing eyes, he began to think that there were other batteries than those of cannon which required a considerable amount of courage to face. The distance that had lent enchantment to his view was rapidly diminishing, and the ordeal that he had to undergo appeared every moment more formidable. As he proceeded westward, an acute observer might have detected a gradual abatement in the length of his pace and the confidence of his manner. Not the ghost of a smile remained on his features; and his umbrella, instead of being carried truculently over his shoulder, reposed peaceably under his arm. As he strolled through Knightsbridge, he became conscious of an uncomfortable sensation that, like Acres, his valour was rapidly oozing out of the tips of his fingers. In proportion as his stride grew less, a corresponding elongation took place in his visage; and as he slowly approached Kensington, with his umbrella now used as a walking-stick to support his tottering steps, no one would have recognised him for the confident and exulting little gentleman who came into such violent collision with the unfortunate policeman a short time before. As he passed through the turnpike his pace had slackened into an absolute crawl; and his umbrella, which appeared entirely to sympathise with its nervous proprietor, trailed irresolutely behind him. His uncle's house stood in a large garden not far from that venerable toll-bar; and when at length he had dragged himself to the door, his first impulse was to run away again as fast as his legs could carry him. Luckily at that moment the colossal image of Miss Crabtree rose up before him, and in a fit of desperation he seized the knocker.

"Is any one at home?" he asked in a faltering tone of a

giant in plush-breeches, who responded to the feeble concussion.

"Mr. and Mrs. Carlton are engaged, sir," said the giant, looking down from a tremendous height at the small visitor; "but Miss Carlton is in the drawing-room."

"Alone?" gasped Mr. Lambkin.

"Alone, sir," affably returned the gentleman in plush.

The door was shut, and retreat impossible. Mr. Lambkin experienced a choking sensation in his throat. He had never felt so nervous as on that particular occasion. All his old symptoms had returned in an aggravated form. Though the roads were perfectly clean, and there was not a speck of dust upon his highly-polished little Balmorals, he performed a lengthened *pas de seul* on the door-mat, and took as long to mount the staircase as if he had been climbing the Great Pyramid.

"Mister Laamkin!" shouted the giant, in a tone for which Nicholas would have liked to have knocked him down—if he could. Amy was sitting at a table with a box of water-colours before her; and in the opinion of her love-stricken cousin, looked more charming and saucy than ever. She rose to meet him.

"Why, Nick," she exclaimed, adopting the irreverent abbreviation of his name in use among the younger branches of the family, "you're quite a stranger. You haven't been to see us for nearly a week."

"I—I've not been very well," stammered Mr. Lambkin, blushing like a peony, and not knowing exactly what he said in his confusion.

"Ah, you may well blush at telling such a dreadful fib. You were well enough yesterday to walk about, with Miss Crabtree. I saw you; but you were too much engrossed with your fair companion to take any notice of your cousin. I was just making a sketch of you going into a shop in Bond Street together. Look!"

"I assure you, Amy, I did not see you," said Mr. Lambkin, sitting down at the further end of the room, and not feeling at all reassured by the exhibition of a clever caricature of himself as a dwarf escorting a female grenadier that bore an absurd resemblance to Miss Crabtree.

"She would take me into Savory and Moore's to give me something for my cough."

"What a wonderful genius she is!" said Amy. "Nothing comes amiss to her. Her mind is like an elephant's trunk. She can lecture on the steam-engine or prescribe a cough-mixture with equal ease. I suspect, Nick, you have rather a *penchant* in that quarter. She was looking very affectionately at you through her spectacles."

"No, indeed," cried Mr. Lambkin energetically. "She's my mother's friend, not mine."

"Ah, you gentlemen always deny these things."

"I assure you, Amy," cried Nicholas, roused by the accusation, "I hate Miss Crabtree; and," he added, fidgeting uneasily in his chair, and reducing his hat to a shapeless mass in his agitation, "I—I—I—"

"Why, Nick," said Amy, wickedly enjoying his confusion, "what's the matter with you? You are utterly ruining a perfectly new hat. Do put it down."

"I want," gasped Nicholas convulsively, "to speak—to you—on a subject—of the greatest importance."

"Well, Nick, if our conversation is to be confidential, don't sit all the way out there."

Mr. Lambkin, who felt much more comfortable at a distance, moved two or three chairs nearer.

"No, no; come and sit here." And she pointed to an ottoman at her side.

Mr. Lambkin mechanically obeyed, and sat himself down on Amy's workbox, that was lying open upon it.

"I beg your pardon," exclaimed the unfortunate gentleman, in an agony of distress, and trying to repair the damage he had done; "I didn't see—"

"O, never mind, Nick; I hate a tidy workbox. Bring a chair here; and while you talk you can hold a skein of silk for me."

Poor Mr. Lambkin! If there is a position calculated more than another to discompose a nervous man on the point of making an offer of his hand and heart to the lady of his affections, it is the ridiculous one of holding a skein of silk for her to wind. In the first place, the attitude is the very reverse of graceful. If he be in a chair, he has to sit bolt upright on the extreme edge, with his arms sticking out at right angles to his body like the arms of a direction-post, and his fingers fixed and rigid as a glove-tree. When the silk gets into a "tangle," which it invariably does, the gentleman can do nothing to assist the fair winder, but must remain stiff and immovable as a trussed fowl, or the "difficulty" becomes more complicated; and when, as in the present case, the lady is perfectly self-possessed, and the gentleman proportionately shy, it is not easy to imagine less favourable circumstances for the performance of that favourite comedietta called "popping the question."

"And now, Nick," said Amy demurely, when Mr. Lambkin had assumed the position of a sedentary finger-post, and she had found the "end" and commenced winding, "what is this very important matter you have to communicate? Any thing about the weather?"

"No," answered Mr. Lambkin, trying to recollect his speech; "nothing about the weather."

"Or the crops?" asked Amy. "No bad news from the Hall, I hope, about the mangel-wurzel?"

"No," answered Nicholas, who felt his forehead getting unpleasantly hot; "it's nothing about mangel-wurzel."

"Swedes coming up as you could wish, I trust?" pursued Amy.

"I didn't come to talk about turnips," cried Mr. Lambkin in a piteous tone, making an insane attempt to get at his pocket-handkerchief.

"O, keep your hands up, please," cried Amy; "my silk will be ruined."

"I beg your pardon," said Nicholas, raising his hands as high as his nose, and proceeding: "I want to say—that is—to ask you, Amy, if—if—"

"Go on, Nick."

"To ask you—if—you could—I mean, if you would try, —to—Dear me, it's very warm to-day."

"I knew it was something about the weather," cried Amy triumphantly.

"No, no; I didn't mean that."

"A little higher, please."

"I beg pardon. I meant to say," said Mr. Lambkin in despair, "that for the last three months—ever since I came to London, in fact—I have been in—in—in—"

"In what?"

"In love,—there!" said Mr. Lambkin drawing a long breath; "that's what I came to say, Amy."

"O, Nick, how sly of you to have been in love for three months and to have said nothing about it!"

"I tried to tell you several times," said Nicholas, feeling more at his ease now the Rubicon was passed, as he thought; "but I hadn't the courage to speak out."

"And who is the lady?" asked Amy.

"Who?" said Mr. Lambkin in surprise. "Don't you know?"

"No, of course not; you didn't tell me."

"But can't you guess?" asked Nicholas, trying to look as insinuating as his absurd position would allow him.

"A little higher, please."

"O, bother the silk!" cried Mr. Lambkin impatiently.

"Can't you guess, Amy?"

"I think I can," she replied laughing.

"Well, Amy?"

"Well, Nicholas?"

"What do you say?" asked Mr. Lambkin anxiously.

"O, I'm delighted to hear it. I think you ought to get married, and that you'll make a very good little husband."

"Do you?" exclaimed Nicholas joyfully. "Then nothing remains but to fix the day."

"The day! What day?"

"The wedding-day."

"O, that you must leave to her."

"Her?" said Mr. Lambkin, dropping his hands in consternation.

"O," cried Amy, picking up the silk, "what have you done! What a dreadful tangle!"

"But, Amy," said Nicholas, who felt *himself* getting into a dreadful tangle, "what *her* do you mean? My mother?"

"No; the lady you're in love with, of course."

"The lady I'm in love with," stammered Mr. Lambkin, getting very pale. "And who do you suppose that is?"

"Miss Crabtree, of course," said Amy.

The shock was too much for Mr. Lambkin; his head reeled, his eyes swam, every thing appeared to be whirling round; and after staring vacantly at his cousin for some time, he rushed from the room with an anti-macassar that had become entangled in the back buttons of his coat streaming wildly behind him.

"Nicholas—dear Nicholas!" cried Amy, following him to the door, "come back."

But he was gone; and as the wicked little cousin returned to her seat, her face wore a penitent look, and something very like a tear trickled down her cheek.

As Mr. Lambkin was flying down-stairs, taking a dozen steps at a time, Mrs. Carlton was just leaving the library.

"Why, Nicholas, you appear in a great hurry. What's the matter?"

"Nothing," said the little gentleman, making a very poor attempt to look perfectly at his ease; "I generally come down-stairs that way."

"Nonsense, my dear," said Mrs. Carlton, who was rather a determined character, "you're quite in a fever. Come into the library, and tell me what has annoyed you."

The unhappy Mr. Lambkin followed his aunt into her sanctum with much the same feeling he would have taken his seat in a dentist's operating-chair. His nerves were a good deal shaken; and Mrs. Carlton, by a skilful cross-examination, arrived at the cause of his woe with as much dexterity as the aforesaid professor of odontology would have extracted a refractory grinder. Like the sufferer from toothache, Nicholas felt much better after the operation, especially as his aunt took a favourable view of his case, and undertook to complete his cure by informing the wilful young lady upstairs of his desperate condition.

"I know Amy likes you very much," said Mrs. Carlton, as she proceeded on her embassy; "and your uncle, I am sure, will be delighted to receive you as a son-in-law."

"Bless you, my dear aunt, for saying so!" fervently ejaculated Mr. Lambkin.

And now I come to the painful part of my story—the catastrophe.

It had grown quite dusk, and the trembling lover was anxiously awaiting the return of his envoy. He was gazing intently at the fire, with his right elbow reposing on the mantelpiece and his left foot resting on the fender,—one cannot be too circumstantial in these melancholy cases,—when a figure noiselessly entered the room, glided swiftly behind him, put its arms round his neck, and before he could defend himself, closed his mouth in such a way that for a few moments he was unable to breathe.

"Nicholas," said the audacious garrotteer, releasing her hold when the unfortunate gentleman appeared totally incapable of resistance, "you're a dear good little fellow, and I love you very much. Forgive me for my cruel conduct this afternoon."

"Forgive you!" cried the enraptured Mr. Lambkin. "I'll—"

Here the garotte-process was repeated, Nicholas this time being the performer, and Amy the unresisting victim.

"I knew all the time what you wanted to say," said the latter, when the operation had been satisfactorily performed; "and it would have served me right if you had gone straight from here and proposed to Miss Crabtree."

"Miss Crabtree be—"

Fortunately the sentence was never finished. The mode of interruption has been already hinted at. Amy has since stated in explanation, that it became absolutely necessary to stop Nicholas's mouth in some way or other, to prevent the utterance of a word relative to Miss Crabtree in a state of suspension, or some other equally unpleasant predicament.

I have nothing more to record, except that the perpetrator of the above-mentioned outrage was, I am happy to say, speedily brought to justice. Being arraigned before a family-court, and having nothing to say in her defence, except that it was Leap Year, and that the plaintiff was her cousin, she was sentenced to go in chains—hymeneal ones—for the rest of her natural life.

The day that the sentence was carried into effect, Mr. Lambkin was, as a matter of course, transported. Miss Crabtree is still unmarried, and likely to remain so. The young couple have just returned from their wedding-tour; and, strange to say, Mr. Lambkin has lost all his shyness. He ascribes it entirely to his having been garotted. J. H. L.

POLYGLOT READINGS IN PROVERBS.

ALL IS NOT AT HAND THAT HELPS.—We cannot foresee whence help may come to us, nor always trace back to their sources the advantages we actually enjoy. *De longe vem aqua a o moinho* (Portug.);—Water comes to the mill from afar.

GOD SENDS FOOLS FORTUNE.—It is to this version of the Latin adage, *Fortuna favet fatuis*, "Fortune favours fools," that Touchstone alludes in his reply to Jacques:

"No, sir, quoth he,
Call me not fool till heaven hath sent me fortune."

The Spaniards express this popular belief by a striking figure: "The mother of God appears to fools,"—*A los bobos se les aparece la madre de Dios*. The Germans say, "Fortune and women are fond of fools,"—*Glück und Weiber haben die Narren lieb*; and the converse of this holds good likewise, since "Fortune makes a fool of him whom she too much favours,"—*Fortuna nimium quem favet stultum facit*—and so do women sometimes. When we consider how much what is called success in life depends on getting into one of "the main grooves of human affairs," we can account for the common remark, that blockheads thrive better in the world than clever people. "It is all the difference of going by railway and walking over a ploughed field, whether you adopt common courses or set up one for yourself" (which is more likely to be done by people of superior abilities than by others). "You will see . . . most inferior persons highly placed in the army, in the church, in office, at the bar. They have somehow got upon the line, and have moved on well, with very little original motive-power of their own. Do not let this make you talk as if merit were utterly neglected in these or other professions; only that getting well into the groove will frequently do instead of any great excellence." (*Companions of my Solitude*.) With this explanation, we are prepared to admit that there is some reason in the Spanish adage, "God send you luck, my son; so that a little wit will serve your turn,"—*Ventura te dé Dios, que poco saber te basta*.

WHEN TWO ORDER THE SAME HORSE, ONE MUST RIDE BEHIND.—Another proverb settles the question of precedence by ruling that, "He that hires the horse must ride before." The other must of course be content to journey as the foremost man pleases. "He who rides behind another, does not saddle when he will" (Span.).—*Quien tous otro cabulga, no ensilla quando quiere*.

ALL COVET, ALL LOSE. "Covetousness brings nothing home." "It bursts the bag," say the Italians,—*La codicia rompe il sacco*. "He who embraces too much, keeps a bad hold" (French).—*Qui trop embrasse, mal étireint*.—A statue

was erected to Buffon in his lifetime, with the inscription: *Naturum amplectitus omnem*,—"He embraces all nature." Some one remarked as he read it, *Qui trop embrasse, mal étireint*. Buffon heard of this, and had the inscription removed.

THEY MAY LAUGH THAT WIN.—"A blind fiddler playing to a company, and playing but scurvily, the company laughed at him. His boy that led him perceiving it, said, 'Father, let us be gone, they do nothing but laugh at you.' 'Hold thy peace, boy,' said the fiddler; 'we shall have their money presently, and then we will laugh at them.'" (*Selden's Table-Talk*.) "He laughs best who has the last laugh" (French).—*Rira bien qui rira le dernier*. "Better is the last smile than the first laughter."

THE STAFFORDSHIRE POTTERIES.

IV.

FROM the tile-manufactory we directed our steps towards Mr. Minton's show-rooms, where are exhibited various specimens of what we suppose must be called pottery, though many of the articles might well have proceeded from the studio of the statuary or the easel of the painter. That there were to be seen there cups, plates, dishes, and jugs, in numbers not to be told, and in endless variety, will be expected; but that from materials so rude as flint and clay statuettes are fabricated, clothed in drapery which rivals the finest muslin in delicacy, and with features so exquisitely moulded as to express the tenderest emotions of the mind, we could not help inferring that the potter's art has here attained the highest point of perfection. Owing to the comparatively low price of the raw material, and, we presume, the facility with which, when once the mould is formed, copies may be multiplied, the price even of the most exquisite specimens is wonderfully small; while the cost of articles of domestic furniture of symmetrical and tasteful shape and perfect workmanship is scarcely beyond that at which, a few years since, the most ungainly forms were sold. All honour to the capitalists who have placed within the reach of the humblest classes models to elevate their taste, and create or foster their love of the beautiful.

From the showrooms we descended to the workshops where these charming things are made. And here we think it only just to state, that we received from all the artist-labourers the same refined courtesy which characterised the tile-manufactory. It may be that manual dexterity, artistic skill, and familiarity with fine forms, may have a reflex influence on the mind, and generate there a politeness generally supposed to belong only to a higher rank than that of the artisan; but however this may be, we were certainly as well pleased with the modellers as with the models.

In the first room which we entered, a man stood at a side-table, employed in putting the last finishing-touch to a mass of clay about to be wrought into form. Had we entered a baker's-shop, we should have supposed that he was throwing aloft, thumping, and kneading a lump of peculiarly white dough; and that the subject of his labour was to be converted, not into plates and dishes, but into the more delicate bread. In a corner of the room, seated on the edge of a kind of trough, in the centre of which revolved a horizontal wheel of about the size of a dinner-plate, was a man pursuing his vocation of a "thrower,"—a veritable potter, having by the impulse of his will and hand "power over the clay, of the same lump to make one vessel unto honour and

another unto dishonour." It is strange that with all the applications of modern science, and although aided by the refinements of high art, the potter still sits at his wheel,—a wheel the same in form and operation as in remote antiquity,—using his hand to model his workmanship, and a string to sever it from its base when completed.

This little table is made to revolve by a strap connected with a large vertical wheel, which is turned by a young woman a few yards off; to her he intimates by words or signs whether he requires a rapid movement or otherwise. Another woman stands near him, whose business is twofold: first to divide into equal pieces, by weight, the clay on which he is to operate, and to place them ready to his hand; and secondly, to arrange in a double row, on a board placed near her, the finished vessels as he "throws" them off. But let us watch him closely; for he is evidently a practised hand, and gets through his work with wondrous expedition. He is making preserve-pots: see, there stands a row of them which he has just made, all of exactly the same height, diameter, and thickness, as if all made (as indeed they are) in the same mould, namely, his fingers and thumbs. He places a lump of clay in the centre of his wheel, and the first jar is finished while we are realising to our own minds the fact that his hands are his sole implements. A pointer projects from the side of the trough opposite him to very near the middle of the wheel. This serves him to indicate the height of his jar, and by his side is a piece of string (wire it turns out to be, when we look more closely) with which he severs it from the wheel. The attendant leaves off weighing for an instant, and removes his workmanship out of his way. A second lump succeeds the first; he thrusts his hand into it; the plastic material seems endowed with a self-forming power; it sinks into the middle; its circumference rises under his magic touch, and in far less time than we can describe the operation, the pot is finished and added to the company of its fellows. A dozen are made in an incredibly short space of time. He signs to his assistants, and he proceeds,—though we are ignorant of the fact until he has finished,—to exhibit to us a specimen of his skill in fabricating other articles. A fresh lump is placed on the wheel; with a touch it assumes the form of a cup; it widens and becomes flatter; the wheel stops, the wire is applied, and behold! a well-shaped saucer. Again the magic wheel revolves, and a teacup is the result. Another and somewhat larger lump is laid on the wheel, which rises like its predecessors; it bulges out below, contracts above, a rim shoots out, and we have the body of a teapot; for which a smaller lump is instantaneously whirled into a lid, fitting as accurately as if measured by rule and compass, and not simply by the potter's eye. A slop-basin follows; and, last of all, another vessel is, by a trick of legerdemain, converted into a milk-jug. The impromptu set of tea-things are allowed to stand for a few seconds on the side-board; when the attendant seizes them, and before we have had time to recover from our astonishment, ruthlessly crushes them to a mass of ignoble clay. The fabrication of jam-pots is resumed, we express our acknowledgments, and withdraw. We next peeped into a low and very hot room, filled with frames, on which were placed some hundreds of vessels undergoing the operation of drying. The next workshop was filled with turning-lathes. At each of these stood a workman, who placed a basin on a revolving mould accurately fitting its concavity. With a tool of simple structure he first hollowed out the base so as to form the rim on which it stands; a few revolutions produced the contraction above the rim; and the tool, slowly moved along the outside, reduced the basin itself to a uniform thickness.

The articles we have hitherto seen were perfectly round and symmetrical. In another workshop are made vessels of irregular shape, such as ewers and vegetable dishes, for which a mould is requisite. A potter's mould consists of two solid pieces, which when fitted together form a concavity similar in shape to the outside of the vessel required. The workman takes a lump of clay, and having rolled it

out into a flat thin cake, places it as a cook would the cover of a pie on one of the halves of a mould; the other being similarly treated, the two are brought together, and the line of junction effected by laying between the two, on the inside, a strip of the same clay, which is patted and coaxed into shape with wondrous dexterity. Handles of teacups, spouts of teapots, feet of tureens, and whatever other members articles in pottery are furnished with, are made for the most part by children, each in a separate mould, and are afterwards stuck on to the main body with a composition called slag. A series of rooms on the upper story was occupied by a number of women and girls, employed in painting plates, &c. which had been already fired. We observed little here worthy of notice, except that the outline was in all cases printed on the article, and that the true division of labour was observed, one girl laying on with an ordinary camel's hair brush all the red, and another all the blue, &c. We must not, however, omit to mention that the decorum which reigned here was not instead of, but subjoined to, the same civility which had awaited us elsewhere. Patterns of landscape, flowers, and fruit, are printed on the porous clay by a very ingenious device. An impression from a copper-plate is first taken in the required colour on silver-paper; the sheet is then dipped in water, and spread lightly and evenly over the surface of the plate, rubbed on the back with a roll of wet flannel, and finally washed off with a sponge till the colouring-matter alone remains. This operation is performed after the articles have been once fired, in which condition they are technically called "biscuit." The process of glazing consists in covering the ware with a thin coat of mineral composition. Into this they are dipped one by one, and quickly withdrawn; and when sufficiently dry, are again consigned to the saggars, and replaced in the furnace, which is heated to the degree necessary to vitrify the glazing.

The operation of gilding is performed by painting the ware with an amalgam of gold and quicksilver. Placed in the furnace, the quicksilver evaporates, and the gold returns to its solid state, but comes out with a dull surface; so that, in order to restore its lustre and brilliancy, it is necessary to burnish it with bloodstones and other polishing substances.

C. A. J.

DESIGN FOR A SUBURBAN COTTAGE-RESIDENCE.

By E. L. TARBUCK, ARCHITECT.

THERE are ten rooms, besides offices, in the accompanying design, and the cost of erection will average about 800*l*. Stone or brick should be used; no cement externally. To the use of the latter material may probably be referred much of the tiresome sameness, prostration of natural thought, and disregard for truth, which characterise our street-architecture. It is so easy and so cheap to stick up details from the same model, that the temptation has been irresistible. We have heard people blame a certain millionaire who had some elaborate plaster ornaments designed for the interior of his house, and afterwards caused the models to be destroyed, that none else might have similar decorations. A little more of this selfishness in architecture is sadly wanted; for good was done in thus discouraging repetition, and impelling once more the exercise of individual thought. Otherwise the forms would have been repeated all over London, and the architect soon have lost the credit due for his peculiar skill and taste, in the plagiarisms which have become so common, but are so perfectly inexcusable. Our design is plain; and therefore there will be but little excuse for tawdry cement-work. Indeed, it will not do now to give much external ornamentation. One of the strange features of our civilisation is, how little appropriate decoration is cared for in domestic habitations, and how niggardly money is doled out on this object. And yet we are richer far than the men of olden time,—far richer than those old burghers of Bruges, of Ghent, and of Antwerp, who lavished nearly as much

money on the outsides as they did on the interiors of their houses. Look again at Venice. Commerce there did not crush the spirit which, not content with gazing on beautiful public buildings and pictures in galleries, still wished to have, surrounding the domestic hearth and outside, where the passengers might gaze, what would tell that the possessor did not content himself with paying taxes for the stately palace and the noble hall, but did something in his own way, and in his own house, to signify his feeling for art. Turn from these buildings to our stuccoed houses, and note how all comes from the same ugly models. We stick up the so-called *ornaments* without regard to beauty, meaning, and truth, instead of boldly carving them in the stone, and, on all occasions, *designing* that which is expressly and peculiarly suited to the site and the purpose, to the age and the people.

Decoration, indeed, there often is in superabundance; but whence come the ideas and forms? Plagiarisms nearly always in architecture from the ancient tangible thoughts. We do more *apparent* work than the old men, but not nearly so much *real* work. We hurry along at a railroad-pace; but it is too fast a pace for any thing but steam. Art requires time, labour, diligent and thoughtful care; and perfection is not to be attained in a hurry. Every thing now must be done quickly; every body is impatient; and every body is at last disappointed with the result. All in the olden time

was done slowly, calmly, and deliberately. Cathedrals progressed during ages; scarcely one abroad is now quite finished, but what is completed is done *well*,—so well, that it is a precious and undying legacy to future times. Then there was harmony between the works of man and those of nature,—for the latter naturally dictate the former; and a building seen in the vastitude of an extensive landscape is a sort of connecting-link between the two:

“And the clear region where ’twas born
Round in itself encloses.”

The penalty of our hot-headed rushing to and fro, of our foolish impatience, of our thoughtfulness of nothing but the money's worth, without regard to intrinsic value, will surely visit us some day. We said before, that the love of home is lost in the changefulness of our abode in the frail things called houses, so hastily run up. In a few years men have forgotten where they settled with the blushing bride, where the first-born calmly slept, where the friends who have departed so often came; the fireside where their parents sat, the spot which domestic affection and friendship should have hallowed. And we shall find out at last that, if this changefulness continues, as it bids fair to do,—that settledness of abode which so powerfully contributes to the prosperity and happiness of the members of a nation being destroyed,—we shall not have long to wait for more portentous changes.

SPECIMENS OF THE ENGLISH SCHOOL: NO. X.

HENRY LINTON ES.

PAINTED BY E. M. WARD, R.A.

BYRON'S EARLY LOVE.

BYRON'S EARLY LOVE.
"A DREAM OF ANNESLEY HALL."

By E. M. WARD, R.A.

"One fatal remembrance, one sorrow that throws
Its black shade alike o'er our joys and our woes,
To which life nothing darker or brighter can bring,
For which joy has no balm and affliction no sting"

If the painting here engraved had been no better than the verses which supply its motto, our task of comment and criticism might indeed be brief. A few words in explanation of the lines will be serviceable, however, in elucidating the subject of the picture; which are the more necessary, as most of the glare and all the smoke having cleared away from Byron's reputation, the present generation is comparatively ignorant of the stormy passions through which he passed, and contentedly rests its judgment of him upon his works as a poet.

After many a boyish love-freak, Lord Byron seems to have experienced the reality of the passion in its highest manifestations for the beautiful Mary Chaworth. She, however, by no means reciprocated his feeling, and in the dignity of her eighteen years treated the peer of sixteen as a boy, not appearing to have even disguised from him her regard for the gentleman she afterwards married,—a Mr. Musters. Byron's affection for the lady was undoubtedly deep-seated and sincere; for the effect of her indifference told greatly upon his after-life, and is expressed in the "fatal remembrance" to which he alludes in the verses.

The subject of the picture is Byron moodily contemplating Miss Chaworth while dancing at a ball in her father's house at Annesley. Of its execution we may say, that it exhibits the usual qualities of Mr. E. M. Ward's works, and may also remark the skill with which he has designed the action of the left hand of Byron himself, holding, as he does, the skirt of his cloak as a screen before his lame foot. If this be intended as a subtle hint at the tyrannising vanity of the poet's character, which led him to make this personal defect the chief misery of his life, it is a very excellent point skilfully introduced. The figure of Byron appears to be somewhat manly for that of a youth of sixteen. The picture was exhibited at the Royal Academy last year, and has been engraved in the illustrated edition of Moore's *Irish Melodies*. We are indebted to Messrs. Longman, the publishers of that work, for permission to re-engage the subject for the NATIONAL MAGAZINE.

L. L.

AN EVENING AT THE — INSTITUTE.

It was evening, in a certain manufacturing-town in the eastern part of Lancashire; a hard, dry, bitter cold was abroad; casual drops of water on the pavement froze into hard knobs of ice; and where the carts passed the ground was strowed with powder of earth and ice. In one of the principal streets, where gas-jets were flaring in all directions, people were busily hurrying to and fro, and the hard struggle for life was carried on with more than ordinary activity, at the entrance of a large hall were fixed two lamps of a special brilliance, from which were suspended huge placards, on which were printed, in letters of notable size, "Go and see Captain H—'s demonstrations." In the interior of this hall were assembled about 1500 people. The gallery was chiefly filled with artisans, weavers, mechanics, railway-porters, and an indefinite number of youths. There were likewise visible in the front seats (they had hard fighting for them, too) numerous mothers of families, supporting their infants with one hand and holding the house-key in the other. In the body of the building were the upper class of operatives; and in front was a sprinkling of wealthier people, and a satisfactory number of Quakers. Five performers were playing furiously some fashionable music. One of these men had such a round red and white face, great black eyes and whiskers, such well-defined eyebrows and imperial, in fact, possessed

such a peculiar and noticeable stylo of beauty, that he was deservedly regarded by the female sex there gathered together as one of the most attractive features of the place. Wit and repartee, disguised in the provincial dialect of the place, were audible enough. In fact, the gallery-people were on the best of terms with themselves and the musicians, and held colloquial discourse freely with the latter. On the appearance of the lecturer, the shouting, yelling, and applause, rose to a terrible height. He was a large, heavy, powerfully-built man, and with that swinging step which smacks of sailor-life, and that easy play of limb which indicates an almost indefinite amount of strength. He was a man of the O'Connell type. Phlegmatic-bilious temperament, a well-developed massive head, a powerful eye, and an expression of benevolence, humour, and self-reliance, were obviously his characteristics. What if he were rather roughly attired, if his letter "h" was occasionally missing, his verbs sometimes oddly conjugated, and their agreement with their nominative wholly disregarded? He was perhaps a rough specimen, but he held his own well. Mr. Jonas Stubbs was seated in the front row. He was a most respectable stout young gentleman; he appreciated to the utmost extent two things—his own person and his own wealth. Moreover, he was engaged, and on the point of marriage, with a young lady of the most genteel sort. He had come prepared to disabuse the public mind of several misconceptions, and to unmask and upset the system of the lecturer completely; in fact, to deal one heavy blow at mesmerism, so that it should never raise its head again in Mr. Stubbs' natal town. He considered very justly, and with unanswerable logic, first, that it was all humbug; and secondly, that if not, it was something much worse. In this frame of mind he listened to the opening address. What there was of it was certainly not very much to the point. It was something in this style: "The British people have always been celebrated for fair play. The Americans are not any thing like us in that respect. (Cries of 'That's true.') They call themselves a go-ahead people; but so are we; we not only go at it, but we go always at it, and we go all of us at it." (Immense applause.) Here a girl, with a very abstracted expression of countenance, and a gait as though she were slightly deformed, walked across the lecture-hall, and disappeared into a little room, where comfort and refreshment in the way of a fire and looking-glass were provided, as appeared from the glimpse which the opening of the door afforded. (Audible whispers of "That's her.") Mr. Jonas Stubbs, not to lose an opportunity, remarked loudly to those who were near him, "That, I suppose, is one of the paid victims." By this artful remark, you perceive, he had included both sides of the case. Pay denoted humbug; and the word victim contemplated the darker supposition. The lecturer continued: "When I was at Cronstadt there was a ship commanded by an American, many years ago. And the Emperor Nicholas went aboard of it; and all the flags of the different nations were hoisted in honour of his visit. Above them all waved the stars and stripes. (Murmurs of, "Shame," perhaps rather unreasonably.) And when the emperor ascended the ladder (here he enacted the part with much effect), what did he see but the Union-Jack spread as a carpet for his feet. (Perfect uproar of yells and catcalls.) What did he do? (Here Captain H—, in his character of emperor, made suitable demonstrations of horror.) He ordered it to be raised up and hoisted aloft, saying, 'I will never tread on the ensign of that noble nation.'" (Hurricane of applause; cries of "Well done, old Nick—Union-Jack for ever.") We will now proceed to our demonstrations. "Any lady or gentleman,"—here he was interrupted by a tumultuous rush of at least thirty men and boys on to the stage. He arranged them all on benches in a semicircle; three young ladies from the little room had already seated themselves. A paralysed woman, two cripples, and a blind boy completed the lot. Every one was silent as Captain H— passed among them, laying his hand on the forehead of each in succession. Some half-dozen closed their eyes at once; these he placed apart. The rest

he made stand up one by one, and made passes behind them. Some staggered back towards him; others reeled after him; these again were grouped together. A few showed no sign of any sort; these he patted affectionately on the back, and dismissed them to resume their seats among the audience. Finally he arranged some ten in a semicircle; they regarded the spectators with a peculiarly imbecile and stolid air. The musicians struck up "Bobbing around." All those that were standing commenced such indescribable writhing and contortion, that they appeared to imitate lively naggots in cheese. He then touched their heads; and while the girls continued writhing the lads fought imaginary enemies with fury. One was in his own imagination a sheep, and bleated piteously; another was a monkey, and favoured the audience with all the absurd chatter and gestures of that unclean animal. After a meal of green leaves, he ascended a pole, and perched himself in such a position as his sober senses would hardly have suggested. Another swam vigorously on the floor, to the intense delight of his comrades in the gallery. Captain H— brought forward the sheep.

"I never saw this young man before; does any one know him?"

"He works for Astow's Mill; he lives hard by."

Another was presented; and he was proclaimed to be "Adam Hope, a stone-mason;" and so forth; they were all challenged by their respective friends and acquaintances. At length Captain H— pointed to the interesting animal aloft:

"Does any one know this lad?" he demanded.

"Ho be my son," screamed a woman; "and he has eat twice as much sin' he wor mesmerised."

They were then awakened. The monkey descended with every appearance of uncomfortable terror; the sheep ceased to bleat; the people in the gallery took on themselves the continuation of that performance; and the subjects seated themselves, looking puzzled and hot, on the benches facing the audience. The lecturer placed them again in a row, and connected them one with another by means of a small brass-chain, the extremity of which was placed in a pitcher of water, in which he had previously been, to all appearance, washing his hands. The result seemed extraordinary; the lads presented the same symptoms as it is well known those do who receive a strong shock from an ordinary electric machine. And presently the platform was a mass of prostrate lads, struggling furiously to free themselves from each other, and yet apparently obliged to retain their hold. "Talk of table-turning," exclaimed Captain H—, "look here;" and springing upon a chair, he began to wave his hands in a circle round him, at first slowly, but gradually increasing in velocity. The lads rose, and ran round and round the chair. When he changed the current, they turned and commenced running the other way. Those who did not change quickly enough were pushed over, and trampled on; they seemed invulnerable, or possessed, for they got up and followed the others. Then there was a lull. Jonas Stubbs gave an audible groan, and Captain H— regarded his subjects with a benevolent air. Now Mr. Stubbs had been for some time boiling with indignation; and at this moment his good genius prompted him to active measures, and to a personal exhibition. So when the lecturer demanded again, "Any lady or gentleman," he rose from his seat with that deliberation which at once indicated his respectability, and ascended the steps on the right of the platform. It so happened that a black man present was at that instant seized also with an inclination to appear in public, so that he rose on one side of the stage precisely as Mr. Jonas Stubbs appeared on the other; and the sable man and the white gentleman faced each other suddenly. This circumstance was in itself enough to create amusement in an audience prepared for joking. For an instant Mr. Jonas regretted his determination; he could have wished to have been in less remarkable companionship—but there was no help for it. Captain H— asked the customary question: "Does any one know this young man?"

"I am Mr. Jonas Stubbs," returned the latter, with a stern air, which might have disconcerted any impostor; "and this," pointing to the black, "I don't know him; I never saw him before." (Black man grins.)

Solemn voice from the gallery: "I know he; he be Cooky Sam." (Cries of friendly recognition.)

"You'll find," said Jonas, "you have no power over me; I'm not a wretched dupe or a paid emissary."

"Ah, no, very likely," said Captain H— smiling; "permit me to try. No; you are a very difficult person, I see." He passed his hands caressingly over their heads and down their spines. "No; you are very difficult," he continued; "determined not to be taken in. Eh, Mr. Stubbs?"

Mr. Stubbs did not answer; but his eyes looked very lack-lustre and sleepy, and the ebony man ceased to grin.

"Now," said Captain H— sharply, "you can't tell me your name, Mr. Stubbs."

Stubbs opened his jaws, and made great demonstrations of eloquence, but not a sound or whisper came forth; he glared in impotent fury at H—.

"Try," said the latter encouragingly; "you'll only stammer."

"Jo—Jo—Jo—Jonas!" gasped the unhappy Stubbs, and then stopped short.

"Now you will perceive," continued Captain H—, handling Stubbs as if he were a child, "he is a negative, this black gentleman is a positive." He placed them back to back, and so they remained; Stubbs advanced, black man ditto; he stepped the other way, black man still firmly pinned on to his back; Stubbs shook himself, black man grinned from one ear to the other, leering frightfully over Stubbs' shoulder; Stubbs walked in circle, still the same; whenever he turned his head he only saw the whites of the black man's eyes. Captain H— touched some part of his head, and Mr. Jonas exhibited the most extreme terror. No wonder; his dark friend hissed, chattered, and grinned, like some hideous ape, twisting his head into the unhappy man's face. Stubbs shrieked, implored, and at length burst into a paroxysm of noisy grief, which produced the remark from aloft, "Now he do cut up dirty." Sinbad's old man of the mountain was nothing to it: the more he ran about the greater was the agility displayed by his tormentor in holding on to him. To behold any man in such a plight was fun, but to see a gentleman of such prickly respectability and defiant demeanour so victimised was charming; and the exhibition was keenly appreciated. At length they were permitted to separate. Jonas Stubbs gave one look of profound disgust at the spectators, one glance of inextinguishable hate at Captain H—, and amidst roars of laughter, he rushed down the steps and out of the hall. People do affirm, that the match of Mr. Stubbs with that most genteel young lady was completely broken off by the unfortunate "demonstration" of that evening.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

It is pleasant to find a severe politician and stern realist like Mr. Roebuck inaugurating a new School of Art at Sheffield, and instructive to mark the feelings and views with which he does so. He seeks to confirm the opinion of those who hold the need of art to be universal, and who rank the effort to train and gratify it amongst the most promising movements of the time. Little as Mr. Roebuck himself may imagine it, little as many of our readers may be disposed to admit the statement, in opening this new school for the town he represents, he put his hand to a far greater national work than in supporting the Financial Reform Association at Liverpool. And why?

Because these meetings represent respectively the two great classes of agency into which most of the social and political activity of the day is divided—the mechanical and vital; the one seeking to mend the national machinery, the other to purify and enrich the national life. Of these, the influence of the former is obviously limited and temporary, in comparison to the permanent and growing power of the latter, which acts directly on the very springs of political strength by invigorating the life-blood of the people. The one is at best but a question touching the better keeping of accounts in the national household; the other relates to the training and highest welfare of the children. An association like the Financial Reform, for instance, relates at most to a little food or raiment more or less; but agencies like the schools of art affect the national life, which is more than food, and the body-politic, which is more than raiment. Not, of course, that the bread-and-cheese question is an unimportant one; on the contrary, it is in a sense the most important, as lying at the foundation of every thing else. But just because it is thus a first necessity, it secures the first attention, and is in no danger of being neglected; while the higher wants of the people,—their need of knowledge, intelligence, rational enjoyment, and self-control,—because less obtrusive, are more likely to be lost sight of, and remain without any adequate provision. In a country like our own, however, the gratification of these necessities becomes an indispensable condition of growing national prosperity; material success being, in fact, a curse instead of a blessing, apart from the manly sense, freedom, and intelligence which turn it to noble uses.

It is cheering, therefore, to observe that these higher national wants, though by no means yet sufficiently considered, are daily rising into fuller recognition. The abstract question of national education, for instance, may be considered quite settled. Thirty years ago, peer and prelate, squire and parson, would have raised their hands in unaffected horror at the thought of teaching the rustics around,—the common people, the lower orders, as they are called,—to read and write. Now all that has passed away never to return. Men of all sects and parties equally admit the right of the people to be educated; and all agree that such education is indispensable to the national welfare. But while it is thus universally admitted that all, even the humblest, have faculties of knowledge that ought to be trained, the equally important fact, that they have imaginations to be exercised, and capacities of enjoyment to be gratified, is still too much neglected. To this neglect, which runs through our whole system of education and social life, may be traced many, if not most of the social evils that press so heavily upon us. Its working may be clearly seen in the brutal violence of the lowest, and the shameful swindling and corruption so prevalent amongst a better class, cropping out, on the one hand, in a Marley and a Sykes, and in a Robson and Redpath, on the other. No doubt it may be true of a few conspicuous criminals that, like poets, they are born, not made; but the great majority are produced by the defects of the system in which they have been reared. Of many a one now wasting in the convict-prisons of the country powers that, with a wise and liberal training, might have turned to good account, what Michael Zetra says of Lord Dunley holds true:

"He was restrained, they say,
Austere when a boy. I've known such cases,
Where, the curb suddenly withdrawn, the youth,
Defrauded hitherto of due delights,
And losing self-respect from daring once
To taste some lighter joy,—unwisely classed,
In teaching him, with things forbidden justly,—
And knowing no gradation, has at once,
With a ferocity of liquorish relish
Unknown to those of looser bringing-up,
Plunged into pleasure."

There is too much of this austere bringing-up in our whole national system; the children of the poor, as Charles Lamb truly said, being in many cases not brought up at all, but "dragged up." The systematic suppression or neglect

of some of the noblest powers and strongest sympathies of our nature is by no means, however, confined to the treatment of the poor. It is too much forgotten, in dealing with children and young people generally, that they must have their seasons of relaxation, their leisure-moments, their chosen recreations and delights; and that, if no provision is made for these, one of the most important parts of education is neglected. The education of the playground, it has been suggested, is as important as that of the school-room; but it would not be too much to say, that it is often far more influential in determining future character. For the education of leisure-hours is chiefly of the kind to which we have referred—of the imagination and the affections; while school-work for the most part addresses only our intellect; and if you make no attempt to train and occupy the former, it matters comparatively little what is done with the latter; effective influence will soon be lost altogether. What Fletcher of Saltoun said of the most popular kind of amusement—"Let me write the people's ballads, and I care not who makes their laws"—is universally true, applies equally to the nation and the individual. The character of a people is far more determined by their chosen pleasures, their voluntary habits and recreations, than by the laws under which they live. And with regard to ourselves, it is not so much what we know,—not even what we do in our ordinary occupations,—as what we voluntarily choose and love, that makes us what we really are. So, where children are trained to delight in the works of nature and the creations of art, their imagination is opened and their affections directed to what is pure and healthful, and their leisure-moments filled with occupations, not only innocent, but refined and elevating. By thus implanting a taste for higher and purer pleasures, a most effective barrier is erected against low excitement and vulgar dissipation; for refinement of mind, if not absolutely virtue, is certainly a strong protection against some of the most common and seductive forms of vice.

This view of the matter, though not yet fully adopted in theory, is, we rejoice to assure our readers, partially recognised in practice. The schools of art connected with the Central Department of Science and Art at Marlborough House, which are rapidly springing up in most large towns through the country, aim at meeting, at least in part, this great national want. They are, in the widest and truest sense, popular, designed and adapted for the people, bringing sound art-education to their very doors, and placing it within the reach of all. These schools are, moreover, eminently successful; and the value of the work they are doing amongst the rising youth of our populous towns can scarcely be overrated. We shall have an opportunity of showing this more at length hereafter. Meanwhile we commend to the attention of our readers the following instructive facts. There are at present nearly seventy of these art-schools in various parts of the country, having an aggregate of twelve thousand pupils; and, through the lessons given by the masters in the national and other public schools, extending art-education to twenty thousand more. So that at the present moment upwards of thirty thousand pupils, chiefly of the humblest class, are in these schools receiving a thorough art-education.

PRUSSIAN POLICE.

By DR. SCOFFERN.

LEAST any untravelling Briton should innocently surmise, that policeman 146 of the metropolitan division A is the type or eidolon of the police-force all over the world,—modified perhaps by dress and general get-up, even to the minutiae of a truncheon somewhat longer, shorter, heavier, or lighter, than the regulation-staff of one of Sir Richard Mayne's præ-

torian guards,—I beg to undeceive him. Reader, feign to yourself whatever living symbolisation of departed power and blighted energy you please—an adder without her poison-fangs, a lion without his claws, a soldier without his arms; a trunkless elephant, a toothless dog,—picture to yourself each and every one of these creatures in the two respective conditions of energy present, and energy departed, then you shall have, on the faith and honour of one who has seen both, the true leading or characteristic idea of a British and a foreign policeman.

Let us look deliberately at policeman 146 A as he sallies forth with his companions to take up his beat. Does A 146 give you the idea of being a warrior? is he decked out in clothes trimmed with gold or silver braid? has he a sword, a pistol, a carbine, Minié, or bayonet? Except he be engaged on peculiar service he has none of these; and even in neighbourhoods where the use of a sword has been conceded to him, the English policeman treats it as a thing which he would rather be without, an appendage which he is somewhat ashamed of. A 146 is essentially a civilian; he is taught to consider that his major duty shall consist in keeping the peace; that his sphere of life affords him no scope for the display of brilliant valour; and so little is the peppery excitability of the warrior instilled into policeman 146, that if by chance he ventures to use the only weapon of offence he is permitted to carry,—the staff,—he had better be prepared to explain the reason why, at the next police-court sitting, or it may go hard with him. Thrice happy may policeman 146 consider himself if his broken arm, or mutilated hand, justify to society the use of the redoubtable truncheon. Even to the gait and movement of his limbs, policeman 146 A is a civilian. Like a soldier, the policeman undergoes a drill; but it is rather a drill of mental than corporeal faculties. He is taught not goose-steps, and marches quick and slow; nor do his superiors care much whether his toes turn in or out. A straight-backed, up-nosed policeman is no phoenix in the eyes of inspector X. Whatever repute 146 is hereafter destined to achieve must be achieved on other more intellectual grounds than these. Accordingly, you will not marvel that A 146 is never addicted to the outward quips and cranks of military dandyism. He is, however, a sop in his way; but his foppery takes a civilian turn, belonging to the class to which appertains the foppery of those who affect a slouching gait and slovenly make-up, to show how devoid they are of—what? that which these very outward demonstrations prove them to have—*affectation*. If I may be permitted to set forth one striking affectation which 146 possesses, it is the affectation of stooping; just, I suppose, to show his thorough civilian bent, his freedom from all military compulsion in such minor matters.

Let no ill-natured person (good-natured ones need no admonition),—let no ill-natured person, I say, accuse me of laughing at our police-force, turning them to ridicule, or impugning the system which tends to make them civilians rather than soldiers. I desire no such thing, but only aim at sketching an extreme illustration of the English system of police, that we may the better perceive by comparison the distinctive features of a Continental and a British policeman. Continental—but I must not be vague. I have seen a little of the police-force of many foreign states: but I have lived in Prussia; his gracious majesty Frederick William having conceded to me the privilege of being a Prussian householder; so I know something about the ways of Prussian police. Just as 146 A is every inch of him a civilian, so is his Prussian representative—by name, and by name alone—every inch of him a soldier. To such extremes, indeed, is the military type affected, that but for the circumstance of his not being armed with the redoubtable "Zündnadelgelwehr," or needle-gun, I should not perhaps even now, with all my experience, be aware that the man with spiked helmet and glittering peak, sword and belt, trousers striped down the leg, frogged tunic, and prim turn-out, was not an individual member of some particular regiment of Prus-

sian infantry. You are desirous of becoming intimate with the duties of the Prussian Polizei? Very well, then; follow me into the dominions of his gracious majesty Frederick William, and you shall soon be made acquainted. You first sit down at an hotel of course; and there, if you are only a bird of passage, a mere travelling Briton—here to-day, tomorrow away—you are likely to come very little in contact with the Prussian Polizei. They know more about you, however, than you think. Personally, the police *bureau* and yourself are strangers to each other; but the chief of local police knows a good deal more about you, your antecedents, and your movements, than you are disposed to imagine. Your passport, which Meinherr of the Gasthof has politely taken charge of, has gone to the police-office; your complexion has been duly noted; your linear dimensions translated from English feet and inches into German measure; your personal beauties and defects, along with your age, or the statement of it, which in the case of a lady passes for the same,—all mercilessly recorded in the Polizei register.

Supposing you to be only a casual traveller, all this will be done so quietly, so unostentatiously, that were it not for the existence on your passport of certain impressions in black ink and blue, and certain grains of sand still clinging to a miserable attempt at a likeness of the king of birds, you would never be made aware that your passport had been out of Meinherr the landlord's possession. If, however, you desire to become a housekeeper, then you and the Polizei will become much better acquainted. You must apply at the police-office personally to answer any questions which may be propounded, amongst which will certainly be the object of your desiring to live in Prussia. All this is very foreign to your inborn British notions of free agency, and so forth. The police-officers of his Prussian majesty give you the impression of being troublesome enough; but, I must say the truth; they execute their numerous and conflicting duties like gentlemen; and if you are an honest man, not given to talk politics, or smuggle *Punch* (our literary friend, Mr. Punch, be it understood), I don't think you will have much trouble. I write now of Rhenish Prussia, the paradise of the king's dominions; and this being premised, let me do Rheinlanders the justice to observe, that whoever smuggles any other punch into that region of good eating and drinking, will not only do a very unnecessary thing, but a very foolish one. The Rheinlanders have their own punch; and such punch! The best English concoction under that name is no more to be compared to it than gin to Maraschino.

Well, you at length obtain your license or permit. It may be awarded for any time that seems fit, all things considered, to the police-authorities. Perhaps for weeks, or a quarter, or half-a-year, seldom longer; but when expired, you will have no difficulty in renewing it. Indeed, I have known some easy-going harmless British individuals who treat their renewal of license very much as I treat the renewal of my British Museum reading-ticket—that is to say, I *never* renew it; but in that case one had better mind his Ps and Qs, take off his hat unfailingly to the most unimportant member of the genus *Polizei*, and in other respects be pre-eminently civil; else he will discover to his cost that certain cumulative fines attach to each omission of non-renewal. So long as you remain in any one Prussian town your passport is hoarded at the police-office, and you cannot reclaim it without giving due notice. It will be ordinarily impossible, therefore, for you to leave a Prussian town without cognisance of the police; and, lest the police should give you your passport inadvertently before all your local debts are paid, a creditor has the power of attaching the passport. This desire on the part of the police authorities to get hold of your passport is not peculiar to Prussia, but prevails more or less in every country which grants passports. Nevertheless, I cannot say that the police authorities of either France or Prussia are very stringent in the matter. I once knew an Englishman who determined on taking up his residence in Prussia, and who did as every

sensible person who has a passport will try to do—keep it. Not having delivered up the passport to the police, though for some days he had taken possession of his domicile, a functionary of the *Polizei* called upon him for the document. All that the Englishman could say in German was "Ja" and "Nein," though he could understand a great deal more. The policeman touched his hat: "Your passport, sir."

My little friend pulled off his hat, shook his head violently, and ejaculated, "Nein."

"Do you understand?"

"Nein."

"Your passport?"

"Nein."

"I must have it."

"Nein."

"Where is it?"

"Nein."

"Ach der tolle Engländer!"

"Nein."

The policeman was at first inclined to be annoyed; but he finished by laughing outright, and walking away. My friend gained his point; he never lost sight of his passport.

Well, your residence-licence is granted; you take possession, and will want servants. You need not wait long. Remark that each girl who comes to offer her services brings with her a book and a basket. I will explain the use of that basket by and by; meantime remember, please, it is called the excuse-basket—the *excuse Körbchen*. She opens her book. What is written there? You shall see. It is a register-book, endorsed by the police, of her birth, parentage, and character; the places she has occupied hitherto, the duration of residence in each place, when she left the last place, and why she left. A servant's character so well accredited as this is something like a character. You may trust to it implicitly. And now about the *excuse Körbchen*. Its origin is referable, like many other ingenuities, to the suggestiveness of woman's brain. To speak plainly, it is a machine for deluding his majesty of Prussia's police, and turning them to scorn. A German servant-girl must sometimes go out of the house of course; she must go to market, and go a-shopping; for the shopkeepers of Rhenish Prussia, of which I write, don't at all understand our London tradesmen's notions of sending things home. In either case she will require a basket; and so it comes to pass that a basket, the inevitable basket, is regarded as indicative of her being out on duty, just as the policeman's sword proclaims that fact for him. Well then, just as a policeman will expect to roam about without let or hindrance so long as the shining Elberfeld blade dangles from his belt,—every body making room for him, nobody daring to question whither he goes, or to what end,—so the servant-girls expect an equal amount of free locomotion when from the arm of each dangles the *excuse Körbchen*. Strangely enough the policemen don't see through the trick. Ah, that wicked *excuse Körbchen*!

As you intend to reside some considerable time in the Prussian dominions, you will perhaps set about papering your rooms. Take care in doing this you do not give the police cause to pounce down upon you. What on earth of vice can there be, you will perhaps say, in the papering of a room? Learn, then, for your instruction, that the Prussian police are, amongst other things, sanitary officers. Each nest or squad of them—excuse the German names—has its own *Polizei physicus*, or police sanitary physician; whose duty it is to see that nothing be done to the prejudice of the laws of public health. An Englishman whom I knew took it into his head to hang his sitting-room with paper of a certain green tint. To be in a chamber whilst the paper-hanging operation is going on is not agreeable. The Englishman absented himself until the time when he thought the hanging would be complete. He then came back; and was surprised to find the chamber, not merely hung, but unhung. The police had sent people there to strip the paper off. The green pigment, which the English-

man had so much admired, was a preparation of arsenic—*Scheele's Green*; and for this reason it was considered to imperil the public health. A rather far-fetched notion was this;* but I know the event to be true.

Are you in good health and of sound constitution? If not, don't think of falling in love with a German lady. Though she, dear creature, may have drawn up to her own mind a creditor and debtor account of the evil and the good, and decided on incurring the hazard; the *Polizei physicus* may not prove exactly of that train of mind. He may be inexorable; if both the lady and yourself are poor I have no doubt he would be. Nor are Pandora's legacies the only sufficient cause for putting Hymen in fetters, according to the sentiments of a Prussian *Polizei physicus*. He goes into the delicate question of appropriate age. Should your innamorata be older than seems to him fit, or the bridegroom elect too young, or both too young or too old, he again interposes his cruel authority. To do him justice, the *Polizei physicus* does not consider it a part of his duty to learn the state of your or the lady's banking accounts, your chance of legacies, revenues, post-obits, your funded or landed wealth, or any other form the good things of Plutus may for you or the lady assume; but other functionaries do this for you—bad luck to them: so all things considered, it is no joke to get married in Prussia. You fret and chafe and threaten self-destruction. Well, of that you are the best judge; but take my advice—if you would avoid being made a scarecrow of, a warning and example to all future suicidal consumptive lovers, be consumptive to the end. Don't hang yourself, or blow out your brains; as for poison, you can't get it:—tar yourself, and set fire to it; jump into the nearest glass-furnace; or, Mokanna-like, plunge into a carboy of oil-of-vitriol. Lastly, if all these resources are wanting, hire a boat, tie a stone to your feet, row out into the middle of a river, scuttle your boat, and go down. That abominable *Polizei physicus*, he has positive orders to dissect every suicide; to record the exact cause of death, and to send any malformed or abnormal organ to the nearest anatomical museum. This he would infallibly do; and soon in your case, travellers would see, preserved in *fusel schnaps* a shapeless mass, which a legible German label would set forth to be

"DAS GEBROCKENE HERZ EINES ENGLÄNDERS." *

But why do I linger thus over disagreeable things? You are neither poor, nor consumptive, nor decrepit, nor a boy. You may renew your license of domicile at pleasure, give parties, drink Rheinwein and Maitrank and Bavarian beer. You are also free to fall in love; but, mind me, do not, as you hope to crown your aspirations with hymeneal bliss—don't commit the solecism in German propriety of asking the lady's consent first. I doubt whether the correctest antecedents, or the fullest banker's account, would ever set that matter right. You would be looked upon as an improper person at once, and for ever. You will think love-making on these terms insipid: so do I; but you are in Germany, not at Rome; and when in Germany—in short, you know the rest. Notwithstanding the strictness wherewith his Prussian majesty and his delegates, the police, take cognisance of preliminaries matrimonial, yet, to be just, they are not so troublesome as their Scandinavian neighbours, a little farther north. It has become the practice of late for Englishmen desirous of marrying deceased wife's sisters to flee to Denmark, and there tie the hymeneal bond. But the sanitary police-law of Denmark will have it that a certificate of vaccination shall be the inevitable prelude to the marriage ceremony; and if the expatriated lovers do not bring each a certificate of that kind they must be vaccinated on the spot!

* Whilst the above was still in type uncorrected, a fact has transpired proving that the Prussian sanitary officers were right, and that my surmise of the idea being far-fetched was wrong. A medical gentleman of Birmingham writes to the editor of a journal to state that he had suffered from sitting in a room papered with arsenical green hangings. The heat of a gas flame evaporated the pigment, and filled the room with deleterious fumes.

From a bridegroom elect to a chimney-sweep the transition is abrupt. I nevertheless shall make it, in order to mention the next phase which presents itself to my mind of Prussian police-interference. What would an Englishman, brought up in the full conviction that his house was his castle,—what *would* he say, if a chimney-sweep some fine morning were to invade that castle, bag and brush and scraper in hand, without being sent for, and the furniture placed aside out of his sooty presence? What if the kitchen-chimney were *the one* in question, with preparations for dinner going on? There is a proverb which sets forth the issue of fighting and conquering a chimney-sweeper. Perhaps no domestic would summon courage to lay hold of "sootie," and thrust him out; but assuredly he would be made to go out by setting a dog at him, poking him with a spit, or by, in short, one kind or other of physical force; and what is more, sootie would know better than to complain. I should like to see the man who would dare, knowing the consequences, to use physical force for chasing away out of his house a Prussian chimney-sweep. It would not be a sweep—a mere sweep—the ejector had to deal with, but the offended Nemesis who waits on the Prussian police. Chimney-sweeping in Prussia at regular intervals is a matter which belongs to the duties of the police; not that the tight-pantalooned, small-waisted, helmeted, sword-begirted Polizei are in their own persons the gerents of the business which *Oliver Twist* doated upon. These gentry are far too neat and trim, too fond of perfumed handkerchiefs and yellow kid-gloves to cover themselves with soot. Nevertheless they are chimney-sweeps, in the same sense that sheriffs are hangmen. They don't do the thing themselves; but they are responsible for getting it done. A Prussian chimney-sweeper, then, is *somebody*; he might without much violation of truth consider himself to be a sort of state-messenger employed on peculiar service.

Apropos of the Prussian Polizei chimney-sweeper, I have now an anecdote to tell. A little English friend of mine having taken up his residence as a licensed householder in a Prussian town, did as most English householders are in the habit of doing when their means permit,—gave dinner-parties. It was on the occasion of a dinner-party to be given by him of more than ordinary style, that the intention of the whole was marred by the police chimney-sweeper. My little English friend was a puffy, stumpy, florid man, fonder of Rheinwein than of pump-water, and solicitous in the matter of good eating. He was what German servant-girls call an "Erbsen zähler," which freely translated into English, may stand for "Molly-caudle." He not only liked good-eating, but good-smelling meats; for which reason he occasionally committed the solecism of going into the kitchen, to inhale the savoury odours which arise from a German cooking-stove.

Thus engaged on the day of the feast was my little friend; and his guests, less ceremonious and restrained by convention than they would have been in England, went to the kitchen too. It was a cold day, and the dinner smelt nice. All were hungry. The ladies even—always less epicurean than men—did not hesitate to say they should enjoy it. But suddenly and mysteriously appeared an implike thing in black, which the native Germans present recognised to be the chimney-sweeper, but which the English men and women present might take for whom they pleased.

Amidst a peal of laughter from a saucy German girl, who knew what was coming, the black creature announced that he was the chimney-sweeper; that my friend's chimney was down on the register for sweeping, and swept it must be. So away went *Suppe* and *Braten* from the stove; and off went the pipes. His excellency Meinherr Polizei Kaminfeger set to work in earnest. From his back he took a curious machine, having an iron-ball at the end of it and circular brushes strung on a rope at intervals. Climbing to the chimney-top, he lowered the iron-ball into the chimney; and the ball falling pulled after it the brushes, and the brushes pulled down the soot. The process was

agreeable to look at, but somewhat trying to hope-deluded stomachs.

And these, O sword-belted Polizei, are some of your goings-on in strict-schooled Prussia. Do I hate you? No; you never did me wrong. I have ever found you polite. Don't, then, make me alter my good opinion of you by getting the better of woman's wit in the matter of the *excuse Körbchen*. But why should I be thus solicitous? As if a woman were not a match for detective Prussian policemen.

THE STORY OF NICHOLAS FLAMEL, THE ALCHEMIST.

By R. ALFRED VAUGHAN,

AUTHOR OF "HOURS WITH THE MYSTICS."

ONE fine summer evening, in the year 1357, Nicholas Flamel was sitting in his stall, which occupied the corner of one of the dirtiest streets in dirty Paris. His little house stood in the shadow of the church of St. Jacques-de-la-Boucherie, whose towers overlooked a network of narrow alleys, inhabited by butchers, tanners, and money-lenders. Very unsavoury was this parish of St. Jacques; but nevertheless very rich. For the trades-corporations who ruled the quarter were thrifty and formidable folk. At a moment's notice, they could turn out a host of burly fellows to maintain their privileges; and when princes wanted money, to whom should they go but to the Lombards of St. Jacques? The stately church owed many a decoration without, and many a monument within, to the piety and the wealth of the dyers, the armourers, and the butchers, who had passed their lives under the sound of its bells, and coveted, when dead, a place within its precincts. Flamel, the scrivener, has but to raise his eyes from the Latin deed which he is transcribing, to look across the street, and they rest on the Marivaux gateway of the church. His gaze is directed thither at this moment. His hand, with its busy pen, lies idle on the bench, as he contemplates in a day-dream the mouldings of the arch, and thinks, "If ever I am rich, there shall be carvings of mine, too, on those walls. Yes, mine; poor Notary Flamel's. And why not, some day? Ah, if I could only make them out—"

At this point he was startled in the midst of a deep sigh by perceiving that his wife, Pernelle, had approached him unobserved, and was watching his face with a sorrowful sympathising expression. She did not avert her eyes as he looked up at her: it was he who looked down, and began to examine his pen, as if about to resume his task. Pernelle laid her hand gently on his, and sat down beside him.

"Put it away," said she. "Let me speak to you."

"Well?"

"Nicholas, what is it? To-morrow we shall have been three years married; and you have never given me an unkind word or look. But for the last two months you have not been the same man. Your heart is no longer in your work. You don't sing. You go about sometimes as if you were in a dream. What do you do so often now shut up in the room upstairs? There is some trouble or some scheme that occupies you. What is it that a wife should not know? Why not tell me? Have I ever betrayed a secret of yours? I tell you plainly, I have been miserable since this change in you."

Nicholas was silent. He seemed to be considering what she said: so Pernelle, like a wise woman, added not another word, and waited patiently. After a silence, which seemed very long, Nicholas suddenly rose, like a man who has made up his mind. He took both her hands in his, looked her gravely and affectionately in the face, and said:

"Pernelle, you have been prudent; now be doubly so. You shall see that I can trust you. Come up-stairs."

Climbing up a steep dark staircase, they entered their little dormitory—a miserable hole we should call it,—in fact, a decent room for those days. Nicholas unlocked a safe in which he used to keep the law-papers sent him to copy, and

SPENDING A HA'PENNY. BY G. SMITH. (SEE PAGE 376.)

drew therefrom a huge book of great age, bound in brass, which he laid carefully on the little table.

"There," said he. "Now you can look at the cause of your trouble, little tender-heart. About two months since, I bought this book of an old pedlar for a couple of florins. Look at these mysterious characters engraved on the cover. And see here, the inside."

Pernelle uttered a little cry of astonishment. Never had she seen such strange and beautiful figures, or such brilliant colours; though Nicholas had frequently in the house the most costly illuminated manuscripts. On the page at which he had opened the volume was represented a young man, with wings at his ankles, holding in his hand a rod, about which were entwined two serpents; and an old man, with huge extended wings, was flying towards him with a scythe, as if to cut off his feet.

Nicholas turned over the leaf.

On the other side was painted a fair flower on the top of a mountain, bent and fluttering under the blast of the north wind. The stalk of the flower was blue, its petals white and red, and its leaves shining with fine gold. Round about, in the sides of the mountain, were caverns in which dragons lay; and gryphons and gryphons'-nests were seen among the black matted boughs of pine-trees.

"These," observed Nicholas, "are the two sides of the fourth leaf. Now look at the next."

On the right-hand page Pernelle saw a rose-tree growing against a hollow oak, from the foot of which ran headlong a silver-clear stream of water, which many people were trying in vain to catch in vessels. Then, on the other side, was a fierce king, with a falchion, causing his soldiers to slay a multitude of infants, while their mothers were entreating and weeping, and struggling with the murderers. In the next compartment soldiers were collecting the blood

of the infants in a great vessel, wherein *Sol* and *Luna* came to bathe themselves.

"And all this writing," asked Pernelle, after admiring these and other pictures dispersed throughout the book,— "what language is it?"

"Latin," answered Nicholas, turning back to the first page, on which were large capital letters exquisitely coloured. "Those words mean 'Abraham the Jew, Prince, Priest, Levite, Astrologer, and Philosopher to the Nation of the Jews, dispersed by the wrath of God, wisheth health.' I suspect the book has been stolen from some Rabbi. Then the writer goes on to warn them against idolatry; exhorts them to wait patiently for the Messiah; and at last begins to teach them the art of transmuting metals, that they may be able to pay their great tributes to the Roman emperors, and yet be rich as ever."

"And is it here?" cried Pernelle joyfully. "The great secret? And you will make gold?"

"Ah no, not yet—perhaps never," said Nicholas; "though the book brings me almost into the heart of the mystery. Here you see are the processes detailed one after the other. Those little figures in the margin represent the shape of the proper vessels and the colours that will appear in the course of the work; but the *materia prima*, the elementary substance (and without that the rest is waste paper), is not revealed in words. It is indicated, the text says, in these pictures on the fourth and fifth leaves. They are secret symbols. Unless I can meet with some learned Jew, or find a scholar who knows the cabala well, I shall never find out their meaning. I think that young man with the winged feet means Mercury. Perhaps the old man with his scythe is some metal that is to fix it. But these 'perhappes' and 'I thinks' are good for nothing, you know. I must be sure. And as to the other symbols, I cannot so much as conjec-

ture. But they are before my eyes day and night. I dream of them. I see the colours in the clouds. Every garden and every rose-tree sets me to work afresh, trying all sorts of meanings. I keep inserting bits of the pictures in my ornamented capitals. You know how often I have visited the Church of the Holy Innocents lately. The sun and moon seem to me now only alchemic signs, and the sky is just the fifth leaf of this blessed tormenting book."

"Sol and Luna bathing in the blood of the innocents," said Pernelle, very slowly, with a perplexed air.

"I have read," said Nicholas, "that, in the language of alchemy, blood signifies the mineral spirit which is in the metals, chiefly Sol, Luna, and Mercury; but how to get at this—or, if I could separate it,—how this process is connected with the others, so as to become the serpents on the seventh leaf; and how then, by drying or digesting these, to produce the fine ruddy powder which is the stone,—all this is utterly beyond me."

"Well, keep a good heart, dear Nicholas," said cheerful Pernelle. "Doubtless Providence hath sent us the book, and the key may follow some day. Rich or poor, we shall be happy while we love and trust each other fully."

"I too feel all the lighter now that I have let you into my secret. I can at least talk over my hopes and perplexities with you."

And talk they did very often together over their mysterious treasure. Nicholas kept to his account-books and his scribbling, lest he should drop the substance in pursuit of a shadow. But often, far into the night, he was busy with experiments in a secret laboratory, or poring, for the thousandth time, over the figures on the papyrus-leaves of his book, or the mystic characters engraved on its brazen cover. It was all in vain.

At last a bright thought struck Pernelle. If Nicholas were to paint, as exactly as possible, on the walls of their chamber the symbols of those fourth and fifth leaves, and invite some of the learned men of Paris to come and try to interpret them? This plan was speedily put in execution. There came doctors of divinity, jurists and physicians,—for what scholar in those days had not dabbled at least in the hermetic art? Most of them, finding they could make nothing of the signs, ridiculed the notary and his pictures. Others looked wise and talked learnedly, but had no information to give. Pharaoh's magicians were not more nonplussed than these sages by the shapes of Flamel's dream.

One Anselm came repeatedly—expressed much interest—was eager to see the book itself. This request Flamel always refused, but he told him all he could himself explain of its method. On these data Anselm proceeded to give sundry interpretations and counsels for procedure in the great work. It would occupy six years, he said, to go through the whole process. Flamel believed him; and while pursuing his daily vocation, wrought at intervals for three times six years to no purpose. He and his Pernelle were growing staid middle-aged folk; but within those brass-covers lay the romance of their life, and they would not let it go.

At length it occurred to Nicholas that some one of the Jews in Spain, whose reputation as adepts in the cabalistic mysteries stood so high, might be able to afford him the desired information. The thought once entertained, he knew no peace till it was acted on. He made a copy of the figures to take with him; vowed a pilgrimage to Santiago; took pilgrim staff and scrip; and with a "God speed" from Pernelle, is on his way to Spain. There he duly accomplished his vow; and was made acquainted, at Leon, with a certain physician, named Canches, a converted Jew. The Spaniard testified the utmost delight at the symbols which Flamel showed him; interpreted many of them, and instructed him in the secret meanings and the potent mysteries which (according to the cabalists) lay concealed in the Hebrew letters and the vowel-points. He accompanied Flamel on his way back to France, that he might see the wonderful book; of the existence whereof he said he was aware, but (with the learned men of his nation generally) had supposed it lost.

But the voyage brought on an illness of which the unfortunate Canches died at Orleans. Flamel, reduced in purse but rich in knowledge, buried his friend as well as he could, and reached Paris in safety alone. Two paintings on the door of St. Jacques-de-la-Boucherie, just opposite his house, representing himself kneeling on one side and his wife on the other, long remained to attest the gratitude of the pious couple.

And now Flamel has his long-wished-for *materia prima*; but not, even now, the preliminary preparation therefor. To arrive at this demands yet three years more of study and experiment. Then he has but to follow the directions of his book, and the work is done. He has left it on record that in the year of our Lord 1382, January 17th, about noon, being Monday, in his own house, Pernelle only being present, he, for the first time, made projection. The transmutation was effected on mercury; a pound and a half whereof, or thereabouts, he turned into pure silver, better than that of the mine, as was proved on the assaying of the same, both by himself and others.

On the 25th of April in the same year, at five in the afternoon, he effected projection of the red stone, this time producing gold of surpassing quality. And the way in which the final process of "the magistry" was accomplished was as follows.

There were three furnaces, each with its crucible, wherein the "green lion," and the "virgin's milk," and the "sophical mercury" had been duly mingled, with their kindred compounds, for many successive days, under the *regimina* of Mercury, Saturn, Luna, Venus, and Sol. There was, moreover, a circular glass-vessel of great thickness, filled from time to time out of the alembic. And to see "the operations of nature" within these vessels was indeed a wondrous and lovely sight. How the drops stood upon the brow of Nicholas as he regulated his fires, and compared the forms and colours that showed themselves in the liquids with the marginal diagrams in his book! How Pernelle stood by, helping, and muttering prayers and vows, and drawing now and then a great sigh of relief, as each regimen was successfully passed through, and the dangers escaped which might have marred all in a moment!

"Now," cried Nicholas, reading from the book, "after the citrine vapours, thou shalt observe a tincture of a violet colour; and after reiterate solution and coagulation, a gold colour changing into green; and then,—through certain cloudy hues, coming and passing, right pleasant to behold,—into a red which for its transcendent redness shall show blackish like unto congealed blood."

"Glory be to Saint Jacques!" interrupted Pernelle, clasping her hands and looking up, "all these we have seen in right order."

Nicholas went on. "Then wilt thou behold in the glass the floating islands and the tree of silver."

"See, see," cried Pernelle, "there they are!"

And sure enough, as they watched the glass, they saw, circulating in the hyacinthine liquid, first one and then another bright flake, like a fragment of silver tissue; and these shot out tiny sprays and argent buds, and gathered about them bubbles of a green colour, like beads of emerald, which presently detached themselves, and floating to the surface, spread out there, changing into browns and reds, so that the liquid appeared covered with a fleet of autumn leaves.

At the end of two hours, the islands sank to the bottom; and out of the sparkling sediment there began to grow a shoot of silver, putting forth threadlike branches, which again divided themselves into finer filaments, till the lustrous arborescence filled the vessel with its network of glistening needle-points. Then, where the branching was thickest, there seemed to come a dimness, and these denser hazy spots began to flush faintly, and became like balls of crimson, and finally unfolded into fairy-roses. At the third hour the silver was dissolved; and the liquid, having absorbed it, changed from hyacinth to the yellow of sulphur.

Afterwards, out of each rose there came a spark of almost intolerable brightness, like an atom of the sun. The rose-leaves fell apart, and the vessel was filled with the floating leaves and the dazzling particles, rising and falling, passing and repassing each other, as the currents in the working fluid carried them.

"Now," read Nicholas, "take of the blood of the green lion (which is the red wine of Lully), and adding in proportion to the argent vive taken at thy first imbibition, and the hardened centre of the residuum will be thy red stone."

"You, Pernelle, must go to bed now," said Nicholas, taking down a vial containing the precious red liquor. "How you tremble!" and his own hand shook so that he could scarcely hold the bottle.

"And can you think I could close an eye at such a time?" answered she, almost reproachfully.

So they waited and watched with feverish eager eyes the final process. A strange conflict seemed to be going on within the vessel, as the ruddy liquor began to suffuse the primrose-coloured. A tiny glacier of crystals began to form itself on the sides of the glass. In the spiny recesses of this frost-work appeared minute forms, lizard-like,—salamanders, it seemed,—that crept about, and were most numerous where the red colour was deepest. Were they the vivified molecules of the mystic lion's blood? Soon they began to sport and leap among their crags of crystal, and to glide in and out among the bays and reefs and caverns of the rockwork. But what is going on at the surface? At the top of the vessel there is a bubbling and a knocking against the sealed lid. Then a growing thickness, like a honeycomb, over-spreads it, from which there shoot downward, like roots, a multitude of waving arms, as of white cord; and at the end of each arm grow five white ends, or points,—as it were the hand of a skeleton,—exceeding small. Presently all the upper half of the vessel is alive with the undulating and waving to and fro of these lithe pendent arms. As the descending hands sweep the liquid lower and lower, there is alarm among the salamanders. Some dart at once into the crannies of the crystals, others swim wildly about, looking for a hiding-place; but most, shooting upwards, are seen trying to bite in under the diving arms. It is a deadly conflict. Whenever one of the skeleton-hands has grasped a salamander,—and they feel about and pursue them through every winding as though in every finger there were an eye,—that moment the salamander drops lifeless to the bottom. Whenever a salamander has bitten through the white filament on which the hand depends, the fingers are withered, or the severed extremity of the arm floats about powerless. Is this the final struggle between the alchemic potencies of pallid Luna and fiery Mars? Long does the fight remain undecided. At one time not a salamander seems left; but the next moment numbers dart from their hiding-places, and, eluding the deadly hands, have fastened their teeth in the cordage of the arms. The salamanders are gaining the day. Under large portions of the surface, as he peeps beneath the lid, Nicholas sees that the arms have all been bitten off by the nimble creatures, and the stumps stand stiff and short like stubble. But in a moment a plunge is heard; a thick cloud seems to fill the glass, as though the coagulated surface had fallen in, and diffused its particles throughout the liquor. They can discern nothing. There is a hissing seething noise; a muffled sound, too, as of pressing and crying; and then all is still.

After due time, hearing no more indication of movement, and finding the glass quite cool, Flamel ventured carefully to unfasten the lid; and there at the bottom lay what seemed a fragment of rock, in the midst of a rust-coloured powder.

It was the Red Stone!

And now it were vain to attempt to describe the embraces, the tears of joy, the ecstatic thanksgivings and vows of the worthy pair. With this red stone they could "tinge" huge masses of common metal, and transmute them into finest gold. It was, moreover, to its possessor a kind of

sacrament. To discover it was never granted to the profane man or the sordid slave of gold. The search after it was a religious work. To possess it was to have received a sign of the Divine favour. Nay more, the stone itself was, as it were, a new channel of grace, whereby the soul was nourished, and man's fallen nature transformed and purified. As baser metals were redeemed into the supreme estate of gold, or Sol, so must the finder of the great secret be himself a redeemed man, assimilated to the Sun of Spirits—Deity. Such being the faith of the highest-minded genuine seekers of the philosopher's stone in those days, imagine with what zeal our Nicholas and his Pernelle would employ their new and inexhaustible resources in secret works of mercy; in charities to the widow and the orphan; in the foundation of hospitals and churches; in the endowment and decoration of holy places. And what an amazing scope for their beneficence was opened, as they called to mind another wondrous property of their stone! By drinking from time to time of water in which it had been immersed, life was prolonged and youth renewed. It was endowed with a virtue that removed the shadow of the curse, and restored the life of its possessor to the length allotted man before he fell.

Well was it for Nicholas that his Pernelle was so cautious and so reserved. For they ran great risks. The mere suspicion that they possessed the secret had cost many men their lives. Their inability to make gold was interpreted as a refusal to communicate their knowledge; and death was the punishment of an imaginary contumacy. With all their care, the benefactions of the Flamels could not altogether escape notice, as disproportionate to the known means even of a notary in what would be called a flourishing way of business. Poor mad Charles VI. was prompted to send no less a person than Monsieur Cramoisy, his Master of Requests, to the scrivener of the Boucherie, to see whether he were really so rich as report said, and whether an extravagant court could not turn him somehow into gold. But the quick ears of Pernelle caught tidings of the danger, and precautions were duly taken. So when M. Cramoisy, in splendid trappings, suddenly darkened their door one morning, he saw Nicholas and his wife, surrounded by every evidence of the humblest means, sitting one on each side of a stool, on which stood a beechen platter full of boiled greens. They were safe; but still it might happen that another time they would not escape so easily. So Flamel resolved to take warning in time; and made preparations for quitting a city where so many powerful men in want of money were apt to become distressingly attentive. Great was the lamentation among the poor of the neighbourhood when they heard that the good Pernelle was sick nigh unto death; great the concourse which soon afterwards attended her obsequies, and inconsolable her bereaved husband. But the real Pernelle, disguised in the habit of a charitable order, was meanwhile on the road to Switzerland, whither she arrived in health and safety. Some months afterwards, it was reported that Nicholas Flamel lay ill of an infectious disorder. Inquiries were many, but visitors few. At dead of night, Nicholas, disguised as his own undertaker, assisted at his own interment. Soon he too reaches the place of rendezvous, and embraces his Pernelle once more. From Switzerland they travelled to the East, lived many years at Broussa, and journeyed thence to the Indies.

More than two hundred years after the reputed death of Flamel, a certain *savan*, named Paul Lucas, who travelled in the East by order of Louis XIV., became acquainted, at Broussa, with a learned dervise from Usbec Tartary. Lucas tells us, in his book of travels dedicated to the *Grand Monarque*, that the said dervise (who talked an incredible number of languages with the greatest fluency) was, in appearance, about thirty years of age, but, from his conversation, at least a hundred. He told the Frenchman that he was one of seven friends who travelled to perfect their studies, and every twenty years met in a place previously agreed on. Four of them had already arrived at Broussa. The conver-

sation fell on the cabala, alchemy, and the philosopher's stone. This last, remarked Lucas, was regarded by all men of sense as a mere fiction.

"The sage," replied the dervise, "is not shocked when he hears the ignorant speak thus. He lives serene and patient in the higher world of true science. He possesses riches beyond that of the greatest kings; but he lives temperately above the power of events."

"With all these fine maxims," interrupted Lucas, "your sage dies like other folk."

"Alas, I perceive you have never had so much as a glimpse of the true wisdom. The sage must die at last—for he is human; but, by the use of the true medicine, he can ward off whatever might hinder or impair the animal functions for a thousand years."

"Do you mean to tell me that all who have discovered the stone have lived for a thousand years?"

"They might have done so, certainly, with proper care."

"You have heard, doubtless," said Lucas, "of an adept named Nicholas Flamel, who lived long ago in Paris, and founded several churches and charities. The arch he built in the cemetery of the Holy Innocents, with the figure of himself reading, and a number of hieroglyphic figures, remains to this day; and so do other sculptures and erections of his. Is not he dead, then?"

"Dead!" said the dervise, with a grave smile. "He, and his wife too, are alive at this hour. It is not above three years since I left both the one and the other in the Indies. He is one of my best friends."

And the dervise then proceeded to relate to his astonished auditor the substance of the narrative given above.

Nicholas Flamel and his wife are historical personages. The sculptures on the churches, to which allusion has been made, were to be seen in 1742, according to the testimony of Langlet Dufresnoy. Certain books, too, have come down, bearing his name: a *Summary of Philosophy*, in French verse, after the manner of the *Romance of the Rose*; a comment on the hieroglyphics he erected; also an account of his wonderful book, and his success in projection three several times. Some of our readers may feel curious to know what is the probable substratum of fact underlying that investiture of the marvellous which has rendered him almost mythical.

For the satisfaction of such, we quote the following passage from a note in Michelot's *History of France* (vol. ii. p. 15, G. H. Smith's *Trans.*): "This church (Saint Jacques) lying between Notre Dame and St. Martin's, which both laid claim to it, was exceedingly independent, and constituted a redoubtable asylum, not to be violated with impunity. It was this induced the crafty Flamel, who exercised his profession of writer, or copyist, without belonging to, or authority from, the university, to sit down under the shadow of St. Jacques, where he could be protected by the curé of that day,—a man of consideration, clerk (*greffier*) to the parliament, and who enjoyed the cure, though not a priest. Flamel squatted there for thirty years, in a stall five feet long and three wide; and thrived so well by his labour, ready ingenuity, and underhand practices, that at his death it took a chest larger than his stall to hold the title-deeds of his property. Beginning with his pen and a fine handwriting as his sole capital, he married an old woman with some money. Under cover of one trade, he drove on many. Whilst copying out the beautiful manuscripts which we still admire, it is probable that in this quarter, inhabited by rich ignorant butchers, Lombards, and Jews, he contrived to get many other documents written. Work, too, would be brought him by a curé who was *greffier* to the parliament. The value of instruction beginning to be felt, the lords to whom he sold his beautiful manuscripts employed him to teach their children. He bought a few houses. At first, worth little, on account of the flight of the Jews and the general misery, these houses gradually rise in value. The tide setting in from the country to Paris, Flamel turned the times to account. He converted these houses into lodging-

houses (*hospitia*, hospices), letting them out at moderate rents. The gains which then came into him from so many sources gave rise to the saying, that he could make gold. He let them say so, and perhaps favoured the report, in order to increase the sale of his books. However, occult arts were not without their danger; and hence Flamel's unceasing anxiety to placard his piety on the doors of churches, where he was ever seen carved in basso-relievo, kneeling, together with his wife Pernelle, before the cross. And in this he found a double advantage; he sanctified his fortune, and increased it by giving publicity to his name. See the learned and ingenious Abbé Vilain's *Histoire de Saint-Jacques la Boucherie*, 1758; and his *Histoire de Nicolas Flamel*, 1761."

PROGRESS OF SCIENCE.

THE past month, February, is one of especial interest to scientific men, in consequence of the award of prizes by the Paris Academy of Sciences. The astronomical prize, founded by Lalande, has this year been divided between three competitors,—MM. Chacornac, Goldschmid, and Pogson,—for the discovery of five new planets made by them during the past year. To our astronomical readers it may be no longer "news" to state, that the planets in question are, Leda, Lætitia, Harmonia, Daphne, and Iris,—names of small prettiness, corresponding well with the minor attributes of the five little worlds recognised as belonging to our own system. Of these, Leda and Lætitia were discovered by M. Chacornac, on January 12 and February 8 respectively; Harmonia and Daphne, first revealed to mortal eye at Paris, on the 31st of March and 22d of May, by M. Goldschmid; and Iris, discovered at Oxford, on May 23, by Mr. Pogson. Not a little extraordinary does it seem that the prize for mechanical discovery was not awarded. Utilitarian branches of investigation might have been supposed to lack no worthy competitors in this utilitarian age; but the lovers of science can hardly be displeased at the result. The great mathematical prize was not awarded; nevertheless the money-value of it has been given to M. Kummer, for his researches on the laws of complex numbers composed of roots of unity and whole quantities. In the department of statistics, M. Husson, *chef de division* of the prefecture of the Seine, has obtained the prize for the valuable information conveyed in his treatise entitled *Les Consommations de Paris*. The grand prize of the department of physical sciences appears to have gone begging longer than the popular nature of the subject would have led one to anticipate. Originally proposed in 1847 for 1849, it was again postponed for completion until 1853; then again for 1856. It has now been finally awarded to M. Lebourlet, professor of zoology and comparative anatomy at Strasburg. A second prize, belonging to the same department, originally proposed in 1850 for 1853, and postponed to 1856, has been finally adjudicated to M. G. Bronn, of Heidelberg. MM. Waller and Davaine have respectively obtained prizes for their researches in experimental philosophy. Under the head of discoveries tending to the amelioration of noxious avocations, the successful competitor has been Herr Schrötter, of Vienna, the discoverer of allotropic, amorphous, or red, phosphorus; which curious substance was first brought before the notice of British philosophers in the year 1849, when the discoverer read a paper upon it in the chemical section of the British Association, convened at Birmingham that year. No person acquainted with the nature of Professor Schrötter's discovery in all its bearings can doubt the justice of the award here recorded. Independently of its sanitary bearings, which we shall explain presently, amorphous phosphorus illustrates more remarkably, perhaps, than any discovery made before or since, the mysterious function of allotropism, or duality of existence. When compound bodies are concerned, the philosophic speculator is at no loss to invent a plausible explanation of matter, identical as to chemical composition,

assuming two or more distinct physical appearances. It is easy to imagine that the compound particles of which it is built up are capable of varying arrangements amongst themselves. When simple bodies, however, like phosphorus or sulphur are in question, the hypothesis fails, and the function of duality of existence remains a mystery. Nothing can be more marked than the distinction between phosphorus in its ordinary and its allotropic condition. Ordinary phosphorus is a soft, wax-like, semitranslucent substance, melting at 108°F ., and taking fire when the temperature is slightly augmented. It is, moreover, poisonous in an extreme degree; so that in the manufacture of lucifer-matches, containing phosphorus, all concerned in it are exposed to dire peril. Danger from the ready inflammability of phosphorus can easily be guarded against; not so the insidious danger resulting from the absorption of its fumes, giving rise to disease of the jaws and facial bones. Soon after lucifer-matches became articles of commerce, the fact was discovered, that no person could be engaged in it, with reasonable hope of impunity, if his teeth were not perfectly sound; and even then grave results occasionally supervened. Insidious extension of caries is the first evidence of this form of poisoning by phosphorus. Almost unnoticed at first, the disease extends until the jaw-bones are involved in its ravages, and the patient either dies or is horribly deformed for life. Such are the effects of ordinary phosphorus, or rather, phosphorus in its ordinary condition. Allotropic, or amorphous, phosphorus is devoid of all these qualities. It has no odour; it does not spontaneously inflame; it is not poisonous, even when swallowed; and not being volatile, of course no apprehension need be entertained of poisoning by phosphorus vapour. Its chemical properties are also different: allotropic phosphorus, as the term amorphous, also applied to it, indicates, is not susceptible of assuming crystalline form; neither is it soluble, like ordinary phosphorus, in bisulphide of carbon. These distinctions are profound; nevertheless, ordinary is converted into extraordinary phosphorus by simple heating, at a temperature between 440°F . and 482°F ., in an atmosphere of carbonic acid or nitrogen; and when allotropic phosphorus is heated, either by friction or otherwise, above 482° , it assumes the condition of ordinary phosphorus, with all the peculiarities of the latter.

Professor Schrötter, however, is not alone in the category of prizemen for ameliorating the condition of artisans following noxious avocations. M. Chaumont divides the honour with him for an invention to effect the separation of long and useless hair of rabbits' skins from the short silky hair employed in the hat-manufacture. This operation, hitherto performed by hand, has proved most insalubrious, on account of the particles of dust and fragments of hair taken into the lungs of the operators. A machine, the discovery of M. Chaumont, so far remedies this state of things, that a prize of 2000*f*. has been awarded to him, with the explanation that the award would have been greater, had the idea not seemed probable that he would speedily improve the construction of the machine already so well inaugurated. Our own countryman, Professor Simpson, of Edinburgh, comes in for one of the 2000*f*. prizes allocated to the department of medicine and surgery, for his discovery of the anæsthetic effects of chloroform. Such, then, is an outline of the prize-awards made by the Paris Academy of Sciences,—homage rendered to philosophy by philosophers. Nor have two great potentates amongst the rulers of the earth failed to profit by so good an example. The Emperor of Austria has forwarded to Messrs. Negretti and Zambra, of Hatton Garden, a gold medal in testimony of his appreciation of the beautiful series of stereoscopic views executed by these artists on objects in the Crystal Palace; and his majesty of Bavaria has caused another gold medal to be forwarded to M. Schönbein of Bale, the philosopher of gun-cotton celebrity, and still better known amongst chemists for his researches on ozone, or oxygen in an allotropic form. M. Henri St. Claire Deville, the producer of aluminium in

its full metallic condition, has been devoting his attention of late, conjointly with Wöhler, to the production of boron and silicon, and to a full investigation of the properties of these remarkable bodies. The same investigators had on a former occasion announced the fact of their having obtained boron under two distinct forms, *graphite-like* and crystalline. They now announce that several varieties of boron-crystal exist, all having a sort of metallic splendour as well as great hardness, and some varieties being nearly translucent. Extreme hardness is the leading characteristic of crystallised boron; all its crystalline varieties abrade the diamond, and some may turn out to be practically applicable to diamond-polishing. M. Quillot, a Parisian lapidary, has submitted boron-dust to a practical test in the diamond-polishing operation, and finds that certain varieties of it, when microscopically examined after considerable use, still display the original crystalline form; a test, it would appear, of the goodness of diamond-dust as a lapidary material. Hereafter it may turn out that some peculiarities in the appearance of crystallised boron may be due to the combination with it of carbon or aluminium, or both. The specific gravity of the crystalline or adamantine form of boron is 2.68; little more, it will be seen, than the specific gravity of silicon; greater, too, than the specific gravity of boracic acid. The points are worthy of remembrance, that the specific gravity of the diamond is greater than that of liquid carbonic acid, though the density of aluminium is barely two-thirds that of alumina.

Still more interesting are the labours of these philosophers in respect of silicon, or, as they prefer to term it, silicium, the material which constitutes about one-half of every variety of flint, siliceous earth, or silicic acid,—one of the most widely-spread materials of the globe. Like carbon, silicon occurs under three distinct physical forms, which MM. St. Claire Deville and Wöhler propose to designate by the terms of amorphous, graphitoid, and octahedral. Each variety is prepared by a different modification of a process, which in general terms may be said to consist in decomposing chloride of silicon, or double fluoride of potassium and silicon, by sodium and aluminium. MM. St. Claire Deville and Wöhler call attention to the fact, which the reader of these notes may perhaps have deduced already, namely, that the strongest possible analogy exists between the chemical relations of boron, silicon, and carbon. The two former can be readily produced crystalline. Is it not likely that chemists are on the verge of manufacturing diamonds? Dealers in precious stones, and ladies proud of their diamonds, had better keep this possibility in mind.

A somewhat animated discussion has been going on at the Pharmaceutical Society relative to the possibility of manufacturing sweet spirits of nitre, unexceptionable as to quality, from methylated spirit. Mr. Macfarlane, at a recent meeting of that society, laid before the members a specimen of sweet spirits of nitre, which he considered to be equally good with that procured from ordinary unmethylated spirit of wine. On this point some difference of opinion was expressed, and Mr. Redwood was led to deprecate the use of methylated spirit for the purpose in question altogether; this gentleman's proposition being to the effect, that the manufacture, if imperfect, will be the means of sending into the market a noxious medicinal agent; if perfect, that it will furnish a means of defeating the objects had in view by the Legislature, and obliging the Government to repeal the Act of Parliament by which the manufacture and sale of methylated spirit was legalised for certain uses. To produce alcohol from sweet spirit of nitre is no difficult matter, Mr. Redwood argues; if, therefore, the former can be obtained pure, it will only open the field to an illicit production of alcohol. Amongst the extraordinary discoveries of chemistry recently made, we must not forget to chronicle that of the presence of four organic acids,—butyric, propionic, acetic, and formic,—in the mineral waters of Brückenau, in Bavaria, nor the action of ozone on certain mushrooms, by that great coryphæus of ozone and all relating to it, M. Schönbein. He attributes to the agency of ozone the blue-

ness which certain mushrooms assume when their tops are broken off, and the fractured portion is exposed to the air. Alcoholic tinctures of the *Boletus luridus* and the *Agaricus sanguineus* both contain a colourless matter which changes to blue under the influence of ozone; and conversely, the juice of the same fungi contains an organic matter capable of transforming oxygen into ozone.

M. Taupenot contributes to the records of physics his investigations relative to the construction of barometers and the boiling of mercury in vacuo. It is well known that no barometer can be correct, the mercury of which has not been subjected to ebullition; a process of extreme peril, involving the rupture of the tube so frequently, that a barometer holding boiled mercury is an expensive instrument. The operation of boiling is ordinarily performed on successive portions of mercury, the source of heat being gradually moved from the closed to the open part of the tube. M. Taupenot obviates these difficulties in great measure by effecting the ebullition in vacuo. M. Taupenot finds that the boiling-point of mercury in vacuo is about 192° F. lower than the boiling-point under ordinary atmospheric pressure. In conducting the operation, the following arrangements are made. The barometer-tube being taken about fifteen inches longer than usual, it is charged with the full quantity of mercury at once, and then contracted in two places above the level of the mercury by the blowpipe-flame. This is done with the object of preventing a tumultuous and unmanageable boiling of the mercury. The remaining steps of the process are obvious. The open end of the tube being placed in communication with the air-pump by means of an elastic tube, exhaustion is effected, and heat applied until air-bubbles cease to escape. The process of boiling is usually finished at the end of about twenty-five minutes.

In microscopic science, the Rev. J. P. Dennis has proved, to his own satisfaction, by an examination of fossil-bones, that birds existed on our planet at the period when the Stonesfield slates were in the condition of soft mud. He affirms, that the microscopic distinction between the bones of birds and those of mammalia is no less great than between the bones of the latter and those of saurians.

THE 'OMETER NUISANCE.

'OMETERS in general are displeasing to the popular mind. Gasometers blow up; barometers foretell bad weather and tempests, which come quite soon enough without being foretold. Electrometers, anemometers, saccharometers, and hygrometers, are standing puzzles to plain-spoken folk. A galactometer has recently had the effect of frightening a whole army of cowkeepers, in this wise.

The French authorities profess to be very severe in punishing adulterations of every kind, which "every" of course includes the adulteration of milk. Every now and then the police make an onslaught on the falsifiers, and the galactometer is the offensive weapon.

One morning lately, the housewives of Douai were not a little surprised to find that not a single milkwoman arrived with the daily supply for breakfast. The explanation of their absence was, that for two days previously the pitiless police had declared war, without quarter, against the milk-dealers, male and female. The grand question for the historian to ponder is, Was the war of the milk-pails a just war, or an unjust one? The following details may help to solve the difficulty.

A couple of milk-women were politely accosted, and requested to lift the lids of their cans. The galactometer was successively plunged in the vessels; and the indiscreet little instrument declared that the first can contained one-fourth of water, the second can one-third of the same. *Procès-verbaux*, or informations which involve costs and fines, were the consequence of this opening experiment.

Next day, the galactometer presented itself at the gate of the city which is called the *Porte de Valenciennes*. It

tested the first can that attempted to enter, and proved an advancement in yesterday's sophistications. This time the tell-tale betrayed the presence of water in the modest proportion of just one-half. Really the temperance movement had gone a little too far.

Meanwhile several persons who were going out of town, and who had watched the proceedings, were instigated by a sentiment of humanity to warn all the milkwomen whom they met coming in from the country. The ladies came to a standstill; their halt was significative; it was a simple confession that they, innocent lambs, were in no hurry to throw themselves into the jaws of the wolf.

But no crime, we are told, goes unpunished, not even the petty offence of adulterating milk. Other travellers, who were coming from the country into the town, remarked the sudden stoppage of the milk-folk, and informed the police of the circumstance. Finding that they awaited their victims in vain, the officials rushed out of the city-gates, to give battle to the delinquents. But their uniform was instantly recognised, and the alarm was given in the enemy's camp. A sudden panic seized the crowd, resulting in a general flight: the carts were twisted right-about face; horses, asses, and mules, received showers of unmerciful whippings and cudgellings; there was a universal rout, helter-skelter, topsy-turvy, the result of which was a grand *tableau-vivant*, resembling a battle-piece in every thing but its sublimity.

A milkman, who had nothing but his legs to aid his escape, was arrested; of course his wares were more than doubtful. The contents of his cans were poured out on the ground, and by way of recompense he got a *procès-verbal*. And this is how it happened that *café-au-lait* was scarce at Douai that sorrowful morning. As a consolation, next day the citizens were regaled with what appeared to them as the richest of cream.

DOMESTIC UTILITIES.

THE VINEGAR PLANT.

To the Editors of the National Magazine.

Will any of your intelligent correspondents kindly give me some practical information about the Vinegar Plant? I have heard, but can hardly believe it until further confirmed, that the vinegar produced from it is of first-rate quality, cheap, and very wholesome. If it really be so, and producible at a reasonable cost, it is well to make the fact extensively popular, particularly at a time when adulteration seems to be the rule, rather than the exception, among dealers in household stores. What is the plant like? And how is it reared?

A YOUNG HOUSEKEEPER.

[The Vinegar Plant is a gelatinous body, greatly resembling in appearance a lump of tough leather that has been steeped in water for a length of time. It is most unsightly to look upon; and, when handled, it feels very much like boiled tripe. It possesses, however, the wonderful property of changing syrup into good and wholesome vinegar, which, the longer it is kept, the better and stronger it becomes.

The history of the plant is involved in some obscurity. Some say that it was originally brought over from South America; others, that the West Indies gave it birth. Both parties may be right as regards individual specimens; but the plant in general use among us is a native of Britain, and is described by Greville as *Penicillium glaucum*.

Every body must have observed, that when a little stale vinegar is left exposed to the air for a few days in summer,

certain sedimentary bodies are produced in it; and these, gradually attracting each other, soon become a gelatinous conglomerated mass. This is the Vinegar Plant. If a little sugar be added to the stale vinegar, the plant will be all the more perfectly formed, and of fuller proportions.

We will now proceed to unfold the mystery of making acetic acid, or vinegar, from this unlikely-looking fungus; merely premising that we have manufactured our own vinegar from it on a large scale for many years, and found it excellent, both for pickling and for general use. In many country-villages no other vinegar is used.

Having provided a plant, procure a large deep jug or covered jar (the top must be covered over to exclude dust). Place in it half-a-pound of treacle, and half-a-pound of coarse brown sugar. Add to these, two quarts of spring-water, nearly boiling; then stir the whole well together. When almost cold, introduce the Vinegar Plant (which will float on the top); cover up the jug or jar, and put it carefully away for six weeks.

The reproductive powers of these fungi are positively wonderful. Ere the new plant is one day old,—that is to say, disengaged from the parent stem,—it goes immediately to work; and in six weeks' time has given birth to another progeny, prolific as itself. The original parent, be it observed, never ceases its fertility, but continues to produce a new offspring at the end of every six weeks throughout the year.

At the end of six weeks, you may uncover the jar, and you will find its contents to have become strong excellent vinegar. Having removed this, withdraw the plant. Adhering to it, you will find an excrescence or under-layer. Insert your finger carefully between it and the upper layer, and it will divide; leaving you two Vinegar-Plants, one as vigorous as the other.

Again, make a mixture as before; only let the quantities be doubled. Throw in the two plants. These will, in a few months, so multiply as to enable you to supply, not only yourself, but all your friends. Strain the vinegar several times through chemical blotting-paper; then bottle it, and cork it down. The older it is, the more palatable and serviceable you will find it.

The best place to keep the jars, when the plants are at work, is in a warm cupboard in the kitchen. The fermentation then soon commences, and the plant proceeds to develop itself, dividing into two distinct layers. Some people cut the layers into separate pieces, to make them propagate more freely.

Let us, in conclusion, observe, that the remarkable mode of propagation possessed by the Vinegar Plant—in the absence of reproductive organs—by means of laminae, is quite in accordance with the merismatic division which many of the lower *algae* propagate.

The more we examine into its nature, the more pleased we shall be with the powers it possesses of longevity and usefulness.

WILLIAM KIDD.]

CORRESPONDENCE.

"Early to bed, and early to rise,
Will make you both healthy, wealthy, and wise."

A few lines in advocacy of the first of the benefits to be derived from early rising may prove interesting to some at least of your junior readers.

It is a well-established fact, from statistics, that the early riser, *ceteris paribus*, lives longer than the person who remains in bed many hours after sunrise, or who turns night into day. But the reason may not generally be known, except to the professional or scientific.

In the first place, it must be understood, that the atmosphere we breathe is composed of certain fixed gases, viz., oxygen, nitrogen, carbonic-acid gas, and ammonia,—the two last in very small quantity,—and that these exist in certain proportions of admixture. That the gas oxygen is the great

stimulating principle, or supporter, of all animal life; whereas carbonic-acid gas is detrimental to it, being a narcotic, i. e. induces sleep.

That the animal and vegetable kingdoms, in an especial and peculiar manner, help to regulate and establish a certain relation between the quantities of these gases during night and day in the following manner. Vegetables, by means chiefly of the surface of their leaves, buds, and stems, give off carbonic-acid gas by night, but oxygen during the day; whereas animals in health, principally through the medium of the lungs and skin, part with carbonic-acid gas, and absorb oxygen by inspiration from the atmosphere.

That, during sleep, the principal functions of the animal body are suspended, it requiring neither fuel or food, but merely positive rest. And therefore a highly oxygenated state of the atmosphere is not only unnecessary, but would prove pernicious if long continued. Consequently night, the period when the air contains its greatest amount of carbonic acid gas, is most adapted by nature for repose; and, on the other hand, day, being the period when the wear and tear of the body is greatest, is just that in which it can receive its greatest amount of that supporter of animal life, oxygen.

Thus the relative strength of the atmosphere is beautifully regulated by the interchange of the gaseous elements eliminated from the animal and vegetable kingdoms. And hence it follows, that the active period of animal life should commence at sunrise and cease shortly after sunset, in order to receive the greatest amount of pure atmospheric air, which is as essential to health as wholesome food is. And to break these natural laws must sooner or later be followed by loss of health.

DRAMATIC CONVERSAZIONI.

MADAM,—As a proof,—though I admit a rather slender one,—that I take an interest in that department of the NATIONAL MAGAZINE designated "The Home," I will contribute the following outline of an amusement for winter evenings, which for a number of years has obtained in the social circle of which it has long been my lot and my benefit to be a member.

The social circle of which I write consists of a large number of ladies, married and single; gentlemen ditto. The single of both sexes preponderate. There is also a full complement of children, making a grand total of about as many as would constitute a complete dramatic company.

From amongst the gentlemen, on the first Tuesday of every month, from November till May, a president is nominated and elected by vote; each individual having the privilege of voting or not as he or she pleases. Should the gentleman nominated not receive votes equivalent in number to three-fourths of the parties present, he is rejected and another is nominated, who must pass through a similar ordeal before he is elected to the high dignity of president.

For a month the president continues in office, and his business is to rule over the meetings; decide on the play to be read on the next night of meeting; appoint the readers for the next night, and also their parts; inform the company when and where they shall next meet, which last information is of the utmost importance, as it is an invariable rule amongst the members that, unless particularly requested, more than one reading shall not take place in the same drawing-room during the dramatic session.

And now for a sketch of the amusement itself. At the place and hour, which is usually half-past seven o'clock, the company assemble; the orchestra, a piano and what other instruments we have, striking up the while a lively overture, which it continues for a quarter of an hour or so. During this part of the proceedings, the *dramatis personae* take their respective places; the readers round a table; the *corps de ballet*, which I may here remark is usually, though not always, composed of children, at one end of the room,

cleared for their convenience; and the audience wherever they can.

As soon as all have occupied their proper positions, the president rings a bell, which is a signal for the orchestra to cease, and the reading to commence. Each character then reads his or her part as it occurs; and if the reader is a singer, sings whatever songs or poetry may happen to be in the part assigned him; or if he really cannot sing, a substitute must be provided; but at all events there is no shying off allowed: and in this manner the reading is continued to the end of an act. At the conclusion of an act, a breathing time is allowed the readers, during which respite the members of the *corps de ballet* perform a dance to the music of the orchestra; which finished, the bell again rings; the next act of the play is proceeded with, and so on we go until the whole piece is concluded; when the orchestra and *corps de ballet* are again called forth, on duty.

Afterwards comes the cream of the evening. As it is an established practice among the readers and the entire company (the children, of course, excepted) to study, not only their respective parts, but the whole play, and mark the passages which strike most forcibly by their brilliancy of expression or any other quality, the members come prepared for the conversation which follows the reading; and a most animated and entertaining conversation, I can assure you, madam, it is; and fully justifies me in giving to each of our dramatic meetings the high-sounding title of a Dramatic Conversazione.

The proceedings terminate at eleven o'clock. I must add in conclusion, that it is to a young lady we are indebted for introducing this pleasant recreation among us.

JAMES.

DOMESTIC PETS.—THE NIGHTINGALE.

THE form and *personnel* of Nightingales are by no means attractive. They are plain-looking birds; but they have a very intelligent eye. There are two species of this bird,—the Lesser and the Greater Nightingale. The former regularly visits this country; the latter is a rarity. Bewick acknowledges to have heard of one, but not to have met with one. I have been more fortunate.

The birds figured on this page will enable our readers to mark the contrast between the two species. Both specimens have been kindly lent me by their owner, Hugh Hanly, Esq. Their plumage and carriage are alike deserving of notice. The Greater Nightingale sings; but his note is far inferior to that of the Lesser. It has no poetry in it, and would excite comparatively little remark when listened to. These birds seldom visit our country. By making themselves scarce, they are the more highly thought of.

The time that this King of Birds is "due" in England is about April 8. I usually see him, and hear him, about that day; if not in my own garden, in some copse not far distant. He loves the county of Middlesex dearly; and there, every season, he and I hold loving converse. It is worthy of note, that the same birds, if living, return to their old haunts every year. They remember hospitality received, and never forget the spots where they reared their young families in security.

As the male birds invariably arrive some ten days before the females, it is desirable to make your purchases early in the month of April; but never buy any bird that is not "meated off;" that is, until he is used to his change of food,

THE GREATER AND LESSER NIGHTINGALES.

and able to feed himself. The bird-dealers are clever in their management of these noble fellows, who are usually "sulky" after they have been made prisoners. They tempt them to eat by pegging down live mealworms in their raw beef and egg. Whilst vainly pecking at, and attempting to swallow the former, they taste the latter; and finding it palatable, they devour it greedily. Many, however, die before they can be thus "meated off." Poor innocent songsters!

Never purchase any bird without first hearing it sing. This is peculiarly necessary as regards Nightingales. Do not, however, then be surprised if their song suddenly ceases. Unless they get an affectionate master or mistress,

and are lovingly waited on, their voices are quickly silenced,—their hearts soon broken. I have had so many proofs of this, from long experience, that I can speak oracularly as to the fact. These are, of all birds, the most tender-hearted. They are constant in life, and die (generally) singing a love-song to their mistress. To slight them is as impolitic as it is cruel.

As Nightingales are generally shy birds, it is usual to place them in large cages made of mahogany; the front only being open, and the bars of wood instead of wire. The top, back, and sides, must be close. If your pets are familiar and happy, it will then be desirable to have the sides open as well as the front. Feed in vessels of glass, not tin; and supply them with plenty of fresh water. Also provide a bath, in summer, for them to show off in.

The food of a Nightingale in confinement should be *raw* rump-steak, perfectly sweet and free from fibre. This must be placed on a marble slab, and held down by a silver teaspoon, while scraped fine with a sharp knife. Do not let the hand touch it, or it will speedily become tainted. With this, mix some hard-boiled yolk of egg, dropping a little cold water on it to assist in making it into a paste. Do not let the substance be too thick, nor too soft,—simply moistened so that the bird can swallow it readily. In summer, this must be made fresh *twice* daily. The flies soon find it out, and poison it; then, farewell to the bird.

Nightingales dearly love ants'-eggs, flies, mealworms, scraped carrot, and elderberries. Also, now and then, a little (under-done) cooked mutton, minced. Hang them in one regular place when indoors, and do the same when out of doors. Any change disconcerts them. Carefully guard against cats, and never let your birds even see them, if you can prevent it; it is fatal to their song.

More than a thousand Nightingales are sold, every Spring, in London alone. Of these, owing to the ignorance prevailing as to their proper treatment, at least seven-eighths perish.

WILLIAM KIDD.

No. 27, commencing the Second Volume, will contain the first Chapter of a continuous Story by the Author of "The Head of the Family," "John Halifax, Gentleman," &c., entitled

LORD ERLISTOUN. A LOVE STORY.

This will extend through many Numbers of the Magazine.

Weekly Subscribers are requested to see that the Label is always furnished to them with the Number, as Notices to Correspondents and the Public, &c., will henceforth appear regularly—and, except on rare occasions—exclusively there.

SAMSON BOUND BY THE PHILISTINES.

PAINTED BY F. ARMITAGE.

THE NATIONAL MAGAZINE.

VOL. II.

SAMSON BOUND BY THE PHILISTINES.

By E. ARMITAGE.

"The Philistines took him, and put out his eyes, and brought him down to Gaza, and bound him with fetters of brass; and he did grind in the prison-house."

SAMSON, the son of Manoah, and first deliverer of Israel from the hands of the Philistines,—whose coming was announced by "a man of God," "with the countenance of an angel of God, very terrible,"—is here presented undergoing the punishment of his weakness and disobedience of the ordinance which that angel pronounced before his birth. Blinded, shorn, dishonoured, and a slave, put to the vile service of the mule and ass,—heavily he treads the weary round of the mill. As a captive taken in war, he is compelled to put forth the remains of his indomitable strength in the service of his captors. And so he shall go on, until the symbol of his strength be again grown, and he cry out, "O Lord God, remember me."

Wearily he hales round the axis of the heavy grindstone, in the dull mechanic circle forgetting the actuality of his fate, with blind face and eyes turned towards God, and deep in his heart the thought of possible revenge and death. So absorbed, his hearing has not warned him of the shouted threat and vengeful lash from the fierce slave kneeling in the front, whom the advancing beam threatens to overthrow on the floor of the pit. The armed guard who sits upon the shaft between the stone and the upright post of the mill laughs silently at the slave's peril, and looks in expectation of the effect of the impending blow across the bare chest of him who had slain a thousand Philistines with a bone. The governor of the gaol reclines behind, equally amused, scarce staying his act to drink in order to notice the result. The women jeer at the misery of Samson; other Gazarites press against the bars, shouting in mockery.

Mr. Armitage is one of the few English artists who paint Scripture subjects, and one of the still smaller number who do so with any thing like judgment and spirit. The picture shows his deep consideration of the example he has chosen; his power in illustrating the text, by inventing the incident we have described; and of giving dramatic force and interest to the history.

There can be no better evidence of the talent of a painter than that he presents some new aspect of a well-known fact, when he makes that fact the basis of his work. A mere relation of the obvious incidents suggested by a story is insufficient to prove that an artist is justified in claiming merit for the choice of a subject so valuable and important as the one before us. We think the reader will agree with us that Mr. Armitage is fully entitled to this merit. Not only is the incident novel, but it is eminently characteristic and just; placing before us in a striking and impressive way the miserable fate of Samson, and inculcating the lesson of his life so forcibly, that it is next to impossible for the observer to mistake the motive of the picture.

We should wish to call the attention of artists to the wisdom of choosing such subjects more frequently, as being

of higher value than those *genre* pictures with which the English school has been for so many years overwhelmed as with a flood. Several of the most able of the artists of our country have given themselves up to the execution of frivolous trivialities in costume and lay-figure subjects; so that the most important of our exhibitions is, year after year, little else than a bazaar for the exhibition of showy, brilliant, and unsound toys, wherein painters aim rather to show their acquaintance with tricks of the palette than a true feeling for art, or desire that it should take its place as a means of instruction.

Mr. Armitage has paid much attention to the costume of his picture; and, as a whole, we think it could only have been improved by his going to the East in order to acquire absolute truth of physical and atmospheric effect. As the picture stands, we have but one fault to point out, which is, that the advanced leg of Samson should have a greater appearance of strength about the ankle.

L. L.

TOO BAD BY HALF.

HORACE GOBBLEDY, Esquire, barrister-at-law, sat in his chambers in the Temple enjoying a state of contemplative beatitude quite new to him. The current of his reverie sparkled like the waters of Helicon, and visions more entrancing than those of an opium-eater in the height of ecstatic hallucination rose before him in endless succession. At one moment gorgeous phantasmagoria such as the genius of the ring might have summoned at the bidding of Aladdin seized upon his senses; at another soft dreams of nestling domesticity occupied his attention. A decanter of sherry stood upon the table half-emptied, fragrant wreaths of smoke curled lightly upwards from his Havannah, and the flames of his evening-fire flickered good-humouredly in the gathering twilight. Albeit Horace had eaten his terms merrily, and washed them down with many a glass of Montillado and Bucellas, not to mention occasional champagne, he had certainly never before experienced such self-complacency and strong conviction that the existing constitution of things is all for the best. He had become, in short, a fanatical optimist. The fact is, that just a fortnight before,—only a little happy fortnight,—our friend had courageously dashed across the *pons asinorum* of love. He had fairly put the interrogatory-in-chief to the golden-haired blue-eyed Angelica Fitzmaurice; and in spite of maidenly evasion and blushing hesitation enough to ruin the credit of the examinant before a jury, had elicited the important truth, that he, Horace Gobbledy, was the sole proprietor of that lady's tender sentiments.

Angelica Fitzmaurice,—whose estimable character and personal graces undoubtedly did honour to the taste of her admirers, and whom it is to be regretted that no occasion offers for introducing to the reader's more intimate acquaintance,—was the only child of Matthew Fitzmaurice, Esq., and he was a widower. She had been for some time past paying a lengthened visit (perhaps Mr. Gobbledy had something to

do with its protraction) to her cousin, Jemima Crickton, whose address the present chronicler declines to give for reasons not necessary to allege.

It was very wrong—shocking and unparliamentary, no doubt—in Mr. Gobbledy, and we have no desire to screen him from the just indignation of all fathers (and mothers) of families comprising marriageable daughters; but so it was. What was? Why, Miss Angelica and Horace, or, as the latter would say, “my guardian-angel and myself,” had determined in a most unfilial way that it was not expedient to make known to the parental autocrat in a hasty off-hand way an occurrence destined to deprive him of the society of his beloved child. Mr. Gobbledy made certain representations to the young lady, and backed them by arguments possessing great and unaccountable influence in the court and parliament of love, although logically of no validity. He represented that the withdrawal of a daughter from the family-circle is, in a domestic point of view, a catastrophe not to be lightly dealt with; that just as, in case of the demise of a near and dear relative, the good feeling and sympathy of men have made it customary to break the news with all possible tenderness and discretion, and oftentimes to withhold the melancholy truth for a short period, and occupy the interval in preparing the affectionate bosom to meet the blow, so, in a case like the one under discussion, it might be, nay, it was, advisable to reflect at leisure how the inevitable pang could be softened to the paternal heart. “At all events,” Mr. Gobbledy suggested, “it will be better not to communicate this intelligence by letter; I shall much prefer a *visà voce* explanation.”

“What a hypocrite Mr. Gobbledy was!” murmurs the reader. True, too true; but we have not undertaken to defend him from censure. It is probable that other reasons than those mentioned led him to take the above line of argument. It is within the bounds of possibility that he wished to make such arrangements (for which time might be necessary) as would be satisfactory to Miss Fitzmaurice’s friends. Doubtless it had occurred to him that, when settlements were in question, his eloquence, so irrefragable in the opinion of Miss Fitzmaurice, might perhaps prove unconvincing to her elderly and experienced papa. A little anxiety, scarcely amounting to misgiving, in the direction hinted at had, however, no depressing effect on the meditations of Horace Gobbledy. He was in some sort a philosopher, accepted the truth, that risk and adventure in the chase enhances its pleasurable excitement and the value of the quarry, and thus reconciled himself to the phenomenon which has been remarked in relation to the course of true love. Perhaps he entertained erroneous views on this point; and many lovers no doubt ardently desire the course of true love to be as unimpeded as lubricated lightning, or planetary motion at the least.

The upshot of the manoeuvres of our ill-advised pair was, that the momentous event above recorded remained a secret presumably unknown to Mr. Matthew Fitzmaurice, who, worthy man, was engaged in a remote district pursuing his lawful avocations utterly unconscious of the machinations of the misguided Angelica, and ignorant of the distinguished existence of Horace Gobbledy of the Middle Temple.

For a fortnight, therefore, this learned gentleman had surrendered himself incontinently to blissful emotions. “His soul was like a star, and dwelt apart.” *Coke upon Littleton* and *Fearn on Contingent Remainders* were clearly inadmissible to that realm of fairy-land wherein his imagination disported itself. What could be the use of boring over musty papers and crabbéd reports, when the very cobwebs here and there attached to neglected folios assumed the similitude of Brussels lace, and white-satin waistcoats, and blue coats with gilt buttons stalked about like lay-figures seized with a fit of perambulation, or voluntarily suspended themselves on the learned counsel’s hat-pegs? Amid this inextinguishable but very pleasant preoccupation of mind, he in vain attempted to unravel the points of law in the great case of

Snubbleton v. Smith, which was to come on next week. A mania for personification possessed his sensitive fancy; and Shelly’s case stood forth a radiant and gallant gentleman with the inevitable white-satin vest and blue coat with gilt buttons, repeating in a monotonous but rather jaunty way, “To A for life with remainder to his heirs,” from which phrase Horace could gather nothing more than that Angelica was the sweetest girl, and he, Horace, the happiest man in the world. (*Vide* 1 Rep. 104^a, Shelly’s case.)

Only three-quarters of an inch (or thereabouts) of his Havaannah now remained, and the last tint of twilight disclosed in shadowy outline the arm-chair opposite and the bookshelves beyond. Very shortly the outer world ceased to have dominion over Horace Gobbledy, who became a naturalised citizen of the realm of reconciled impossibilities. He was engaged in opening the case of Snubbleton v. Smith, and commenced by addressing a serene personage in clerical robes as “My lord,” and a number of individuals in white-satin vests and blue coats with gilt buttons as “Gentlemen of the jury.” Then he poured forth such a stream of legal lore and badinage from the matrimonial service, that Smith was forthwith crowned with a wreath of orange-blossoms; while Snubbleton, producing a mysterious signet-ring, at once established his title to Whiteacre. Suddenly Snubbleton became Horace Gobbledy himself, Smith was converted into Angelica Fitzmaurice, and the verdict of the jury was proclaimed amid the pealing of an organ in the marble-columned nave of a cathedral, and the roll of drums.

The pantomimic exercises thus rehearsed on the stage of dreamland were abruptly brought to a close by the tap, tap, tap at the door, which Horace had in the first instance interpreted as a roll of drums. “Enter,” said Horace drowsily; and, to say the truth, he would not have been much surprised to see the ghost of Hymen enter with his altar on his back, Cupid playing round his feet, and Angelica hanging on his arm. “Who goes there?” he repeated in a louder tone, at the same time getting up, and poking the fire into a blaze.

The door opened, and in walked, not any mythological person whatever, but only a little stout waddling old gentleman with a very rubicund nose and flowing white locks. The visitor wore a drab travelling-coat, a scarlet-velvet waistcoat, and snuff-coloured continuations as far as the knees, where a pair of dark gaiters embraced his sturdy legs, and finally united themselves to shoes adorned with shining buckles. Horace had risen, imagining that possibly it might be an attorney with a retainer, or (better still) John with a pretty little note. The old gentleman advanced with his hat in his hand, and saluted him with grave solemnity.

“I have called upon you, Mr. Horace Gobbledy,” said he with a squeaky voice, but in a stately way, and gently tapping the top of his silver snuffbox, “with the view of obtaining—”

“Pray be seated, sir,” said the other; “but allow me to remark, that it is usual in cases of disputed property for a solicitor to intervene between the client and his counsel.”

“Ay, I understand; the nobler beast of prey is attended by the jackal; very good, but that’s nothing to the purpose, Mr. Horace Snubbleby—”

“Gobbledy, sir.”

“Your pardon, Gobbledy. I was saying that I called with the view of obtaining some explanation relative to a transaction which has taken place privily and without my consent. For some weeks, in order to have the benefit of change of scene, my daughter has been visiting her friends the Cricktons.”

“O, indeed! Can it be that you are the father of Angelica—my dear Angelica?”

“I beg your pardon, sir,” interrupted the old gentleman tartly; “I cannot listen to such language. As the father of the young lady to whom you have too familiarly alluded, I have to request an explanation of your unwarrantable conduct in insinuating yourself into the affections of a

member of the Fitzmaurice family. I have come to town expressly for this purpose. I wait for a reply. You are confused, sir,—naturally so."

"Really, Mr. Fitzmaurice, your question is quite a—leading one, and—and—requires some reflection before answering it."

"I will give you one minute to collect your thoughts, which I have reason to believe are woolgathering, Mr. Horace Snobblety—your pardon—Gobbledy," said Mr. Fitzmaurice, taking an antique watch from his fob and laying it on the table. He then tapped the family snuffbox, and taking thereout a copious pinch, carefully laid it on the back of his inverted hand, and inhaled it with deliberation.

Horace watched him with great interest. Could it be possible that this oddity was the father of the sweet and accomplished Angelica? "Yet it does not follow," thought he, "that because the daughter is charming, her papa may not be eccentric. But I wonder who told him about this matter?"

Glancing at his chronometer, the visitor repeated, "I wait for your reply, Mr. Horace Gobbledy."

"My dear Mr. Fitzmaurice," commenced the gentleman addressed, exhibiting great tribulation.

"Your pardon, sir. As we have but recently become acquainted, it may be as well to withdraw the possessive pronoun, and also the epithet of endearment, although of course I appreciate the honour implied."

"Upon my word, sir, I can't conceive how you can ask such a question as the one you have put to me, knowing as you do the manifold graces and accomplishments which—which adorn the person and character of my dear Angelica."

"Ah!"

"Of Miss Angelica Fitzmaurice, that is to say."

"If I may borrow a word from your vocabulary, Mr. Gobbledy, I should say you are fencing with my question. I still wait for a reply."

"Well then, with reference to your interrogatory, I beg to say, it was because—because—I—couldn't help it."

"Judging by your appearance at the present moment, I apprehend the cause alleged is still in operation," retorted the old man maliciously. Taking another pinch, he proceeded: "And you have the audacity, young man, to assert that my daughter is so prodigal of the blandishments of her sex as to ensnare you in her toils against your will."

"O, you mistake me, indeed you do; on the contrary, it was only by the most assiduous devotion that I gained her inestimable favour."

"Then why on earth did you tell me you couldn't help it? Why did you take the trouble to exhibit such assiduous devotion?" Horace had lost his presence of mind, and scarcely knew whether he stood on his head or his heels, or in a horizontal position. "Now, sir," resumed Mr. Fitzmaurice pompously, "you have fenced with a straightforward question, you have prevaricated in a most glaring fashion, and I wish to ask whether you for a moment suppose that I shall allow a Fitzmaurice to ally herself to an equivocating, a briefless—"

"No, sir, not briefless; I am in the case of Snubbleton v. Smith."

"And will Snubbleton v. Smith, think you, drag itself along for the term of your joint lives? Am I to understand, Mr. Gobbledy, that you contemplate extracting the pin-money of a Fitzmaurice from the vitals of the unhappy parties in that cause? Fie, Mr. Gobbledy!"

"But I hope—"

"And what business have you to hope, young sir?"

Here Horace Gobbledy, Esq. was completely overcome by his emotions, and regardless of dignity, threw himself at the feet of Angelica's obdurate parent. He besought him not to destroy his happiness for ever by interposing the parental authority, and with head bent in submissive dependency, he remained immovable until the sentence of doom should be pronounced. Crestfallen Gobbledy!

"Ha, ha, ha! haw, haw, haw! if this isn't capital! By Jove, Horace, you deserve to have her!"

Horace started and looked up. "Augustus Crickton!" There stood that good-for-nothing mischievous cousin of Angelica, with a white wig in his hand, and doubtless a holster for a corporation like a stage Falstaff, and rouge upon his nose enough to tint the cheeks of a company of artists.

"Ha, ha, ha!" and with a loud guffaw the unfeeling wretch burst out of the room, and rattled down the stairs like a mad lamplighter.

Horace found it difficult to forgive that. "Villain! I'll call him out," thought he. "No I won't," thought he again; "I'll hurl a chair at him." Bounce, bounce, clatter, clatter went the article of furniture down three flights of stairs. Fortunately it did not hit the rogue; but he had a narrow escape, and got less than he deserved,—didn't he, O legion of loves?

It is pleasant to be able to add, that the gentleman who veritably represented paternity on behalf of Angelica was of a very amiable disposition; and there is every reason to believe that Horace subsequently became the legal protector of the young lady in question. We venture to state, however, that prudent Gobbledy does not allude to the foregoing incident, even after dinner.

NEW BOOKS.

LAYS AND LEGENDS OF ANCIENT GREECE.*

Or "lays" the English public have had many, and of various qualities. Macaulay has gallantly sung those of Ancient Rome; and the minstrel of the Scottish cavaliers has shown in their cause a natural force and pathos which are sadly wanting in his later and more ambitious work. Professor Blackie may be held as having a special right to chant the lays of Ancient Greece,—a right given by the intellectual labour of a lifetime devoted to the study and elucidation of Greek literature. To the able and conscientious translator of *Æschylus* there are few lovers of classical lore who will not be glad to listen.

As might be expected, the present "Lays," though not without faults and shortcomings, bear the distinguishing merit in every page of an intense love and a thorough and sympathising knowledge of their subject. Many of their faults, indeed, would seem to spring from this very fact. The minstrel has such a tender delight in the story he sings, that he enlarges its descriptions and dwells on its details at the risk sometimes of exhausting the interest of listeners who lack the love born of that intimate knowledge which he himself possesses. It hardly needed the frank and genial introduction to assure us that the compilation of this volume has been a labour of love. More of the lover than the artist stands revealed in its pages, we are bound to admit; but having so admitted, and viewing the book from the point thus reached, there is much in it which will delight the lovers of classic fable. From the introduction, take the following stanzas, in which the writer discusses the "old Greek men" and their romantic mythology:

"Thus every power that zones the sphere
With forms of beauty and of fear,
In starry sky, on grassy ground,
And in the fishy brine profound,
Were to the hoar Pelasgic men
That peopled erst each Grecian glen,
Gods, or the actions of a god.
Gods were in every sight and sound,
And every spot was hallowed ground
Where those far-wandering patriarchs trod.
In the old oak a dryad dwelt,
The fingers of a nymph were felt

* *Lays and Legends of Ancient Greece, with other Poems.* By JOHN STUART BLACKIE. Edinburgh: Sutherland and Knox.

In the fine-rippled flood;
 At drowsy noon, when all is still,
 Faunus lay sleeping on the hill,
 And strange and bright-eyed gamesome creatures
 With hairy limbs, and goat-like features,
 Peered from the prickly wood.
 Nor less within that mystic realm
 Where passions swell and thoughts o'erwhelm,
 Strong-ruling powers divine
 Were worshipped. All-controlling Jove
 With clear-discerning eye did prove
 Each human heart. The thoughts that move
 To pity of the houseless poor,
 The open hospitable door,
 Obeyed his law benign.
 But when unreined wild Passion flew,
 And evil Hate sharp daggers drew,
 And deathful blows were given,
 Dream not that he who fled from man
 Escaped the sleepless eyes that scan
 All sinful doings in heaven.
 Far from the fell avengers' tread
 The blood-bedaggl'd murderer fled;
 O'er many a blasted heath he sped,
 The dewy sky his curtain made,
 No sleep might close his eyes;
 For, when he fain would rest, a crew
 Of murky-mantled maids from hell,
 Snuffing his blood, his track pursue
 And pierce his ears with baleful yell,
 That blissful slumber flies:
 Haggard he lives a little space,
 No fatness rounds his eyes;
 The Furies' mark is on his face;
 Grim leaders of the airy chase
 Perplex his path from place to place,
 Till stumbling with a blinded fall,
 With never a god to hear his call,
 The wasted murderer dies."

Then follow various of the classic legends, among which we may instance "Ariadne," "Bellerophon," and "Salamis," as happy specimens of the narrator's power. In the latter, the great naval combat between the Greeks and their Persian invaders is described with singular spirit and a rugged eloquence, very characteristic of the writer.

"Now they meet. Now beak on beak is furious dashed; and
 Sidon old
 Drives her brazen-breasted triremes 'gainst the ships of
 Athens bold.
 A moment equal; but the Athenian, in the desperate-handed
 strife,
 Wields, as patriots well may wield, a surer sword, and sharper
 knife.
 On he presses; close and closer; cloven booms and shattered
 sails,
 And the frequent-crashing oarage, mark the track where he
 prevails.
 Ocean seethes beneath their fury; and the hostile-fretted
 flood
 Yawns to drink the reeling Tyrian, and the floundering Cy-
 prian's blood.
 Sobs the wave with drowned and drowning: where the narrow
 channels flow,
 Vain the strife with death two-handed, here the water, there
 the foe."

A large degree of enthusiasm, of impulsive warmth and kindly earnestness, is manifest throughout the book, whether we turn to the classic legends or to the miscellaneous poems. Among these latter there are some sweet and occasionally fine utterances. "A Sabbath Meditation" deals impressively with high things. We must except, however, to a tendency on the part of the writer to identify the holder of a definite religious creed with the bigot. We do not believe that the illiberality deplored by Professor Blackie really exists,—certainly not as a necessary concomitant of faith. No intelligent Christian, however much he may prize the special service of the temple, restricts either the presence of his Maker or his own worship to its walls. We are persuaded that, on the whole, the heart that is most reverent in the sanctuary is also the most reverent amidst the wonders of the universe. Where it is otherwise, not the religious belief, but the narrow mind of the worshipper, is in fault. Bating this objection,

Professor Blackie has handled the general theme with great earnestness and power. Throughout the book there is often evinced a keen feeling for natural beauty. Of this sense, "The River-side" is a delightful example, but too long to quote; instead, we give this picturesque rendering of

"SOLITUDE.

Alone, alone, and all alone!
 What could more lonely be?
 'Neath the mist-wove pall of a dull gray night,
 On a treeless shore and bare;
 Nor winds' low sigh,
 Nor sea-birds' cry,
 Stirring the stagnant air;
 And only one dim beacon-light
 Far-twinkling o'er the sea.
 And the wave that raved but yesternight,
 So blustering and so wild,
 Is smooth and faint, and crestless quite,
 And breaks on the sand as faint and slight
 As the whispers of a child.
 Alone, alone, and all alone,
 By the sad and silent sea,
 On one far-twinkling beacon-light
 I look out through the lonely night,
 And only God with me!"

We like the shrewd but cordial philosophy which pervades many of the Highland and German sonnets; nor do we quarrel with the frankness, though it occasionally be somewhat rough, with which our author deals out his opinions on men and things. The charm of thorough heartiness pervades all that Professor Blackie writes. His animadversions may take a wide sweep, but we are much mistaken, if they are not enclosed within the circle of a yet wider charity and kindness.

No more noticeable reprint in poetry has lately been issued than that of Mr. Heraud's epic, *The Judgment of the Flood*. The labour, learning, and genius expended on the perfecting of such a work entitle it to be discussed with reverence. No doubt a poem so large in its design, and so elaborate in its detail, is alien to prevailing taste; but the most supercilious reader of the fast school should pause before he utters a careless verdict on a production which commanded the respect of Wordsworth, Southey, and Lockhart. *The Judgment of the Flood*, it is true, will attract none who cannot bring to it a large amount of poetical enthusiasm. It contains exquisite and majestic pictures of nature, impersonations of tragic dignity, and reveals a noble philosophy; but the author has done nothing to conciliate popular favour; and we must add, not without strong censure, that he has done nothing to help popular apprehension. The "Book of Enoch," in particular, outdoes any riddle propounded by the Sphinx; and the very terms in which its propositions are couched are only intelligible to a small school of thinkers. Nevertheless there are few modern works which recal so vividly the colossal framework of the great masters in epic song; and as a monument of patient devotion to a noble task, it stands almost alone in contemporary literature.

Episodes in the War-Life of a Soldier, and other poems, by Major Calder Campbell, claim a word of cordial recognition, as the work of a man of poetical taste and true feeling, and whose refined and gentle utterances have been lost more than was meet in the din of this age of action.

A new edition of Wordsworth's works has just been issued, with notes by himself, many of which are very valuable. These show how diligent the poet habitually was in observing nature, so that he might trace characteristics in her various forms which had not yet been described. He became early conscious, to use his own words, "of the infinite variety of natural appearances which had been unnoticed by the poets of any age or country," and he made a resolution to supply in some degree the deficiency. This was the way in which Wordsworth studied his poetry as an art, by making his mind the treasury of images taken from his own immediate experiences of the external crea-

tion, and afterwards consciously using them in the act of composition. The lesson is of great importance, and may particularly avail for the instruction and guidance of our younger minstrels. Good service to Wordsworth's fame has been rendered by the publication of these autobiographical notes.

On the other hand, a desperate attempt has been made by Dr. Maitland to pluck the laurels from the brow of the unfortunate Chatterton. The reverend doctor would degrade the poet to the swindler, and thus give one poet less to the world. He is impatient at the number of the claims on its admiration, and would considerably deprive it at least of one. An undertaking of this kind, even in the service of truth itself, one would think, could hardly be a delightful one to its projector; but when we say that the materials of Dr. Maitland are derived from a loose pencil document, purporting to be notes of the inquest on Chatterton, and that in dates and other vital statistics this document is full of the most glaring errors, we can hardly conceive what motive there could be to a labour which is as barren of facts to vindicate justice as it is of feelings to enlist sympathy. In the opinion of some persons, all enthusiasm is misdirected energy; and in Dr. Maitland's, our usual estimate of Chatterton is an especial instance of the mania. Dr. Maitland represents what we hope is an inconsiderable portion of mankind,—those who are slow to acknowledge the presence of poetical genius, and would rather find an aspiring youth,—probably "led astray," like Burns, by the very "light of heaven" itself,—to be a scamp than a Scald.

Genius has, or should be permitted to have, its family claims, where its intelligence is clearly inherited; and that it is so derived to a considerable extent in the case of the younger Thomas Hood, a cursory perusal of his *Pen and Pencil Pictures*, lately published by Hurst and Blackett, will convince any impartial reader. It may be granted that he has not yet acquired all the wonderful skill displayed by his father in the manufacture of those intellectual puns which sparkle through his comic lyrics like new revelations of verbal analogies, as if in virtue of some pre-existent harmony by which the wit and the sage were in him identified in one individuality. Nor has the son all his father's deep-searching pathos, which, in his "Bridge of Sighs" and the "Song of the Shirt," penetrates the heart in the heart, and reaches the sealed fountain of sympathetic tears in its most mysterious recesses. But with his father's name the present Thomas Hood has much of his fancy and feeling, and a tact in composition which enables him to amuse while he instructs. For in this also he resembles his father, that in trifling he does more than trifle, and under the smile hides the earnestness of wisdom. He too has the art of making all his objects live; and in this respect his taste is as oriental as it is quaint. The volume contains both prose and verse; and though we cannot afford space for citation, there is much of both highly meritorious. A gentle spirit reigns throughout in union with a humour never boisterous, equally light and thoughtful.

We have perused with much interest the first volume of *The Temple Lamp*, a serial published at Paisley, and edited by the Rev. John Bathurst Dickson, of that place, author of *Theodoxia*, one of the most eloquent of Scottish divines. Apart from matters of theological controversy, into which it is not our province to enter; the work contains kind and loving expositions of religious truth,—expositions which tend to convince and instruct,—in lieu of those barren affirmations with which the pulpit too often abounds, and which are often strong in dogmatism in the precise degree that they are weak in reasoning. Moreover, Mr. Dickson shows the excellent faculty of applying religion to matters of mental culture and social right. He does not exclude from his sympathy every thing that is not directly theological, and thus leave Christianity without a sphere for its action. He can render homage to Shakspeare, discuss the laws of imagination, and delight in its examples; nay, utter a fervent protest against political wrong, and feel that,

so far from derogating from his sacred mission, he is only fulfilling it. He sees evidences of the Creator in all that He has made, and believes that every pregnant fact of human or natural history is a contribution to Divine science.

We must not conclude without drawing attention to a work of great value, elucidative of our elder literature. We allude to a book published by Chapman and Hall, and entitled *The English of Shakspeare Illustrated in a Philological Commentary on his "Julius Cæsar."* In this excellent book, Mr. George L. Craik, the author, has treated our dramatist as a classic poet writing in a tongue the full sense of which has been impaired by time. Mr. Craik has given to every word of the play a distinct study. The lights that he brings to bear upon the text are, in many cases, very remarkable. His etymological acumen is exceedingly fine, and the abstruse points are hit in a manner which surprises and pleases. This "philological commentary" is indeed full of curious matter; and no student of our elder poetry should miss the opportunity of at once perusing this mass of learned notes and philosophical disquisition.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

King Richard II. has been produced at the Princess's Theatre with all that scenic pomp and antiquarian research which mark Mr. Kean's revivals. This circumstance invites comment, not only upon the particular play, but upon, what is more important, the general question of what may be called the Pictorial Drama.

For gorgeous spectacle,—for picturesque grouping,—for accuracy in presenting the manners and customs of a period, we hold Mr. Kean fairly entitled to very high praise. The exhibition which he offers to the public is imposing, refined, and instructive.

Nor can we see any just exception to a series of spectacles which bring vividly before the eyes of this generation the scenes, manners, and costumes of the past; provided always that no mistake occur as to the kind of merit to be recognised. Were we noticing the Princess's Theatre under the head of Fine Arts, we should have little but praise and congratulation to offer. It is only when that which is excellent in point of decoration and learning assumes also to be a dramatic excellence that we feel bound to question, nay, let us say at once, to protest.

It should be granted at once that there may be certain pictorial effects in a theatre which bring out the poet's conception. *Acis and Galatea*, as produced by Mr. Macready, with its exquisite scenery, so true in local colour, and its charming suggestions of the old classic life; the mob in *Coriolanus*; the civic gate, thronged with eager watchers while the two monarchs contend, in *King John*; the sudden glitter of a hundred unsheathed swords in protest against Duncan's murder, in *Macbeth*,—are a few instances out of many furnished by that great actor and manager, whose too early retirement we have to deplore, of the manner in which dramatic effect may be enhanced by pictorial accessories. Nor is Mr. Charles Kean's management wanting in such examples. The beacon-fires and the clink of the armourer's hammer near the usurper's tent, in *Richard III.*, and the exquisite moonlight-pictures in the *Midsummer Night's Dream*, belong to that class of illustration which may be justly commended. In all these cases the scenic illusion is an aid to dramatic interest, not a substitute for it.

Difficult as it may seem to point out in detail where spectacular exhibitions enhance the dramatic motive and where they injure it, the principle by which such displays are to be tested is a broad and intelligible one. Spectacle

is admissible and praiseworthy when it serves as a background to story, passion, and character; it is, dramatically speaking, baneful when it usurps their place. Interpolated dances, elaborate banquets and processions; corporeal angels that move in grooves and mount by pulleys, drawing the spectator from the human emotion that sees them in the "mind's eye" to the contrivances of the mechanist; panoramas of old London; long processions, where the spectator is asked to test the heraldic accuracy of every badge and cognisance; cups and mallets, fashioned after the pattern of the time represented, and inviting the scrutiny of the antiquary,—all these obtruded into the first rank of interest, are essentially undramatic, and render the conception of the poet just as subservient to pageantry and archæology as the libretto of an opera is to the music. The drama, thus treated, no longer exists for its own sake, but as a vehicle for spectacle and erudition.

It is vain to say that these objects, so prominently set forth, are mere adjuncts to the dramatic purpose. Whatever managers may think, audiences know better. We put it to the experience of every frequenter of the Princess's pit whether the anticipations that send him there relate to what he expects to *feel* or to what he expects to *see*; whether the display of the passions, the fine analysis of human motives, the vigorous interpretation of character, are not quite secondary attractions compared with those of tableaux and appointments. He looks for a magnificent picture of life without him, not for a revelation of the life within him.

Is Mr. Kean serious when he takes credit in his programme for paying homage to Shakspeare by "realising the scenes and actions which he (Shakspeare) describes"? Those actions must of course take place somewhere, but where is not a matter of vital moment. We should have imagined the highest honour to the dramatist to be the realisation of his mental conceptions, not the ostentatious reproduction of the mere localities in which his persons either did or were supposed to exist; far less in the invention of scenes and ceremonials which he never thought of. We cannot believe that the genius of the poet is complimented by a system which dares not trust to himself for his chief attraction, and which is ever striving to eke out his insufficient claims by an excuse for a show. There is surely decrepitude either in the poet or somewhere else when he can only stand by leaning on the shoulder of the scene-painter. What, let us ask, were the aids of this kind to which Shakspeare had recourse in his own day? In what framework of spectacle has he himself set some of his greatest scenes? Sometimes they occur on a blasted heath; sometimes in the gloom of a dungeon; sometimes in a churchyard; very often in an ordinary "interior." And who is there that doubts, when these crises of interest arrive, that pageantry was the last thought in the mind of the dramatist, as it ought to be in that of the spectator? Granting the propriety of some picturesque display in scenes which form the background of the story, they ought never to be prominent in the principal scenes, nor to occur so frequently in other portions of the drama as to distract attention from the human interest to its mere auxiliaries. Why, is it not the province of a great actor to make you *forget* his mere surroundings? Give him a chamber or a dead wall, and though he be but a unit, he will fill the entire stage. The eyes of all will follow the lead of their hearts, and converge upon himself. In the whirlwind of passion; in the struggle with temptation; in the pathos of some noble sacrifice,—he will disclose to you the recesses of the heart; thrill you with whatever is terrible or august, melt you with whatever is sympathetic and tender there, and from his own nature pour a flood of light upon your own, till all that is seen and felt is man responded to by man. In such cases, spectacle is at best a superfluity; more often an intrusion.

It is not necessary for us to show that Mr. Charles Kean is precisely an actor of the class referred to, nor shall we impose upon ourselves the too arduous task of proving it; but he has undoubtedly many and unquestionable merits.

If not a profound, impassioned, or imaginative actor, he is at least earnest, graphic, and vigorous; and from the advance he has already made in his art, we should be slow to set limits to his future progress. For his own sake, then, and for that of his company, we regret that he should have made the position of both subsidiary to the external appliances on which he so much depends. There is an almost artless *naïveté* in his statement, that plays which, without these aids, "only commanded occasional repetition, now attract audiences for successive months." What is this but to admit that Shakspeare, as interpreted at the Princess's, has no charm for the public on grounds purely dramatic, and that the manager's present success is owing, not to the substance of these works, but to their accidents? We think sufficiently well of Mr. Kean to believe that he would have eventually triumphed on these higher principles of art which he has discarded as inadequate.

As we said at starting, the objections taken have been urged on grounds purely dramatic. Once leave that element out of the question, once grant, as a contemporary says, that the Princess's Theatre would obtain all its triumphs won in Shakspeare's name if Shakspeare himself were dispensed with, and we have nothing but hearty praise to award.

As a pictorial resuscitation of a past age; as a gallery of historical illustration, in which the resources of the scene-room are combined with those of the museum,—such a production as that of *Richard II.* has undoubtedly claims upon the public. The actors engaged in filling up the spectacle did their task so well as to make us regret that they were exhibited for the sake of the picture, not the picture for their sake and the poet's. The expense lavished on this revival, the taste and judgment evinced, and the beauty of the result, make us believe and hope that, *as an exhibition*, it will keep the stage for many weeks. But it would be a fatal error to identify its success with that of the Drama. Should such a delusion prevail, and be adopted at other theatres, not the triumph, but the death, of the actor's art would ensue. Brilliant spectacle would but signalise the obsequies of histrionic genius; and, in such an event, the arms of Legitimacy, with the motto, "Shakspeare," should be displayed, not as a banner, but as a hatchment.

MR. WOOLNER'S "PUCK."

THE little figure of "Puck," by Mr. Woolner, which we engrave, is rich in grotesque humour. The statue exhibits the merriest subject of the "king of shadows" standing on the top of a mushroom, and with elvish fun turning over with his foot a young frog, who has chosen that spot for his batrachian meditations. See how he strides wide about the cap of the fungus, and how that grin shows the zest with which he enters into the joke of disturbing the amphibious philosopher!

The usual representations of Puck present him to us as a corpulent boy,—a great mistake, which Woolner's judgment has avoided; for here we have him as a sinewy little elf, adult, active, and strong, fit for any mischief, and precisely what both the old ballads and Shakspeare represent him; as capable of those feats of wheat-threshing for his friends, and of rude practical jokes upon others, which rendered him the terror of our ancestors in many a thorp and homestead, while they beguiled the winter evenings with tales of his freaks, and their excited fancy traced his figure in the starting shadows which the firelight cast upon the wall.

We shall take an early opportunity of speaking of other and more important works of this able sculptor.

L. L.

PUCK. BY T. WOOLNER.

LORD ERLISTOUN.—A LOVE-STORY.

BY THE AUTHOR OF "THE HEAD OF THE FAMILY," "JOHN HALIFAX, GENTLEMAN," ETC.

I.

"JEAN," I said, "Lord Erlistoun is coming."

"Is he?" said cousin Jean; not our cousin, I should add, but we called her so for convenience, to save telling the not-easy-to-be-told facts concerning her and her poor father.

"Jane, my dear," said my mother,—she would never remember to say Jean,—*"is that piano well in tune? Do see about it. And we must have the velvet furniture uncovered to-day; Lord Erlistoun's coming."*

"O yes; I'll remember, Mrs. Browne."

"Jean—O cousin Jean—Russell and I shall miss the rook-shooting. It is to be put off till Monday; Lord Erlistoun's coming."

This last of the various interruptions made Jean stop her practising. She was fond of the two lads, and they of her.

"Never mind, Algernon. The young rooks will have four more merry May-days; and, after all, I think I would rather see a worse fellow than you shooting them."

"A worse fellow? Eh? Lord Erlistoun?"

"Well, he may be; I don't know him."

"Jane—my dear Jane!"

"My dear Mrs. Browne." But mischief was too strong in the lass; her merry eye caught mine; she repeated solemnly, out of last week's *Punch*, which lay on the drawing-room table:

"To H'Apsley 'ouse next day,
Drives up a broosh-and-four;
A gracious prince sits in that shay
(I mention him with *hor!*)."

Of course I knew as well as Jean that one of my good mother's few faults was a propensity to "mention with *hor*" any member of our British aristocracy. She had it, I have heard, from the time when honest Thomas Brown became clerk to Browne and Co., merchants, with many a true word spoken in jest about the possibility of changing the final *e*; the only thing in either his name or character that in his progress upward my father ever consented to alter. She was then Susan Steel, a young milliner and dressmaker—very pretty. As Mrs. Browne, of Lythwaite Hall, mother of many children,—none now living but the two boys and myself,—she was often pretty still; and she took a pleasure

—very excusable, considering all the years she had kept herself neat and spruce in cotton and linsey-woolseys—in making the best of her good looks with handsome gowns.

She made the best, too, of every thing about her,—house and carriages, servants and plate, even to “my sons at Cambridge,”—though I often thought they all bothered her at times, especially the latter. Poor dear, the only thing she could never make the best of was me.

I was new to the splendours of Lythwaite Hall. It was only lately that my father had bought it, and settled down among the landed gentry; only lately—probably through his active labours in the Great Exhibition, which that year mingled together all classes—that I had heard of his having noblemen among his visiting-acquaintance. I was not too pleased, moreover, that any visitors should break in upon this, one of my rare visits home,—for I take a good while to become accustomed to new people; I did even to cousin Jean. Jean and I were good friends now; yes, the best of friends.

We had taken a long walk that very morning,—in the garden to the lily-of-the-valley bed, then across the park by the trout stream, and home by the rookeries, under the three horse chestnuts; for Jean said, laughing, that when her “ship came home,” and she owned a park, she would have it full of horse-chestnut trees. I remember the saying, since it quite convinced me that she and I had been, both in our speech and our silence, carrying on trains of thought and plans for the future as wide apart as the poles.

Our “ships” rarely do come home, or are meant to come home; are they, cousin Jean?

I am but a plain man, I know. There is no poetry in me: if there ever was, the Liverpool Docks and Liverpool ‘Change beat it all out of me nearly twenty years ago. Whether it ever might revive depended upon certain things, which I had tried that morning to find out, without troubling any body, or making any talk in the family. I did find them out; or rather, I found out in safe time that there was nothing to find. So ended the whole matter; and I was once again Mark Browne, eldest son of honest Tom Browne, the merchant’s clerk; belonging to a prior order of existence from Charles, Russell, and Algernon Browne, my brothers, born after a long interval, in days of prosperity. Nice handsome lads they were; well-grown, well-educated, accustomed to ease and luxury. No wonder they got on so merrily with cousin Jane, and that Jean should have such a liking for the boys.

She was fond of my mother too, and humoured her peculiarities admirably; followed her this morning from chair to chair, taking the covers off with a most domestic and inexhaustible patience, worthy of a “poor relation;” and then with a lively spirit, very unlike any poor relation, bursting into a song or two for her own entertainment.

“Just stop one minute, my dear; don’t you think Lord Erlistoun,” &c.

And having stopped and settled the important question, Jean was off again with her ditty,

“O no, O no, says Earlistoun,
For that’s a thing that maunna be;
For I am sworn to Bothwell Hill,
Where I maun either gae or dee.”

“Mark, who is Lord Erlistoun?”

“Just Lord Erlistoun; I know no more. What were you singing about him?”

“O, that Earlistoun was quite another person; an old ballad-hero of mine. Nobody you know, nothing you would care about.”

Sometimes Jean was mistaken. She knew much that I did not know; but that was no reason why I should not care about it. True, my learning and my literature had been chiefly in ledger and cash-book, like my father’s before me; and until lately, in the incessant whirl of money-making, I had had little leisure for any other interests. Still Jean was mistaken.

But I did not contradict her. I let her sing out her song,

and watched her sitting at the piano in the green-shaded drawing-room, with one slender sunbeam sliding across the Venetian blind, and dancing to the music on the top of her head. Ah, bonny cousin Jean!

To return to Lord Erlistoun.

It had since struck me as one of those coincidences we afterwards trace with some curiosity, that Lord Erlistoun should have first appeared at our house on this day. He was not expected till the morrow; and I had gone to my room. When my mother tried to open my door, it was bolted, for a wonder.

“Mark, do go down; your father’s out, the boys gone walking with Jane, and I’m this figure. O dear me, what shall I do, for Lord Erlistoun’s come?”

Yes; there I could see him from my window, lazily walking up and down, or leaning against the portico,—a tall slight young man, in a gray shooting-dress and a Glengarry bounnet. Nothing very alarming about him, as I hinted to my mother.

“Nonsense, Mark; for shame! Only do go down-stairs.”

Usually I dislike strangers, and especially “fine” strangers; but this morning all things appeared the same to me, and all people alike. The only thing worth doing seemed the simple necessity of small every-day duties, as they lay to my hand.

“Mother, don’t vex yourself; indeed I’ll go. How long am I to keep him out of the way?”

“Until dinner-time, if you can. Mercy me, and there’s no game to-day for dinner!”

I thought, what mere trifles do women, even the best of women, sometimes seize on to worry their lives out! But I went down.

“Lord Erlistoun, I believe?”

“Mr. Browne. I beg pardon, Mr.—”

“I am Mark Browne. I am sorry my father is not at home to welcome you.”

“All my own fault, indeed; I mistook the day fixed for my visit. Still, may I intrude?”

His manner presupposed an answer, the only one possible. Probably his society was not usually considered an intrusion. I bade him welcome; and we shook hands, with a mutual covert inspection and dim recognition of having met somewhere; but no allusion was made to that prior acquaintance by either.

I remembered him distinctly. We of the hard-working classes seldom see, even among our women, seldomer still among our men, that noble yet delicate outline of face which is commonly called “aristocratic;” not unjustly either, for it is the best type of mere physical beauty. We rarely boast—we poor fellows, stunted in early growth by toiling in close offices and living in town-homes—such lithe tall figures, combining the strength of manhood and the grace of womanhood, even down to the long hands and almond-shaped nails: I remember noticing them. No; each rank has its peculiar advantages; physical development rarely belongs to ours. It depends on chances frequently out of our power, or prior generations, who bequeath us their personal type to start with; afterwards on rearing, education, and modes of life.

I saw at a glance what any sensible man must see, nor need be ashamed or afraid to see, that for certain qualities you might as well institute a comparison between a working-cob and a race-horse, as between Lord Erlistoun and Mark Browne. Perhaps the instinctive train of thought which led to that comparison, or rather distinction, indicated too much self-consciousness in me. But there are positions when a man will and does think of himself, and compare himself voluntarily or involuntarily with other men; such a one was mine this day.

“This is a very pretty place,” said Lord Erlistoun.

He was correct; many a nobleman’s I have seen not half so fine. My father took great delight therein; and it was not without a certain satisfaction that I did the honours of it to our guest—through gardens, conservatories, plea-

sure-grounds. There was a pleasant pride in showing to Lord Erlistoun that we also—we money-makers—could love nature and art, and expend wisely and liberally what we did not inherit, but earned. And in going over the place I was myself forcibly struck with the whole thing,—with my father's princely style of expenditure, and with the contrast it formed to the little dark merchant's office in Liverpool, which originated and maintained it all.

Sometimes I thought uneasily that—but a son has no business to comment on a father, on so excellent a father.

Our walk came to an end, likewise our conversation. We talked over the state of Europe, the Great Exhibition, &c.,—topics which were possible meeting-points,—until they successively fell dead. I am not a conversationalist myself, but I like to hear others; and am obliged to own that I found Lord Erlistoun's company rather uninteresting.

I left him safe in his apartments; whence, to every body's relief, he did not emerge till dinner-time.

He must have found it a dull meal; my father still absent, my mother, brother, and cousin being all I could introduce him to. I remember the boys, strong in Cambridge ease and "knowledge of the world," coming readily forward, till quenched by the grave politeness which it was impossible to make free with; and my mother, whose hearty apologies for "pot-luck" were met by a smile which expressed by its very reserve the most amiable ignorance of what "pot-luck" might be.

My dear good mother, hot-checked and hurried; a little too warm and too fat for her light-coloured silk dress, and her white gloves that would not come on properly; with her uneasy attempt at ease, and her incessant stream of talk, in which the "If"—that unlucky letter, which we had never yet succeeded in safely impressing on either her or my father—appeared and disappeared at pleasure;—I wondered what Lord Erlistoun thought of his hostess.

Possibly nothing; for no outward indication testified that he ever had any thoughts at all. I have seen close-tempered men—iron-visaged fellows, whose faces were as hard as a locked chest, but then you guessed from that very fact that there was something inside; proud sensitive men, who tried to wear a countenance like a mask, yet through which now and then, by some accidental flash of the eye, you felt sure it was a mask, with the natural flesh and blood behind it;—but I never in my life saw such a smooth, courteous, handsome negation as Lord Erlistoun's physiognomy seemed this first day of acquaintance.

"What do you think of him, Jean?" I said, when my father having returned late, I was free—free to settle myself in the usual corner, and watch Jean going about her usual evening's ways, which she did not alter, nor seem to intend altering, for our grand guest. She had merely bowed when I introduced him to "my cousin." She was not usually much noticed,—and something in her manner rather evaded than attracted notice,—when we had company. And yet it often seemed, to me at least, as if she, of the whole family, looked most at ease, most natural, in the beautiful rooms of Lythwaite Hall.

"What do you think of him?" I repeated, as she stood by the tea-table, ending a long discussion, by persuading my mother it would be much better to let her make the tea, as she always used to make it, country-fashion, in spite of Lord Erlistoun.

"What do I think of him?—wait a minute. (John, leave the lamp there.) Yes, I think him very handsome, and remarkably well dressed."

"You are jesting?"

"Not at all. The latter quality is no mean one. Any man can dress like a dandy; but it takes a man of some taste to dress like a gentleman."

"And his manners?"

"I have seen worse, and better."

"My dear Jane, how can you judge? So elegant, so polite; accustomed, as one might at once perceive, to the very highest society."

"But, mother, Jean has been accustomed to good society too."

"I was accustomed for six-and-twenty years to my father's." She said this with pride, yet no unholy pride. I saw the tremble on her lip, and hastened to talk of other things.

Once in my life I had seen Jean's father. He was not a man ever to be forgotten, even by a mere lad. Why he married into the Brown family, or whether the Emma Brown he chose had qualities in herself enough to make her his fit wife, and Jean's mother, I never could learn. She died early. We never heard of either father or daughter,—save that occasionally we saw his name in newspapers and magazines; and my father would say, "That's surely poor Emma's clever husband,"—till we heard of him one day in a newspaper obituary. "Authors usually die in poverty; but by some means he had secured enough to leave Jean mistress of about fifty pounds a-year. My father brought her home for a visit; and then somehow we couldn't part with her. This was all her history that I knew of."

Of herself—she was a tall dark-haired girl. People did not generally admire her, at least our sort of people; bright complexions, plump figures, well set-off by gay dresses, were their notions of beauty. If the Parthenon Athene (I have a head of her, which I bought at an old-curiosity shop, on account of some turn of the brow and trick of the hair which reminded me of Jean),—if Athene herself were to appear at one of their parties in a high black silk-gown, a little white frill round her throat, and not a ribbon or jewel on neck, arm, or finger, they would doubtless have called the goddess a "rather plain young woman," as I have heard Jean called.

A "young woman" she decidedly was, not a girl. She had seen a good deal of the world, in London and elsewhere; her character and manner were alike formed; that is, if she could be said to have a "manner," when, under all circumstances, she was so simply and entirely natural; not always the same,—few people are, except the very reserved, the sophisticated, or the dull,—but in all her various moods she was—as alone she cared to be—herself.

There was no pretence about her; no tendency to petty or polite humilities. I think she knew she was *not* plain, and was rather amused by the ill-educated taste of those who considered her so. I think, too, that, in a harmless womanly way, she took pleasure in her own classic features, large and noble,—her father's features,—and in her father's beautiful hereditary hands,—for his sake partly. She was the sort of woman to have something true and good at the root of her very vanities.

I describe her as she was to us who knew her; not to strangers. She rarely "came out" to strangers; or, except when she was really interested in them, made any show of appearing so. Nor, in the extremely quiet mood she was in to-night, was I surprised that Lord Erlistoun merely noticed her face (he, accustomed to art, must have seen it was handsome) as if it were a picture or statue, and quitted it. She bore the look; or was unconscious of it, with those "level-fronting eyelids" of hers, full of other thoughts—sometimes thoughts evidently far away. She had had a hard life, you saw that; she had gone through a great grief, you saw that too, at least some might;—but so much discernment was probably not to be expected from a young man like Lord Erlistoun.

"How old do you think he is, Jane?"

"Who? Lord Erlistoun? Really one can hardly judge so speedily. But 'Burke' will inform us, Mrs. Brown."

"I told you, my dear, that was by no means a useless purchase," said my mother, turning over with no displeasure our till lately unknown necessity, the book which some satirist calls the "British Bible." "Here it is: Nugent, Baron Erlistoun. Dear me, only twenty-four! just Charles's age; younger than you, Jane."

"Yes."

Here the subject of discussion unwittingly ended it by opening the drawing-room door, looking rather tired, but

still listening with the blandest courtesy to every word of my father's. Now my father's talk was always worth listening to; but then, like most old men, he had a trick of long-windedness; and it is trying to have the wisest sayings and the best of stories half-a-dozen times over. The young man turned, perhaps a little too quickly, to my mother, when she came to the rescue; and there was just the slightest shade of personal interest, beyond his invariably polite interest in every thing, when, among the long list of people whom he "had not the honour of knowing,"—the *élite* of our friends, whom my mother had anxiously invited to a dinner-party for his entertainment to-morrow,—she chanced to light on some whom he did know. "Lady Erlistoun" ("my mother," he explained) "was acquainted with the bishop and his lady; very nice people."

"Charming people!" (Ah, why so ecstatic, good mother of mine, for you had only dined there once, I know?) And that sweet little niece of theirs,—she's not out yet though,—the heiress, Lady Emily Gage. You know her, of course?"

"Lady Erlistoun does. Allow me;" and here Lord Erlistoun rose in a languid manner to bring my mother's cup to the tea-table. It cost him some trouble, and her a thousand apologies; but Jean's eyes had a spice of mischief in them as she looked on.

"Don't stir, Mark. A little exercise won't harm him. Let him do at Rome as the Romans do."

He stood by while she filled the cup, made some slight remark or acknowledgment, and retired. Then, in great dearth of entertainment, and with a dead heavy atmosphere of restraint creeping over the room, he was set to whist with the parents and Charlie till bed-time.

Jean and I contemplated the party in silence: my mother's round, rosy, contented face; my father's, rather coarse and hard-featured, but full of acuteness and power; and between them this elegant young man, whose exquisite refinement was only one remove from, and yet just clear of, positive effeminacy.

"I wonder what on earth he came here for," Jean said meditatively. "He must have had some very strong motive, or be sadly in want of novelty, before he—"

No, cousin, you need not have hesitated; I traced your involuntary thought; I too was aware of what our house was and its ways, also how they and we must necessarily appear to one so totally different from us as Lord Erlistoun. It is folly to disguise an abstract truth; I never do.

"I see what you would say, Jean;—before he came among such inferior folk as we are,—he, accustomed to the high breeding of fashionable life. That slow, listless, faultless manner of his, which I perceive is fidgeting my poor mother beyond expression, is, I suppose, high breeding? You know."

"No, I am glad to say I do not know. Mark, you ought to be ashamed of yourself" (and I was, seeing the indignant colour flushing all over her dear face). "I do not know, and never mean to know. What have I to do with fashionable life? I know how good you are, all of you; I love you."

Ay, Jean, speak up, frank and warm. Surely you loved us, every one, and all alike.

After Lord Erlistoun had been lighted duly to his repose,—and the greatest nobleman in the land, as his hostess privately avowed, need not have desired a better furnished or handsomer chamber,—we began to breathe. Of course we "talked him over," as families will among themselves,—and, thank Heaven, with all our increase of fortune, we had never ceased to be a family. Jean, stealing slowly into the place of the little daughters who had died, or else by the natural force of her character making a place for herself among us, took her due share in the discussion. She gave full merit where merit was; but was severe and sarcastic upon various small peculiarities which had struck the family with unacknowledged awe, namely, that under-toned soft drawl, that languid avoidance of the letter R, and that nimini-pimini "O."

"I should like to compel him for once into a good honest English round "O" of either pleasure or pain. Boy as he

is, I wonder if he is still capable of either, or of the expression of them. I wish he may be."

"Not altogether a kind wish, Jean."

"Yes it is," she said, after a moment's thought. "Any pain is better than stagnation; any expression of feeling better than the elegant hypocrisy which is ashamed of its existence."

And then she turned laughingly to put her arm round my mother's neck, and tell, apropos of nothing, how twice that day she had been addressed in the village as "Miss Browne."

But no, Jean, you could never have been my mother's daughter. I saw clearer than ever to-night that something in your mien, manner, and tone of thought which made you distinct from all of us. Perhaps you knew it, too, much as you loved and respected us, honest honourable Brownes.

So thought I; and my thought had a truth in it, but was not the whole truth. "Each after his kind" was the original law of things; and that "like attracts like" is no less an absolute and never-to-be-ignored law. But sometimes we decide too hastily, and with mere surface-judgment, upon what it is that constitutes similarity.

A WORD ON MR. THACKERAY'S LECTURES.

By this time almost all our readers will either have heard or read of Mr. Thackeray's lectures on the "Four Georges," and have done battle for or against him, accordingly as their dispositions and occupations may have inclined them. We say occupations, because we believe that they have a great deal to do in the matter, and have considerable weight in the manner in which men are disposed to view both historical characters and social questions. It is natural that those who live by abuses should have small love for those who rise by abusing abuses. Could one wish it otherwise? Thackeray has been unsparingly condemned, not only for the subject of his lectures, but for the tone which pervades them. Apart from all narrow-minded considerations, there are reasons appertaining to professions which almost infallibly determine men on one side or the other. "Are you going to hear Thackeray?" demanded one gentleman of another. "No, I am not going to hear the Royal Family abused." "On the contrary," returned the first speaker, "I go to hear how well they can be abused." We do not think clergymen as a body have admired them. The Evangelical section fell foul of his portrayal of George III.; the High Church party demurred at the taste and propriety which disinterred the iniquities of the Fourth George. What Conybeare denominates the Broad Church in general testified admiration and approval. Literary people shared these sentiments; and with them were ranged most young thinkers who had any thing good and hopeful and enthusiastic about them: for the natural attitude of youth towards sycophancy, intolerance, and profligacy, is undoubtedly that of stern aversion. With respect to the fairer sex, opinions were divided. Thackeray is infinitely tender and pathetic on women, and yet they do not seem properly grateful to him. Perhaps they are not commonly sympathetic with a sarcastic writer, and do not quite enjoy hearing men so trenchantly dealt with, and their *beau idéal* so pitilessly dispelled.

Nevertheless these lectures have attracted large audiences, not only in London, but in all our principal cities and towns; and in Edinburgh especially, where the fashionable world,—who pride themselves on being more scientific than the philosophers, and more literary than the *literati*,—the *élite*, attended in enormous numbers. Large proportions of the middle-classes contributed; and shopkeepers, artisans and working-men, and women were not behindhand; and the applause from horny hands which followed any good sentiment was hearty and unmistakable. Those who expected a brilliant, sarcastic, fashionably-dressed man were woefully disappointed. To our mind, he presents the appearance of a profoundly sorrowful man, who has discovered

for himself the truth of the preacher's saying, "All is vanity and vexation of spirit." The expression of his countenance seems to say, "I know the hollowness and weariness of all things; and the worst that can befall me I can bear and despise." Of course every question has two sides to it; but, in truth, we conceive the censures passed on Mr. Thackeray to be unjust as far as these lectures are concerned. No spirit of malignancy is betrayed, no democratic turbulence taught, no making the right appear wrong, or the wrong right. There are touches of the finest irony and of the most exquisite pathos.

The lives of the Four Georges have passed away into history. Nearly thirty years ago the last George died. The virtues of the Third George are not forgotten; the vices of the Fourth George have left their trace, as all bad actions do, especially when done in high places. Profligacy was then in fashion; and surely the stern bitter invective of genius is well employed in lashing that dastardly vice from its position. We honestly believe that Thackeray has done more than any other writer to make young men ashamed of being bad. He has taught them that it is not very difficult, not very fine, to be false to woman; that to seduce and swear and drink and gamble, to cheat and run into debt, to dishonour what they profess to honour, are but poor accomplishments, and such as a man with a very poor head, a very little spirit, and no heart at all, can easily practise. He has taught this systematically in his books; and if the lesson can be more forcibly impressed by portraying the last George, we say it is well done; and if it saves one young heart from sorrow and shame, one man from guilt and remorse, it will not have been done in vain. If he has shown us that goodness may exist along with a monotonous, dull, and tiresome life, he has also demonstrated that wickedness is not essentially lively or clever, but often more stupid and brutal than any thing else. Is there no moral to the intolerant or greedy of the present day in this passage? "What wonder, then, that there should have been a Whitfield crying in the wilderness, or that Wesley should quit the insulted temple to pray on the mountain-side?"

How fine, and yet how mournful, is the sarcasm when he speaks of Walpole's times, and of the ladies and gentlemen!—"the fine gentlemen who made coarse jokes, and the fine ladies who listened to them, and laughed at them." Is there not a lesson which speaks to all in the stern brevity with which he records the death of George II.? "At length the fit came which choked the old man. On the 25th of October 1760, his page took his chocolate into his bedroom, and behold, the king was dead on the floor." We need not multiply quotations which are probably already familiar to our readers. But a long time hence, when the shadows of many years shall have fallen over us, and made us less prejudiced; or when, as is more probable, we shall be fighting for the same things under other names, these historical readings of Mr. Thackeray will be regarded as more profound and true, and perhaps as brilliant as any of Mr. Macaulay's vivid descriptions.

IGNOBLE CARES.

BY THE AUTHORESS OF "THE HOUSE OF RABY."

"PLAGUE, pestilence, and famine; battle, murder, and sudden death;" an unrequited love, a betrayed love, an unworthy love; the death of those we hold most dear, solitude in life, political or social dishonour,—all these things, and such as these, are recognised as great afflictions; and the cares and pains which they entail no one feels to be ignoble. They call into exercise the highest powers of our nature; they set us face to face with God, and rouse the hope of immortality. We are carried by them out of the paltry every-day interests of this earthly life; we forget our lowest needs and greeds in the gratification of the higher. Sufferings of this kind dignify our humanity. Through them man ob-

tains his ideal conception of the hero and the saint. The man of great afflictions and noble cares walks the earth with self-respect, and, though sad, may still feel that he is but a little lower than the angels. Alas! that such a creature, whose thoughts can wander through eternity, whose best passions dilate his mortal heart, so that he feels like a god, and knows no end to his powers,—alas! that he should ever be a slave to ignoble cares, that a Man should ever be troubled in spirit about five-and-ninence to pay a milk-score!

For the want of "so much trash as may be grasped thus" is the joy of life taken out of a man. The poor in purse are too often made the poor in spirit, though not in the evangelical sense.

It is all very well for people to try and put a good face upon the matter in public, and to talk big about

"The glorious privilege
Of being independent;"

or to demand, in a British tenor, and a white neckcloth,

"Wha sae baso as be a slave?"

But let some invisible little demon go about whispering in the ears of speaker or singer and his audience, "*How about the payment of that little bill that the man will call for to-morrow?*" Such a question will take the light out of their countenances; at least out of ninety in every hundred, so wide-spread is the tyranny of one class of ignoble cares. The other ten per cent are of the jolly-dog kind, or of the systematic dishonest sort, who are neither of them troubled about the payment of debts until they are in prison. Their cares are of another ignoble kind, and shall have a few words presently.

It is many years now since I came to the belief, that what are called the great afflictions of life are easier to bear than the small worries; that it is positively less painful to die by a sword-thrust through the heart than by innumerable flights of Lilliputian arrows lodged in all parts of the body. Ridiculous and contemptible sorrows require a double portion of fortitude or insensibility. They have a poisonous quality which is most injurious to the best natures.

I sat last night with Forster's *Life of Goldsmith* on my knee, after I could read no more from pity and shame. I stared into a great fire, and grew cold at the remembrance of that man's youth. He had no great sorrow, no grand tragic trouble, to cast about him like a pall of state, and to add a dignity to his manhood. He had few cares in life but those ignoble ones that sprang from the necessity of earning a living. To think of him bound as a slave to such wretches as Griffiths and his wife, is far more terrible and pathetic to my mind than the thought of the tortures of Regulus or of Joan of Arc. There is a horrible mockery, a sort of devil's dance on the prostrate soul of the poet, in the details of Oliver Goldsmith's poverty that does not strengthen the reader's heart as stories of heroic deeds do; they only make it rebellious and antagonistic to suffering.

After deeply meditating these things, and finding no end, "in wandering mazes lost;" having indulged in temporary Manichæanism, and a satirical view of the origin of evil, I returned once more to the point from which I had started—the contemptible meanness, the sordid trials, the ignoble cares, that environ our human life. These, be it ever remembered, are not the portion of the highest, the choicest spirits of the earth, solely; on the contrary, if they be made to succumb for a time to such a plenipotential tyranny, how much more are inferior natures kept in subjection thereby! For ordinary men and women, in this hollow civilisation of ours, the ignoble cares of life are like the circumfluous ocean to the earth. They compass it round on every side. In ceaseless waves they grumble and roar and dash against it now; then again there is a lull; the shore forgets the storm, and man forgets the taxes and the butcher's bill, the *dicta* of Mrs. Grundy, and the pitiful ambition of making a figure in her world. But still the sea is there, and will vex the shore again to-morrow; there too are the ignoble

cares of life, biding their time to wash over the soft and lowly, and to undermine the lofty and strong hearts of men.

The ignoble cares connected with the want of money are among the most destructive of true life among us at the present time. It is very easy to talk like great philosophers about being content with such things as you have; but it is not so easy to be content. For instance, to be content when you see your children grow weak and sickly for want of change of air and natural exercise, which you can't give them for want of money. In a thousand smaller matters it is not easy for even very rational and uncovetous people to be content with what they have. Suppose you have but sixpence, and a friend wants to borrow a pound of you to pay for a train immediately to go and see his dying father; suppose you yourself are invited to meet some old school-fellow now become a great celebrity, and feel yourself bound in conscience to refuse, because you can't afford the journey or the time, which is money also; suppose you are walking in London with a lady, and it begins to rain;—she proposes that you should call a cab, and you are *sans sous*: a great philosopher might be content to tell her so; but an English gentleman would find it difficult to do it.

People of the Poor-Richard school, who preach to you about the happiness of spending only nineteen shillings and elevenpence out of every sovereign you possess, and the misery of spending twenty shillings and a penny, are in the right to a certain extent:

"Such dire results from trivial causes spring."

But to such persons it would be useless to talk about the impossibility of practising their doctrine in any given case. In a question of expenditure they see nothing but financial facts, moral right or wrong; moral comparisons of better or worse they do not entertain. Your income is so much; the whole is consumed by the yearly necessities of your family. Your wife is pining away; she should have good medical attendance, and other costly aids to restoration. "She must go without it," says your rigid economist; "for you must not run into debt." "But she will die if I do not." "O, but you will have lived within your income." "I would rather run into debt, and take my chance of getting out again," says the husband. Blame him who will. Some of us would be very sorry to cast a stone at him; some of us, too, who hate debt cordially as the fruitful parent of ignoble cares.

"Out of debt out of danger," is an excellent prudential maxim; but let prudent people remember, that prudence is not the highest virtue, and that the post of danger is sometimes the post of duty and honour. Let not every one who is able to live within his income hug himself in the notion that he is a wiser and a better man than every one who has tried to do so and failed.

But, ah, my dear friends, not of the Poor-Richard school, I shall sing in another key to you. Beware of debt. It is the most insidious fiend that roams the earth seeking the ruin of souls. Suffer hunger, mortification of vanity, nay, of affection; labour hard—yea, over much—but keep clear of debt. Once in the clutches of that first-born of Mammon, and you begin to lose your freedom of soul. The small sums that you can't pay pursue you (if you have a delicate sense of honour) like gadflies. You may be light of heart in poverty, but not in debt. Small worries accumulate like curses upon the household that can't pay all liabilities. Sensitive, noble-minded people are reduced to sordid thoughtfulness. Base cares drive away fine fancies; and small anxieties oppress their spirits, so that things lovely and of good report touch them not with joy.

To the man of letters, to the artist, ignoble cares of this sort are supposed to come as a sort of birth-wrong. And a most cruel wrong they are to him, as the lives of great men in literature and art abundantly show. Prosperous "ledger-men" are scandalised at the extravagance of authors and artists. They do not know that it is a very extravagant thing to be poor; that want forces honest people to go into

debt, which is only less extravagant than dying, when the creature who would die is an uncommonly valuable human being. It is sad to think of the many fine intellects and brave hearts that have been worsted in the battle with ignoble cares of this sort.

Even among ordinary men and women, as I said before, how much of their sorrow in life is caused by what are called trifles—cares for things ignoble, yet inevitable! How a man despises himself, too, for being worried by trifles! How angry he gets with his wife for being worried too! Is it possible he can't resume his study, or his letter to a friend, because of the tax-gatherer's knock, or the tailor's request for 20*l.*, which he has not in the house?

Getting a living is sometimes nothing but a succession of ignoble cares, destructive to life in the true meaning of that glorious word. For there is a great difference between *living* and getting a living; as great a difference as there is between getting a living and not being able to get it, between being content with the meat that perisheth and not being content.

There are other ignoble cares which spring from money. There is the stupid and vain care to hide that you can't afford to spend money as your richer acquaintances do; and the stupider care to spend in ostentation what is pinched out of healthful comforts. We know ladies who will keep a man in livery, while the household shivers over scanty fires, and grows thin on *soupe maigre* and rice.

It is almost as ignoble to care about having things because others have them, as it is to seem to have them, on that account. If people were but impressed with this truth, many fictitious wants and ignoble cares would be cleared away from the lives of sensible and earnest men and women, who would then lead their own lives, careless of the remarks of their neighbours concerning such "strange disregard of appearances," such "very odd ways," &c.

I also reckon among ignoble cares the heaping up riches in order to found a family, as it is called; and the living not to *be*, but to be rich.

There is also a very ignoble care about the salvation of one's own soul, which is quite different from the noble care for the same object.

The best cure for ignoble cares is to rouse a care for noble and excellent things in the mind; and to be on one's guard against those self-indulgences and careless habits which put us in the power of small circumstances. Let no one desire a life free from care or responsibility. That is not true human life; that is the life of a slave. We cannot all

"Scorn delights, and live laborious days,"

because most of us lack the power as well as will to do so. Very few men in a generation are born to care for the race, for a nation, or for a new truth; those few are free from the tyranny of ignoble cares. They may fail, they may be disgraced in the eyes of men, they may be poor, reduced to beggary, they may even die of starvation; but they will be always free from ignoble care, because free from the selfish weakness which is the essence of ignobility, as loving strength is of magnanimity. Belisarius, blind and begging his bread, was still the noblest Roman of his day.

Women are supposed by better men than Iago to be by nature condemned to ignoble cares, which may be briefly summed up in the well-known words:

"To suckle fools, and chronicle small beer."

But how if instead of fools they suckle wise men? Socrates and Pythagoras, Solomon and Confucius, had nursing mothers once; and theirs, I take it, was no ignoble care. As to the chronicling of beer, if they brewed College ale and Dublin stout, would men deem that an ignoble care? Do they not even take it upon themselves to chronicle much small beer of their own brewing?

The uncertainty of men's minds, and the vanity of human wishes, are forcibly set before me in the above remarks. When I began to write about ignoble cares, the subject

seemed full of matter for light jesting, and rich in absurd incongruity; but a little more reflection made me see it in its true light. The lets and hindrances, the petty annoyances, and the sordid anxieties of this wonderful human life, are not fit themes for fun, unless looked at only on the surface. I could not look only on the surface, because I have too often been obliged to work, and to see others work, below it, among these same ignoble cares, from which may your life be as free as is good for you, O gentle reader. And so farewell. Another time you and I may be more inclined to laugh at this matter than we are to-day.

POLYGLOT READINGS IN PROVERBS.

GIVE A DOG AN ILL NAME, AND HANG HIM.—"I'll not beat thee nor abuse thee," said the quaker to his dog; "but I'll give thee an ill name. Hallo! mad dog!" "He that bath an ill name is half hanged," says another English proverb; and a French one declares with a still bolder figure, that "Report hangs a man,"—*Le bruit pend l'homme*. The Spaniards say, "He that wants to kill his dog has but to impute madness to him,"—*Quien á su quierre matar, rabiale ha de levantar*.
W. K. KELLY.

WORKHOUSE VISITING.

SEEING a paper in your very agreeable NATIONAL MAGAZINE (which I have taken from the beginning), on workhouse visiting, I thought you might like in the Homo column to insert my own remembrances of such visitings. They may make some of our young friends anxious, like Una of old, to make "sunshine in a shady place," and take a few happy moments with them to the poor secluded ones there. I have been myself a constant visitor for six years past, and never am so affectionately welcomed as by my poor friends in the hospital-wards of our large union.

When I first went there it was dull vacuity: nothing to do all day long among the invalids and "poorly folk." To see from their window the parish-horse preparing for a funeral journey, was their only living change, and would furnish conversation for days. This shocked me. I proposed to them to make me some patchwork; they jumped at the idea. I bought about ten shillings' worth at our draper's—all kinds of old-fashioned and modern patterns; drove up soon again, and laid the treasures on the bed of one hopelessly crippled. Never did I see greater delight. "There now! wouldn't I like a dress of that?" "La! if I hadn't an apron of that pattern." "Bless my heart! it do do one's eyes good to see such pretty things once more." The next time I went up, half-a-dozen were on their knees arranging the colours and patterns. "Bless'ee, ma'am, we've a-been happier over this 'ere work than ever we were afore." And so it was. Even the mistress entered into it; helped them out with scraps of her own; and "sunshine" came into the dark dull ward. I have now by me, on my servants' beds, two of these delicately-arranged counterpanes—really beautiful in their design and execution. The joy of showing me how they had got on, the anxiety to get a light bit to finish some effect, the sense of rising in the morning with something to do, was inspiriting to them. I used to go, take my chair in the midst of them, read them *Uncle Tom's Cabin*, or books of some interesting kind, for an hour. Then all work put away, they would listen to me like little children while I read them a few earnest words from God's book, followed by a five-minute prayer—such as one would utter

to one's darlings circled for the purpose round mamma's knee. Many a sob have I heard as I have mentioned them individually—"poor old Bridget," "the crippled Sarah," &c. Then the hearty shake of the hand, the loving look, and the burst of, "Now do'ee come again soon," sent me back to my happy home happier still from the sense of having been permitted to "soothe Creation's groans." I established a regular system of book-lending from one ward to another; using my own books—such as *Robinson Crusoe*, *Pilgrim's Progress*, *The Wide, Wide World*, &c. This was something to amuse the weary day; and then to talk to me about it afterwards was the great charm.

I never shall forget singing to them on one occasion a simple hymn,—beginning, I think, "There is a happy land." A poor idiot-girl who always came,—but, as I thought, mindlessly,—burst into tears, and exclaimed: "My mother, my mother; O, come to poor Mary!" They want humanising; they need the gentle influence of a lady's visiting. They like to see a well-dressed lady come among them. They dreamt of me, of my house, &c., envying the servants who lived with me; brought me their little quarrels when I came, for "our good lady to set them right." I found them living an aimless existence, and provided them with interests, simple and utterly inexpensive; and, could any of your young readers have looked in yesterday on my sweet young daughter and myself going among them, they would have felt with Trench—

"A solemn yet a joyful thing is life,
Which, being full of duties, is for this
Of gladness full,—and full of lofty hopes."

My child picked out of the hedge, going up, a few green leaves, and placed them in the cripple's hands; and how her face brightened as she said, "It do seem so good to see a bit o' green!" Should you wish to hear more, I could tell you more—much more. Enough, if I can rouse one earnest-hearted woman to mitigate such dull woe as is found in workhouse-wards.—I remain, &c.,
AN ENGLISH LADY.

GROUND AND ENAMELLED GLASS.

[THE writer of the following paper objects to the process previously described by "Alpha," and speaks, he says, from a practical experience in the calling of twenty to thirty years. We give his own plan.]

To imitate this, white-lead of itself is too chalky and painted-like. Take a little patent dryer, with the least particle of white-lead to give it body; tint to a light-gray with black; thin with one-third raw linseed-oil, and two-thirds turpentine, to the consistency of milk; and, after cleaning the glass well, proceed to lay on the colour with a short-hair brush in the ordinary way of painting, but with as little colour as it is possible to cover the pane. Cross it and recross it till it be regular all over; then take a piece of old silk, fold it neatly up without wrinkles, dab it gently and regularly over the pane; this done, let the paint dry. Prepare pounce (which is the design drawn out, and pricked with a fine needle, on paper, to size of pane), and pounce-bag, which is finely-powdered charcoal tied up in a piece of flannel. Lay your design on pane; dab it over with pounce-bag, which you may do with freedom (the paint being dry will resist the pressure, and no injury be done to the paint); after which trace the mark left by the pounce lightly with a black-lead pencil; dust off the loose charcoal, and you have the design neatly sketched before you. Or you may obviate the necessity of pouncing altogether by drawing your design on paper with ink, and placing it outside the pane to be ornamented, and follow the drawing inside with pencil. Then take your pieces of hardwood-sticks, sharpened to the necessary thickness; breathe gently on the part you intend commencing at, and repeat as you proceed. This softens the paint, and allows the lines to be sharp and clean, which is the principal beauty in enamelling.

Thus you may execute any design, however elabo-

rate, at your pleasure and convenience; whereas, by Alpha's method—drawing the points on the wet paint—you raise the paint on each side of the lines, which conveys the foul proof that it is painted. And, according to his manner of mixing up his colour, you must finish your ornament before leaving, otherwise it will dry, and of course the labour will be lost. In conclusion, after having finished the ornamental work on the panes, take crystal or mastic varnish, with which coat the panes. This will prevent the paint being rubbed off by accident or otherwise; and it may be washed carefully with soap and water.—I am, &c. OMEGA.

deed, in all except the delicate blue of the upper surface of the wings, —which were of a deep rich brown (figure 3). From this circumstance I had imagined it a distinct species, which was excusable enough in a mere tyro; but I soon ascertained that it was the female of the *Polyommatus Alexia*, just described. The colours of many of our native butterflies differ similarly in the opposite sexes, as the "Purple Emperor" and the "large copper;" but in no other genus have I yet met with the peculiarity about to be described.

BRITISH INSECTS AND THEIR METAMORPHOSES. II.—THE COMMON BLUE BUTTERFLY (*Polyommatus Alexia*).

BY HENRY NOEL HUMPHREYS,

AUTHOR OF "INSECT CHANGES," "BRITISH BUTTERFLIES, AND THEIR TRANSFORMATIONS," ETC.

THIS beautiful little insect must oftentimes have been observed, towards the beginning of May, by lovers of nature, flitting gaily among the wild flowers of our heaths, or over the turf margins of our sunny lanes. The genus to which it belongs has received its distinctive name, *Polyommatus*, from the number of delicate ocelli, or eye-like marks, with which its wings are variegated on the under side.

At a first glance, this exquisitely-tinted insect would seem but a pretty azure-winged fly, not calling for further notice. It will, however, repay a much closer examination. The wings, like those of nearly all other butterflies, have the colouring of their under side differing entirely from that of the upper. In the present instance, the two surfaces are as strikingly diverse as the obverse and reverse of a medal, and each as perfect in its individuality of design. On the "obverse," or upper side, the delicate nacreous blue, fitfully changing to pinkish tones of lilac, is bordered on the external margin by a close silken fringe of delicate straw-colour. Within the fringe runs a bright slender streak of brilliant black; and down the front of the anterior wings is a line of purest white. The under side of all four wings have for their ground colour a delicate dove-like ash tone, upon which are dotted the numerous eye-like spots, their pupils black as jet, within an iris of bright cream-colour. Towards the edge, just within the fringe, is a border, formed by a row of black dots upon a rich orange ground. The body, on the upper side, and the parts of the wings adjoining, are clothed with fine, silken hair of paler blue; and the horns, or antennæ, are decorated with alternate rings of black and white (figs. 1, 2).

Such are the beauties which a careful observer may detect in a little insect often passed by without examination. It has also other peculiarities well worth the finding out. In my own collection I had a number of specimens agreeing in size with the insect just described, and with many of its markings,—in

On one of my collecting excursions, I captured a specimen having on one side the azure-wings of the male, and on the other the more sober brown of the female (fig. 4). This hermaphrodite example forms one of the choice treasures of my collection. Other amateur lepidopterists may hope to be equally fortunate; for that variety is not excessively rare, as the Museum collection possesses three or four specimens of the same kind.

The metamorphosis of this elegant insect, from its larva to its perfect state, is rendered perhaps more striking than that of any of the family, from the ungraceful form of the caterpillar, which certainly does not in the least foreshadow any of the beauties of its finally perfected state. It is of the class of lepidopterous larvæ termed *onisciform*, or woodlouse-shaped, as shown in the figure (No. 5). Its colour is bright-green, with a dark streak down the back, near to which, on either side, is a line of yellow varied with black specks; and there is another band of paler yellow just above the legs. It feeds in preference upon several species of medicago or upon the cultivated lucerne represented in the illustration, the curiously-twisted seed-vessels of which are a characteristic of the genus. The chrysalis is represented in the example (No. 6). It is of a pale flesh-colour, and is found attached to a blade of grass, or sprig of lucerne or bird's-foot trefoil. The first brood appears at the end of April or beginning of May; the second in August.

The warmth of the midday sun appears to be very grateful to this gay little insect; when he assumes all his flitting activity, seeming more intent upon the exercise of his azure wings than even on his repast among the tiny nectaries of the wild-thyme or other heath-flowers. He becomes, indeed, quite pugnacious in his agile and dexterous flight, frequently attacking and driving from his "beat" the bright little butterfly known as the "meadow copper," whose ruddy orange tones contrast strikingly with the blue wing-banners of his rival during the contest; and who is always subdued and driven off by his more persevering adversary. I have sometimes seen the little blue warrior attack the comparatively monstrous *Atalanta*, described in my former article; and he is generally successful even in this unequal combat, *Atalanta* retiring majestically before the reiterated assaults of his puny antagonist, just as I have sometimes seen a giant Newfoundland dog, from the yelping of some combative little terrier, make a dignified retreat.

SPECIMENS OF FOREIGN SCHOOLS: NO. V.

THE NEAPOLITAN IMPROVISATORE.

THE NEAPOLITAN IMPROVISATORE.

BY DURET.

THE extraordinary interest and patience with which the Jazzaroni and Matelots of Naples listen to the interminable tales of the Improvisatore are well known to visitors, and have more than once been described by travellers in the south of Italy. On the Molo, and in all the maritime quarters of the city, large groups of men may be seen listening to these recitations, and manifesting the keenness with which they enter into the good or ill fortune of the heroes by yells of approbation or anger at the conduct of various characters who appear in the progress of the manifold and particoloured story. In these tales, magicians and enchantresses figure greatly; very often a damsel oppressed and a brave knight are the subjects; and it is said, that they are prolonged night after night, to the same audiences, until the Improvisatore has utterly exhausted the stores of his invention,—a matter requiring time. Astolpho, Rinaldo, and Armida, our King Richard, and even Arthur, figure with Charlemagne and Charles of Anjou in a manner not a little interesting to the mass of hearers, and bewildering to the better informed ones who pin their faith upon chronology.

These histories are almost invariably cast into a rough metrical form; for which the Neapolitan dialect, with its numerous elisions, is so well adapted. The manner of addressing the listeners is generally in a kind of recitative or occasional chant, accompanied upon such a lute as the statue bears in his hand. The attitude and expression of the figure show that he has come to a comic portion of his tale, which he dilates upon with great animation, marking a point of interest with upraised finger. The sculptor has skilfully expressed the action of a man drawing in his breath by the contraction of the respiratory muscles which is shown in the statue. The ease and wild grace of its attitude evince that he was thoroughly master of the subject, and well acquainted with the class from which he took his model; nothing shows this more clearly than the air of habit with which the arm sustains the lute.

As a work of art, this statue is a good example of the sculptures of the modern-romance school, which in one sense may be said to be based upon the later antique satyric statues; at the same time it is scarcely necessary to remark that, however equal to these latter such works may be in spirit of design, and superior to them in individuality of character, sculptures like that before us are greatly behind them in scientific and artistic execution.

There is a cast of this statue at the Crystal Palace.

L. L.

THAMES ROWING.—MY LAST "PULL."

"SHALL I take her out of the water, sir?" said he to me, as we were both standing by the banks of the river. This did not refer, good reader, to any defunct female, love-slain or otherwise; but was simply an inquiry from my boat-master as to whether I intended to row any more this season. A reply in the affirmative would decide him to place the boat under cover for the winter. But I bade him delay this a few hours; for the warm still afternoon and the sight of my favourite outrigger were sufficient inducements to take a last "pull," and once more revisit the old localities of my summer pleasure. Bidding him get her ready, and changing my dress, I was soon afloat; then, speeding along, stroke after stroke, upon a good tide, went quickly some miles away. But what a day it was! the sombre afternoon seemed grieving for the past year; and the sun, like a man declining fast, strove to break through the wanish misty clouds, struggling against the languors of approaching death,—“Surely I shall not die!”—and fitfully shone, but with a weak and mournful radiance, that rendered more sad the gray distance, the sere leaf-dropping trees, and the full

stream autumn-swollen, which seemed to murmur a low dirge, and complain that it glittered in his brightness no more. That long cloud above,—dappled with pale purples, and touching the zenith and the horizon,—would, if this were summer, glow like the hollow of an angel's wing;—now, how mournful it looks!

I speed along, now linger, and now stop, and endeavour to recal to memory the many scenes I have witnessed here, and the associations the river has for me. There under the trees is a nook where one can lie unseen, boat and all, screened from the summer's heat, and watch the passers-by, letting the smoke of a pipe rise slowly away into the branches above. This is the battle-ground of the regatta, where the oarsmen stretch as for life and honour to the boat anchored for a goal above. Many a stoutly-contested race have I seen here. From the high bank there, among the osiers the quick kingfishers flit in and out like flashes of fire; but that is when the sun glares upon the water and the shore, and the days are twice the length they are now. At present, the very swallows are mostly gone; what few do remain hover upon the face of the water, and wheel with a sharp twitter after their prey. In another week there will not be one of them left. I fancy these are not the local inhabitants, but merely a few feeding upon their long journey from north of this, and bent upon “flying south.” Do they bear the message of Tennyson's lorn lover?

“O Swallow, Swallow, flying, flying South,
Fly to her, and fall upon her gilded caves,
And tell her,—tell her what I tell to thee.”

If this be their charge, he has chosen most dilatory messengers; for they circle over and round one another in a manner very unsatisfactory to a lover's impatience. The first rain will start them again, however, by destroying their insect-food; and the only strange bird these waters shall see for many months is the long-winged sea-gull, which, if the winter be sharp, comes up from the coast for shelter and garbage.

The water is oily-smooth, and charged with earth to excess from the up-country floods; and myriads of leaves slowly float along, their number added to every second by the fresh fall from the trees, whence they drop without the slightest breath of their ancient playmate, the wind, and, feathering down, reach the water, dip, and are carried silently away.

Not a boat to be seen, and scarcely a sound heard, though there are houses here and there upon the banks,—most melancholy tenements, with the green damp-stains streaming down their fronts, like a girl's hair when lank and out of curl. Think of living in such places through the winter; walking on your lawn in goloshes; the young ladies practising the use of stilts to reach the conservatories; no one looking out of the windows on to the river without such a shudder as one feels in the neighbourhood of a dead body. The trees here look stark and thin, their boughs rigid and straight, standing out from one another as though each felt the discomfort and dampness of its neighbour. The same might be said of the houses; there is one heavy-porticoed place, just passed, which, from the black shadow beneath its pedimental brows, seems to scowl on every thing around, for all the world as if it had its feet in the mud and could not get away. The ghastly white front of this mansion looks superciliously upon each neighbour, defiantly pale, when one might imagine that common fellow-feeling would lead to a little sympathy for that cottage *opposé*, with the glittering laurels and dark arbutus, which seems fairly about to slip off the bank into the river, like a man going to swim with his clothes on.

Now a sound of oars and loud voices confusedly talking, and from round a point appears a boat, the first I have seen. It has a cargo of Westminster scholars, their coxswain standing up to steer, as usual, and the whole affair proceeding with that reckless audacity which causes wonder that they ever return to their suppers and early beds. They row well, however, and with their usual good fortune

may escape the eels to-night. Here, as if for contrast, comes a specimen of that *lucus a non lucendo* called a lighter, carrying thirty tons of coal, and managed by a stoutish individual, dressed in a complete suit of black cloth and a round hat,—an odd dress to tug at the great sweeps of the craft in; yet he hauls away lustily, looking in figure like a corpulent rural dean, but is simply a small coal-merchant, whose workmen have got drunk, and, like a true man, now puts his own hand to the oar in their default. He inquires about the tide,—when it will be high-water,—and acknowledges the information given with a grunt and a vigorous tug at his work.

Talking of incongruities of costume, was it ever noticed that your masters and captains of little river-steamers affect an almost Quakerish demureness of dress? You will see a man who is exposed to all sorts of weather the entire year through arrayed in a black dress-coat (of the description popularly called a "tail-coat"), black trousers, and a single-breasted waistcoat of black cloth; which latter on grand occasions—say Sundays—is exchanged for one of gorgeous black satin, with glass-buttons; while he surmounts the whole with a hard-looking round hat. The commanders of colliers and other coasting-craft are to a man got up in *this style* on Sundays; and the result is almost as worthy of a smile as the outrageously vivid garments of scarlet, orange, or purple, in which a certain class of amateur rowing-men induce themselves, in preference to simple and cleanly white, which is so suitable a dress for a man taking violent exercise in hot weather, on account of its property of radiating heat. Do not let these things be condemned as trifles; for they show an equal amount of affectation on both sides, and are loopholes through which we may view human character. What can be more absurd than for a man who is obnoxious to all weather-damage to dress himself in strict imitation of what is in itself another absurdity,—that is to say, the costume of a London mechanic or handicraftsman in his "best clothes," as he calls them, which is precisely what we have described as worn by the masters of coasting-vessels? Most men of the class referred to,—in London at least,—rejoice to render themselves uncomfortable in such a costume as this; and why? The truth is, that they fancy it is the ordinary dress of a gentleman, of a class higher in the social scale than themselves. The root of this feeling seems to lie deep, and not to be without a significance, which is to be regretted. The masquerader,—for he is little else,—wishes to appear to be what he is not; renders himself wretched for a time to accomplish this effect; longing to be mistaken for one who does nothing for his bread,—an idler, in fact. He does not see that his own honour lies in being an excellent carpenter or builder; that his pride should lie in this, not elsewhere. If we are to augur from this that he hates and is ashamed of his position in society, how significant of what Carlyle calls this "Age of shams" this manifestation of feeling is!

Now in the country an agricultural labourer does nothing of this kind; when "dressed," he delights to put his head into an imitation beaver-hat, with long nap, wind-shake, like bear's fur; he greases his boots, dons a clean shirt and smock-frock (which latter has often really beautiful embroidery upon it), and the whole dress differs little from that which he finds most convenient for his labour. You see he is a labourer, and he does not pretend to be any thing else. Standing upright, he is not ashamed of himself or his trade. But the black coat of our coal-merchant has led us far, and the tide carried him quite out of sight.

It is nearly high-water now, so let me scull onwards; for there are two or three miles yet to row before getting out to rest.

Men who profess the *nil admirari*, and who state themselves *blasé* of beauty, ever affecting to shun a new sensation, should, if the profundity of their self-contemplation so permits, try to see the river under a new phase when it has few visitors. Let them start just before mid-night, and row into that part of the stream where there are no houses,

and not even a sound can at that hour be heard. Rowing in the profound darkness of night is really a novel thing. All around is intense still blackness; the water welters along, just lapping against the side of your boat; while the sky, if the night be without stars or moon, is solid and opaque like a cavern-roof, such a one as we may fancy Peter Wilkins passed through into his land of misty twilight. The echo of your rowing will come backward from the bank, and greatly assist fancy in this idea. Every moment one expects the darkness of the cavern to dissipate in grayness on either hand, and the sleepy trees and level waters of that strange southern land to group themselves around you, all as silent and dreamy as this dark river now appears;—awful and full of profound melancholy is the water at that time. But wait for dawn, if you seek the fullness of a new sensation. Gradually the palpable darkness has grown gray, and you see the night-clouds parting from the deep firmament, which is lighter than they are. As the light increases, this grayness has grown silvery, and of a thousand opalescent hues, which charge with pearl-colour and metallic brilliancy every cloud-edge. Silver, seventy times refined into the radiance of pure light, has possession of all the sky; while here and there, upon the peaks which surmount the cloud-heaps and rise into the ether, a faint stain of rosy-tint has just begun to strike. For no longer a time than the falling of an eyelid (as the glory overhead remains not longer the same) look into the river which glances like a mirror of ivory, and of inky blackness,—of profound blackness; solid as ebony are the reflections of the trees upon the shore, while interspaces of whiteness come from the sky as it fills with light. Look up again, and see how the clouds have grown purplish, but changing—rosier and rosier—with every breath you draw; and that heap of clouds which has stood like a habitation of giants all night long upon the horizon, has a single streak of dull fire upon its line of summits that lingers until lost in the red light which streams through each rift, till every part from the east to the zenith seems bursting into flame. The trees, which a few minutes ago were sound asleep, now stir and shake themselves without a wind; every bough seeming to quiver with self-contained life, so that you might conceive this alone to be the cause of the moving air which comes from the west, and is like the last breath which a sleeper draws upon awakening. But let us have done with the dreamy darkness of night and the brightness of the summer morning, and make the most of the daylight which this sullen November permits. Here is Kew Bridge, where we will rest until the tide turns.

Half-an-hour has elapsed, and the water-flags, which just before bent to the west, are now inclined to the east, and the ebb-tide has begun to run. Like most things in this world (if you only know how to manage them), the tide may be made serviceable in all its humours of ebb and flow; at any rate it will serve my purpose in returning to Chelsea as well as it did in coming to Kew. Now that I am afloat again, and got into the easy mechanical sweep of the sculls,—their strokes as regular as the beat of an engine,—mile after mile is traversed with ease, and I am rapidly nearing home,—past Strand-on-the-Green, Barnes, Mortlake, Chiswick, and Hammersmith, until the widening river opens out into as fair a view as one can wish to see without going far from London.

This broad sweep of the river is Putney Reach, much used for regattas, and known to boating-men as the scene of some chivalrous actions, wherein the English character has come out bravely. It was here that a well-known rowing-club were present at a match with an eight-oared boat. The boat was accidentally swamped by the swell of a passing steamer, and was sinking with her crew of nine men. In the imminence of the danger, the steersman, a servant of the club, cried to the man sitting next to him, "Give me your oar, give me your oar, sir; I can't swim." The other, with a generosity worthy of the nation whose soldiers mustered at beat of drum on the deck of the sinking Birkenhead, replied, "Nor can I swim, P—; but here it is;" thus giving away his

best chance of life. They were all saved ultimately. It was in this reach that the writer saw, at another match, one of the crew of a boat engaged in the race throw himself into the water, because he had accidentally broken his oar, doing this in order that his comrades might not have to carry his dead-weight when he could not do a share of the work. It was here also that I, rowing down at night, heard cries for help suddenly rise from the water, and even the struggles of a man in his death agony, so close at hand was it; yet I could not by any effort, because of the darkness, discover the whereabouts of the drowning man, or by any inquiry afterwards learn who he was. The horror of those cries hung about my mind for a long time; they seemed to answer my eager shouts, and even to call me by name reproachfully, grow smothered and fitful, and with an indistinct bubbling sound were merged in the murmuring sweep of the dark relentless river. He might have been within two-oars length of me,—could not have been far; but although I leaned over at my own peril nearly to the level of the water, and looked in the direction of the cries, yet the eye could perceive nothing but the trembling black shadow of the trees, and the dark overhanging bank.

These are black and ugly thoughts, and their impressiveness is not a little enhanced by passing a spot somewhat further down, which always reminds the writer that he himself is indebted to the Leander Club for the preservation of his life, which his own heedlessness had endangered. Passing the dreary swamp of Wandsworth, and Battersea village and church and bridge, I reach Chelsea and see the Cadogan Pier, and a light (for it is quite dark now) just behind it, low down near the water, which I know is a signal to me; a few strokes, and I am alongside the landing-place. One stoops to grasp the outrigger of the boat, and a voice says, "You are the last out, sir." It may be so; I know I have taken "my last pull."

F. G. S.

AMYLENE AS A SUBSTITUTE FOR CHLOROFORM.

CONSERVATISM is one of the leading characteristics of all learned bodies. Perhaps it is a necessary tenet, and a wholesome safeguard against rash or unripe innovations. And yet it is painful to see great discoveries doggedly and perversely ignored by the very men who should hail their advent with enthusiasm, until they are forced upon them by the general acclaim of public opinion.

It was thus that the possibility of preventing pain during surgical operations, by the inhalation of certain vapours, was long treated with utter neglect by the medical profession.

The ancients may have known and used several anæsthetics; but Sir Humphrey Davy was the first in modern times to suggest the possibility of suspending the sense of pain in certain cases incidental to medical practice. During the course of his experiments on nitrous-oxide gas, he discovered, incidentally, that a severe pain in the gums, arising from inflammation, was relieved by breathing it; and he then published, fifty-seven years ago, the following passage upon the subject: "As nitrous oxide, in its extensive operation, seems capable of destroying physical pain, it may probably be used with advantage during surgical operations," &c. The publication of this remarkable sentence, the first utterance of a wonderful discovery, made no impression upon the steady march of routine; and for forty years it was continually read at public lectures with no better success.

At last a grain of the good seed fell upon fertile ground, and flourished; but that ground was not British ground. The late Mr. Horace Wells, a dentist, of Hartford, in the United States of America, hearing those remarkable words, in a lecture delivered by a Mr. Colston, "immediately acted upon the suggestion; and, with the assistance of the lecturer, succeeded in extracting several teeth without pain. He was, however, so much disappointed by a subsequent failure at Boston, that, deeming the effect of the nitrous oxide uncertain, he appears to have abandoned it. His first success

had, however, stimulated his partner, Dr. Morton, to the search after other agents of a similar character; who succeeded at last in discovering that sulphuric ether produced similar effects with greater certainty, and greater completeness of coma, if required. It was in 1846 that Dr. Morton established the powers of sulphuric ether by positive experiment in several important operations. Nevertheless, its use, in consequence of the prejudices of the profession, did not even then become general.

Chloric ether was tried in London, in the following year (1847), by Mr. Jacob Bell, with nearly equal success; and was occasionally used at St. Bartholomew's and the Middlesex Hospitals, and in the private practice of Mr. Lawrence; but it did not attract that immediate and general attention of the profession which might justly have been expected, not even among those of the highest attainments; while the routine practitioners, of which the great majority is always composed, of course ignored the matter altogether.

It was found, upon analysis, that the so-called chloric ether was a solution of chloroform in spirit; and it was from a Mr. Waldie, of Liverpool, that Dr. Simpson, of Edinburgh, who had long been in search of a safe anæsthetic agent, learnt this circumstance, and many particulars connected with its inhalation to destroy the sense of pain. That eminent physician succeeded in procuring pure chloroform in its undiluted state, and was the first to apply it with such success in midwifery cases as eventually led to its general use; but not without obstinate opposition from the public as well as the profession.

Pamphlets actually appeared stigmatising the use of any anæsthetic in midwifery cases as a direct violation of the decree of Providence,—“in sorrow shalt thou bring forth children;” and many were as much influenced by this unexpected view of the case as by the ordinary opposition of routine to innovation. Dr. Simpson was, however, not slow to reply, in a pamphlet, not only full of argument, as opposed to mere assertion, but in which he showed that he too could quote Scripture with as good effect as his adversaries.

To prove, he said, that neither man nor woman were destined to unnecessary pain, he asserted that the very first “surgical operation on record” was performed by the Divine hand under the influence of an anæsthetic agent, as proved by the passage in which it is described in the following words: “The Lord caused a DEEP SLEEP to fall upon Adam, . . . and took out the ribs, and closed up the flesh instead thereof.” This silenced the open opposition of the most fanatical scoffers, though an under-current of prejudice still lingered in the public mind, and impeded the progress of that great discovery, so welcome to all who are unfortunately destined to suffer natural pain, or undergo the agony of complicated surgical operations.

Opposition, however, gradually died away, and the use of chloroform became very general, and at last nearly universal, in hospital-practice; notwithstanding some unfortunate cases (altogether insignificant in number) in which, from unskilful administration or other causes, it had proved injurious, or fatal. There were also the minor objections, that it occasionally caused severe sickness and other unpleasant symptoms; and many members of the profession began to look for the discovery of a similar agent which should be free from these defects. Dr. Snow was fortunate in being the first to try the vapour of Amylene, which bids fair to supersede, not only chloroform, but even the less dangerous, or rather, more manageable, sulphuric ether.

The substance Amylene is said to have been discovered some fifteen years ago by M. Cahours, though first described, in 1844, by M. Balard, professor of chemistry to the Faculty of Sciences of Paris. It is composed of ten atoms of carbon and ten of hydrogen, and bears the same relation to fused oil or amylic alcohol that olefiant gas or ethylene bear to common alcohol.

Of the advantages and disadvantages of the new anæsthetic agent, Dr. Snow, after trying it in twenty-one cases, makes the following summary in his paper, read on the

10th of January last, and subsequently published in the *Medical Times*:

"In the first place, it has less disagreeable pungency than chloroform; so that, while a patient often complains of a choking sensation during the first inhalation of chloroform,—by which some minutes are occasionally lost,—the Amylene can be inhaled at the full strength within half-a-minute from commencing; and the operation may generally be begun within three minutes. In the amount required to produce insensibility, it is intermediate between chloroform and sulphuric ether."

Amylene has the further advantage of preventing pain with a less profound stupor than that occasioned by either of the other agents; which has been probably the cause of the unfortunate effects resulting from their use in some few cases. In the ready waking and recovery of the patient, Amylene has also the advantage over chloroform, and a still greater over ether. The most important advantage of all is, however, the nearly constant absence of sickness, and also of the struggling and rigidity which sometimes accompanies the administration of chloroform. Dr. Snow considered, at the time of writing the paper just alluded to, that the results were so satisfactory as to encourage its further trial. He has since tried it in forty-eight additional cases, making sixty-nine in all; and his general confidence has greatly increased, though slight sickness has occurred in one or two of the forty-eight new cases, while in every other respect it has been entirely successful.

Dr. Snow intends to make known the results of his further experience; and in the mean time the profession will be enabled to watch the interesting series of operations by Messrs. Fergusson and Bowman which he is superintending, under the influence of Amylene, at King's College Hospital.

H. N. H.

THE NATIONAL INSTITUTION OF THE FINE ARTS, PORTLAND GALLERY, REGENT STREET.

THE Exhibitions of the National Institution differ widely from those of the other London art-societies, as being the only ones where the pictures are not entirely selected by a committee of the proprietors of the gallery. Although a right of rejection is here reserved, it is rarely exercised, and the exhibitor occupies his space upon the walls as a matter of course, upon the payment of a certain sum. For ten years this society has struggled on with more or less success; and we think never until now has it shown that its peculiar principle could bring together a majority of paintings whose merits should be even mediocre in quality. It is, therefore, with satisfaction that we congratulate the society upon the number of excellent works here placed for exhibition, and we trust that every year may add to the proportion which the good examples bear to the bad, or to the indifferent.

The frequenters of art-exhibitions will joyfully notice that there are but three portraits, two of which are excellent and solid specimens of that much abused branch of art. No. 285, "G. A. Beckett, Esq.," by C. Couzens, and the large whole-length of a lady, in the third room (without number or name in the catalogue, but evidently by this painter), possess qualities which are sadly wanting in ordinary portraiture. Here are few figure subjects, and still fewer which do not merit a hearty condemnation. Mr. J. Colnaghi once distinguished himself for the great care and modesty evinced in his works. Those who remember his "Charity Boy's Début," some years ago, and "The Writing Lesson," both at the Royal Academy, will feel as much surprise as regret that in his pictures this year ("The Mineral Spring" at the British Institution, and "Our Topsey" here) should show such false feeling, weakness, and insincerity. What "Our Topsey's" qualifications for the character are, beyond an enormous and distended pair of eyes, are points which the artist has not expressed. This is a kind of art which we hoped would ever be confined to the frontispieces of music-sheets, certainly never be found in a place of honour at a public exhibition.

Mr. F. Cowie's "Bolingbroke's Entry into London," No. 31, is so egregious an imitation of Mr. Hook's system of painting (without its beauties), that we cannot forbear pointing the picture out; the disproportion of the parts of figures and that which they bear to each other is most palpable. "Christopher Sly," No. 299, by H. Stacy Marks, is a well-known subject admirably executed. Mr. Marks is evidently improving in power of colouring. The textures of the drunken tinker's dress are extremely well rendered, and show some careful painting. In No. 321, "Modern Minstrelsy," Mr. C. Rosseter represents two boys, one of whom is accompanying the other's performance on the banjo with a fantasia on the slate-castanets. This is a very clever little picture, exhibiting knowledge of boyish expression and character. We wish we could speak as highly of W. Maw Egley's "Taming of the Shrew," No. 307, whose whimpering Katherine would not require a Petruchio to tame her. This artist appears to mistake the real nature of the finish which he attempts to produce. Apparently his pictures are executed piecemeal, and with much transparent colour; the result is a look as of coloured ivory. Mr. Egley must remember that hardness is not finish: his picture is as hard as a billiard-ball.

Mr. F. Smallfield has a charming water-colour, No. 170, "The Divining Peel," a girl, who (according to the tradition), in paring an apple, inquires the initial of her lover's name from the convolutions which the rind assumes; she leans her head back, smiling yet dreading to look. In execution this drawing is almost equal to W. Hunt's;—we seldom see flesh, even in oil, so finely and beautifully coloured, or so soundly drawn. The artist's other picture, No. 440, "Fight with the Frost," representing Luca della Robbia drawing by candle-light in the cold of a winter's night, does not tell its tale, and is by no means a true representation of the effect intended. Mr. D. Pasmore has some clever and effective little pictures which, although seldom rising beyond the rank of sketches, are brilliant and skilful. His "Interior, Accrington, Lancashire," No. 315, a large room in the disorder of use, with its inhabitants, is especially pleasant to look on. No. 338 also, "The Arrival of the Guests," showing an ancient hall, wherein some visitors are received with the most elaborate courtesy by their hosts, has the same qualities; the figures in both are full of spirit and grace. No. 361, "Janet," from Scott's *Kenilworth*, by J. Bowles, is a picture which, although badly placed, merits considerable praise, as it well represents the subject, and is modestly painted. No. 477, "Getting Wood for the Winter," J. B. Burgess, shows the yard of a house, where a man is cutting up timber, while some children drag away piecemeal. This picture has sound and good painting about it, being obviously done from nature; the artist showing himself a skilful manipulator, with considerable knowledge of colour.

We never saw in any exhibition so many noticeable paintings from flower and still-life subjects as in this. We may particularise Mr. Finlinton's three pictures,—No. 151, "Winter Fruit;" No. 260 "A Kingfisher;" and No. 155, "A Bachelor's Dessert." The latter shows some fruit lying on a carpeted table, with a well-coloured meershaum and a tobacco-jar, and is really striking for solid painting, for colour, and for truth of imitation. Fruit is too often painted to look like wax, with glossy surface; but let the observer admire the way in which the apples in this picture are done, with all their *dry* rich look of nature. Mr. Burcham's two pictures, Nos. 162 and 177, are exquisite. Let us direct especial attention to the one he calls "Wild Roses and Nest."

We seldom see two pictures by the same artist whose merits differ so widely as Nos. 132 and 286, by R. S. Lauder, "Meg Merrilies and the dying Smuggler," and "The Death of Arthur Duke of Bretagne." The first is a subject which we believe the artist has painted before. With all its mannerism of colour and effect, it is a powerful and valuable work; but the latter is ill-drawn, coarsely coloured, and melodramatic in design.

The best feature of the exhibition is the number of good landscapes. First in merit is Mr. J. Peel's "Coast Scene, Isle of Arran," No. 128, exhibiting a rough part of the coast of the Scottish island, with a rain-cloud hovering over, and the sun behind casting great sharp shadows from every bush and rock and tree. A storm is working up and roughening the sea-surface, which is slaty in colour from the reflections of the great cloud which hangs above. There is a patch of corn-land half-reaped, and some stunted trees, which are scattered about, or gather themselves into little shaws. The freshness and hearty feeling for nature which the picture shows are delightful. It has the fault, however, of not being equally finished throughout; some weeds and shrubs in the foreground are exquisitely drawn and coloured, while the corn behind is not only careless in execution, but violent in colour; the tree-shadows also, although skillfully introduced, are much too sharply defined at their edges. When it is remarked that Mr. Peel exhibits no less than ten pictures here, and three others at the British Institution, it will need no comment to explain the causes of these faults. The naturalism of No. 128 stands in wholesome contrast from its neighbour, No. 141, "The Inn Valley at Kufsteine, Tyrol," by F. L. Bridell, with its hot shadows and gaudy colour, careless conventional sky, hazy mid-distance, and coarse feeling throughout. No. 133, "A Salmon Fishery," by R. S. Boud, is, in spite of its opacity, powerful and true.

In mentioning the pictures by J. S. Raven at the British Institution, we had occasion to remark the antithetical qualities they exhibited; his pictures here are noticeable in the same manner. No. 246, "The merry merry Month of May," shows a large expanse of open land, traversed by a road, and in the sky a long promontory of cloud running down to the horizon, casting its shadow through the whole country. We seldom see so profound a knowledge of cloud-structure as this artist shows; he seems to have made it his special study. The picture, however, greatly requires colour in the foreground; that fault, with the intense blue of the firmament, giving it somewhat of a raw appearance. No. 468, "The Mill-stream," and No. 520, "A Kentish Cottage-door," are noticeable examples; the latter a great advance in colour on the artist's other works this year. More than those of any other painter Mr. Raven's works remind us of Antony's earlier productions; but his pictures are deficient in variety and force, and he has a vast deal to learn in colour before he can even approach that master. "The Funeral of a Village Maiden," No. 358, is jointly by this artist and Mr. C. J. Lewis: here the faults of a hasty and careless style predominate. The latter's picture, No. 60, "Waiting for the Wedding Party," has a certain sketchy power and fearlessness about it which takes one's fancy. It has obviously been a study from the porch of a country-church; and the effect of the *locale* is clearly and beautifully given with pearly-gray purples and faint yellows. The figure of the girl, who stands within holding flowers to bestrew the path with, has been introduced in order to make a subject, which it does but indifferently; it is wretchedly drawn, is coarse, and vulgarly showy. The architectural part of the little picture is well executed. The artist's other pictures, No. 129, "A Cottage Interior," and No. 144, "The Sunset Hour," evince similar faults and merits.

Mr. J. W. Oakes exhibits three pictures,—No. 251, "A Breeze on the River," No. 262, "A Salmon Trap, Evening," and No. 304, "A Mountain Path." The second is a worthy companion to his admirable painting in the British Institution ("Caerhau, Low-water"). In the present work we have a calm evening with all things at rest. The expanse of the river spreads out above the weir reflecting the sky, while the mists creep up, and lie like level clouds hovering above the hollows of the hills behind. Against the warmly-tinted atmosphere a rocky hill-top "stands up and takes" the sun. All Mr. Oakes's pictures are remarkable as showing his love of nature and his care in execution; but none more so, we think, than No. 251, where a mountain-stream

comes rushing over broken rocks, and the birches and willows on its banks are bending before a keen strong breeze. The mossy boulders are represented in the utmost fidelity, with all their weather-stains and lichens, and the brook foaming over them white and plummy. No. 304 is also very beautiful, and its minute vegetation given with great care.

Mr. G. Pettitt's picture, "A Mountain Mirror," No. 70, shows a tarn imbedded in mountains, whose utterly barren sides are perfectly reflected on its surface. This is an admirable landscape. The whole scene is overhung with slaty clouds, through which fitful streams of light strike the rough hill-sides, whose peaks repeat one another until lost in the distance, where we catch a glimpse of more level country. The detritus from the mountains, which centuries of storm have cast down, stands heaped against their sides and encroaching on the lake. A more desolate effect it would be difficult to find. Nos. 51, 99, 296, and 303, by F. W. Hulme, are examples of a kind of cultivated sketching much in vogue amongst minor English landscape-painters. Of this artist's four works, we prefer the first-named; but here the observer will notice how the trees are executed, by a series of dots, or rather touches, without the slightest reference to the variety of nature; this is very palpable where the tree-tops come against the sky. There is enough of an agreeable and pretty character in such works to render them popular; but we must ask if this is art, or if real affection for nature is thus shown. Mr. J. Dearnley exhibits three paintings, Nos. 37, 256, and 414, of which the latter pleases us most, not only because it appears to be more carefully executed than his recent works, but as showing that he has found a new phase of nature to paint from. "A Sketch in Stoke Park, Guildford," by A. Fraser, No. 417, strikes us as possessing valuable qualities, the result of care and judgment.

"An Autumnal Afternoon," by J. Thorp, No. 28, shows a rich effect, with quiet water spread out in front, and warm reflections. This is well studied from nature, and, although rather sketchy and crude in colour, is promising. No. 84, "On the Rother, near Rye," also by this artist, shows his taste for the same peculiar aspect of nature. This picture represents the still embouchure of a river, with ships at anchor, the reflections from their masts and rigging shaken as the water creeps past with slight undulations. On the banks is a town with hills behind, and the calm reflection thereof in the water; through this a boat advances with measured oar-beat, whose spreading wake breaks up the surface into light. The great fault of this picture is the unnatural and sulphury colour of the sky.

We recommend to the visitor's notice, as thoughtful works in their various subjects, No. 94, "Interior of St. John's Hall, Norwich," by S. D. Swarbreck; "A View in Surrey," by G. Crookford, No. 152; and "An old Farm-house," by A. Fraser, No. 242. In concluding, we feel called upon to observe the manner in which the *catalogue* of the exhibition is prepared. It is the most complete specimen of careless and negligent compilation we ever met with.

L. L.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

WHEN King Cheops built the great pyramid of Ghizeh, and prepared its granite chamber for his imperial mummy's grim but aromatic rest, he supposed, perhaps, that an original thought had gone out of him, as new to earth as the shadow on the Egyptian sand which would move henceforward daily round his sepulchre. But nature had been beforehand with him. On the same spot, and far beyond it; over regions not so much as dreamt of by any soul in the whole line of Pharaohs; before King Cheops or any human king could

have lived a moment on the half-chaotic world, empires vaster than his own had risen and fallen, and not their monarchs only, but their entire races had been embalmed in elements beside which the spices of the East are powerless, and laid in pyramids, whose mere foundations are greater than all the works of man.

Those pyramids are the mountains of the earth; those races were its first inhabitants. There they rest in the sleep of ages; in marble chambers, on sandstone beds, in coffins of slate and clay. There is little to be got out of the dry husk of an Egyptian king. A few drops for the well of truth; a few torn pages for the book of history; a few grave thoughts about the grandeur and the vanity of man; a standing exercise for the subtle powers of research, and a passing wonder, which is at times the seed of wisdom;—these things we may find in the painted coffins and the perfumed dust; and they are perhaps enough to countenance the charitable thought that those royal races and their labours were not quite utterly in vain. But it is not with such scant and doubtful gratitude that we turn to nature's pyramids, and search the coffins where her dead are laid. They give us truth in a new fountain; history in magnificent and perfect volumes; exercise the fullest and the healthiest; a world-wide astonishment, and out of it a nobler wisdom. They do not end even here. A modern Turk may find building-materials for his ill-shaped dwelling by the Nile, among the broken slabs falling from the tombs of the Pharaohs; but the whole earth lives, the forests strike their roots and the grass grows, by virtue of that beneficent decay which has brought down from the mountain-sides the fertilising dust embalmed within them when plants and fishes, birds and reptiles, were buried there out of an elder world.

The harmonies of creation are as infinite as its variety. The innumerable parts are cast in the same great mould. This world of matter stands before a looking-glass, and its reflection is the world of mind; not an atom of the same substance, but a counterpart of every line and feature. If kings have built pyramids of stone to hand down little more than the knowledge of their own insignificance, vain-glorious souls have paraded their pompous thoughts to as little purpose and with as poor a meed of immortality. If nature, more divine than kings, has preserved the material relics of former life in rocks, upheaved them in mountains, and left them to refresh the earth by perpetual disintegration, so also ideas have been fossilised in equal safety and abundance, and human genius in its grandest ages has raised them high above the common intellectual plain, to crumble down on it year by year, as the rich soil of Egypt has crumbled from the hills.

So far as art is concerned, we are not living just now in one of these mountainous ages of the mind. The volcanos are burnt out, or they throw up lava and not alps. The mental heights to which we lift our eyes were mostly upheaved some centuries ago, and there is no immediate shaking of the ground as if another Chimborazo or Mount Meru were within an inch of the surface. We look on all sides for positive greatness, but it is not found. Many hands are pointing, lo here and lo there; but point as they please, the great peaks do not rise. Yet the times are full of beauty and full of promise. We are rolling in mental wealth, and were never further from the monotonous dead-level of intellectual barrenness. What is the secret of the age? It is not poverty; it is not grandeur. It has quite another characteristic. Its work has been to pull down pyramids, not to build them; to disintegrate mountains, not to give them birth. The rocks crumble towards us; they do not heave above us. It is an age of fragments.

Three or four centuries ago the world rang with the noise of great discoveries. Columbus was in America; Cortez in Mexico; Pizarro in Peru. New trees, new animals, new races, were coming to light every year; and the same era gave us our Elizabethan chain of mental mountains, with Shakspeare in the midst. We discover no new continents now. The kingdoms of vegetable and animal

life have been explored from side to side, and nothing more is to be expected from them that is likely to astonish us very much. We find instead distinctions many and small in species and varieties; and we stumble on Californian or Australian gold-fields, where infinite wealth lies scattered and fragmentary, like the mental riches of the time. There is such harmonious fitness in the ordering of all things, that one might almost predict the intellectual character of the age from that of its external aspects.

Go into any modern picture-gallery, and be struck at once by two remarkable facts. The executive power exhibited is wonderful, to all appearance unlimited; but it is all spent on subjects intrinsically small. There is ability to paint any thing, but there is nothing that was very much worth the painting. We have clouds that float, skies that dazzle, streams that ripple and flow; flowers that might be smelt, flesh that quivers, faces that are alive; but we have them as fragments only, not as any glorious whole. The clouds hide nothing awful; the sky shines on nothing heavenly; the streams are not sacred ones; the flowers are like Peter Bell's primroses; the flesh is not the flesh of heroes, and the faces belong to men and women who had no particular occasion to be copied. Put a great idea before these brushes and these fingers, and a great picture must be the result; but great ideas do not sit now-a-days, even to the most ambitious; and so our walls are hung with large sheets of canvas, but little pictures nevertheless.

Turn from painting to poetry, and the case is not very much altered. The beauties of modern poems are exquisite; of their kind unrivalled. There is a delicacy of touch, a refinement of perception, a purity of thought, unknown to any other era. Yet the poems are only fragments. There is the stone and the cedar, the brass and the gold; but we miss the architecture. The work of perfected greatness has yet to come.

So with our sculptors also. They carve superbly; but what do they carve? Busts of country-gentlemen, monumental stereotypes, or the worn-out gods of paganism. At times, indeed, they give themselves up to fancy; but it is dangerous ground. A great hall in Liverpool is to be surrounded with gas-lamps; a dozen river-gods rise up to hold them; they throw themselves into muscular attitudes, and strain their stony sinews to the uttermost under a weight just heavy enough to tire their little fingers. A new banking-house in a close street in Bristol is to be elaborately adorned. It is forthwith covered from roof to basement with sculpture as exquisite in workmanship as it is grotesque in taste; a medley of birds, beasts, fruits, and other matters, quite enough to make an Englishman stare in admiration, and to send an old Athenian into fits of laughter.

Where is this to end? In the physical world the eras of grand events seem over. The earth has built her pyramids; we look for no new peaks among the eternal snows. The mountains stand about us, sublime, but old, and with no prospect of any younger rivals; and broken fragments, rolling down from them as years go on, are the only novelties we are very likely to discover hereafter. Is it even so with the world of art? Have we already seen the Andes and Himalayas of human imagination? Is the fragmentary character of our age the symptom of a completed cycle and the sign of a latter day; and must we henceforth be content, instead of working for the future, to live only on the fossil treasures of the past? The question would be altogether a melancholy one, if it were not for two considerations. The first is, that the resources of creation are boundless, its possibilities infinite, and the past, after all, no more a key to the future than the seed is an outline of the flower. The second is, that whatever limit there may be to the phases of the world we are born in, our souls themselves belong to another order of things, move in a grander cycle, and may rise hereafter to a height of thought and a vision of beauty as far above the culminating points of mundane genius as these transcend the lowest form of life that lies petrified in our paving-stones.

THE HAPPY AGE. BY A. LUDOVICI. (FROM THE CRYSTAL PALACE.)

LORD ERLISTOUN.—A LOVE-STORY.

BY THE AUTHOR OF "THE HEAD OF THE FAMILY," "JOHN HALIFAX, GENTLEMAN," ETC.

II.

LORD ERLISTOUN spent a whole week at Lythwaite Hall. Why he did so, or if he found any pleasure in it, we really could not tell. He deputed himself agreeably to all; went meekly with my mother to various solemn dinner-parties; took his due share in our own company-keeping in his honour; at other times he shot or fished with Charles,—Algernon and Russell having vanished,—nay, even walked and talked amiably with me. With Jean, who had little leisure, and perhaps less inclination to spend it in doing nothing, his association was chiefly confined to, "Good morning, Miss Jane" (having discovered that her name was not Browne, but being too courteous or too idle to find out what it was), and a brief, equally civil, and indifferent, "Good morning, Lord Erlistoun."

He did not seem to take any interest in one of us more than another, if, indeed, it was his habit to feel interest in any thing. The only occasional gleam visible in those soft, large, lazy eyes was once or twice over the post-bag, on getting an accidental letter or two: "My mother's letters," as,—once when my mother, in her homely way, ventured the shadow of a jest,—he replied, with such overwhelming bland dignity, that the dear old lady was quenched for evermore.

Still, as Jean observed, it was a good sign in him to like—if he did always like, of which we were not sure, but at any rate to be interested in—his mother's letters.

We knew—from "Burke" of course—who his mother was; a member of a noble, indeed, a truly noble family; also from that most useful book, and from various things he himself let fall, that she had managed a somewhat dilapidated property through his long minority faithfully and well. There were some sisters; but he was the only son.

"I think," Jean observed, one night, when as usual, after he had gone to bed, the rest of us were sitting in committee upon him, making that domestic dissection, which, as I said before, families and friends will make,—and the only thing to mind, therefore, is to take care that it is made in good humour, justice, and charity,—*"I think much ought to be forgiven an only son."*

The next morning, during the garden-walk, which by mutual consent had become a habit with my cousin and me,—we being always the earliest risers in the household,—the subject was again recurred to.

"Jean," I said, "if he stays over another week,—and I think he will, for I heard him promise the Bishop to come to that child's party given for Lady Emily Gage,—you really will have to take your turn in amusing him. He hangs heavy on my mother's hands sometimes."

"Your poor dear mother!" half-amused, yet with a vexed air, at things no doubt which vexed me likewise occasionally; but they were inevitable, and it was useless to notice them. "Mark," she added seriously, "if a young man of four-and-twenty, handsome, well-educated, and by no means stupid; having been Lord Erlistoun from his school-days; having travelled a good deal, seen court-life, common life,—who knows what life?—at home and abroad; his own master, possessing a good fortune, together with a mother and sisters, whom he seems not to dislike,—though to love

them, and own it, might be a display of feeling quite impossible;—blessin, if such a young man is not able to amuse himself, all I can say is, that it is a very great shame."

"I did not know you had reasoned so much, and felt so strongly, concerning him."

"Not him; but the simple right and wrong of the question, of which he is a mere illustration."

"Yet you appraised him categorically. You must have observed him a good deal."

"A little. One cannot live in the same house with people without noticing and forming some judgment upon them."

"Do you dislike him, or his manner;—his high-bred manner, I mean?"

"On the contrary, I like it; it is the external sign of those qualities which a few have, and twice as many imitate. His case may be either the one or the other—I don't know yet. If we only could break this fine outside enamel and get at the real substance underneath, supposing there is any."

"Do you think there is?"

"I am not sure. Mark, do you understand me? I like refinement; I love it, in every thing and every body. It is really charming to me sometimes to hear Lord Erlistoun's low-toned voice, and see his quiet way of doing little civilities, little kindnesses—especially to women. I give him credit for every thing he is; and would not wish to see him less, but more; I would like to make a man of him."

"Hush!" I said; for she was too much in earnest to notice, on the other side of the espalier, footsteps, also the top of a gentleman's hat. "Tis himself; I think he heard you."

"I think he did." Jean set her lips together, and held her head erect. Nevertheless she coloured, as was not unnatural; still more deeply, when at the path's end Lord Erlistoun crossed in front of us. Would he pass on? No; he turned and bowed.

"A fine day. You are walking early, Miss Jane," with a steady gaze, though he too seemed to have had those "hot cheeks" which are said to trouble people who are talked of behind their backs. "I have been stealing your lilies of the valley; may I restore some?"

Leisurely keeping a few, and presenting her with the rest, with a matter-of-course air, as if it were a mere "devoir," a duty owed to her sex, he lifted his hat again, and sauntered on.

"Jean, I am sure he heard."

"I hope he did; it was the truth, and perhaps he does not often hear the truth; it may do him good."

That notion of "doing good" to a person which women have—the best and sincerest women often most dangerously. "Ah, Jean," I thought to myself, "take care!" But facing those eyes, bent forward meditatively as she walked,—those eyes, neither downcast nor passionate, neither a child's nor girl's, but a woman's, with a woman's steady heart,—I felt ashamed to say of what I wished her to "take care."

I was absent in Liverpool all day; but with hard travelling, managed to return at night. We had a family-party,—a party of poor relations,—postponed a little, waiting our guest's possible departure, till at last my father decided on its being postponed no longer. By "poor," I mean not indigent, but less wealthy and in a less honourable position than ourselves; kindred whom in climbing up the ladder my father had passed one by one, and now stood towards them in the envied, yet perhaps unenviable position of "the great man of the family."

An odd heterogeneous gathering it was, as we were aware it would be. Under present circumstances, my mother had been seriously alarmed at the idea of it—"Mercy on us! what shall we do with Lord Erlistoun? What will Lord Erlistoun think of so-and-so?" and my father had invariably answered her with that dogged iron twist of the mouth which had helped him up to the top of the tree, and that merry twinkle of the little bright eyes which had kept some enjoyment for him when he got there.

"Molly,"—he still called her Molly sometimes in private,—"I—don't—care."

So the good people came. I found them all in the drawing-room when I returned home.

Heaven forbid I should be hard upon poor relations, even the dearest, that, lying nerve during a man's struggling days, spring up like mushrooms every where under his feet in the summer of his prosperity; and the scores, still worse and more trying, who, unable or unwilling to help themselves, expect always to be helped by somebody—him, of course; who, wherever he goes, clings like a fringe of burrs to his coat-tails, not a whit the better or greater in themselves for sticking there, and to the unhappy rich man neither a use nor an ornament. Yet let every man do his duty—even to these: my father always did.

It was good to see him now and then, on occasions like this, fill his house with honest folk, who no doubt spent weeks after in commenting injuriously on the grand establishment of "cousin Tom," to watch him, and even my mother, gradually warm up into old acquaintanceships and old recollections, till at last the very tones and manners of earlier days would revive, and we would hear them both talking as broad Lancashire as any body present.

They did talk very broad—these "country-cousins;" or, so it seemed to me to-night. I was accustomed to it pretty well in the way of business, and with men—but women! And then they dressed so showily, so tastelessly; those Liverpool ladies seemed so horribly afraid of being thought any thing less than "ladies," and so convinced that the only travelling patent of ladyhood consisted of clothes. They paid great court to my mother; there was always an admiring group of listening gazers round her ruddy velvet gown; and she was pleasurably and amiably conscious of it too, dear soul! though perhaps just a thought too patronising. But with all her pleasantness, and the pains she took to amuse them, they seemed at first to have ignored altogether, and then to stand a little in awe of, my cousin Jean.

Must a man be blind with poring over a lifetime of ledgers? or deaf from hearing the incessant rustle of notes and clink of sovereigns? I was neither.

Let me give all credit to those worthy people, my kindred; many of them good wives, good mothers, good daughters, lively and pleasant in their own homes, though a little awkward and ill at ease, more so than we were ourselves, in ours. But when Jean crossed the room in her soft, rich, black dress; when Jean's low tones struggled through that awful Babel of loud voices, O, what a difference it was! And yet she came of them too; her mother was a Brown. But nature itself had made her what she was; a creature distinct from these, and, as it seemed to me, from all other women in the world.

Some one else saw it besides myself; other eyes traced her with slow observation across the room and back again. Once or twice when she was talking, I saw Lord Erlistoun quit the books of prints in which he had taken refuge and listen.

Doubtless his lordship had spent a very dull day. My father, shrewd and wise,—neither wishing to show off his titled acquaintance, nor thinking himself justified in mixing up heterogeneous classes against their will,—had desired that his guest should be left entirely free to find his own level, and join in the society about him as much or as little as he chose. Perhaps for their comfort, if not their sagacity, some of our good relations did not even know that the young man who sat so quietly aloof, and talked so little, was Nugent Baron Erlistoun.

"Ask him to play chess with you," said Jean, passing me, towards the piano, where some of the old folk had begged for one of her old-fashioned songs.

I had intended asking him; so we soon sat down face to face to our mimic battle.

Let me do him justice, as I tried to do that evening. A finer face I have never seen; not a mean line in it. Something eclectic even in his way of handling the chessmen; balancing over a poor pawn, in doubtful choice, those white expanded fingers, laden with a ring that valued—I know

in a business capacity the value of diamonds. Nay, his every action, down to his way of lounging back on the crimson-velvet chairs, had a freedom and repose—in addition to that last grace, entire unconsciousness—at once admirable and enviable.

Let me do myself justice now. I did *not* envy him. Physically, I might have done, a little: there are times when most men feel keenly nature's niggardliness; but, spiritually, never. In any great moral battle,—as in this sham one we were fighting, somewhat unequally, as I soon saw,—I had an internal conviction which would be the victor, which would hold out toughest, strongest, and longest,—Lord Erlistoun or I.

He lost, as I expected; but replaced the men, seeming to make no account of losing.

"Do you like the game, Lord Erlistoun? To enjoy chess, requires a certain hard, mathematical, calculating quality of brain."

"Which I have not? Very probably. Nevertheless it amuses *vous passer le temps*. Your move, I believe?"

He leaned back, and we began another game, keeping up the chess-players' solemn silence, nor distracted therefrom even by Jean's singing.

She rarely sang in public at Lythwaite. Either she disliked it, or her taste in music was too "old-fashioned" for our elegant friends. Now it struck home. People's songs they were, with the people's life in them; passionate or tender, merry or sad, but always fresh warm-blooded life. One felt rather sorry for those too refined to understand them.

"You like music, Lord Erlistoun?"

"Yes. You should have heard *Ernani* last winter at La Scala. It was very fine."

"My taste in music is low. I had rather hear an English or Scotch ballad than a dozen operas."

"*Chacun à son goût*," said Lord Erlistoun smiling.

Jean burst out again, like a mavis from a tree-top, with another of those ditties made for all time—such as "Huntingtower," "Robin Adair," or "the Bonnie House o' Airy." To see her, to hear her, with her heart both in voice and eyes—her true womanly heart—tried me. I could not play chess for it. Lord Erlistoun apparently could, for he won. Just as we were rising, Jean looked across at me, merrily and mischievously,—I know she did it out of pure mischief,—and began afresh—

"O billie, billie, bonnie billie,
Will ye gae to the woods with me?
We'll ca' our horse hame masterless,
And gar them throw slain men are we.
'O no, O no, says Earlistoun."

Lord Erlistoun looked up quickly; Jean went on—

"O no, O no," says Earlistoun,
'For that's a thing that maunna be;
For I am sworn to Bothwell Hill,
Where I maun either gae or dee.'

The ballad continued, verse after verse, in a wild plaintive tune, about this young laird's rising "i' the morn," his

"Farewell father, and farewell, mother,
And fare ye well, my sisters three;
And fare ye well, my Earlistoun,
For thee again I'll never see."

And so on, ending, I think, with,

"Alang the brae, beyont the brig,
O mony there lie cauld and still;
And lang we'll moun, and sair we'll rue
The bluidy battle o' Bothwell Hill."

The last line fell in a faint echo, as if the singer herself was touched by the sweet old song. Lord Erlistoun rose.

"That ballad—I never heard it before; may I look at it?"

"You cannot, unluckily; I sing it from memory."

"Will you sing it again?"

"Some time, but not to-night, I think."

Was Lord Erlistoun so surprised by being refused any

thing by any body that he did not ask again? Nevertheless he still stood by the piano talking to her.

"The bluidy battle o' Bothwell Hill." There was hard fighting in the days of our forefathers. We live an easier life now."

"Do you think so?"

"I mean—let me help you with that music-stand,—I mean, there is a difference between the men of to-day and the hero of your ballad: Alexander Gordon, of Earlistoun, I think you said?"

"Certainly a difference."

Lord Erlistoun was silent.

Presently he made another attempt at conversation.

"I rather fancy I have a legitimate right in that pretty ballad of yours. Our family is descended collaterally from those same Gordons of Earlistoun."

Jean's attention was caught. "Ah, indeed? Earlistoun near Dalry, a tall gray castle, among trees, in the bottom of a wide valley surrounded by low pastoral hills?"

"You seem to know the place better than I do myself. In truth, save the fact that the first Lord Erlistoun chose to take his title from the old castle, I know very little of those remote Scottish ancestors of mine. I have been so much abroad; have become so thoroughly a cosmopolite."

"I perceive that."

"Do you?" as if he wished to discover whether the perception was favourable or unfavourable. "You are interested, I see, in those days of gone-by romance. Yet I thought you rather contemned old families?"

Yes, he had certainly overheard us this morning—Jean felt he had. Her colour rose painfully; but she was neither ashamed nor confused.

"I would be sorry to condemn any thing for being old; or, on the other hand, to value any thing merely because it was old."

"You believe, then, there is some little truth in the doctrine of race?"

He said it, not without pride, but a pride too accustomed to its possessions to heed either condemnation or justification. Jean answered with something of the same feeling, though drawn from a different source.

"Thus far I do believe, that, seeing how fast races decline and families dwindle and die out, when a family has maintained itself notable above others for centuries, the chances are that its members must have sufficient good qualities, and the whole race enough vitality, to keep it worthy of note."

"If so, can it be a mean thing to respect one's progenitors?"

"I never said that, Lord Erlistoun. Any one who ever honoured a dear father can understand something of the delight of honouring distant forefathers—when they were deserving of honour. But,"—and her great bright eyes flashed light and life enough to kindle a whole race,— "I think it far, far beneath the honour of a living man to go trading all his days upon a heap of dead men's dust."

Perhaps never in all his days, among his English peeresses, his Russian princesses, his Paris *baronnes*,—had Lord Erlistoun seen a woman who spoke her mind out, with all her sincerity, in this way. Evidently simply because it *was* her mind, without any reference to, or thought of, her interlocutors. He looked certainly a good deal surprised. With some curiosity, if not admiration, his eyes rested on the dark glowing face; then he stooped to help her arrange her music.

"Dowglas," reading the lettering on a volume; "Jean Dowglas." I beg your pardon; is that—"

"My name? Yes; my father was Scotch. My mother's name was Brown."

Ay, Jean, lift your head; speak up proudly of that poor young mother, who had no "gentle" blood, yet who left some of the bold plebeian energy of us Brownes in you, to to help you after she died.

"Dowglas," repeated Lord Erlistoun. "Spelt, I see,

with the *w*, as a very old branch of the Douglasses still persists in spelling it?"

This was meant as a question apparently; but whether she belonged to that "very old branch" or not, Jean did not vouchsafe to say.

"Jean, too. Have I not always heard you called Jane?"

"My father called me Jean. Thank you. Do not trouble yourself any more with that music, pray."

She moved away, and busied herself for the rest of the evening in entertaining the poor relations. I did not see her speak again to Lord Erlistoun. He sat in his arm-chair, occupied with his book of prints, till at length, finding some person worth talking to,—as doubtless every one present was, if only one would discover the right key to unlock their hearts and lives,—he began talking with a good will.

When we all separated for the night, I noticed that he held out his hand, which Jean had never touched before, in a manner that made it impossible for her to refuse it.

"Good night, Miss Dowglas."

"Good night, Lord Erlistoun."

III.

I WENT to Liverpool next day; but my mother made me promise to return every Saturday, remaining until the Monday. I did not look well, she said, and she thought it was a curative measure; but I myself was not so sure of that.

A week in the office, with odd evenings spent in walking swiftly up and down the busy Liverpool streets, or taking a twopenny breeze on the river, to see the sun setting behind the Groat Orme's Head, and colouring into beauty the long sandy line of the Mersey shore;—while all the time I knew it was lighting up wavy grass meadows, May hedges, and merry rookeries far away, in those lovely spring evenings, which I never knew so lovely any where as at Lythwaite Hall.

A clerk in our house, speaking of my father's new place one day, said he knew it well when he was a boy. He once spent a whole May month there with a cousin of his, who was dead now. He told me how they used to agree to rise early and stroll about the garden before any one else was up; go fishing in the trout-stream, and rook-shooting in the shrubberies—only she did not like that much; how they generally went to church the field way, where he helped her over the stiles; and how he had still the clearest recollection of her face as she sat opposite to him listening to the sermon. She was dead now, and buried—had been for years. He thought he should like to get a holiday, and go to that village-church again some Sunday.

O, Jean, my cousin Jean, if you and I had been girl and boy together, years and years before now; if we could be boy and girl still, and go hand-in-hand through the gardens and over the meadows of beautiful Lythwaite Hall!

When a man lives an exceedingly practical and busy life, when of necessity the one spot—of romance, will you call it?—in his character must be reduced to a very small space of time and thought daily, close pressed down,—locked down, as it were,—it is astonishing what vitality it preserves, and how, in the brief moment or two when he allows it liberty, it can rule and sway his whole being.

I seemed to have lived a year in the short railway-transit between Liverpool and Lythwaite Hall.

My mother was unfeignedly glad to see me. She had been worried about a good many things, she said, but that was nothing now. Poor body, she was always worried. "Could Jean not help you?" I asked.

O no; she did not like to say any thing to the poor dear girl.

"Mother, is any thing the matter?"

But that minute, through the dusk of the garden, I heard Jean's laugh, and saw two figures moving slowly up and down her favourite walk—our favourite walk.

"Don't go to them, Mark; please don't. It isn't Charlie; it's Lord Erlistoun."

"Not yet gone?"

"No; nor seems inclined to go. And I can't help thinking, though I wouldn't mention it to her or any body for the world, that this visit of his may turn out a very good thing for our dear Jane."

"A very good thing!" When women say that, they mean marriage, supposed to be the best possible thing for any woman. My mother—the worthiest creature alive, and not a bit of a match-maker—she also undoubtedly meant marriage.

Lord Erlistoun wanting to marry Jean Dowglas! plain Jean Dowglas, whose mother was a Brown. Things must have gone very far indeed for even my mother to take into her innocent head such a "very good thing."

It must be understood here, that the matter struck me—who perhaps knew her better than my mother did, or any of us—solely in the light of Lord Erlistoun's wanting to marry Jean; a very different thing from her consenting to marry him.

"But if it does come to that," said my mother, after listening to all my excellent good reasons to the contrary, and then repeating her own, "what will your father say? and what will his mother say about our having had him here—to entrap him, perhaps? and what will all the world say"—a little pleasure lurking in her lament;—"our poor cousin Jane to be made Lady Erlistoun?"

"Hush, mother!" for nearer came that little laugh. They two were in full and lively argument about something; they noticed nobody till we were close upon them, and then Jean turned with a start of surprise.

"O, Mark, I am so pleased!" with an unfeigned pleasure.

Lord Erlistoun likewise, with extended hand and an air of real friendship, was "exceedingly glad" to see me.

We all joined company, and paced up and down the garden till nearly starlight. Jean linked her arm in mine; and turning to Lord Erlistoun, went on with the argument. I don't remember what it was about; in fact, I did not hear much of it. I only recollect noticing the perfect frankness and freedom of her tone, mingled with a certain decision and independence which usually marks the intercourse between a woman and a man younger than herself, and possibly younger still in character.

Twenty-four and twenty-seven. Comparatively, a woman and a boy. Often a boy worships a woman—sometimes permanently, always devotedly, for as long as the passion lasts; but it is rarely that a woman's love goes backward in the dial of life, to expend itself in all its depth and power,—as a true woman alone can and ought to love,—upon a boy.

When starlight was exchanged for candle-light, and I had full opportunity of noticing them both, I saw nothing in any way to controvert this opinion; not even when coming back into the drawing-room after all the rest were gone. Jean found me still sitting over the fire, and stopped to talk a minute or two upon the nearest and most natural topic—Lord Erlistoun.

"He is here still, you see, Mark. He appears to like Lythwaite and our steady-going home-ways. And, upon my word, I think they have improved him very much; don't you?"

"He certainly is a great deal altered."

"For the better?"

"Possibly. Yes; I think for the better."

"I am sure of it. Not all surface politeness now; you may see his kind heart through it. And he is beginning to feel the useless waste of his life hitherto; thinks of dashing into politics or public business or literature. He longs for something to live for—something to do. He says he often envies you, Mark, that you have something to do."

"Does he?"

"Cousin," after a pause, "I am afraid you don't quite like Lord Erlistoun, as indeed none of us did much at first; but we should be slow of judging. We never know how much good may lie hid in people, nor how good they may finally grow. I have great hopes of Lord Erlistoun."

I looked suddenly up at her, doubting for the moment—only a moment—whether she too were playing off the usual feminine hypocrisy, or whether she was still her true self—my spotless Jean Dowglas. Ay, she was.

"Jean," I said, feeling somehow that now I ought to say it at all costs, "take care."

"Of what?"

Could I answer? But she was no child. After a moment, I saw she had answered the question for herself.

"I understand you; and Mark, though it was not quite kind of you to say that; still, such friends as we are, I should be very sorry if for a moment you misunderstood me. 'No; I am not in the least afraid of what you suppose.'"

"Why not?"

"Why not? Because I know myself, and trust myself. When we are girls," and she sighed, "out of our very innocence and ignorance we make mistakes sometimes, but not afterwards. A young man must be blind indeed, very blind, and a little conceited too, if he cannot discern at once from the manner of a sincere woman whether she simply likes him or *loves* him."

"That is true."

"So, cousin Mark," smiling, "do not be unjust again, either to me or to Lord Erlistoun."

No, I wished not to be. I made every effort to see things justly, and as Jean herself saw them; and perhaps her vision was clear then. Perhaps, had Lord Erlistoun left that day, or even the next, he might have merely carried away with him the remembrance of a noble and unworldly woman, who, in the totally opposite world in which he dwelt, might have been an element of purity and goodness, lasting him at intervals all his life long. But in these things, people frequently go on safe and sure to a certain point; they cross that, on some idle hour, in some unconscious way, and there is no going back ever again.

On the Sunday evening we took a walk—Jean, Lord Erlistoun, and I—through the same fields which our old clerk in Liverpool had been talking of. It was such an evening as perhaps, poor old fellow, he had enjoyed many with that little cousin of his; the sort of evening which always puts me in mind of Wordsworth's foolish-wise rhymes,—Jean repeated them, sitting on a stile, eating clover-honey,—

"O, who would go parading
In London, and masquerading
On such a night of June,
With that beautiful soft half-moon,
And all these innocent blisses
Of such a night as this is?"

"Who would, indeed? But I am afraid I must soon."

And Lord Erlistoun leant against the stile, listening to the soft, sleepy, far-off "caw-caw" of the rookery, looking up at the face of the "soft half-moon," and then at another face, also quiet, also rather sad, as if in the pathos of the hour Jean had gone back into former years, shut-up sanctuaries of her chequered life, whither no one could follow her.

"Miss Dowglas" (she started slightly), "I wish you knew my mother. You would like her for many things—and I think likewise—" He stopped. "I had a letter from her this morning; would you feel interested in reading it?"

"Thank you; you know my fancy for reading strangers' letters. Sometimes they let one into bits of character unknown to the correspondents themselves."

"I wonder what you will find out here," and he lingered over it,—the delicate-tinted scented envelope, with the exquisite handwriting and large coronetted seal,—before he put it into Jean's hands. "Read it all, if you will; excepting, indeed, the crossed page. She has but one fault, this mother of mine—like her one crossed page."

Jean read and returned the letter. "But I ought to confess," she said smiling, "that I saw one word—I think the name of 'Emily' or 'Emilia,' on this momentous page."

"O no, quite a mistake!" with one passing flash, fierce and bright, that showed what fire could kindle even in Lord Erlistoun's eyes. He put the letter in his pocket,

and returned to the subject we had been lazily canvassing along the fields, as if in contrast to every thing surrounding us,—namely, London life, "high" life, as set forth in that most sparkling and most melancholy of fictions, whose very brilliancy tortures one like the phantasmagoria of disease—Thackeray's *Vanity Fair*.

"The question seems," Jean said, "is it a true picture of that sort of life? I would never shrink from any truth merely because it was painful; but *is* it true? I have no means of judging. Is it true, Lord Erlistoun?"

"I am afraid, in a great measure, it is."

"Then I would rather say to any sister of mine, like Hamlet, 'Get you to a nunnery; go, go, go,' than see her thrown out into the great world, to grow into the sort of woman you have described to me sometimes. I couldn't help thinking so, even in the cathedral this morning, when I looked across the aisle to the pretty baby-face of that little Lady Emily Gage."

Lord Erlistoun knocked the mud off his boots,—he could risk muddy boots now,—saying carelessly,

"Miss Dowglas, what is your opinion of that small school-girl?"

"Lady Emily? Indeed I have no possible grounds for forming an opinion at all. I only now and then have felt sorry, looking at her, to think how soon her child-life will end. I always feel great pity for an heiress. She has less than the common chances of us women."

"How do you mean,—that she is likely to be loved for any thing except herself?"

"Or if she were, she would be unlikely to believe it. Poor little Lady Emily!"

"Don't waste your pity over Lady Emily. You might spend a fragment of it upon us men,—men of the world,—who never find a woman to believe in; who are sought, flattered, hunted down as it were; afraid to look at a pretty face lest it should be only a bait to hook us with; afraid to trust a warm heart, lest it should turn out as hollow as this worm cast under my foot. What chance is there for us men, when we have lost our reverence for women?"

"Not for all women," said Jean gently; for he had spoken with passion, as certainly I never in my wildest thought expected to hear Lord Erlistoun speak. "You have told me of your mother."

"And what does my mother do, even *my* mother?" His tone was lowered, but I could not help hearing it. "She writes me that there is a charming creature just ready for me,—one whose estate joins mine, and therefore will be a most suitable match,—with a good fortune, and I am poor you know; good birth, good looks, and in short, every thing convenient—except love. Shall I go in a year or so, propose to her, and marry her?"

"I thought you said that for ten or fifteen years to come you were determined not to marry?"

"So I was. I abhor matrimony. Of course, after a time I must settle down as others do; but I will have my liberty as long as I can. When I do sell myself, it shall be tolerably dear, even though it be to this young lady. I won't tell you her name, lest perhaps I might finally marry her."

Whether he was in earnest altogether I know not, but Jean was. You should have seen her look of mingled pity and scorn.

"Lord Erlistoun, we will, if you please, discuss a less serious subject; on this you and I could never think alike."

"Could we not?"

Perhaps he felt that, regarding sideways the dark noble face, on which the last bit of sunset was shining,—a pale face too, for to-day she did not look either particularly well or young. While in his unwonted energy, stronger than ever I saw the distinction before spoken of, between the woman and the boy. Equally strong between the one who, living in the world, lived only for it, and its ideal of happiness; and the other, who, also abiding in it, and enjoying it so far as fortune allowed her, had yet an ideal, a spiritual sense, far, far beyond any thing there.

"You think, I perceive, that I am fit for nothing better than to turn out one of those people you hate so in *Vanity Fair*—a Marquis of Steyne, perhaps?"

"I never said so or thought so, Lord Erlistoun."

"What would you have me do, then? What would you have me be?"

I, leaning on the other gate-post away from them, was struck by this speech. It is not a light matter when a man arrives at asking a woman, "what she would have him be." Possibly Jean noticed it, for she replied rather coldly,

"Indeed you are the best judge of that; every man must be the keeper of his own conscience."

"But he may gain a better self, a purer conscience, to help him. Miss Dowglas, shall I take my mother's advice and marry?"

"No!" and the truth in her, the duty of speaking it, seemed to make Jean forget every thing else. "After the fashion of marriage you have told me of, undoubtedly no. For those who see no clearer, know no better, much must be allowed; but for you who do, nothing."

I saw Lord Erlistoun smile to himself. "You do not quite understand me."

"Yes, I think I do; but we see things from such opposite points of view. You have always been used to consider marriage as a bargain, a convenience, a matter of necessary respectability; I think it a sacred thing. There can be no medium in it; it must be either holy or unholy, entire happiness, or utter wretchedness and sin. For man or woman to marry without love,—not merely liking or decent respect, but downright *love*,—is in my belief absolute sin."

Lord Erlistoun replied never a word. All along the still twilight fields he scarcely made one observation. It was my hand that helped Jean over the stile; he did not offer to do it. My hand, large and hard it might be, not like his; but a man's pulse beat in it; it could support, and it could hold fast too.

"Will you take another turn up and down the walk, Miss Dowglas?"

"No; it is too late, I had rather go in."

She slipped away. Was it with the same sort of instinct, that whenever Lord Erlistoun came near her, for the whole remainder of the evening, she slipped away?

Well do I remember that evening, and the look Jean had—her face a little flushed, with a certain unquietness in it. She sat at the piano a long time singing; it had become a custom, I found, that she should sing every night, and to no lack of listeners. What she chose, in spite of one or two hints to the contrary from Lord Erlistoun, who seemed a little surprised at our narrow notions about "Sunday" music, were songs of Handel and Mendelssohn, among which, I remember, were some of their solemnest and most spiritual,—"I know that my Redeemer liveth," and "O, rest in the Lord;" ending, at my father and mother's desire, with an old-fashioned Methodist hymn (we were Methodists when I was a child); and how the tune carried me back to the hot chapel in Rathbone Street, where, after some fierce, coarse, strongly-emotional sermon, the congregation rose, and their stent Lancashire voices threw the chorus backwards and forwards, women and men alternately:

"For we're marching on Immanuel's ground,
We soon shall hear the trumpet sound,
And we all shall meet at Jesus' feet,
And never, never part again.
No, never part again,—no, never part again.
O, never part again? No, never part again;
For we all shall meet at Jesus' feet,
And never, never part again!"

O life,—life so full of partings! I have often quieted the pain of it with a bit out of that old Methodist hymn; with the echo of that "never part again."

I was up early on the Monday, as usual; but my father caught and carried me off to look at some horses he had bought for the new brougham; so that I did not get my early walk with Jean. She had taken hers though; for I met her in the hall laying her hat aside. She was late;

and we waited some minutes for her before she came down to make breakfast. All breakfast-time she was exceedingly silent and grave:

Lord Erlistoun did not appear till breakfast was nearly over. When he entered, I noticed that Jean blushed burning hot, in trouble and pain, a very anguish of blushing. He did not speak to her, even to wish her good morning; but took his seat near the foot of the table, and entered with my father into a long and energetic discussion on politics. In the course of it, I overheard that he had some thought of standing for a small borough in the south of England; and to do so, it would be immediately necessary for him to leave for London.

I breathed. Yes, he was going away at last. Maybe I could even feel sorry for the young man.

He did not seem much moved himself. He carried things with a high hand, and stood talking with great *empressement* of the pleasure he had enjoyed at Lythwaite Hall; but I noticed he did not give any of us the slightest invitation to return his visit.

Ay, in a few hours he would be gone. The new element he had brought into our household—as he certainly had, since different characters and classes must necessarily act and react upon one another—would depart with him. My mother might cease to put herself and her house into full-dress every evening, and my father to bring out his claret every day, as if for a dinner-party. We should go back to our old ways, and Lord Erlistoun to his. Could we? or could he? Can any new experience in any life be merely temporary, leaving no result behind? I doubt it.

Nevertheless he would most probably vanish completely out of our sphere, as if he had dropped at Lythwaite from a balloon, and gone up again by the same ethereal conveyance. Would any body miss him? Would any body care?

Of this, too, I was not quite sure.

"Liking," not loving; used in opposition to loving, rather; but most certainly she had said the word, and she did not even "like" every body.

"Mark, are you going to walk to the station? I'll walk with you."

So once again went Jean and I, under the chestnut-trees, where the white flowers now lay strewn, soiled and scentless, beneath our feet.

"You perceive; you had better reconsider the chestnuts that are to be planted in your park. 'It is not always May'—eh, Jean?"

"Ah, no!" with a slight sigh. "Cousin, you need not make public that foolish speech of mine."

"About owning a park? You never mean to own one, then?"

Whether involuntarily I put into this question some meaning below the surface, I know not; but Jean answered, seriously and emphatically, "No."

Still, as she walked along, though her head was erect and her footfall firm, and she talked easily and cheerily upon our usual family topics, I fancied I could trace at times the same unquietness of mien, as of a good and true nature not quite satisfied with itself. She was "out of sorts," as people say; out of harmony with herself and with the lovely June morning; it seemed almost to give her pain.

Waiting at the station,—for she would wait,—she took my arm to walk up and down the platform.

"O, Mark," clinging a little, "I wish you were not going away; there is some comfort in you."

I asked her, after some consideration, if any thing was troubling her; would she tell me?

"No; I had rather not. In fact, I ought not. It is, after all, really nothing; it will soon be quite over. If I were not sure of that, as sure as—There's your train."

"The next train goes at 2.40. Express, remember. Lord Erlistoun wished me to inquire. He goes by it."

"O, indeed!"

"Jean, one word. Are you sorry or glad he is going?"

"Very glad; heartily glad."

"But he may change his mind again; he has a trick of doing so. Ah, Jean, take care!"

"I have taken care."

"You are not angry at my saying this?"

"No. Good by."

My sight rested on her there for as long as the whirling train allowed, standing fixed and firm, with her shawl gathered tight round her, as if nothing in her or about her was to be left loose, subject to any stray wind of fancy, feeling, or chance.

PAYING DAUGHTERS.

DEAR MOTHER,—As you have invited remarks from all who conceive they can add something to the pleasures and comforts of home, I, as one of its members, would fain make a little statement to you of the feelings of some of its daughters, in the fond hope that through your benign influence the head of the family may be prevailed on to take our case into consideration. My claim to your indulgent hearing is founded upon the fact, that we do not think a fair share of this world's good things falls to us, in comparison to that which is bestowed on our brothers, and that consequently there is just cause for remonstrance on our part.

We belong to the happy middle-class, whose men are mercantile or professional; while the women do not require to work for a maintenance, but are, as gentlemen express it, "young ladies, with nothing to do but amuse themselves." Now I wish it to be remembered, that we are offered no choice in this matter; the men of the middle classes do not choose that their females should work for money, so we have no option; but as we are born or bred to be ladies, must just live as such.

Ask our brothers if they would exchange places with us, taking our "happy idleness" and our allowance of pocket-money; see if you would get one to agree to it, highly favoured as they talk of us being. Again, ask a similar number of girls if they would willingly take the toil and anxiety of a business-life, with its chances of making money. I can answer for it, you would find many ready, who are now pining in the monotonous round of home pursuits—busy idleness, unremunerative employment. But do not let any one fancy I mean to advocate women going into the business-world when it can be avoided; I merely suggest the idea of exchange of position by way of illustrating my subject. Neither can I allow, as some may be ready to say, that this is cherishing an undue love of money. It is simply natural, and must at least be as innocent for women as for men. I fully acquiesce in the wise arrangement that makes man the provider, and his wife the dispenser, of the household funds; but my present argument relates to the unmarried of the two sexes.

We young women have had our minds and tastes cultivated; but wanting money, we have no power to indulge them. Benevolent feelings have been implanted and cherished in us, but we are not given means to exercise them. We cannot buy a book for our own improvement, or as a gift to a friend, unless its value can be reckoned in pence rather than shillings; and so on I might go in my list of very moderate desires, whose realisation is, however, impossible to us. Turn, then, to our brothers, and see how they fare in this respect. They have been set out in the world, and not only allowed but encouraged to make money. They too have taste for art or science or sporting; but mark the difference—they have money. They can buy pictures, if that be their fancy; or costly books of art or science; or they

may keep a horse or dogs or birds; or they may buy all the requisites to satisfy their sporting tastes;—any or all of these recreations which require money are thought reasonable in them. Say, what have we, their sisters, in lieu of all this? They choose that our time should have no money-value, our labour be unproductive, never thinking it unkind or selfish to deny to us what affords them so much gratification. Now my object is, to show the propriety of giving the daughters of a family a share of the family income. Let no one say he cannot afford it; a good man can always afford to be just. Let him live in plainer style, entertain less company, or do it in a more homely manner; let him keep fewer servants, and train the daughters to do all the lighter household duties. They might then be paid for their services; and thus learn to value and economise their time, because they find a direct benefit from being active and industrious. The wholesome stimulus of gain, which is the mainspring of most of man's labours, surely cannot fail to act well with woman also.

At present there are two great classes among us; the first, those who, as they have been taught, keep themselves as far as possible out of mischief (wonderfully so, I think) by employing themselves in fancy work, music, and other accomplishments; the second, those who employ themselves really usefully in making and mending their own and the family garments, in educating the younger branches, and occasionally in housekeeping. It would be for our own and the general welfare were we all to be found in the last of these classes; though far be it from me to disparage those light occupations for otherwise idle fingers, which might with fitness be the elegant recreation, but not, as at present, the employment of life,—the all of preparation that too many girls have for the earnest work of their womanhood. Such trifling pursuits do not allow sufficient outlet for a girl's natural high spirits; consequently, love and marriage are all that she has to look to for relief from her monotonous, aimless, useless existence. Men will have it so; and they reap the fruit in ill-kept, ill-managed house and children. Give girls, instead of trifles, active employment, and a share of the money they see others dispensing, and very sure I am there will be a great development of the proper qualifications for being good wives, mothers, and mistresses; and likewise, should their lot prove a single one, for being kindly, gentle, patient, loving maiden-aunts,—those much despised but useful, nay, indispensable, members of society.

A DAUGHTER.

THE INVALID'S CLOCK.

In August last, I purchased one of the six-shilling clocks at the Crystal Palace, and found that it kept capital time.

The only objection to it was, the small size of the face, it being only $3\frac{1}{4}$ inches square.

To remedy this, I made a scale upon paper, as shown in the annexed drawing (so that twelve divisions were equal to half the length of the chain), and affixed it to the wall of my bedroom, under the clock. A night-light I burn in place on a bracket, surrounded by a tin-reflector; thus throwing a light on the scale, the rest of the room being in shade.

If the clock is wound up at nine p.m., it is necessary to bring the top of the weight to IX at the upper part of the scale.

Thus, instead of fumbling for a watch, and being thereby thoroughly disturbed, it is sufficient to cast the eye to the opposite wall, and the top of the weight shows the time.

A ring at the other end of the chain does duty during the day.

E. A. CORLAND,
Bellefield, Chelmsford.

GOLD FISH.

The first requisite for the proper treatment of Gold Fish (*Cyprinus auratus*) is a commodious and roomy (glass) globe, wherein the inmates can move about at their ease. The larger the space the better; for it admits of an abundant supply of water, and, by consequence, supplies an increased number of animalcules (invisible to our eye), which are their proper food. The next thing is, to furnish them with water adapted to their natural requirements. If this be neglected, the fish will grow sick, become unsteady in their gait, and lose all their brilliancy of colour; their tails will split, and their bodies become furred. They will then try to obtain relief by poisoning themselves on their heads, or by leaning against the sides of the glass—all in vain. Disease has attacked them, they are indifferent to all around them, and death is awaiting his victims.

Spring-water, being considered the brightest of any, is too often injudiciously chosen for the purpose. This contains iron, and is the cause of much uneasiness to the fish. It moreover changes the brilliancy of their colour, and frequently dyes it brown or black. Whenever this is observable, it is a proof that nature has been outraged. The sufferer must be removed into a more genial element. Nor must any water be supplied in which there exists either chalk or clay. Both these have the effect of destroying their vision; and this readily accounts for their eccentric movements, so often considered proofs of tameness, playfulness, and happiness. Unhappy error!

Rain-water appears, from close observation, to be most suitable. If this be not easily obtainable, use the purest river-water. No difficulty can exist in ascertaining whether your fish are in good health. Their motions and habits will at once declare it.

In the selection of your little prisoners, it is not sufficient to choose those which are of the deepest and brightest colours. If you wish them to be admired, you must consult, not only the vivacity of their motions, but the elegance and symmetry of their form and markings, closely observing their structure and outline. In this matter, there is often much negligence shown. A fat fish floundering in a crystal bowl is unsightly to a degree.

As regards any special food, there is much difference of opinion. Feeding must very greatly depend upon the frequency or otherwise of the change of water. Beyond all doubt, their proper food consists of the invisible animalcules contained in the element wherein they live. If, therefore, there be a daily change of water, and the number of inmates in the globe be not too great,—this should be guarded against,—the less they have in the way of "extras" the better. Crumb of bread contains alum, and is therefore homoeopathically poisonous. Sponge-cake is better. A small fly thrown in occasionally both amuses and pleases them. Hard-boiled yolk of a fresh egg, dried and finely powdered, is also a luxury. A wee bit suffices. All must depend upon the

deficiency of animal food existing in the water. So long as a good supply remains, all beyond is *de trop*. They are easily tamed, and readily rendered familiar. "How," will be explained in a future paper.

Here it is needful to put in a kind word for our little friends in the matter of light and heat. They can bear, and they prefer, a moderately warm temperature; but they are severely punished by being exposed to the uncontrolled rays of the sun; they are certainly tortured under such circumstances. The effect produced on the fish by the glass and water, so operated upon by the solar rays, is, probably, little short of madness. Their eyes feel like balls of fire; they stagger, and seek for some means of escape. Finding none, they rush furiously about, until perhaps observed by some of the family, who may remotely guess the cause of their discomfort, and relieve them. Fish thus treated can never be healthy or happy. Their position should be under a tree, or surrounded by flowers and shrubs. Intensity of heat or light are destructive of all their enjoyments.

The necessity for a frequent change of water is now, fortunately, altogether obviated. Natural science, amongst its other wonders, has taught us that, by in-

troducing certain plants into the water wherein fishes are located, the balance of nature is at once preserved without man's interference. This may be familiarly explained in few words.

At every inspiration made by a fish the water taken in by the mouth is immediately expelled by the gills. By this act, the free oxygen of the water is absorbed, and carbonic acid given out. This operation, continuously repeated, naturally exhausts all the vitality of the water. Its constituents are now changed. It is not only useless, but dangerous. It is destructive of life, consisting principally of carbonic acid. The poisonous nature of the water soon manifests itself. The fishes rise to the surface in search of that which they cannot find below—atmospheric air. This, for a season, sustains them; but as they obtain it in an unnatural way, their lungs become inflamed; the effect is overpowering, and they soon cease to live.

To remedy the evil, there only requires "the balance" which has been before alluded to. This is effected by introducing into the bowl some suitable and pretty water-weed, such as the *Vallisneria spiralis*, which, whilst being ornamental and characteristic, immediately brings about a new set of chemical operations. These operations are of such a nature, that they prevent all necessity for a change of water. The cause is evident, inasmuch as plants absorb both oxygen and carbonic acid; and as they give out (when in health) more oxygen than they absorb, they thus contribute that which the fish require to maintain their powers of respiration. Fish and water-weeds flourish famously together.

One word more. Seeing that the square glass "tank" is becoming fashionable, I would strongly urge its very general adoption in preference to the globe. The form of an Aquarium is natural. It affords plenty of room for its inmates, and it removes the danger of the sun's influence on the organs of vision. The structure of a fish's eye is so delicate, that too much care cannot be taken to preserve it from injury.

It must be borne in mind that, when there is no change of water, fish require to be fed. Their natural supply has become exhausted, and must be replaced.

WILLIAM KIDD.

SPECIMENS FROM RECENT EXHIBITIONS: NO. VIII.

PAINTED BY T. P. HALL.

MOLIÈRE READING HIS COMEDIES TO HIS HOUSEKEEPER.

MOLIÈRE READING HIS COMEDIES TO HIS HOUSEKEEPER.

By T. P. HALL.

"Molière," says Boileau, "used to read to La Forest, his housekeeper, his comedies and farces; and when he perceived that certain laughable situations did not excite her hilarity, he altered or erased them, having remarked that such passages never had any success."

THE picture which we here engrave is by Mr. T. P. Hall, and is at present exhibiting at the British Institution. It is one upon which we had great pleasure in commenting in our notice of the paintings now before the public in that gallery. We then described it as a work by a young artist from whom much might be expected, if he would avoid even the suspicion of following, or rather imitating, the manner of that school at the head of which Mr. Frith has placed himself for many years, and which is at the present day so popular. This warning we considered the more necessary, as we thought Mr. Hall might venture to strike out a line of art far enough removed from the probability of a charge of plagiarism, and also because English exhibitions have for a great while past swarmed with pictures which are even more obnoxious to that suspicion than this work of his; and lastly, as in many parts of the execution it is easy to trace the influence of the excellent painter we have named, and of those numerous artists who are either followers of, or coadjutors with, him in the extensive walk of art which is known as *genre* painting.

Jean Baptiste Poquelin, who called himself Molière, determined, like many men whose names resound in the world, upon following his natural instinct for the stage in direct opposition to the wishes of his family. Neglecting the route which his father had marked out for him in life, he became an actor, and ultimately writer of plays. For many years,—indeed, until past the prime of youth,—he achieved no position which seemed to give hope of obtaining that immortality which he now holds in the minds of men. It is to be remembered that in France, for nearly a century and a half after his birth, the very rites of Christian burial were denied to players; and that, in spite of all the celebrity and riches which some of them obtained, they were never looked upon otherwise than as outcasts of society. No one will therefore wonder that his parents should endeavour to divert him from the path he had so resolutely chosen. Perrault relates an anecdote of their opposition which is amusing, and illustrative of the force of Molière's character and of his histrionic powers. A certain friend of the family, who was a schoolmaster, had been deputed to remonstrate with him on his devotion to the theatre; but Molière so utterly routed the ambassador by reading some of his own compositions, and by the rehearsal of a favourite character, that the ambassador himself became a player. It is further said, that more than one of the lost dramas (for, as with Sophocles, Shakspeare, Ben Jonson, and many others, some of Molière's dramas have been swallowed up by time) were written in order that the *ci-devant* schoolmaster might act therein.

When Molière had entered upon the downward phase of life, and was separated from a wife to whom he was devoted, but who was alike his torment and his disgrace, he made, as Mr. Hall shows, a favourite housekeeper his confidant, or rather editress, previously to bringing his works upon the stage. The best point of the picture is the face of this woman, whose unrestrained cacklings are not overawed by the prospect of the dreadful amount of Ms., or "copy," upon which she has to exercise her editorial function.

We need not dwell upon Molière's power as a humorist, nor on the force of his sarcasm against the extravagances of his day, in fashion, in law, in medicine, and in manners. To him may be attributed the more moderate and natural style of acting which prevailed in his time, taking the place of an extraordinary system of ranting and vociferation, which had reached such a pitch, that more than one actor actually died on the stage from the sudden rupture of blood-vessels consequent upon the violent manner of performance.

The great French dramatist reading to his housekeeper has so long been a stock-subject with English artists, that we hoped to see the last of it in Mr. Hall's picture; but we were hasty in doing so, for at the National Institution the same subject is repeated. This persistence is the more annoying, because, if artists *will* paint from his life, there are many subjects in it of graver interest than this; indeed, of all the biographies of great men, there are hardly any so copious or so fascinating as that of Molière. There is scarcely an incident in his life which is not dramatic, and, in some sense, like the working of a fateful Nemesis; it reads, in fact, not unlike a novel by Thackeray, and would make a splendid subject for his pen.

L. L.

SIR RALPH AND LADY JEAN.

By HOLME LEE, AUTHOR OF "GILBERT MASSENGER."

PART THE FIRST.

"ASH-BERRIES are turning red, Jean,
Beech-russet lies underfoot;
There is gold on the maple-bough, Jean,
And orchis about its root.
When I saw thee first on the moor, Jean,
The blackthorn was but in bloom,
And now the summer is gone, Jean,
And coming the winter gloom.
But the gorse is still in flower, Jean,—
It blossoms the whole year round;
So kiss me once ere I go, Jean,
True lips should aye be crowned.
There be roses outlive the May, Jean,—
Such roses are thine, my sweet!—
No blight on their beauty come, Jean,
Till again my lips they greet.
And say that thou lov'st me well, Jean;
It will nerve my good battle-arm;
I shall think I am fighting for thee, Jean,
And wearing thy heart as a charm."

"Mind thou bring honour home, Ralph,
Think first of The Cause, then me;
For I scarce could welcome thee back, Ralph,
If thou should'st beaten be.
True soldier, true knight, must thou live, Ralph,
True soldier and true knight die;
So will I love thee or mourn, Ralph,
Till cold in my grave I lie."

"I swear by my spurs and sword, Jean,
By my stainless name and shield,
To die in the thick of the fight, Jean,
Rather than fly or yield!
Sooner a grave and thy tears, Jean,
Than dishonour with all thy love.
I will do what a man may do, Jean,
To win thee, my trembling dove!
Kiss me once more ere I go, Jean,
Sweet, soft as the summer thou art!
For a gage of my faith and my love, Jean,
I give thee this ring with the heart.
'Tis full of a ruby-light, Jean,
As warm as the light of our youth;
It will pale if I change to thee, Jean,
And break if we break our troth.
I had it from one who said, Jean,
That the maiden who wore this ring,
Six stalwart sons to my house, Jean,
In her matronhood should bring.
No wife will I have but thee, Jean,
To sleep in my living breast;
No mate shall thou take but me, Jean,
To lie in thy arms at rest."

Look in my face and swear, Jean,—
Swear by some pretty oath,—
By the heart in thy breast that beats, Jean,
That thou wilt be true to thy troth."

"I will swear by what is mine own, Ralph,—
My heart thou hast ta'en from me :
Say, shall I swear by *thine*, Ralph,
Which thou hast pledged to me?"

"Swear by whate'er thou wilt, Jean,
I know thou canst faithful be ;
Or swear me no oath at all, Jean,
Until I come back to thee.
Then shall thou plight thy word, Jean,
In the sight of God and men,
To live and to die with me, Jean,
And never to part again."

PART THE SECOND.

"There are signs in the sky, dear mother,
Dark threatening signs in the sky ;
Watch how the serried lances
March swiftly and palely by !
To the tumult of cloud in the westward
They rush like the sweep of a host
That is dashing down to the battle
When the day is almost lost.
Look how the glorious banners
Wave wide on the wingèd breeze,
And the burnished corslets glitter,
Like foam on the boiling seas !
Look at the white plumes tossing
In lines on the crest of the hill,
At the prance of the war-horses fretting
To charge and to trample and kill !
O, Ralph, art *thou* one of the foremost ?
Now Heaven be good to thee !
Strengthen the worthy and brave, Ralph,
And send thee safe back to me."

"What do these signs portend, Jean ?
Dost thou dream and talk in thy sleep ?
I see nor lances nor banners ;
Why dost thou shiver and weep ?"

"They are gone, and the heaven is silent,—
O, mother, kneel down and pray !
Pray that the God of all battle
Will prosper the right to-day !"

"Give me thy hand, my daughter ;
What frenzy obscures thy brain ?
There is nothing of all this vision
Abroad on the silent plain.
The clouds are full flushed with crimson
In the west where the sun goes down,
And the moon is rising in beauty
O'er the quiet of Ashburn town."

"O, look where the sky is reddest !
There, there, o'er the barren they rush,
Scattered and lurid and broken,
Flying, defeated, they push !
See how the points of the lances
Drop blood-gouts along the way,
And the plumes are half shorn from the helmets,
And the banners are rent away !"

"There are flocks of sheep on the moorland,
And kine in the meadows green ;
But they are feeding in safety ;
There is no flight here, dear Jean."

"Seest thou this ring, kind mother,
What tint does the gemmed heart wear ?
Is it of ruby brightness,
Or pale like a fallen tear ?"

"It is red as the heart of a rose, Jean,
That has fed on a tropic sun ;
And clear as the star of eve, Jean,
When the night is but begun."

"Now art thou living or dead, Ralph ?
O, mother, let me go weep !
If dead, I will break my heart, Ralph ;
If living, still must I weep."

PART THE THIRD.

There is no light in the sky,
No light but the light of stars,
And the red moon gleaming angrily
Across its prison-bars.
The west wind whirls through the mountain-pines,
And tosses their ghastly boughs,
Like elfish locks dishevelled,
On the night's uplifted brows.

What little foot comes swiftly,
Gliding by grange and hall,
Gliding so very softly,
That you cannot hear its fall ?
What little shadow creeping
Under the arch of trees,
Comes with a panting swiftness
Unheard through the mournful breeze ?

Comes like a ghost in the midnight
Under the churchyard-wall,
Asking the late by-passers,
"Heard ye my true love call ?"
Her hair is all pranked with daisies,
Red poppies, and golden corn,
That she culls in the dewy hedgerows,
Where she strays at early morn.

They say she is crazed who see her,
And they let her steal away,
Up to the fearful forests,
To watch the wild winds at play.
There's not one who would dare to follow
As she goes on her lonely course,
Glancing so white and eerie,
O'er the bridge that spans the Fosse.

Should her light foot once falter,
As she crosses the dangerous track,
There would mourning be in Ashburn ;
For Jean would ne'er go back.
The water is wan and angry ;
She shivers and glances down,
Where it pours through a midnight ravine,
And thunders from stone to stone.

The black wood is all around her,
The chillness of autumn night,
And a choir of solemn whispers
That thrill in the dim pale light.
The leaves are telling each other
Old secrets of gone-by times ;
The sighing wind in the brushwood
Sounds faintly as long-dead chimes.

She thinks of the headless gytrash,
Of the wraith by the winter byre,
Of the thousand ghastly legends
She has heard by the winter-fire.

But her spirit is armed full fear-proof,
As she steals through the darkling grove,
And her wide bright eyes are shining,—
And both with the power of love.

She comes to a hidden pathway,
Where the tangled wood twines low,
All massed with the creeping ivy
From roots to arching brow.
Her brave young heart beats faster,
Her tender hands are torn,
Groping her way in the darkness,
By many a cruel thorn.

The moaning wind in the branches
Now stays her in pallid fear;
The rush of the distant water
Breathes like a whisper near.
Down midst the ferns she crouches,
And listens, and scarcely breathes,
Till certain that all is safety,
She creeps from the clinging wreaths.

Then presses eagerly forward,
Where the path goes down a glen,
As lonely and fair as Eden
Ere death was the meed of men.
There is moonlight athwart the elm-trees,
And moonlight upon the sward,
Where a gaunt old priest is keeping
A dangerous watch and ward.

He has had a weary vigil,
Twelve nights by that painful bed,
Where Sir Ralph has lain in hiding,
With a price upon his head.
Sore wounded, and left to perish,
Midst thousands of ghastly slain,
He had found him at dismal nightfall
On the bloody battle-plain.

Sir Ralph could but beg in whispers
To bear him to Hurly Dell,
And send to fair Jean of Ashburn
A message that all was well.
And every night in the darkness
She has come by that perilous way,
And stolen home in the morning
By the wood-paths dank and gray.

He can hear the cautious rustle
Of her foot in the fallen leaves;
He can see the wave of her garments
In the fancies his fever weaves.
Through all the long hours of daylight,
The echoes of last night's cheer
Come whispering of joy and comfort
To his stretched and wakeful ear.

When she comes his joy is all voiceless,
Or breathes but in longing sighs;
He watches her face in the silence,
And worships her with his eyes.
He covers her hands with kisses,
Or crushes them 'gainst his heart:
"Ah, Jean, how the hours are flying!
'Tis morning, and we must part."

"Dear love, the red ring is faithful,
It glows like a furnace-spark;
Canst thou see it upon my finger,
Shining athwart the dark?"

"Sweet Jean, this dell is a temple,
Let Heaven our witness be;
The priest will give us his blessing,
And thou shalt begone with me."

"I must kiss my mother good-by, Ralph;
She wakes for me all the night,
And wanders forth from her chamber
At the earliest point of light."

"Stay, Jean, yet a little moment,—
Ah me, but my heart is sore!
It seems that if thou should'st leave me,
I may never see thee more."

"Nay, Ralph, this is strange and idle;
Am I not all thine own?
Come through the wood at sunset,
And meet me by Hurly Stone.
I know of one that is faithful,
Who waits with his brig at Leigh,
Who will carry us soon and safely
To some refuge beyond the sea."

She bent down her face, and kissed him
On his aching fevered eyes,
And wept some tears on his bosom,
Till the old priest bade them rise.
Then the dell was a holy temple,
And the sward was an altar green,
Where they knelt before God together,
Midst witnesses unseen:
All the soft-breathing watchers,—
The angels who come and go
'Twixt earth and merciful Heaven
In hours of joy and woe,—
All the unspoken blessings
That wait upon love and youth,
Gathered and hovered around them
To hear them plight their troth.

PART THE FOURTH.

There is joyful shouting in Ashburn town,
The people crowd round the gate;
Sir Ralph and his lady and all their folk
Are riding through in state.
Six goodly sons go in their train;
Sir Ralph is stalwart, but gray;
And Jean has passed with the passing time,
To August from blooming May.

Loud ring the bells in the ancient tower;
Sir Ralph looks up with a smile:
"Sweet wife, dost thou mind how thou used to steal
In the night full many a mile,
To bring me food to the bonnie dell
In the forest beyond the Force?
Ah, Jean, it seems but as yesterday
Since we met in the golden gorse."

Next to Lady Jean rides her eldest-born,
And three little lads of his:
"Dear Ralph," says she, "I can count the years
Only by signs like these.
Six sons of ours, all hardy men,
And twelve slight boys of theirs,—
'Tis a long yesterday, dear lord,
That brings us such blessed cares."

"Fair wife, I am young when I look at thee,
Thou hast such love in thy face!
Can forty years and more have gone
Since we left this homelike place?"

"Forty-three years of exile, Ralph,—
Of exile, but not of grief:
O, let us not count our sorrows, love,
They seem so few and brief!
No; let us reckon our blessings,
These noble and loyal sons,—
The treasures that God has given, Ralph,—
And all their tender ones."

"Thy voice is shaken and faint, love,
There are tears in thy gentle eyes.
Ah, dame, it is sweet to remember
Old troubles when they arise."

"It was that I saw a grave, Ralph,
That we could not bring away,—
A grave in the Flemish town, Ralph,
That we made one winter-day.
The sun is out on the cornlands,
The shadows play hide and seek,
How is it with that old graveyard?
Ah, dearest, my heart is weak!
I cannot but think how sweetly
Our little maiden smiled:
Forgive me, love, if I hurt thee,—
She was our youngest child."

"Dame, she went first to heaven;
God took her—O, be thou still!
See how many He left thee!
And fret not against His will."

"Look, grandam, the crimson banners,
Where high on the walls they float;
And look at the waving kerchiefs
From the drawbridge over the moat!
Why are these people shouting,
As forth from their doors they come?"
"My darling, these cries are pleasant,
Because they welcome us home."

"Who is this ancient lady
That a servant leads by the hand,
Stepping so slow and careful,
Yet looking so proud and grand?"

"God save ye, my little daughter!
Who are all these with thee?
For God has darkened my eyeballs,
And their faces I cannot see."

"They are my sons, good mother,
Six sons and twelve lads more,
And this is Sir Ralph, my husband,—
Together we are a score;
For God has prospered our marriage;
The king has vouchsafed us grace;
And we have come back to Ashburn
To rest in the midst of our race."

"To the Greeks," says Aristotle, "belongs dominion over the barbarians, because the former have the understanding requisite to rule; the latter, the body only, to obey." This was all very well in the days of Alexander; it is still the doctrine of every man who owns a slave;—but England has adopted a wiser creed; has carved on her white cliffs a nobler motto; has pledged her soul to the extirpation of slavery from the earth; has fought for it, argued for it, even paid for it, and is just as likely to become a South Sea island or an Indian jungle as to change her mind about the question whether men, women, and children ought to be bought and sold. Faithful to this cause, she turns with constant solicitude to her sister in the West; and if the news came to-morrow that America had emancipated her slaves, there would be a shout of joy amongst us such as few other events could possibly call forth.

It is nevertheless an astounding fact, that the news we should receive at first so gladly would, at the present moment, be more fatal to ourselves than war against a world in arms, more ruinous than all the plagues of Egypt, and as likely to plunge us into the ruthless misery of civil strife as a seven years' famine or a reign of tyranny.

We live by our commerce. Our commerce is the fruit of our manufactories. The existence of our manufactories depends on the supply of raw materials; and of these raw materials the most important by far is the cotton grown for us by the slave-states of America. There are more than 2000 cotton factories in England; they employ nearly 400,000 pair of hands; the numbers of those engaged in making the machinery, providing the coals, and carrying on the trade, is probably very much larger. One third of our whole export trade consists in the shipment of cotton goods spun and woven by these factories. We sent these goods abroad last year to the value of nearly forty millions sterling, after supplying also the whole internal consumption of the British Isles. To feed these whirling mills, to employ these multitudes, to carry on this prodigious business, we have to import a quantity of raw cotton which weighed last year about 900,000,000 of pounds. Of this vast quantity, three-quarters of the whole came from the United States. We receive, in fact, from America every day of our lives enough cotton-wool to stop the ears of every man, woman, and child on the face of the globe; and the whole of it has been grown, picked, cleaned, and packed by slaves. Our muslins, our calicos, our tapes, our cotton-thread,—the most beautiful fabrics of modern looms, and the most indispensable articles of modern comfort,—have passed fibre by fibre through the dark fingers of negroes, with the lash at their backs and the curse of slavery on their souls.

Now we know by dearly-bought experience the first effect of emancipation upon human beings whose lives have been degraded by long and hopeless captivity. Ambition has died out; aspiration is extinguished. The wants remaining are purely animal ones; and when the freed bondsman has done enough to satisfy these, he will do no more. There is no doubt whatever that if America, by any sudden act, were to liberate her slaves, compulsory labour would be changed at once into comparative idleness; and as no other labour can be had on the spot at any price; as the American cotton-plant is an annual, which must be sown, reared, and gathered within a year; as even a partial cessation of labour for a few months only would be fatal to the whole crop, and as there is no considerable stock of cotton ever laid up beforehand,—our mills, the mainsprings of our wealth, would be left without material to work upon, and must stop perforce with such a shock as England never felt before.

This fact is perfectly understood in Manchester, and it is a very ugly one in every point of view. We do not wish to dwell on its commercial significance. That is the most obvious part of the business, and ample justice will be done to it by those whose self-interest is urging them to acts of self-preservation. We would rather point out its bearings upon the wider and higher question of human freedom,—the question as to how much longer the wants of civilised and Christian nations are to depend for their supply on the forced and blood-bought service of the slave.

The growth of the British cotton manufacture is in itself a general benefit to the world. It spreads the comfort of cheap clothing and the advantage of commercial intercourse in all directions. But its effect upon the Slavery question is extremely powerful and extremely unfortunate. We are customers at good prices for any quantity of cotton that America can grow. In the present state of her population, she can only grow it by slave-labour. In Texas and elsewhere she has vast unoccupied territory, where it could be grown with great profit, if there were only slaves enough for the purpose; and the demand for them has in consequence become so eager, that the re-opening of the slave-trade with Africa has been seriously proposed by the Southern states, and may very possibly be insisted on in some shape or other. This is

not all. If the planters of America are deeply interested in the extension of slavery, the spinners of England know that the existence of their own trade still depends on the continuance of that baleful institution. The moral influence of England is great in a good cause. We may, and we ought, to give most valuable aid to that great American party whose watchword is Emancipation. But can it be supposed that England will ever throw her whole weight into the scale of freedom, will ever do her utmost to encourage the trembling virtue of a sister nation, will ever desire from the bottom of her heart the extinction of slavery in the United States, while the ruin of her own cotton trade, with all its terrible consequences, is the price she may expect to pay for the accomplishment of her philanthropical designs? It is out of the question; it is more than can be asked of human nature; nay, the very noblest souls may well be pardoned if they stand aghast and hesitating. The case of our own colonies had nothing parallel with this. Our West-Indian islands supplied us with sugar and coffee; but sugar and coffee could be had in any quantity from other parts of the world as well. The deficiency caused by the emancipation of our own slaves has, in fact, been filled up in this way; and even if it had not, the articles themselves were not the staples of manufacture, and the want of them would not have caused any serious stoppage of our industry. For American cotton, however, there is at present no substitute. We depend upon it as entirely as the silkworm depends on the mulberry-tree. This is a plain truth. It may at any moment become a fearful one. The same year which has seen a demand made for the restoration of the slave-trade has also seen one insurrection among the slaves. It has been put down, sternly, cruelly, and successfully; but it reveals a hidden gulf and a smouldering fire, where the passions of three million brutalised and ignorant souls lie heaving and burning.

There is a mountain on the borders of Tibet whose peak of everlasting ice has been trodden by no foot of man. The condor flies over it, and looks down from that frigid height over the watersheds of two great rivers. On the north the Indus, on the south the Ganges, has its source. Between them lie the plains of India; the great empire whose name and destiny England has united with her own. India, at the present moment, remains what it has been from time immemorial—the greatest cotton-growing country in the world. The East, and not the West, is the native home of the cotton-trade. Cotton is itself an Arabic word; calico is derived from Calicut; muslin, from Mosul. The quantity of cotton produced annually in India is probably twice as much as our whole consumption. If half of it found its way to England, we should be as independent of the American slave-states as we are of the Russian corn-fields. Yet we received last year from India only one-sixth of our supply; this was the largest importation that had ever been made; it was made under the impulse of unusually high prices; and if on a sudden we wanted two or three times as much, it is certain that, under present circumstances, we could not get it. How this happens is easily explained.

The staple, that is, the fibre, of Indian cotton is shorter than the American staple; it is in some respects inferior also in texture. The condition in which it arrives in England is worse, both in regard to dirt and damage, and the use of it requires a certain alteration in our machinery. The Indian product fetches, therefore, a lower price than the American in the English market. There is, in the ordinary qualities, a general difference of about twopence a pound, or twenty-five per cent. But the cost of production in India is astonishingly small. A man's labour can be had there for little more than the rice he lives on. A rupee a month will keep him from starvation; and if he gets two or three times as much, he is prosperous. Slave-labour, on the other hand, is dear labour; and though the African is a more powerful fellow and a better worker than the Hindoo, though he works with the whip behind him, has all the aids of Saxon intelligence and capital, and produces per acre fully four times the Indian average, yet the first cost of raw

cotton in America is twice as great as on the plains of Hindustan. The price obtained by Indian cotton, low as it is, ought therefore to pay the cultivator well, and to draw large quantities from his hands. Yet it does nothing of the kind. When American cotton happens to be dear, the Hindoo gets a moderate profit; but when it happens to be cheap, he gets little or nothing. He is beaten, in point of fact, and pushed out of the market by his American competitor, notwithstanding the very small comparative cost of his own cultivation. This strange anomaly is the effect of a very simple cause.

It is not the cost of production, it is the cost of transit that is the largest item in the cotton-trade; and it is this that makes all the difference. The freight across the ocean itself is a very unimportant part of it. It is a shorter voyage from New Orleans than from Bombay; but that matters little. The real difference is, that whereas in America the means of transit by land and water from the interior to the ports of shipment are excellent and abundant, in India there are positively neither roads, canals, nor navigable rivers, by which the produce of the country can be brought safely and cheaply to the coast. Such cotton as we receive from it is brought on the backs of bullocks, along tracks impassable by any thing on wheels, across hills, deserts, and unbridged rivers, the journeys being often hundreds of miles in length, and weeks or months in duration. It frequently costs thirty times as much per mile to bring the cotton from the plantation to Bombay or Surat as it does to bring it from the plantation to New Orleans; while the injury from wet and exposure during these barbaric expeditions is enormous and unavoidable. This is the root of the whole matter; and the subject is of such national importance, that every Briton ought to make up his mind to understand at least the leading facts of the case. The cotton of India is not at present so good as that of America, but it is good enough for most purposes. It is good enough to be used to any extent while it can be had at the present average prices; and these prices would pay the grower a splendid profit, and lead in consequence to all those improvements in culture which are sure to follow the certainty of commercial gains, if there were only the means of conveying it cheaply and safely from the fields to the sea. We have held India for years with absolute power; its petty princes are our puppets and slaves; it yields an enormous revenue; we can do what we will with it, and yet we have not made a dozen important lines of road in the whole peninsula. Nobody, however, knows better than John Bull that a bad road is the road to ruin. The greatest road-makers have always been the greatest nations. In this little land of England we have 30,000 miles of turnpike-road and 8000 miles of railway. If we want an opposite example, there is Spain before our eyes. There are no roads in Spain; and she remains to this hour as poor as Job, as proud as Lucifer, as ignorant as her own mules, and at least three centuries behind the rest of Europe in every thing except her wine and her fleas.

Now a great deal is being written and said about the growth of Indian cotton, and the duty of Government to do something to increase the supply; but it is much to be feared that many years will be lost, and a vast amount of energy wasted in the prosecution of schemes, excellent in themselves but perfectly useless for the intended purpose, while the one grand evil remains. The spinners of Manchester, for example, have joined together to promote improvement in the culture of the Indian cotton-fields by every means in their power. They will supply seed, machinery, and information,—all of which are needed; but this will avail but little by itself. A single good road from Bombay to Hyderabad would do more to improve culture, quality, and production, than half-a-dozen societies. But a whole network of roads is needed before India can supply cotton enough for our wants at home. At present the vast quantities grown there are used on the spot. We export a good deal of calico to Hindustan; but the natives are still clothed chiefly in fabrics of their own manufacture. All this might

be changed; we might bring the whole of their cotton to England, and return it in calico, to the advantage of both parties; and there is room enough and labour enough in the Decān and in Guzerat to grow tenfold the present quantity; but the only magic that can bring about such a change is the magic of road-making,—and road-making on such a scale as nothing but the direct efforts of the Government can accomplish within any calculable time.

This, in truth, is the disheartening part of the business. For any thing in the shape of public works the Indian Government is one of the worst executive machines in the world. From the collector to the Board of Revenue; from the Board of Revenue to the Local Council; from the Local Council to the Supreme Council; from the Supreme Council to England; from England back again through all these dismal stages;—such is the hopeful journey on which almost every project has to start, when it involves the idea of something actually to be done. It is no use despairing, however. The work might be accomplished. Even an Indian government might be badgered into activity.

It will not do to be beguiled with the promise of Indian railways. They will do incalculable good; but they are slow and costly works, and will hardly be formed into a complete system in half-a-century. There are at this moment only three lines of railway open in all India, and their aggregate length at the present time is little over 300 miles. They are designed, moreover, rather on a military than a commercial plan, are the property of companies, who are ravenous for immediate dividends of ten per cent, and will be worked on a scale of charges far too high for the true interests of the country. Good common roads and bridges in all directions, the improvement of rivers, and the construction of canals,—these are the grand and pressing wants of India. Such works as these could be done at once, and at a comparatively trifling cost. A despotic road-maker, with a staff of engineers, sufficient authority, the necessary funds, and no restraint upon him except the obligation to get his work done within a given time, would cover India with passable roads, and arrange a practical system of tolls and repairs in the course of five years. He would make mistakes, of course; there would be jobbing and there would be waste; but the thing would positively be done, and would be worth ten times the outlay. The money can be borrowed at any moment. Ten millions might do it, or it might cost twenty; if it cost a hundred, it would repay itself in a single generation. We do not scruple to borrow for the necessities of war; why not for the necessities of peace? Common roads can never be dispensed with by any extension of railways; nay, the railways themselves depend very largely for their success on the avenues by which traffic can be brought to them from the country on either side.

Some trifling improvements in the means of transit have actually been made in India. The most aggravating thing about them is, their marked success; for it shows how much is possible, and how much is neglected. Between India and Ceylon, for instance, a reef of sunken rocks, too near the surface for ships of any size to sail over them, caused the traffic between the island and Madras to be carried on by means of very small vessels at a heavy rate of expense. A few years ago these rocks were blasted, and the channel deepened by some five or six feet, to the disgust, it is said, of certain oysters; but with an astonishing result in its effects on trade. The simple blasting of the rocks, so as to allow larger vessels to pass, immediately reduced the freight on corn between Ceylon and the peninsula about twelve shillings a ton, and increased the traffic ninefold. The river Godavery, again, flows right through the cotton-fields of the Decān and falls into the Bay of Bengal some distance north of Madras. It is not properly navigable; but there is nothing to prevent it from being made so for hundreds of miles. Near the mouth of it improvements have really been begun, and their success, as far as they go, has been striking. The only pity is, that they go no farther, and that while water-

communication could be had so easily with so important a district, the work is so long delayed.

The case stands thus before the British nation. India will give us as much cotton as we please as soon as we give her roads to carry it on, and will improve her culture as soon as we improve her gains. The moment that an abundant supply is sent to us from the cheap free labour of the East, the dear slave-labour of America will be stripped to a great extent of its profitable character, the greatest stimulus to the demand for slaves will be taken away, and while we relieve ourselves from a continually impending danger, we shall at the same time remove one of the chief obstacles to the liberty of the African race. Let every one who speaks of India speak of roads. In ethics, there is a road to perdition as well as a road to glory; but a practicable road of any kind in India is assuredly a road to freedom and civilisation.

LORD ERLISTOUN.—A LOVE-STORY.

BY THE AUTHOR OF "THE HEAD OF THE FAMILY," "JOHN HALIFAX, GENTLEMAN," ETC.

IV.

BUSINESS kept me in Liverpool for three weeks without intermission. My father could only find time to go down once to Lythwaite for a day and a night. The incessant burden and responsibility of money-making, money-turning, and money-spending,—the cruel slavery of riches,—sometimes weighed heavily upon even his stout heart.

"Mark," he would sometimes say to me, when we were laying our heads together over business-matters in the small parlour till long after office-hours, "I sometimes think I'd ha' done better to ha' left thee a clerk, as I was myself when thee wert a bit of a lad, going back'ards and for'ards 'twixt this and the little house at Everton. Heigho, my boy, I hope thee'll get more good than thy father gets out of Lythwaite Hall."

It did sometimes seem to me strange that he and I, working here, in this musty room, under the coarse flare of gas-light, sometimes lifting our eyes from the mass of papers and mazes of figures to exchange a word or two, then again silence,—it seemed passing strange that he and I should have any part or lot in the splendours of Lythwaite Hall.

For its splendours, they might go to the winds; but then it had some sweetnesses too. Every Sunday,—that being the only day I had time to let them come,—I used to be haunted by wafts from the May-hedges, by the sound of rooks cawing, or the soft single twitter of young thrushes going to sleep in the rustling trees.

On Monday, when my father came back, I asked him if all were going on well at home.

"All well, and particularly quiet. Your mother," with a twinkle of his keen eye,—*"your poor dear mother has quite given up telling folk how very much she misses Lord Erlistoun."*

He was gone, then, safe and sure. Well, let him go, and prosperity go with him. He was a fine fellow in his way; but he could have done us little good, or we him. Why he came among us at all, whether from self-interest (yet rich and influential as my father was, common justice condemned me for suspecting the young nobleman of that), or whether it was one of those mere idle adventures which an idle young man is prone to, I still was ignorant; and, to throw no further mystery over the matter, I remain ignorant to this day.

Sometimes in the dull round of business, which chained my father and myself as effectually as if we were two horses in a mill, or two convicts working hand-fasted side by side, there would suddenly come across me a vision of that easy

THE MAGDALEN. BY CORREGGIO. (FROM THE DRESDEN GALLERY.)

enjoyable life, pictures from which Lord Erlistoun had given us at Lythwaite,—and I had seen Jean's eyes light up on listening,—pictures of summer sunrises in the Alps, of summer sunsets over the Euganean hills, of exquisite moonlights, brighter than our dull northern days, while lazily rocking on the blue Mediterranean seas, or skimming in and out among the lovely isles of the Grecian Archipelago. All pleasure, nothing but pleasure; bounded by no duties, burdened with no cares.

Yet, would I have exchanged lives? No.

One Saturday afternoon, when I was just thinking of him,—thinking, too, whether it would be possible to get away by the last train that night for a little, a very little, pleasure,—my notion of pleasure,—our housekeeper ushered into the back parlour "Lord Erlistoun."

I was surprised, and probably I showed it; for he looked awkward, that is, awkward for him.

Again, as I seem always to keep on saying, let me be just to him; let me not deny that delicate courtesy, that charming grace, which made the least thing he did well done; which, after the first, forced the little dark parlour

and me to brighten up in his company. He gave no reasons for his visit, except a slight apology for "interruption;" but sat down as if determined to be friendly and at ease.

We talked upon ordinary topics; then, on his inquiring after my "family," about Lythwaite Hall.

"You go down every Saturday, I believe?" he said.

Was that the reason of his coming? Was it only through me that he could hear,—as, in spite of all his calm, politeness, he seemed nervously eager to hear,—any tidings of Lythwaite Hall?

At my age, a man is seldom without some penetration, especially when his observation is sharpened by certain facts which concern no one but himself. I think I can detect falsehood in feeling or expression, and can likewise respect any feeling which is evidently honest and true.

Jean had "taken care," she plainly said. Perhaps one might even afford a little temporary regret for the temporary pain of young Lord Erlistoun.

I told him I did not go every Saturday; but intended to be at home to-night.

"Ah, indeed! It must be a pleasant thing to be able to say, as you say it, that thoroughly English word, 'home.'"

Thereupon we diverged, in an abstract way, upon different branches of this same subject. I detected in what Lord Erlistoun said many turns of thought, nay, even of phrase, which I recognised as my cousin Jean's. I have often noticed this fact,—how one person will involuntarily imitate, not merely the tone of mind, but slight peculiarities of word or gesture belonging to the one other person who has most influence over him or her.

Again, I say, both on this account, and from a certain restlessness which, well as he disguised it, pervaded his whole manner, thoughts, and plans,—for he poured out to me, unwilling and unresponsive confidant, a great many of these,—I could not help feeling sorry for Lord Erlistoun.

Rising to leave, he said suddenly, "You are going home to-night; might I burden you with these?"

Two letters; one addressed to my mother, the other to Miss Dowglas. Probably he noticed my surprise; for he continued:

"They are, you perceive, from Lady Erlistoun. She wished them delivered to-night; and I think I have reason to believe your Lythwaite post is uncertain. May I ask of you this favour on the part of my mother?"

He always spoke somewhat haughtily when mentioning the word "favour;" and yet to-day there was a hesitating humility about him too.

"I was not aware of any shortcomings in the Lythwaite post; but I will deliver these safely."

"Thank you. And you return on Monday?"

"I really cannot inform you, Lord Erlistoun."

All these miles the letters seemed to lie burning in my pocket. Men, especially young men, visit about as they will, in circles higher or lower than their own. If honourable in themselves, there is no reason why they should not be accepted and acceptable; but with women it is different, or society thinks so. What on earth did Lady Erlistoun want with my mother and my cousin Jean?

I reached home late: they had not expected me. The drawing-room windows were dark. However, in the little breakfast-room I found them both presiding over a large heap of new household-linen, my mother looking busy and pleased, as she always did when, on any excuse, she could put off the fine lady and be the housewife once more; Jean rather pale and anxious; but she brightened up when she saw me at the door.

"Ah, cousin Mark!"

"Mark, my dear boy!"

Lord Erlistoun had said truly; it was pleasant coming home. I did not for an hour or more deliver the two letters. My mother opened hers in a flutter of curiosity.

"Dear me! Bless my heart! Why, Jane!"

But Jean had taken up hers, and gone out of the room.

When she came back, it was merely to say, "Good night, Mark;" and she said it hastily. Two hot roses burnt on each cheek; but her hand was very cold. It struck to my heart.

I am no advocate for the romantic dignity of silence, that is, between two people who, however much or little their mutual regard, understand and believe in one another. With such, silence is often no virtue; merely cowardice, selfishness, or pride.

"Do not go," I said; "I want to speak to you."

"I can't; I must not stay."

"Only a minute. Sit down;" for she was trembling.

"Lady Erlistoun is coming to call here on Monday. Did you know?"

"Yes, he told me."

He! that little momentous word. But I passed it over; it would not do to stand upon trifles now.

"Cousin, I should like to know,—not that I have the slightest right to ask, and you must not answer, if you have the slightest objection,—but I should just like to know, in explanation of something he let fall, whether, since he left, you have heard from Lord Erlistoun?"

She paused a moment, and then said slowly and sadly, "He has written to me almost every day; but I have never answered a single letter."

No need to ask what the letters were about; no need to guess what their effect must have been, coming thus, every day,—and strong must have been the impulse to make Lord Erlistoun do any thing regularly every day,—coming from a young man, fresh in all the passion, the poetry of his youth.

I stood silent by the chimney-piece, meeting in the mirror over it a familiar face, well-known in Liverpool warehouses and on the Liverpool 'Change; seeing, too, in the distance beyond, that poor flushed face of Jean's. At last she turned, and hid it on the sofa-pillow.

"Do help me, Mark. I have been so very miserable."

I took a chair and sat down, opposite the grate, with my back to her, and said—something or another. Then I waited, and waited in vain. My mother called from the staircase, "Mark, it's bedtime; see that the house is locked up;" and I answered from the parlour-door, to prevent her coming in.

"Now, Jean, tell me."

She told me: just what I had feared, nay, expected. There is no necessity to give her precise words; indeed, she explained no more than the bare fact that she might have been Lady Erlistoun.

"I thought you said you had 'taken care.'"

"Ay, that's the thing. It was my pride, my wicked self-reliance; I thought I was doing him good; I wanted to do him good; I liked him to like me. But I never thought—O, Mark, if I did wrong I have been punished!"

Punished! Then even though his letters came day after day,—even though by some unaccountable means he had persuaded his lady-mother to come and condescendingly investigate his choice, there was no fear. I had judged her rightly. Our Jean would not marry Lord Erlistoun.

"I know it will not last; he is too young. After a little it will seem to him no more than a dream. And I may have done him some good, after all. Was I so wrong, Mark?"

I attempted not from any false kindness to compromise the truth. I said, it was likely that she had been in some way wrong, since, as she had herself acknowledged, in similar circumstances the woman is rarely free from blame.

"Ay, that is it; that is my self-reproach and fear. Yet, O Mark, if you knew what it was to feel your youth going—to feel, too, that you never had had its full value, that there had been no love in it, and now it was going, gone; and if some one came and loved you, or thought he did, said you were the only creature in the world who could make him happy, make him good; if you saw, too, that there was some truth in what he said, that if you had been younger or he older, or if other things had been more level between you both,—you might—"

"Jean," I said, startled by the expression of her eyes, "do you love Lord Erlistoun?"

"I am afraid I do."

So in a moment the whole face of things was altered; so, in less than a moment, that "ship" which Jean used to laugh about, as being with most people so long in "coming home," went down, down, without the flapping of a sail or straining of a mast, to the bottom of the sea.

Otherwise I might have perceived something unnatural in those five slow words, something not right in any car except the lover's being the first to hear them. As it was, I simply heard them, in all their force and significance to both our lives; and, so recognising them, entered upon the duty of mine.

This was plain as daylight. There are none who feel more sacredly the absolute right of love for love, than those to whom fate has denied its possession.

Jean came behind me, and laid her hand on my shoulder. She might. Henceforward I could no more have touched it, except cousinly or brotherly, than I could have put out my hand to steal the crown-jewels.

"Well, Mark."

"Well, Jean."

"I think 'tis time we said good night."

"Good night, then." A look up into her bending face, which was pale, drawn, and hard, "You will be happy, never fear."

"No; what I told you has no reference to—that. If any thing, it prevents it, and makes easier what I did upon instinct for his good as well as mine. No, Mark; I shall always remain Jean Dowglas."

With a smile that made her face saint-like in its sadness, she passed out of my sight.

But we cannot be in a state of saint-hood always. Certain facts which four dun walls might that night have borne witness to, till such time as the rookery was all astir in the weary dawn, gave me a clue to certain other facts, which Jean's exceeding paleness next morning alone betrayed.

There was happily no one at home but us three. I kept my mother safe out of the way the best part of Sunday, and on Monday forenoon.

My good mother,—she behaved admirably. Only a few nods and winks in confidence with me, and an affectionate lingering over Jean, indicated her perception of what was going on, or her prophetic anticipation of what was undoubtedly coming. After the first expression of pleasure, she did not even refer to Lady Erlistoun's visit, and, moreover, gave me a hint to the same purport.

"You see, she doesn't like to be noticed. Very natural; I was just the same myself when your father was courting, Mark, my dear."

Monday came. My mother was rather fidgetty; dressed herself directly after breakfast in her gayest silk gown, and strongly objected to Jean's, of some soft gray stuff—mouse-colour—her usual morning-dress.

"O don't, please," Jean answered, in a weary tone. "What does it signify?"

"Well," my mother commented, after watching her stand arranging the drawing-room flowers, her customary daily duty, and then sit down to work in the far window,— "well, I don't think it does signify. Poor Emma Brown! I wonder what she would have thought of her daughter."

And my mother wiped her eyes, for all she seemed so proud and pleased.

Not many minutes after, she rushed back into the drawing-room, all in a flurry. Lady Erlistoun's carriage was coming up the avenue.

"Who is in it?" I asked. Jean did not stir.

"Only herself. Dear me, how very odd of Lord Erlistoun!"

I thought differently.

Lady Erlistoun was a very handsome woman. You saw at once where her son had inherited his delicate profile, his full soft eye. The likeness might have been stronger when she was young, or would be as he grew old. In their world, the years between twenty-four and forty-four effect much.

She resembled her son in manner too. She paid various elegantly implied compliments to my mother on the exceeding beauty of Lythwaite Hall, and her own desire to see it; then went on graciously to explain how she happened to be staying a night at the Bishop's, and was unwilling to return north without having had the pleasure of making Mrs. Brown's acquaintance; and so on, and so on, never alluding to any particular object of her visit, nor noticing, except by the customary acknowledgment, the lady who was presented to her as "Miss Dowglas."

Nor when, after this formal introduction, Miss Dowglas slowly retreated to her seat, could a less sharp eye than mine have detected the occasional wandering of Lady Erlistoun's—keenly inquisitive as women are of women—anatomising her at a glance from top to toe.

Jean sat still, proudly quiet, unmistakably fair.

"Miss Dowglas, will you take me to see your rosery? Erlistoun has spoken much of your beautiful roses." This was the first time she had mentioned her son's name.

Jean crossed the room. Lady Erlistoun watched her,

every step, every trick of gesture and action of hands, as she showed the flowers in the vases; listened attentively to every word that fell from her lips, dropped easily in that low-toned, pure English, not, alack! as my dear good Lancashire mother talked.

Let another mother meet equal justice. She, who had been used all her life to these external refinements, valuing them far beyond their worth,—and yet they are worth no little, as indications of greater things,—let her be judged fairly. Nay, I doubt now if even my mother's son and Jean's cousin had a right to feel his heart so hot within him while this noble lady stood conversing with and investigating the other lady (yes, she recognised that self-evident fact, I saw), whom her only son desired to set in her own place, as Lady Erlistoun.

And for Jean?

Once or twice, at the bent side-face, at some accidental family tone, which you can detect in most voices, I could see Jean's composure stirred; otherwise she was, as she was sure to be, simply herself. Her mind she could disguise, or rather conceal, and in degree her feelings; but her character never. To attempt it would have been to her an ignoble hypocrisy.

I followed them as they moved slowly up and down the garden, talking of books, pictures, Continental life,—as Jean could talk, if necessary, and did so. In no way could I detect in her the least faltering, the least paltering with what she owed to herself, or to us Brownes.

Us Brownes! Though Lady Erlistoun was extremely gracious, though she had too much self-respect not to fulfil to the last letter whatever courtesy she had evidently set herself to perform, still one felt, if one did not see, the soft, intangible, but inevitable, line she drew between Jean Dowglas and "us Brownes."

In leaving, she held out her hand, "I trust we shall meet again, Miss Dowglas."

"You are kind to wish it, Lady Erlistoun."

And so they parted. When, after seeing her to her carriage, I returned to bid my mother and cousin good-by,—for I was starting,—I found Jean had gone up at once to her own room.

Two days after, my father showed me a letter from Lord Erlistoun, enclosing another from his mother, and from himself a formal application for Miss Dowglas's hand.

A very extraordinary thing, the old man said—quite unaccountable. If he had known what was going on, he should have set his face against it; he didn't like those sort of marriages. But in this case, when the other party had shown such respect and consideration towards the dear girl, and towards us likewise, when it must be a thoroughly disinterested affair,—for he remembered telling the young fellow himself that, except her fifty pounds, Jean had nothing,—why, he hardly knew what to say about it.

I suggested that none of us ought to say any thing. Jean was her own mistress; she must decide.

"You're right, my dear boy; of course she must." And not sorry to have the responsibility lifted off his shoulders, my father, in his own honest way, wrote to that effect.

In four days more I learnt, or at least judged from obvious evidence, that she had decided. Lord Erlistoun was again my father's guest.

That Saturday I did not go down to Lythwaite Hall.

* * * * *

Youth and love—first love;—let not those who have passed them by turn back and deny either: they are glorious things.

In time I became accustomed to the new order of circumstances: could go home and see those two pacing the garden of mornings, or talking of evenings in the summer Sunday twilight, without feeling that their position towards each other was unnatural or wrong.

This came easier to me, perhaps, because Jean looked happy. Not at first; but when she saw how happy her lover was; how gradually, under her influence, his whole

tone of mind seemed changed; how his character settled and deepened, the fine qualities in him strengthening, and the frivolous ones vanishing away,—then Jean, likewise, became at ease, and content. She evidently loved him; and love alone will make people happy for a time; not permanently; at least, not that sort of love.

Even now sometimes I fancied—could it be only fancy?—I could trace a doubt, like as when she had asked me so pitifully that very night, "Mark, was I so very wrong?" We had never spoken together confidentially again; indeed, it was an understood thing in the family that Jean did not like to be spoken to on the subject of Lord Erlistoun. When and where she was to be married, my mother said, she herself had not the least idea; it seemed "rather odd of Jane."

But, either from the inherent weakness of human nature, or something different in the girl herself, every body in the household treated her with great consideration, and offered not the shadow of a reproach to the future Lady Erlistoun.

I was not of them, and had no call to be. Their Jean Dowglas was not mine—never had been; it was a very different thing. And one day, when she was mentioning something she intended to alter in the Lythwaite garden "next year," I determined to find out the truth about her engagement.

"Next year?—you forget." And I looked at her left hand, where, as I had noticed, she wore no ring.

With a rather sad smile, she turned to me. "No, I did not forget. I know what you are thinking of; but you are mistaken. I told you the truth that night."

"That you should always remain Jean Dowglas?"

"I believe I always shall."

I could not just then find words, or her manner stopped me. She went on—

"Mark, I wish to tell you one thing,—which is all that any body has a right to know, and I have said it from the first, only nobody here seems to believe it,—that Lord Erlistoun is not engaged to me."

"Jean," I cried,—for it was hard to think her less than the woman I had always thought her, and yet keep silence,—"for the third time I say, 'Take care.' You are attempting a dangerous game; you are playing with edged tools." "Am I?"

"Beware! Two people may go on together easily and friendly for a long time; but after love is once confessed, or even suspected, they *must* be lovers, or nothing. I speak as a man. You women know not what you do; you are toying with burning coals when you play fast and loose with a man's heart. It is worse than folly—wickedness. Let there be no half measures; take him, or reject him; love him, or let him go."

I spoke hotly, out of the bitterness of my soul; but she was neither hurt nor angry. A little reproach there was in her eyes, as if in me at least she had looked for something she did not find.

"Mark, cannot you understand the possibility of loving and letting go?"

THE THEATRES.

ON Balzac's novel of *Eugénie Grandet*, MM. Bayard and Dupont, some time since, founded a drama, entitled the *Fille de l'Avare*; and a few seasons back Mr. John Bridgman made a version of it for the Olympic, while under the management of Mr. Fayren. A new version has been prepared for the same theatre by Mr. Palgrave Simpson, apparently for the purpose of adapting the character of the miserly parent to the genius of Mr. Robson. This actor has for a time held an anomalous position on the stage, as a broad-farce and burlesque actor who raised his edifice of humour on the basis of tragic passion. Not a few have felt that this same basis was the real element of his genius, its very substance, indeed; and that the comic superstructure was, in a vulgar as well as in a philosophical sense, merely accidental.

The revival of *L'Avare* has gone far to prove this, and, if such proof be necessary to any really critical mind, to convince the doubter of the fact. Mr. Robson is a tragedian; and, in the part of *Daddy Hardacre* (such is the title of the new adaptation), he is furnished with opportunity for evincing his emotional power. The tragic scenes are introduced by some comic ones, in which the avaricious feelings of the old man are cleverly illustrated, in connection with the affection which he bears for his only daughter. Hardacre finds it impossible to decide whether his love for his gold or his child is the greater. Nature herself, it is evident, holds the balance even. But in the course of the dramatic action the normal equilibrium is disturbed, and a fearful conflict ensues, that must end either in its restoration or the death of the subject. Does Hardacre love to increase his golden heaps, to touch their constituent units, and to gaze on the glittering pieces both separately and collectively, toying with them in admiration and fondness? Even so he cherishes his daughter, fondles over her, and presses her to his bosom and his lips with devoted passion. Fain would he teach her to love money as he himself does, and learn not to "let it slip through her fingers," which, in her pardonable inexperience, he fears she may. Hardacre loves also to possess land, but it gives him a pang to pay for it—to part with the bright gold for the dirty earth; it costs him blood to effect the exchange, but the anguish makes him richer in the end, and is therefore endured as a portion of the means for accomplishing the final cause of all his being. He has just completed the contract for a bargain which will make him at least five hundred pounds more wealthy, and the money is set apart for the purchase. Mean time the daughter's sympathies are wrought upon by the distress of an uncle, who, for the want of five thousand pounds, is about to commit suicide. She takes the sum from her father's stores, and sends it to her uncle. Hardacre discovers his loss; ere long, too, he discovers the thief; then it is that the struggle of emotion commences. His reason, his life, is threatened by the vehemence of his passion. We fear, too, his vengeance as he raises the chair to dash it on the poor girl's head; we tremble while he commences a malediction, which, however, he does not complete; we listen to his implorings with interest; we share his passion as he grovels on the ground in search of the hidden treasure, and hangs over the aperture from which it has been taken; and when he crawls up the stairs in the climax of his agony, we feel relieved from the weight of an intolerable suffering. Feebly do these words describe the scene; they can only enable our readers to guess at the acting of Mr. Robson. They must therefore imagine the coalescence of all that art and nature can accomplish to give perfection to the histrionic expression of complicated emotions like those we have indicated, and they will then form some conception of its completeness and depth; but nothing short of actually witnessing the scene can realise it to the mind of any one, however fertile in anticipations and invented probabilities. The money so stolen turns out, after all, to be by right the girl's own, and this fact proves the turning-point of the emotion; and when the mischief done can all be healed by marrying her to his nephew, whose presence on the scene has been the occasion for the distressing incidents which all parties have survived, a gleam of comfort penetrates Hardacre's poor racked brain, and the torture gradually subsides. Peace returns to his mind and heart, and a certain satisfaction, too, in the result. It is, however, at the cost of his daughter, whom he must part with—whom it is better, after such a breach, to part with; but as to the rest, he is solaced by the conviction that his other loss has only been imaginary, that he has really lost nothing, that she has only stolen her own property; and with such a chuckling sense of superiority over his fellows, and fortune into the bargain, he rejoices that he has still enough to complete his intended purchase and realise the profit on which he had calculated; and to this philosophic phase of the conclusion Mr. Robson gives as much effect as to the tragic force of the main situation. Beyond

doubt, in such a part as we have described, he is the greatest actor on the modern stage.

The dramatic season at the Lyceum has been brought to a close by the temporary transfer of the theatre to Mr. Gye for the purposes of Italian opera. The continued illness of Mrs. Dillon interrupted the run of the new works in which she was engaged, and the lessee had to fall back upon revivals. Amongst these *Virginius* and *Hamlet* have been conspicuous. We have not seen Mr. Dillon to greater advantage than in the Roman Father of Knowles. The performance was equally chaste and powerful. As to the former quality, indeed, we think Mr. Dillon carries his dislike of what he thinks "stagey" into excess. The indignation of the patriot at the end of the third act, and the devotion of Appius to the "infernal gods," in the fourth act, were consequently under-toned; but the grief and passion of the father were rendered with a natural truth and intensity that roused the house to enthusiasm. The passage in which Virginius sees in thought the arms of the "Second Tarquin" coiled round his child was one of the most striking displays of histrionic power that we have witnessed for years.

In his personation of Hamlet, the same performer has no superior on the boards. From the bias already noticed, some of the soliloquies—the "To be, or not to be," in particular—were given with even too much simplicity, and would have gained in effect by a more set elocution. On the other hand, the charms of genuine emotion and fresh thought were present throughout. Although Mr. Dillon, on the whole, eschewed new readings, his Hamlet in its general effect is decidedly original. The ardent and loving nature of the princely Dane, aspiring to meet in life with that ideal of truth and sympathy which, except in the case of Horatio, he never finds, was most truly and affectingly portrayed. The celebrated scene with Ophelia, in the third act, deserves the highest praise. The "noble mind o'erthrown" at first vents itself in an agony of invective. It is as if there, where Hamlet had "garnered up his heart," he discerns that lurking poison of self and falsehood, the fruits of which he had elsewhere proved so poignantly. "Get thee to a nunnery," he cries, bitterly at first, for he fears that even *she* cannot else escape the fatal contagion; but before he parts from her the old memories of affection revive, the thoughts of all that she has been to him come back, and it is with a voice faltering from tenderness that he at last repeats, "Get thee to a nunnery," and turns away from her as from a fading vision of youth and love. There is far more than conventional merit in such acting as this. In the play-scene, and on the reappearance of the Ghost, Mr. Dillon showed a power to grasp the sterner elements of the part no less admirable than the pathos which he had previously evinced. We take leave of the Lyceum management for the present with congratulations on the result of the experiment to the lessee, and on the dramatic gain which has accrued to the public.

Since the closing of Sadler's Wells, Mr. Phelps, and one or two of his company, have migrated to the Standard Theatre in Shoreditch. In such a neighbourhood the refining influence of the poetic drama fitly presented can hardly be overvalued. By force of high and consistent purpose, and great ability as a Shaksperian actor, Mr. Phelps has not only superseded in the north of London a low and meretricious entertainment by a pure and intellectual one, but he has given an almost classic fame to his suburban theatre, and attracted thither persons of intelligence and taste from all parts of London. It is with much pleasure, then, that we find the same actor now aiding the civilising ministries of art and poetry in the East. No small portion of his present audience is drawn from classes to whom the theatre is the sole recreation from else incessant toil, the one illusion amidst the hardest realities of life. Minds untaught except by the sternest experience, and too often embittered by the lesson, are amongst those who throng to the Standard Theatre; and who, amidst the images of beauty or passion which a noble drama affords, feel there at least that they are something more than hired machines, and that the

hopes, struggles, and triumphs of the heart there portrayed belong also to themselves. There one sees the fustian-jacket, the worn, it may be the dingy, visage, lit up only when the genius of the actor embodies that of the poet, and by the "touch of Nature that makes the whole world kin" enfolds the humblest spectator in the bond of a common nature. We know not whether such a sight can compete in externals with the gorgeous shows that prevail elsewhere; but we must be allowed to think that it has the advantage of them in moral use and dignity.

Glancing for a moment at the drama of spectacle, we may observe, that an equestrian version of *Henry IV.* has been produced at Astley's; and that in this, as in previous cases, the words of Shakspeare are positively delivered. Curiously enough, while theatres professedly dramatic have tended in the direction of pageants, a theatre professedly devoted to pageant has thus become in a measure Shaksperian. We do not profess to inquire whether the balance thus struck is a very consolatory one; but we suppose, if Shakspeare must be held to do little good in "legitimate" establishments, it may at least be granted that he can do little harm in equestrian ones.

A FRIENDLY VISIT TO CANTON.

WAR is a wonderful master of the ceremonies. Like individuals constantly meeting in the same drawing-room, but perseveringly ignoring each other's existence, because the magical words of introduction have not been pronounced by the common friend in whose house they meet, nations may stand face to face, and even keep up a certain degree of intercourse for centuries, without seeming to know aught of each other. But let war bring them into contact for a moment, and they become at once eager and interested about each other's affairs, and sedulously cultivate acquaintance. If this be not true of all nations, it is most assuredly true of the English, which,—whether it be from its insular position, or, as foreigners are prone to think, from an overwhelming degree of self-esteem,—during times of peace receives with listless indifference any attempt to make it acquainted with foreign manners, life, and modes of thought; while in times of war, the very turn of the noses and twist of the moustaches of the people with whom we are engaged in deadly struggle become of interest to us; and every scrap of information, old or new, concerning them is caught up with avidity.

Presuming that, in consequence of this peculiarity in our national idiosyncrasy, an interest in China has by this time been created, which all our tea-drinking, and the various excellent works written about that country, have hitherto failed to awaken, we venture to invite our readers to take a glance at Canton through the eyeglass of an intelligent French officer lately stationed in the China Seas.

It is not until the bay to which our Anson gave his name, between the mountainous promontory that terminates the peninsula of Chuen-pi and the point of Anung-hoy, spreads out before him, that the European, advancing up the Chou-kiang and approaching Canton, becomes strongly impressed with the distance of time more than of space that separates the empire he is about to visit from all that he has until then known. For the Chinese fleet, perchance lying at anchor under cover of the forts which crown the summit of the promontory, at once brings home to his mind the strange immobility of the race with whom he is coming into contact. The vessels of Nearchus must have been less primitive looking than these long rectangular boxes with three spars in the middle, looking more like dead saplings than the regular masts of a vessel, and the whole construction of which is such as would make the very mummies smile that repose under the pyramid of Cheops. Their poops rising in stories like a child's card-castle, bear on their escutcheons the imperial dragon with its greenish folds and its blood-tinged jaws; their prows are ornamented with scarlet flags, and

with two haggard eyes, without which it is supposed the vessel could not find its way along the water, and which give to its formless mass a ludicrous resemblance to a frightened seal. All the details of their construction and rigging make these war-junks curious specimens of the art of navigation in its infancy; yet they differ very little from the large commercial junks which visit the distant ports of Singapore, Batavia, and Siam. How they can achieve successfully such long voyages it would be difficult to understand, had not complaisant nature undertaken to solve the problem. One monsoon carries the helpless junks to their port of destination and another wafts them back again; and if, when close to the coast, the breeze ceases to favour them, they patiently await the tide, and float in upon its bosom like the sea-weeds that are the toys of the waves. Let no one suppose, however, that the deficiencies in the construction of these vessels are owing to the incapacity of the Chinese ship-builders. The same men who construct these primitive arks build the swift and admirable clippers and schooners which navigate these waters under English and American colours, and the agile mandarin-boats which are constantly plying up and down the river, cutting through the water with incredible swiftness by the aid of their forty oars. But the sacred rites and time-hallowed routine which hedge round the ancient civilisation of China extend their sway over the art of ship-building also; and though the imitative Chinaman may construct for the use of foreigners vessels on a level with the requirements of the nineteenth century, his countrymen he only furnishes with such as are built upon a model twenty centuries old.

The passage of the Bogue is less than a thousand yards wide, and though there is a somewhat broader channel to the west of the little islands of Wantong, both these straits might be long defended against a hostile squadron by a well-directed fire. Indeed, the Chinese seem to have been quite aware of the importance of guarding their inner waters against barbarian invasions, and have spared neither stone nor iron for the purpose. Having erected batteries on every available summit and point, they have further constructed massive walls at the foot of the hills of Amung-hoy, and behind these they have accumulated an amount of artillery sufficient to demolish all the fleets in the world. But having done so much to intimidate the barbarians, they deemed all further trouble superfluous. However, the events of 1856 may have impressed the lesson which the defeats of the years '40, '41, '42, and '47 failed to teach, and the Celestials may by this time have become convinced that fortifications and cannon, without men to back them, are poor means of defence.

Be this as it may, the Bogue Forts form an imposing feature in the river scenery, which, between these and Wampoa, twenty-five miles further up, assumes a somewhat different aspect. The verdant hills crowned with tufts of trees, and the cultivated valleys winding their sinuous path among them, now withdraw further inland, and vast rice-fields, won from the alluvium of the river, and skirted by rows of banana-palms, extend on all sides and hem in the course of the stream, which is further obstructed by numerous banks, that render the navigation very difficult. Small boats, with one man in each, stationed along both sides of the deep channel, warn the mariner off the shoals; and the Chinese pilots that navigate the ships through these upper waters are so skilful, that a wreck in the Chou-kiang is said to be a thing almost unheard of.

Wampoa is the roadstead of Canton. Hundreds of foreign ships assemble here every year; and around these, in thousands of boats that circulate in the numerous channels that intersect the land, and along both banks of the river, swarms a population that lives exclusively by the barbarians. In spite of the interest presented by the spectacle of restless activity that prevails at Wampoa, we must, however, hurry on to Canton in one of the small steamers which ply between the two places, and represent the inroads of Western civilisation upon the stronghold of Eastern stagnation. As

the steamer rapidly ascends the Junk River, verdant rice-fields climbing up the hill-sides in terraces, villages peeping out from amidst bambou-hedges, pagodas half hidden under the gigantic branches of the banyan-tree, meet the eye on both banks; and in the distance clusters of many-storied turrets with polygonal roofs and galleries announce the presence of a large city. As soon as the feeble barrier is passed, which, in 1840, was thrown across the river, and the oft-humiliated forts that defend it, the red masts of the mandarins, the first houses of the suburbs, built upon piles and hanging as it were over the river; large squadrons of junks, lying side by side, with their banners fluttering in the breeze, and the ever-increasing crowd of tankas, give notice that the port of Canton has been reached. Soon after this the city presents itself, but not the Canton beheld from afar, buried amid the heavy walls that surround the Tartar city; not either the Canton rising out of the mud of the Chou-kiang, which often overflows its streets; but Canton, such as the Chinese artists love to represent this Venice of the Celestial Empire. In the background, the imposing edifices of the European factories (for, be it remembered, we are describing the city before the outbreak of the recent hostilities), the flagstuffs of the consuls, and the proudly waving flags of England, America, and Denmark; in the foreground, the floating city, with its avenues of palaces, with gilded façades and delicate tracery; its long streets of cottages with wooden walls and bambou-roofs; its gambling-houses and pleasure-gardens, lighted at night with gaudy paper lanterns and silken globes; its teeming population; its swarm of boats, playing the part here that carriages would play on firm land;—a truly picturesque city, dazzling with colour, dizzying with movement, fantastical as a tale in the *Arabian Nights*, or as a scene at the opera.

But the steamer passes on, and approaches *terra firma*. Making way for itself through the crowd of tankas that hover round the quays, it deposits its passengers at the entrance of a large square planted with trees, and in the middle of which waves the flag of the United States. Grand as is this entrance to the European quarter of Canton, it furnishes a deceptive measure of the extent of liberality extended by the Celestials to the restless progressive sons of the West; for an area comprising between 400 and 500 acres of swampy ground is the utmost extent of territory that was granted to them, and beyond the limits of this they ever walked on enemy's ground. The factories and other edifices raised upon this area, which had to be filled up and consolidated at great expense, are divided into thirteen distinct groups by intersecting streets. Two of these streets, running at right angles to the course of the river, and denominated Old China Street and New China Street, are occupied by Chinese shops; and here are gathered together in fabulous quantities the divers and innumerable objects of Chinese art and industry which are so much prized in Europe: silks manufactured in Kiang-nan, and enriched with heavy embroideries in the suburbs of Canton; ebony boxes inlaid with gilt or ivory ornaments so minute that the beauty of the designs can only be duly appreciated when seen through a magnifying-glass; water-colour paintings with tints so soft and brilliant that they seem borrowed from the butterfly's wings, and representing gods brandishing thunderbolts, or warriors shooting with bow and arrows, or condemned mortals writhing in the tortures of a Buddhist hell, or mandarins seated in solemn grandeur on their curule chairs, or lovely ladies hovering like the fabled birds of paradise between heaven and earth. Then there are lacquered tea-caddies, fans, and trays of every variety of form and hue; porcelain of exquisite delicacy, bronzes of most capricious form, and carved ivories, exhibiting more taste in design than delicacy of workmanship. And from among all these articles you are to make your selection; and, in a strange compound of English and Portuguese, with elision of all not strictly necessary words, and in soft and liquid tones, that make you think this Anglo-Portuguese alliance remarkably harmonious, the Chinese merchant wheedles you

into spending much more money than prudence approves of. Who could resist the old opium-smoker when, with a caressing smile that almost imparts to his aged visage the gracefully naïve expression of childhood, he bends his sunken sallow cheek upon his shoulder, and says: "*You are my friend; we talker true; foty tolla*"? Forty dollars are given for what is not worth more than twenty; but it is only experience that can teach you what "talker true" means to a Chinese mind.

Old China Street and New China Street are broad and regular, and paved with large flags of granite; but being only frequented by Europeans, they bear a deserted appearance, in spite of the lines of low shops that border them on each side; and they form a striking contrast to the bustle and noise of Physic Street, a narrow irregular lane that winds its crooked way from east to west, between the European quarter and the labyrinthine islands of the suburbs, and through which an incessant stream of passengers and merchandise is flowing. Here you make acquaintance with all the dainties that tickle most agreeably the Chinese palate: Mandarin oranges with soft crimson rind, water-melons from Amoy, pears from Shantung, and jujubes from Pe-tche-li, are displayed in tempting order. Living fish from the Chou-kiang disport in large basins; and the wild-dogs, destined for the tables of the Luculluses of Canton, fret their short hour of life in baskets made of ratan. Here also are smoked ducks, but flattened so as to be almost unrecognisable, and bunches of dried rats and strings of cats' shoulders, hanging most amicably side by side, and vying with the more substantial attractions of quarters of beef and mutton and sides of terribly fat pork.

What a running to and fro; what a jostling, what a clamour, in this the noisiest street of Canton! but no quarrelling and no fighting; for patience is one of the most salient traits in the Chinese character, as you may judge from the look of passive endurance with which yonder rich merchant, seated at his counter, has been submitting for the last half-hour to the unceasing noise kept up by a blind beggar who has entered his shop, and who, by way of giving something in return for the alms he is soliciting, is striking together two sticks of bamboo which pass in Canton for a musical instrument.

No Chinese woman ever appears on foot in Physic Street; nor are the buttons of the mandarins ever seen mingling in the motley crowd there. The small-footed ladies and the big guns among the men are carried about in palanquins on the shoulders of vigorous coolies. They are not, however, the only members of the population that enjoy this privilege; for there is no student, be he ever so poor, who does not at times indulge himself in a promenade in one of these bamboo vehicles, and his porters upset the passers-by with the same aristocratic *sang froid* as do those who are preceded by lictors and runners announcing with fearful din the coming of a mighty lord. Indeed, the bearer of any thing seems, in Canton, to be invested with superior importance; for even the fellows that come tottering along under the burden of heavy baskets of fruit, slung on poles carried on their shoulders, trample down whoever may be in their way with all the indifference of conquerors trampling on a despised race.

Calculations based upon the daily consumption of rice fixed the population of Canton a few years ago at 1,200,000. The city of boats alone is said to number 300,000. A crenelated wall about eight or ten yards high surrounds the space occupied by the Mantchou Tartars when, in 1650, after a siege of eleven months, they gained possession of Canton, the last place that bent to their yoke. It is in this interior city that reside the viceroy and the other authorities of Canton, and within shelter of its precincts also the greater part of the respectable Chinese population withdraws at nightfall; for the tradespeople of Canton, like those of our own city, abandon their shops at night, and seek more quiet and comfortable quarters, either in the suburbs or in the Tartar city. From the latter strangers have always been

most rigidly excluded; and those who have visited it have done so at the peril of their lives, and have found little to reward them for their daring. It remains to be seen whether Sir John Bowring and Sir Michael Seymour will be more successful than their predecessors in opening to us the range of the entire city of Canton.

POLYGLOT READINGS IN PROVERBS.

YOU CAN'T SEE THE WOOD FOR TREES. "The houses hinder one from seeing the town" (French).—*Les maisons empêchent de voir la ville*; i. e. the attention is so distracted by a multitude of details, that one cannot comprehend them collectively. In its primary meaning the English proverb may have been equivalent to the French; but it is scarcely ever used now except in an ironical sense, like the Spanish, "He cannot find water in the sea,"—*No halla agua en la mar*.

W. K. KELLY.

BRIGHT POKERS.

We do not hesitate to set forth by asserting that we are utterly opposed to the whole class of articles of which that named above is the shining head. Although we thereby draw upon us the compassionate displeasure of many thousands of admirable housewives, we must be candid, and confess that bright pokers, and the whole catalogue of such "things not used," are our abhorrence. They are specious hypocrites, household shams, and deserve to be scouted from the society of those honest working-day sons of toil, their serviceable brethren. These latter, in daily familiar use, which do all the labour, become blackened, battered, bent in the service, for which, with half the world, the useless polished dummy gets all the credit,—yet who would not rather be the last than the first? Who would not rather be a tea-cup of the homely ware, constantly in requisition round the fireside, than one of the splendid set only brought out on state-occasions, when company comes, and every body is stately and stupid accordingly? What apartment possessed of heart and feeling would not infinitely prefer the estate of the cosy family-room, where the children are allowed to play about, and where, of evenings, the father and mother, in their easy-chairs each side the hearth, chat over the events of the bygone day, than that of the grand drawing-room upstairs, sacred to strangers and formalities, where the chairs and sofas and curtains are alike pinafores in brown holland,—where the looking-glasses and pictures are veiled with yellow lino, and the carpet is kept from profane feet by a layer of green baize?

But setting aside our sympathy with the things themselves (and, indeed, we are ready to admit that there may be many narrow-minded rooms, and many household articles, so nice and pretentious in disposition as to like the gilded state of a useless existence), we must be permitted briefly but emphatically to protest against the system which permits them to be. The principle is surely a mistaken one from the first. Use, and not idleness, should produce the only true and effectual polish. We should admire things, as persons, for what they are rather than for what they appear to be. "Handsome is as handsome does" is a homely proverb, equally applicable to the bright pokers of the household *ménage* as to human beings, we submit. Also, there is another wrong at the root of the custom,—the wrong which assumes that "any thing will do for us"

when we are by ourselves," in order that the eyes of visitors may be dazzled by the household splendours on company occasions. It is this feeling, or a phase of it, which invests the drawing-room draperies and chair-covers with their unsightly wrappings about 360 days out of the 365. It is this, too, which keeps the pretty dinner-service in almost perpetual imprisonment with the silver tea-service and the fine damask table-linen, while the family dine daily from ugly willow-pattern plates, and drink their tea from an ungainly and pewtery-looking vessel out of tea-cups, cracked, mismatched, &c., as the case may be. There is danger, too, that where these material externalities are thus careless and un-beautiful, the family manners may likewise deteriorate and fall far short of the proper standard. With children especially this danger would be imminent.

Let no one rashly assert, that the theory hinted at here is transcendental or unreasonable. It is no part of our present purpose to advert to it at length; but they who doubt may be assured *en passant* that more "education," in the true sense of the term, is achieved for good or ill by such so-called "little" things than even by the great ones. Children are quick observers and apt imitators; see, therefore, that, so far as it is possible, there be nothing in the daily habits and customs of family life which it would not be advantageous for them to perceive and draw unconscious influence from. For this, therefore, among other reasons, reserve not the handsome china, the damask curtains, and the satin dress, for "company," while in your own home-circle, which should be dearest and holiest of all to you, you are content with shabby, ungraceful, common things to use and to wear. Rather have *no best*. Let there be no satin for the gala-dress, if only duffle-gray and coarse stuff can be afforded for "every day;" and let the drawing-room hangings and chair-covers be of simple moreen for company, rather than they should be of brown holland, cold, ugly, and comfortless, for the family.

In other words, have no bright pokers, if you dare not use them at the household hearth to raise warmth and light around and among your nearest and best-beloved.

HABITS OF GOATS.

In a late charming paper of yours you stated with some emphasis, that *goats never drink*. That statement I must venture to contradict. We kept goats for years, and I am able to speak from personal observation. Our goats con-

DESIGN FOR A GAS CHANDELIER. [GARDNER.]

stantly drank water, preferring that in which a lump of brimstone had been placed, and greatly enjoyed warm ale-posses, such as is sometimes given to horses; and after milking, were the bowl carelessly left within their reach, they would soon drink up their own milk; and sometimes, while one was being milked, another would come behind, and nibble away at the groom's coat. Paper they were very fond of. I once left a volume of Cowper on the window-sill of their house, and on returning discovered that they had found it no task to swallow the "Sofa" and the "Time-piece," as well as "Truth" and "Charity;" and this was not from hunger.

Their love of horses is well known. If the stable-door were left open, our goats would immediately rush in, nor be ejected without difficulty. One of them, while dying, crawled to one of the horses, and resisting all efforts to remove

her, died almost under the horse's legs.

They seemed afraid of nothing—save the cat. Hor they seldom dared to attack; and when they did, she had only to *spit or hiss*, and away they scampered, cured of their bellicose attempts (against her at least) for the next month.

I will only add, that I know no creature more beautiful and engaging than a young kid. A baby is not to be compared with one.

W. THRELKELD EDWARDS.

9 Downing Terrace, Cambridge.

[My remark, as the context shows, applied to goats in a state of nature. They are not the only quadrupeds which ordinarily abstain from drinking; many of the antelopes do the same when they obtain sufficient green food. She-goats in milk will sometimes drink, once a fortnight perhaps, and then only when fed on dry food. If goats get sufficient succulent diet, they do not drink; in fact, have an aversion to water. This is not intended in the sense of opposition or contradiction of our correspondent's statements; we admit that, in exceptional cases, goats do drink. It is the *rule* that gives interest to this fact in natural history. I could match the one that swallowed the "Sofa" and received the "Truth" without disputation by another that *chews tobacco*, ay, and swallows it too; in fact, she will eat any quantity of the vilest mundungus, and enjoy it.

As to the opinion of our correspondent as to the playfulness of the kids, let him turn one loose in a plantation of roses or fruit-trees, or any choice things that should not be *barked*, and then judge if it is *more engaging* than a baby. Fie! what will the ladies say to the comparison?

SHIRLEY HIBBERD.]

SCENES OF THE ENGLISH SCHOOL: NO. XII.

PAINTED BY A. ELMORE, A.R.A.

A SUBJECT FROM "PEPYS' DIARY."

A SUBJECT FROM "PEPYS' DIARY."

By A. ELMORE, A.R.A.

"Feb. 15, 1685-6.—Mr. Hales begun my wife's portrait, in the posture we saw one of my Lady Peters, like a Saint Katherine. While he painted, Knipp, Mercer, and I sang."

THAT eminently respectable man, Samuel Pepys, Esq., secretary to the Admiralty of Charles II., left behind him a voluminous and most valuable Diary, which has been for many years a delight to all students of human nature, and, indeed, to every one who cared to observe the humorous side of mankind; and which is also extremely curious as an historical document relating to an important period of the history of England.

Among other entries, is the one quoted above as supplying the subject of Mr. Elmore's picture, from which our engraving is taken. Mrs. Pepys's, "poor wretch," as the diarist often calls her, sits patiently enough, making the best she can of the circumstances, but not without a glance of dissatisfaction at the singing with Knipp. Her husband is utterly absorbed in his share of the performance, beating time with his hand, as his companion does with hand and foot, to the song. Mr. Elmore has made a good point of design in showing this repetition of action in both. Knipp's face is characteristic and pretty, though rather out of drawing; the *minauderie* of her figure and action is very excellent; so is Mr. Pepys's face, as characteristic of his gross and sensual nature,—not, indeed, without a certain kind of goodness. Hales goes on, undisturbed by the singing, with a disguised smile on his face.

In the early progress of Mrs. Pepys's portrait the difference was so great between it and that of Lady Peters, that Mr. Pepys rather doubted if the latter could have been really painted by Hales. It progressed, however, more to his satisfaction; and afterwards he records, that it "is at last come very like her [Mrs. P.], and I think well done; but the painter, though a very honest man, I found to be very silly as to matters of skill in shadowes." Poor Hales! When the work was quite finished, he grew delighted, and "not myself almost." These were the difficulties of the artist, but Mr. Pepys did not escape; for he says, on the very day of the commencement of the picture, "and by and by comes in Mrs. Pierce, with my name in her bosom for her valentine, which will cost me money," it being the custom at that time to give jewellery to ladies on such an occasion.

On the completion of the portrait, Mr. Pepys inquired of Hales what was the price; and notes that "he [H.] says 14*l.*; and the truth is, I think he do deserve it." He had his own likeness painted soon after by this artist; and observes, that "I do almost break my neck looking over my shoulder to make the posture for him to work by." We suspect that here was the revenge which Hales took for the criticism his sitter had previously favoured him with. The reason Lady Peters, and after her Mrs. Pepys, chose St. Katherine as the character for their portraits was, in order to pay a clumsy compliment to the queen, Katherine of Braganza.

Mr. Elmore has exercised much discrimination in showing Hales to us as a mere man of business executing a portrait, not wasting an expression of ideal capacity on his head; an error into which many other artists might have fallen, and which there are no facts to warrant. This picture was exhibited at the Royal Academy in 1852, and is now at the Crystal Palace.

L. L.

FAST MEN AND THEIR FOUNDER.

In the dictionary of popular terms, "fast" implies a quality that has an inevitable tendency towards ruin; and yet its opposite, "slow," is only applied as an epithet of contempt. But prudent people connect *sure* with *slow*; and being aware that there is nowhere such a thing as perpetual motion, and that a man cannot be fast and seem fortunate for ever, the prudent people may be said to have by far the best of it.

A fast man resembles, in a certain degree, those coats of heraldry which dazzle by their varied and contrasting colours. Such scutcheons are known to the initiated as being the least honourable, and a competent judge is not deceived by the vulgar blazonry. Like a tulip, the fast man is showy, but also useless and unprofitable. The one is of ill odour, the other of evil reputation. Nevertheless, as in the tulipomania foolish amateurs wasted a fortune on a flower, so silly admirers of the professors of fastness pay dearly for their taste. It was said of a celebrated author, that he touched nothing which he did not adorn; the fast man comes in contact with no one without marring him. He does not merely shine, he burns; he destroys others, and consumes himself. He is like the balloonists, who rise high by flinging sand in the eyes of the world. He tosses overboard all principle, and is then like a ship whose ignorant crew have lightened her of all ballast; there is more appearance of solidity, and very much less of safety. The fast man, however, prefers appearances to reality; and yet what appears in him, to an observant eye, is real ruin; and his reality is empty show. He is like a torch flaring in a draught; the wilder it blazes, the swifter it consumes; and there is no honest warmth in him, nevertheless; yet does he wear a smilingly calm though cold countenance. But his heart is even colder than his face; and, in this respect, he is not unlike those lakes which, under certain conditions, show a liquid surface marked by a gentle ripple of smiles, and which are all solid ice below. If he has a fine head, illogical admirers will be ready to conclude that he has a fair heart; but with him appearances are especially deceptive. The very slips of his tongue spring from the corruption of his heart. You may trace one to the other, even as in paralysis we know that the side of the body is affected which is opposite to the side of the brain which is attacked. The conceit of the fast man is on a par with his selfishness. He is as daring in the former as Goethe's philosophical friend, who used to maintain that had he existed at the Creation, he could have given some useful hints to the Divine artificer. And we may add, that if the fast man is often daring in his conceit, he is quite as frequently ridiculous. There is no great work accomplished but he fancies he could improve upon the achievement. He is like Green, the Oxford watchmaker, who, just a hundred years ago, published a specimen of a new version of *Paradise Lost* in a "particular metre," by which he professed to have "brought that amazing work somewhat nearer to the summit of perfection." Generally speaking, however, the fast man lacks capacity for intellectual work. He is as foolish as he is fast. If his conceit equal his selfishness, his ignorance is often as great as the sum of both. If he be attached to any philosophy, it is (and that without knowing it) to the system of the Pythagoreans, who declared that many things were best learned late. The fast man defers instruction till he dies ignorant of all things save his own ruin. There are some men of the class who affect indeed the virtues which they do not really possess; as Pompey built a gaudy theatre, and thought to reconcile serious people thereto by calling it a temple. Under similar false titles, there are especial individuals of the class of fast men who ride triumphant for a time, and fancy that their triumph shall not end. And therefore do those require to be reminded of a fine saying of Parendon, one of Charles I.'s chaplains, that "there are some whose chariot-wheels God striketh not off till they are in the Red Sea."

The period is not so very remote when fast men occasionally found their career brought to an end on the scaffold. One thus placed laid blame on his sire whose indifference in his paternal office had resulted in this catastrophe to the son. But even the most anxious of sires now and then exhibit unskillfulness in dealing with their vicious offspring. They lack the dexterity of Alcon the Cretan who, when he beheld his son in the killing embrace of a serpent, aimed an arrow so justly as to kill the reptile without injuring the child.

What made the first fast man the founder of the order?

Simply that which has ever since increased the evil brotherhood—discontent and ambition in inordinate degrees. Why does one star in the Pleiades shine with less lustre than the rest? The star of Merope is dull only because, of all the seven sisters, she is the solitary maiden who was not wooed by a god. Happiness is very much like the golden tree of felicity in the Paradise of Mahomet, a branch of which reached to the very extremity of creation. There was fruit of various sorts for all, and all were required to be satisfied with the share which it was in their power to pluck, to keep their own, and not count their neighbours'. All dispensations have walked beneath the shadow of a similar tree, only to show how numerous are they who would rather live fast than live well. It is under the very earliest of dispensations that we find the original founder of the fast brotherhood, and his career has never been equalled for brilliancy and brevity.

The Abbé Banier was a man who made matter-of-fact of the grand mysteries of mythology. Gods and goddesses become under his hand simple gentlemen and ladies; Olympus is a hill, and Jupiter a squire of not irreproachable manners, who lives in a country-house on the summit. There is not a mythological hero whom the abbé does not strip; he takes the hide and club from Hercules himself, and shows us the performer of the "dozen labours" in the attire of a private individual. We see hero and heroine in their respective garters; they have played their parts; but, the play ended, the abbé takes us to sup with them, and then we discover that the ambrosia and the nectar, the helm and the tunic, the eagle of Jove and the owl of Minerva, were but mere symbols, and that the actors were by no means so great or so genuine as they seemed to be.

But the abbé has failed to satisfactorily elucidate the instruction given in the story of Phaeton. Now Phaeton was the founder of the order of fast men; and we are the more surprised that the abbé did not discern this fact, seeing that in the abbé's time France gloried in gentlemen whose way of life was the reverse of slow. Indeed such had been the case long before the age in which Banier flourished. What a sublime sample of the fast man, for instance, was that Duke of Angoulême, the officers of whose household once ventured to apply to him for the payment of their salaries!

"Why, what sorry and unreasonable varlets ye are!" exclaimed the duke. "My house stands where four roads meet; every road is frequented by travellers with rich cloaks and heavy purses; and yet you have the impudence to ask me to provide you with money."

The penniless gentlemen of the ducal household understood their fast master; and with a finger on the nose and a hand on their swords, they went forth singing, "Hurrah for the road!"

Of the order of fast men, of which this duke was so accomplished a member, there is no doubt that Phaeton was the founder. An examination of his story, as it is told by the Sulmian who sang of the Metamorphoses will tend to prove that our assertion is not groundless.

The first thing we learn of Phaeton is his intimacy with Epaphus. The latter was the son of Jupiter and Io; and he affected to look down upon the glittering boy whose mother was the nymph Clymene, and whose claim to call the sun his sire was laughed at by the proud offspring of Jupiter. This assumption of superiority on the part of his friend made Phaeton blush. To prove his quality and equality, he did just what fast youths are apt to do,—he applied to his father for means to make a figure, and he resolved to accomplish his end at any cost.

If the lad was weak, his sire was foolish. The latter could not withstand the boy's flattering appellations addressed to him; and Apollo, trusting that Phaeton would not ask too much, promised to grant whatever he might demand. When the boy requested to be put in possession of the chariot and horses of the sun, Apollo exhibited the characteristics which distinguish the foolish fathers of too rapid sons; he chose rather to ruin the boy than let him be disappointed. He des-

poiled himself in order to glorify his child. The latter scarcely heeded the counsel given him by his sire. He was too impatient to make a figure either too heed good counsel, or to count the cost. He thought his sire slow, and dreamed only of outshining the fop Epaphus. When he felt the reins in his hand, with the cruel ingratitude common to fast fools, he was ready to drive over the father who had stripped himself in order to deck his son.

The whole after-story is the narrative of a fast career. The father timidly suggested that Phaeton would do better by taking his sire's counsel rather than his chariot,—*Est tibi consiliis, non curribus utere nostris*; but Phaeton, dazzled by his possessions and prospects, replied only by cracking his whip, and dashing forth upon his way before him. He created a sensation,—of that there is no doubt whatever,—and his vanity was intoxicated by the result. There were many, however, who neither admired nor welcomed this first of fast young men; but these were sneered at. Some, who left town to avoid exposing their children to his example, and went to the sea-side under the plea of bathing, were pronounced cold. Such were the *gelidi Triones*. Others, equally reluctant to form an acquaintance with him, were pronounced not only cold but stiff; Bootes was voted slow, "*tardus eras*," for no other reason than because his honest soul was frightened at the ruinous course of an obstinate and headlong youth. And the time speedily came when that youth became alarmed for himself. His short hour of splendour was soon over; ruin stared him in the face; safety lay neither before nor behind him; and when he beheld the bailiff Scorpio, with both arms stretched to arrest him, the sight of the long, ill-smelling, and insolent official so affrighted him, that Phaeton hurriedly disappeared from the scene of his glory, leaving naught behind him but an evil name and hideous ruin.

The consequences of his career are to be found in the catalogue of his devastations. They are all emblematic. Beauty has perished before him; he makes poverty take the place of wealth; where he has passed, the nymphs bewail his passage with dishevelled hair, and the aged deplore his presence with equal reason. Cities suffered through his extravagance; and the gold of Tagus has melted away under his touch. The ruin also brought upon himself is well depicted in the broken harness, the smashed axletree, and the fragments of the shattered chariot, which are strewn around the proto-fast man on his final fall. A modern Banier, perhaps, would find in the words,

"Excipit Eridanus, spumantiaque abluit ora,"

some allusion to the restoration of Phaeton by the process of what is technically called "whitewashing." The process is not unfamiliar to fast men; but the ruin of their founder appears to have been permanent. He had his admirers of course. The foolish Hesperian Naiades said of him, that he had only failed in a dashing attempt,—*magnis excidit auris*. But also, of course, his own family wept bitter and fruitless tears over him to whom they were indebted for their ruin. The ruin which he brought upon his sisters in particular is suggested by the metamorphoses which they are described as having undergone, by being changed into trees; that is, they ceased to live, and thenceforth merely existed, or simply vegetated. And mark the pretty involution employed by the poet to describe the lowliness of the condition into which the sisters of the original fast man permanently fell. "From the trees into which the sisters were converted," says Ovid, "tears began to flow; and these tears, distilling in drops of amber from the new-formed boughs, harden in the sun, and, received below by the limpid stream, are thence sent to shine in the dresses of the dames of Latium." What is this but to say that the sisters of Phaeton were reduced to the condition of needlewomen? To this day, the tears of the sisters of that sad community may be traced on the garments which they make for bread.

The example of Phaeton has had many a follower. The brotherhood of fast men drive the chariots which they

hold on credit, create ruin where they pass, and, like their prototype, go to Eridanus at last. We have them, indeed, in our days "with a difference." A century ago, fast men, when "hard up," threw their main at White's Chocolate House, mounted their "thorough-bred," and cantered quietly down to some suburban heath, where they waited for passengers and purses. These were bold fellows who perilled their lives in their rather fast vocations. Fast men have other methods now; and the variety of the men, as well as of the systems which they pursue, baffles description. Some are evangelical bankers, who live like Oriental princes, plunder like pirates, and quote Scripture like the gentleman who is said to have a facility in doing so, when it suits his purpose. Others look like trustworthy officials; they are the pleasantest of Amphitryons, are genial chairmen of benevolent institutions, and are the most stupendous of felons. To maintain a look of respectability, a fast Quaker, not long ago, committed a murder. There is a tribe of Beloochees with whom it is a religious and profitable delight to slay every Christian who comes within reach of their hospitality; their belief being, according to their own phrase, that "his belly is full of gold." Fast men, at home, are even less scrupulous than the Beloochees. They will sooner slay a golden friend than a foreign heathen; and strychnine and the gallows close the tale. Finally, in the most contemptible class of fast men we must reckon him who dishonours an honourable name, prefers rather to be splendidly vicious than richly respectable; who knows not how to obey, and is perfectly unfit to command; who glories in his shame, positively enjoys his own evil renown, and whose best joke is to run up an account with a tradesman, and try to wriggle out of paying him by some rascally plea. When the fast Prince d'Henin exposed himself to the remonstrances of his friends, who were startled by his prodigal gallantry towards Sophia Arnould,—one instance of which was his presenting her with a new carriage-and-four every month,—he answered them by showing his coachmaker's bill receipted, and impressing on them the satisfactory fact, that he was living within his means. Such a fast man may have been a fool, but he was not a knave. Too often, in these latter days, your fast man is both one and the other.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS,

SUFFOLK STREET, Pall Mall.

As usual, we find here, among many bad pictures, some whose merits sparkle like little oases in the desert wilderness, and on these alone do we propose to comment.

Numerous small landscapes, apparently by young men, are noticeable, as showing a more heedful manner of study than prevailed of yore. Of these we shall direct the visitor's attention to No. 14, by F. Buckstone, "On the Llugwy, North Wales." Although over green, there is much truthfulness in this picture; its water-reflections are extremely good. "A Study from Nature," L. G. Cawher, No. 15, an old gate overhung with briars, is skillfully painted, although lacking colour. No. 74, "Bridge, Ewell, Surrey," by Mary Bleaden, a stream spanned by a single-arched bridge, is a charming little bit of nature, painted with much clearness of tone and fidelity. Similar merits belong to No. 126, "Rabbit Warren at Burnham Beeches," W. Luker, showing an old group of beech-stems, mossed and sunlight sprinkled; and also to No. 188, "A Pathway in the Wood," by Miss Witcomb, which is very clear and fresh. No. 218, "A Lane at Albury," G. Cole, is a pretty little picture of a sandy road overhung with trees, and full of shadows and sparkling lights. There are other pictures by this artist which merit observation. No. 585, "Study on the Banks of the Rother," A. Evershed, a full stream with meadows on its banks, and glimpses of distant country seen between trees, is a pleasing little work. Nos. 777, "A Weedy Nook;" 798, "A Corner of

the Lake;" and 799, "At Burford Priory, Oxon," by L. H. Micheal, are most charmingly painted from nature, each one being exquisitely finished. The young green wheat seen over the hedge in the first is quite a novelty in landscape-painting; the second shows a punt moored among weeds: its reflection in the water is one of the most scientific and pictorial effects we have seen. The prevalence of a pale-greenish tone is very detrimental to these beautiful water-colour drawings. A little still-life picture, with the motto,

"The rusted nails fell from the knots
That held the peach to the garden-wall,"

No. 669, W. J. Bolton, and No. 781, "Sketched from Nature," J. Hayllar, showing the verge of a wood, appear to be executed with much feeling and care.

Although containing numerous figures, we presume No. 36 may be included among the more ambitious landscapes; it is named "Delights of Summer," A. J. Woolmer, and represents a sort of medieval, or rather dreamland, picnic, with ladies and cavaliers lounging about in gorgeous raiment. Without the slightest pretension of resemblance to earthly nature, there is much cheerful and solid brilliancy about this picture, though retaining the ordinary *bizarre* qualities of colour for which this artist is celebrated. He has seven other pictures here, which are exactly what the public have been accustomed to from his palette for so many years. "Calves and Landscape," No. 65, by G. W. Horlor, has the animal portion of the picture capitally executed; but its landscape is inferior in quality. "Broadstairs Hovelers going out to the Goodwin Sands," No. 67, C. B. Hue, has the sea rendered with great truth,—a rare thing. Mr. W. Williams's painting, "Holme Chase, on the Dart, Devon," No. 69, shows a moorland valley, with a broad stream and rocky swelling land beyond: this is admirably painted. The artist's other pictures, of which there are four, will repay examination. Mr. Alfred Clint's "Recollection of the Thames," No. 80, a view below the Pool, is worthy of his ancient reputation. This artist exhibits ten pictures.

Nos. 121, "Mont Blanc, from the Col de Balm," and 346, "Near Annecy, Savoy," are by an artist, J. P. Pottit, whom we have more than once had occasion to commend. These pictures display Alpine prospects, which are represented with great fidelity and care; the truth of aerial perspective in both is capitally rendered. "Evening," No. 254, by the same, represents the sun setting—purple, orange, and crimson—behind some trec-trunks, which grow on the margin of a stream. This is a most effective and impressive little picture. Mr. West, who is celebrated for his Norwegian subjects, this year fully sustains his ancient reputation by No. 158, "Waterfall, Romsdal, Norway." A Norwegian river breaks between rocks,—its snow-sources visible in the distance,—while below the fall the water spreads calmly and still. The enormous masses of rock, upon which giant trees appear but as shrubs, display their horizontal strata piled mass above mass, and defy alike time and the ceaseless fall of the water. It appears to us that the shadows in this picture are over purple, an opinion, however, which we express with much diffidence. This painter exhibits seven pictures, amongst which "Water-worn Rocks, on the Conway," No. 347, is most remarkable; but all are excellent. No. 223, "A Summer's Noon, Llyn Givernen, North Wales," by H. G. Boddington, although replete with the peculiar manner of a class of artists whose works are so well known, and being moreover charged with purple tints much beyond the truth of nature, is, despite these mannerisms and exaggerations, very effective and interesting. It is greatly to be regretted that so accomplished an artist should continue to repeat himself until it is hardly possible to find a novel feature among the very large number of works he produces every year.

"Early Spring," No. 475, W. J. Webbe, is a novel subject for a picture, but so admirably painted, that we earnestly commend it to the visitor's study: it shows the base of

a mossed bank wherein a robin has his nest; the bird himself is here attending upon his mate, whose head peeps out between the tall grasses. Primroses, violets, the fronds of the adder's-tongue fern, and many lustrous broad-leaved plants, some caterpillars, and a splendid moth, are painted with the utmost discrimination and care; thrusting amongst all this are some boughs of hawthorn full of bloom. The painting of these flowers is the only fault we can detect in the execution of the whole picture; they are hardly "moonlight-coloured" enough, to employ Shelley's exquisite phrase, for May-blossoms. A strange subject is that of a picture by H. J. Rolfe, "A Committee of Taste," No. 511, wherein a worm on an angler's hook is submitted to the judgment of certain roach and bream, the majority of whom look askance, but the biggest and greediest turns on his side preparatory to a bite. This picture requires brightness. Why the glimpse of landscape above the water-line should be so dull in colour we cannot divine.

Mr. J. W. Chapman's "Dead Pheasant," No. 189, and a "Brace of Partridges," No. 78, will be found to be most elaborate studies. No. 107, "My Basket," by Miss L. S. Rimer, shows a white camellia lying in a little basket, and opposed in colour by a red flower: a little picture which is executed throughout with skill and taste.

In "The Son and Heir—the Birthday," by J. Clater, No. 70, is a daring innovation upon a rule of art which we thought sanctioned by nature herself. The picture represents a farmer's family embracing the first-born son, and preparing the anniversary feast; but the artist, determined to be original, has so drawn the faces that no single eye is on a level with its companion; the effect of this, although peculiar, is not pleasing. "The Playfellows," J. Morgan, No. 61, a child tied in a chair and playing with a puppy, is painted with much solidity, force, and clearness of colour: the infant is a little gem. No. 75, a girl reading "The First Valentine," J. H. Naldor, is a somewhat ugly but tolerably faithful rendering of nature in a coarse way. No. 102, "A Rosebud," Miss A. E. Blunden, the head of a little girl smiling demurely, has the expression rendered with feeling, although evidently by an inexperienced painter. "Anxious Suspense," 327, by P. R. Morris, shows an amusing incident: a boy climbing a tree has lost his hold, but escaped a fall by the toughness of his smock-frock, which, catching over a bough, keeps him suspended in mid-air. The expression of face and attitude is capital, as hanging half in hope of a deliverance, and half in fear, lest a person whom we see approaching from behind should be his master, whose advent might convert his suspense into a painful certainty of a "hiding." Under these circumstances, the expectant look of the culprit's face, and the way in which his feet, in their huge boots, dangle wide apart, is inexpressibly ludicrous. The execution of the picture is not unimproving. Mr. H. A. Bowler's "Scene from *As you like it*—Rosalind, Celia, and Orlando," No. 269, has a great deal of skilful painting in the foreground of the landscape, and much taste in the arrangement of the figures; but their faces are of the lay-figure cast, extremely pretty, but unlike life. This artist's picture at the Academy in '55, "The Doubt," a lady meditating over a grave, did not prepare us for the conventional character to which we now refer.

Mr. E. Eagles' painting, No. 153, "Il Ritorno della Contadina," is executed in a style which will astonish most English observers, being a reproduction of some of the peculiarities of the Roman school, such as is rarely seen in this country. It shows an Italian peasant-woman wading through a brook with a basket on her head, in which lies a child playing with some red berries; this she steadies with one hand, holding by the other a boy, who stoops to make a flash with his hand in the water. If we put aside all idea that art should be the interpreter of nature, and that the first duty of an artist is to reproduce something from her vast storehouse, choosing whatever may express the motive of his picture,—having done this, we say, we are bound to state that the picture before us has very promising

qualities, being broadly and skilfully drawn, the expression successfully rendered, and the design having an element of grandeur such as one rarely sees surpassed now. Our surprise will, however, be great, if Mr. Eagles wishes it to be understood that he ever saw a sky (which we take as a key to the colour of the whole painting) like the one here represented. True, we have seen such things, but it has been through the reek of a brick-kiln; otherwise we do not believe there was ever any thing like it on the earth.

"Turning a deaf Ear," No. 138, S. Anderson, is an example of the manner in which the idea of Pre-Raffaellism is abused: the subject is a child playing with a heedless cat. The extreme care with which this picture is executed makes its faults the more lamentable; these are, that the colour is gaudy and hard, violently opposed and unnatural, with the flesh opaque and coarse in texture. The carpet is surely wrong in both aerial and linear perspective. To this artist's other picture,—No. 445, "I'm helping Mamma," a child pulling to pieces some crochet while reclining in a large chair,—every visitor will turn with delight, and long remember. We have rarely seen a painting more exquisitely finished, more richly subdued in colour, or where infantile expression was more charmingly rendered. The drawing throughout the work, from the face and limbs to the wonderful minuteness of the pattern of a shawl which is carelessly thrown over the chair, is unsurpassably correct and beautiful. This picture is the gem of the whole exhibition; and it was with surprise and regret we observed on the day of our visit that it remained unsold.

No. 778, "The Day after the Play," children repeating a performance; and No. 802, "The Lover of Art," an errand-boy regarding a print after Raffaele in a shop-window, by R. W. Chapman, are very capital water-colour drawings, of which the former pleases us most, both for design and execution; the latter, despite a dash of sickly sentiment, is, however, so good that we should rejoice to see more like it in this room.

We shall end by introducing to the reader two pictures by J. Campbell, Jun., whose admirable work, "The Askings," was here last year. "Waiting for legal advice," No. 379, shows the interior of a country lawyer's office, wherein is seated before the rail of the clerk's sanctum an impatient litigant, whose private affairs are under discussion by two vulgar clerks behind. Their audible whisperings are no alleviation to his impatience, as he sits with a bitter hardness on his face that speaks highly for the artist's power of rendering character. The blemish in the picture is the figure of a boy, who vainly endeavours to call the attention of the suitor to a tectotum he has set spinning on the floor. This figure is out of drawing, distorted, and coarse. Mr. Campbell ought to repaint this figure, and turn a blemish into a beauty. The artist is young. He comes from the north of England, which has recently produced such notable painters as Messrs. Windus and Sterling. The latter's picture, "Scottish Presbyterians in Church," exhibited at the Academy in '55, strikingly resembles in many qualities the one before us. No. 750, also by Mr. Campbell, shows a man seated in a stable repairing some harness, the dilapidated condition of which promises that any thing but "a tidy job" will be the result of his labours. The expression is fully equal to, and more finished than, that of the former picture; but the colour, although in perfect keeping with the subject, appears a little overloaded and black. L. L.

THE FIRE-REPORTER.

By STEPHEN HUNT.

THE phases of London life may be likened to the changes of a kaleidoscope, presenting us with something new at every turn, and occasionally exhibiting eccentricities so striking, that it is no wonder they should have provoked elucidations in prose and verse, for the edification both of drawing-room and nursery readers, from the pens of many clever writers.

Of the poetasters, however, it may be remarked, that some of them have made singular omissions, particularly the authors of those amusing little books entitled *London Cries*, not one of which contains the least mention of the cry of "Fire!" the most exciting of all outdoor cries, especially at midnight. No sooner is it heard than up go the windows of almost every house in the street, and the heads of the awakened inhabitants pop out as simultaneously as if they were suddenly seized with the whimsical mania of looking at each other's faces in their nightcaps. "Fire! fire!" Surely it must be a hoax:

"No mist obscures, nor cloud, nor speck, nor stain
Breaks the sereno of heaven,"

and the windows are being closed, when suddenly a dense smoke rises from behind the roofs of the opposite houses; then a shower of sparks; and then up shoots a tongue of flame, and young and old hasten to dress and betake themselves to the scene of conflagration.

Of all sights there is not one more generally attractive than that of a fire; it is at once picturesque, grand, and appalling. People will run miles to behold it, and display the utmost eagerness to get to the scene while the flames are yet raging with their wildest fury; but should they be disappointed, as they sometimes are, by mistaking the locality, they console themselves with the reflection, that the daily papers will be certain to give a full account of the occurrence. At breakfast, only a few hours afterwards, they get it,—a vivid description of the fire itself, number of houses consumed or injured, names of occupants, value of property destroyed, lives lost, narrow escapes, and other particulars, so minute that they could have been recorded only by some very painstaking person on the spot; the London fire-offices doubtless keeping in each brigade a competent scribe—a sort of literary fireman—to do the reporting. To those who are unacquainted with the mysteries of a newspaper-office this may seem a reasonable way of accounting for the details that are given of the numerous fires that occur after midnight. The majority of readers, however, do not trouble themselves to think about the matter, and will probably learn with surprise that the graphic accounts which so deeply interest them are not supplied by any one specially employed either by the fire or newspaper-offices, but by casual reporters, who, as though they bore an affinity to the reputed peculiarity of the salamander, depend upon fire for their existence, ay, more, even their wives and families subsist upon it, their welfare and felicity increasing with the number and extent of the fires they may be able to revel in during the year, or rather three parts of it, the summer being a season of perfect torpidity, and affording nothing but such poor substitutes as one or two railway-accidents and an occasional murder or suicide. This, however, is very listless unprofitable work, and affords our reporter little more than a discontented domesticity at his lodgings, which are invariably within a few doors of an engine-station; whence, at all hours, he receives intelligence of every fire the brigade are called out to, and, like the fireman's dog, being considered as belonging to the establishment, he is allowed the privilege of conveyance free of cost wherever the engine and its attendants may be going.

The season for fires begins about November; and then, limiting his nocturnal repose to a sort of dog-sleep, and having prepared every thing in case of a call, he is up and dressed almost before his alarm-bell has done ringing. Off he hurries, in dread of exceeding the limited three minutes during which the horses are being put to; and should he, in his haste, escape such hindrances as a slip on the stairs, a collision with a lamp-post, or an immersion in the gutter, he presently finds himself being whirled off to the scene of conflagration. No matter how repulsive the weather,—be it a cutting north wind, with sleet, hail, and snow, or a soaking south-wester, or a dramatic combination of thunder, lightning, and rain,—he braves it all. The idea of "a good

fire" in perspective, especially if the first of the season, would cheer him through fog, frost, or any amalgamation of inclemencies, albeit in keen contrast with the cosy warmth of the bed that he has just turned out of. Yes, it is a good fire; the glare in the sky is beginning to spread; possibly it may even be good enough to admit of "further particulars" for a second edition; and the idea of this dispels at once every sense of discomfort, however seemingly oppressive.

On a dark or foggy night, when the swarthy faces of the brigade, their glittering helmets, and the fiery-red of the engine, are illumined by the glare of torches smoking and blazing in the current of air created by the furious speed at which the horses are galloping, our fire-reporter presents the imaginary impersonation of some condemned victim of the Inquisition on the road to his *auto-da-fé*; and, in truth, his life is perhaps sometimes seriously imperilled; for there is no saying to what casualty he may be subjected in obtaining the particulars indispensable to the completeness of his report. Arrived at the fire, he has first to ascertain the name of the owner and value of the property that is being destroyed; and who so fit to give those particulars as the sufferer himself?

"Mr. Tomkins," says somebody; "there he is, making his way with yonder fireman into the counting-house."

Note-book in hand, off darts our reporter, heedless alike of impropriety and of every other more palpable and personal impediment. "Beg your pardon, sir;—very sorry indeed. *Times* reporter,—trust you will excuse my inquiries. Hope you are insured. What amount shall I say, sir?"

"Ten thousand pounds."

"Thank you, sir. And the value of the property?"

"Double that, at least."

"Any idea how the fire happened, sir?"

"No."

"Nor in what part of the premises, or at what hour?"

"Don't pester me, sir!" cries the irritated sufferer, hastening to depart with the books he has saved out of his iron-safe, and followed by the "*Times* reporter" through a dense volume of smoke which threatens to inflict instant suffocation.

For further information, our scribe applies to some of the crowd, and to such of the neighbours as have come to their doors. Having thus learnt all he can in as little time as possible, he is off on the look-out for some place where he can write his report, on his road to the newspaper-offices. At three or four o'clock in the morning, and probably in a neighbourhood innocent of night-houses, this is rather a perplexing matter, especially if rain, snow, or hail preclude the possibility of using one of the fixed tables, such as we see in front of many of the public-houses in the Kent Road, or of converting the step of a street-door into a writing-desk. The incredulous reader may laugh; but some such transformation, pantomimic as it seems, is very often performed by the fire-reporter, with the aid of a thick oblong piece of tin, about five inches in width and seven in length. To insure a smooth and level surface for writing, he lays this between the doorstep (or whatever other support he can find) and the manifolds which he has brought with him,—alternate sheets of white and lamp-blackened tissue-paper,—already arranged and pinned together. His pen consists of an instrument professionally termed a "stylus," having a wooden stem like a pen-holder, with a beautifully smooth though rather sharp point of hard steel; and thus, at one writing, he makes six copies of his report, unless the length of it happens to exceed a single page, when a dive into his capacious pocket-book will probably produce another set of blacks and whites ready for use on the instant.

Should the weather be wet, he avails himself of the best accommodation he can find—such, perhaps, as one of the sheltered shambles of a market; or, failing in this, he ties his handkerchief round his head, and makes a writing-desk of the top of his hat, unless, indeed, his road home lies westward, and then he knows where to find plenty of houses

that are open; but he has no time to go out of his way to look for them in a strange neighbourhood. His report being now written, he flies round with it to the different offices; and, after all this toil and positive suffering, to say nothing of injury to health, sometimes finds that, owing to the pressure of parliamentary debates, or other imperative matter, the editors of the papers have condensed his account, and cut down his earnings—literally a penny a-line—from pounds to a few shillings.

As a compensation for this, however, they will, when their pages are less crowded, accept his account of the first atrocious murder, or other exciting event that may occur; and should it be any thing legitimately in his own line, such as the destruction of a theatre or other public building, will allow him to extend his report to any length he pleases, taking also "further particulars," almost *ad libitum*, as long as the public mind continues to evince an interest in the occurrence.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

THE question which has lately been raised in the *Times* as to the Efficiency of the Pulpit in our National Church, is one of the deepest interest.

Abstaining as we do from argument upon those points of doctrine on which Christians differ, we hold ourselves quite free to remark upon the best means of enforcing those great truths to which all Christians assent; and we may say further, that we should care little for the interests of science, imagination, or morals, with which we especially deal, unless we could refer all, directly or indirectly, to a common ground of religious life and influence.

While granting on the whole the earnestness and devotedness of our clergy, we fear that, as regards the great function of speaking home to the hearts of the people, there is too much reason for complaint; nor can we admit that in this particular Dissent has any superior claims to boast of. The names of MELVILL and DALE, MAURICE and KINGSLEY, in the Establishment; of CAIRD, GUTHRIE, and DICKSON amongst the Presbyterians; of LANDELS and (viewing rather the intensity than the width of his mind) of SPURGEON amongst the Dissenters,—prove, indeed, that we have still preachers who can rivet the sympathies of their congregations; but such men are the exceptions. In hundreds of cases it is too plain that cut-and-dried theological phrases form the whole apparatus of the preacher; that the man beset by religious doubts is met with a dogma instead of an argument; that the "hope that is in" the Christian is affirmed, without that "reason" for it which the Apostle enjoined; that the aroused conscience, the enlightened mind, the melted heart, are effects seldom produced; and that infidelity, though weak in its own sophistries, continues the fight uncowed, not because itself is invulnerable, but because its opponents are unarmed.

For this deficiency, so widely felt and deplored, several remedies have been proposed; the chief one being the education of candidates for the holy office in the art of popular appeal, or at all events a previous examination of the candidate to test the degree of his natural gifts in oratory.

Now we cannot but think that this is a somewhat shallow way of looking at the difficulty. Preaching is so often ineffective, not simply because of the speaker's manner of saying, but because he has so little to say. We have, moreover, a repugnance to the notion that the influence of the pulpit is to be restored by the aid of the elocution-master. The issues of religious leading are in Higher Hands than ours; but the consoling truths, and the wide scope of our faith, will, so far as the instrument is concerned, make their

own way, however plainly stated, provided they be enforced with intelligence and earnestness.

The real obstacle to ministerial success is, we apprehend, the narrow views which prevail as to the functions of the pulpit, and the disposition to sever theology from the ordinary feelings and aims of life, instead of regarding it as a central principle which applies to the entire nature and pursuits of mankind.

The great themes of human redemption, and the conditions on which it is to be obtained, are, indeed, not only vital, but the very basis on which Christian hope must rest. Yet we may well ask whether there be not too great a tendency to suppose that the preacher's work is done when the Christian plan is set forth. Man's sinful state, the deceitful bias of the heart, our helplessness but for the provisions of Divine mercy, are surely not only views to be entertained, not only internal feelings to be cherished, towards God, but, as a natural result, motives to holy and noble action towards man. Christianity, it will be conceded, is designed, not only to rescue us from a penal state, not only to produce gratitude for that rescue, but to flow as a sacred current through our whole experience; to leaven, not to destroy, our habitual interests; to direct, not to limit, our feelings and powers.

Yet how lamentably true is it, that in modern preaching religion is often treated as if it were a something apart from man's nature and his daily pursuits; as if there were certain faculties—that of imagination, for instance,—certain callings—that of the politician, for instance,—on which Christianity had no direct bearing, and from which it was practically distinct!

We would speak reverently; and it is because we feel reverently that we ask whether a system which ignores the concerns of our daily life can be a meet offering to Him who appointed it? Do we honour that Divine One, whose name it is our privilege to bear, when we view His religion as a thing apart from our joys, sorrows, and vocations? Is it the truest gratitude, to muse upon the benefits He has bestowed, and our own security for their enjoyment, and yet to look upon His world as unconnected with Himself; to admit Him into our closets and into our sanctuaries, and not into our marts, our senates, our walks, and our recreations; to shut Him out from the philosophic thought, the poetical conception, the scientific discovery; to repair to Him as if He dwelt in a corner of His universe, instead of pervading it? The attempt were as reasonable as to fence in the sun. A man cannot wall-in *that*, although he may himself.

Can it be denied that our contemporary preaching is too often liable to the charges we have advanced? Do we find it habitually incorporating Christianity with life? Does it try our politicians by the standard of Christian rule? Does it exact from our poets the conception of Christian self-sacrifice and purity? Does it demand (except in theory) that marriage shall be a sacrament, not a barter? Does it hold out to the young the ideals of reverent self-denying and heroic character in manhood or womanhood as the fit objects for affection? Does it inculcate innocent joy from the beneficence of the Creator? Does it add to our delight in natural beauty the zest that it is the work of His hands? Does it tenderly visit the recesses of the mourner's heart, remembering Who it was that once wept? Does it draw from the yearnings of the bereaved new arguments for a life to come, and so confirm the truths of revelation by the instincts of man? Too often, even by good and sincere teachers, these interests are neglected, or treated as if they were merely secular; and the minister of religion leaves the heart void because he does not apply religion to its wants.

With its Divine revelation of self-sacrifice, as at once the means of salvation and the guide to holiness, we can see no condition of our affairs, no faculty of our being, no labour of the hand, no device of the brain, which should not be referred to Christianity for their motive. As a central principle of life, its nature is to permeate, not to check, human endeavour; to raise the ideals of imagination, to dictate the policy of cabinets, to become integrity in the

THE COLOSSAL PAIR, THEBES. BY FRANK DILLON. (SEE PAGE 375, VOL. I.)

counting-house, love by the fireside, charity every where, forbearance under wrong, peace in affliction, immortality in death.

So apprehended and taught, we cannot doubt that truths which lie at the very core of life would no longer leave their hearers cold or their practice formal. But rightly to expound them, not only earnestness and spirituality are needed, but a large grasp of thought and sympathy. It ought at least to be felt that to such a task a man must be divinely commissioned, not self-appointed; that his office is, in the highest sense of the word, a vocation, not a profession.

LORD ERLISTOUN.—A LOVE-STORY.

BY THE AUTHOR OF "THE HEAD OF THE FAMILY," "JOHN HALIFAX, GENTLEMAN," ETC.

V.

TOWARDS the end of the season, which lasted longer than usual that year, we all went up to London for a month; not with any great show, or to enter into expensive gaieties: my father, without assigning any reason, forbade that. He returned to Liverpool, leaving the family under my charge at a handsome lodging in Baker Street. There was only my mother and Jean, Charles (now the Reverend Charles—we were very proud of that "reverend") having gone to his curacy and promised living, and Russell and Algernon being away on a reading tour.

Lord Erlistoun called at Baker Street almost daily. In the Park I had continually to lift my hat to that handsome carriage, where, placed beside Lady Erlistoun's smiling fashionable face, was one I knew; not altered,—no outward circumstances could alter Jean,—except that by the contrast it seemed sometimes a little graver than it used to be.

Well, she had chosen her lot; she was old enough to know her own mind, and to be the arbitress of her own destiny.

Frequently, in my duty as temporary head of the family, I took my mother and cousin to the receptions at Erlistoun House. There, having nothing better to do, I used to moralise on the sort of life they led—this noble old family; nobler in strict purity of blood than many modern dukes and earls. And theirs being a type of many others, though of none other had I ever any experience, I often in that whirl of society, which makes a centre of contemplative solitude for any man who chooses, took notes of a few facts which we *parvenus*, we daring swimmers who have struggled into unknown waters by the main strength of our hands, are rather slow to learn.

It seemed to me that we are looked down upon, not so much for what we are as for what we assume; that the secret of "aristocratic" ease is its conscious possession of so much, that assumption becomes needless. Alas, if we in our generation were as wise as these children of the world; if we valued our sterling ore, our honest manhood and womanhood, as much as they their lovely flagree-work of external refinement; if we were never ashamed of ourselves,—I think these, "our betters" in breeding and education, if such they be,—the only tangible betterness they possess over us,—would be shamed into acknowledging that nobility which worth alone possesses, that power which needs no asserting, since it "cometh not from man, but God."

I know that night after night I, Mark Browne, whose father was a clerk, and whose mother was a milliner, have gone among the best of the land,—the high, the wise, and the fair; the higher I went being the more courteously entertained. That there, amidst velvets and diamonds, I have watched Jean Dowglas, always Jean Dowglas, in her simple attire and free noble manners; speaking as she chose, dressing as she chose,—for she obstinately refused to spend a shilling more than her own humble income,—different from all, fearless of all; yet compelling for herself, and more than herself, an invariable instinctive reverence.

Let no one belie truth by doubting the power of it. In the foolish strife between patrician and plebeian, jack-daws and jays, it is only our sham feathers that make us despised; and deservedly, because all shams are despicable. We that keep our own honest plumage shall always be respected and respectable birds. I never heard one sneer, or saw one covert smile, against either poor Miss Dowglas or "those wealthy Brownes."

This was one view of the subject, but I noted another.

Splendid as this sort of life was, having apparently no aim beyond that of the old Athenians,—“to tell or to hear some new thing,” to seize on some new plan of beauty or delight,—it seemed to me exceedingly sad and strange. Not for people in their first youth, when the faculty of enjoyment is so intense that it must needs be right rationally to enjoy, but afterwards. I dwell not here on the dark underside of such a life, but simply on its brightness,—a glare like living in a house all glass with no shadowy corners in it, or tossing from wave to wave upon a dazzling sunshiny sea without anchorage or rest.

Sometimes coming from one of those assemblies, where in the whole of Erlistoun House you could not find a single nook to make a fireside of,—not a single bare jewelled neck where you could fancy a child nestling to and lisping “Mother,”—I would catch from Jean's corner in the dark carriage a faint half-involuntary sigh.

No wonder Lord Erlistoun had been struck by the pleasantness of our middle-class “home.” In his sphere, except as an order to the coachman, they seemed hardly to know the meaning of the word.

Lord Erlistoun came to us, or rather to Jean, as I have said, incessantly. And now, catching an occasional flicker of the fire that smouldered in his dark eyes, indicating the "substance underneath," which Jean had once said she should like to get at,—ah, foolish Jean!—I began to perceive some reason why, for his own sake, it was better that he should be allowed to come.

His mother never hindered him; all her plans for him seemed to have vanished in air, conquered or made void by his own impetuous will. She was a wise woman, Lady Erlistoun; something better than a mere woman of the world, too; for Jean always said when questioned that she "liked" her.

One forenoon, Jean and I sat together in total silence; for I had business-letters to attend to; and the present surfeit of pleasure made me feel business to be even a respite of rest. Jean was by the window, watching the rattling confusion of the London street; she hardly looked like the rose-cheeked active Jean Dowglas who used to loiter about with me of early spring mornings, before Lord Erlistoun had ever been seen or heard of at Lythwaite Hall.

Those far-away days we never mentioned now. Happily I can put aside times and seasons, thoughts and feelings, when I will, that is, when my conscience wills. Not destroying aught,—nothing save evil need be destroyed; but locking all up, and keeping the key. I never contest anything with any body; I simply resign, absolutely and utterly. Let small rights go with the great ones; I never would claim, or beg, or struggle, for one iota that was not freely and solely mine.

Thus Jean and I rarely talked to one another more than habit made necessary; thus to-day, hearing a knock at the door, I merely observed that it was doubtless Lord Erlistoun, and began putting aside my papers.

"No, it is Lady Erlistoun; I was expecting her. Mark, do not go; I wish you would not go."

Of course I obeyed.

Lady Erlistoun had never before called at this early familiar hour, rarely alone as now. She saluted Jean, French-fashion, in her lively loveless way; thanked her for admitting herself so early; hoped she was not weary with her exertions last night.

"But really, *ma chère*, your singing is perfection. Mr. Browne, why did you not tell me of it before? Such charming simplicity, and yet thorough finish of style. Your cousin might have studied under Garcia himself."

"I did for a little while." (Lady Erlistoun looked surprised.) "At one time I meant to be a professional singer."

"O, indeed!"

"It would not have been quite the life I would have chosen; but it appeared necessary I should earn my own living. I had only my voice, and I would thankfully have used it. However, I had no need, and may not have."

"No, certainly not;" and the visitor began talking graciously to me—would have talked me out of the room if she could, for that was the usual result of her benignity towards me; but Jean's directness ended all difficulty.

"I believe, Lady Erlistoun, you had something to say to me? Need I banish my cousin Mark, who is as good as a brother to me who have none?"

Lady Erlistoun bowed a negative. "My communication is very simple; possibly Erlistoun has told you, his lady-confessor. Nay, he said his decision depended on yours. Truly, there could not be a more devoted worshipper than my son at this fair shrine."

Her light recognition, implying the lightness of the bond, did it hurt Jean? However, she replied steadily,

"Lord Erlistoun is kind; nor could he leave any decision concerning him in safer hands; but, as you both know, I claim no right to influence his plans."

Lady Erlistoun smiled. "I see he must make his own confession, implore his own absolution."

"I trust he knows me better than to do either."

Jean's earnestness surprised the mother into something of the same. She asked in a low tone,

"Miss Dowglas, am I to understand that no tie exists between you and my son? Is the engagement broken?"

"There never was any on his side, as I thought he had long since told you. He has always been free, perfectly free."

A glitter came in Lady Erlistoun's eyes; faint reflex of that in her son's sometimes. "Do not let us argue nominal points. I will tell you this plan of mine, which I have long desired to carry out. It is, that my son and I should take a tour together through Italy, Greece, and the Holy Land. A charming country—the Holy Land."

This last remark, addressed to me, I answered by one or two more, to give Jean time. After a minute she said,

"Would it be a long tour, Lady Erlistoun?"

"Only two or three years, or a little less."

"And when should you start?"

"Immediately."

Jean inquired no further, but sat quiet. Something—it could not be colour, for she was now always pale—faded out of her face, like the light cast on a window when the sun goes down,—faded too gradually to indicate that it was unexpected, or in any sense a sudden loss; still it was a loss—a something that had been, and was not.

"Tell me, what do you think of this plan, Miss Dowglas?"

"I think—if Lord Erlistoun wishes it, and since his mother wishes it, he will—there can be no doubt that you ought to go."

"'Ought,' your favourite word; nay, you have engrafted it on a certain young friend of ours. He is always talking of what he 'ought' to do. Seriously,"—and there was kindness under her sportive air,—"a mother owes thanks for any good influence which at a critical time of his life is exercised over her son."

Jean's mouth trembled.

"I am really sorry to take him from you for this tour; but you know him as I know him, my dear Miss Dowglas—a noble fellow, the soul of honour, both in principle and practice; but a little, just a little—However that will amend."

What would amend? Jean must have known; for she answered slowly and firmly, "I believe it will."

"Once,—I may speak before your cousin, I know?—once I wished Erlistoun to marry early; and even now, I think"—hesitating, with a passing survey of the face and form, less fresh and fair than it was under the first maternal investigation in the Lythwaite drawing-room—"I think sometimes if you would listen to him—"

"No," Jean interrupted hastily, "he had better *not* marry early. It would not be for his good that he should marry me."

"Have you told him so?"

"From the first; but he will not hear it. He will not let me go. He loves me, *now*."

O, what depths of meaning lay in that half-uttered,—I know she did not mean to utter it,—that quickly smothered "now!"

Lady Erlistoun might have heard it, or might not. I suspect she did, and understood it likewise. Taking Jean's hand, she said, out of the heart that may have beat truly, or even passionately, some time—possibly, since she married at twenty, for another Lord Erlistoun,—

"I never wish my son to love a nobler woman."

From that day I ceased to avoid Jean's lover so much as I was accustomed to do. The lover in him interested me in spite of myself: this persistent pursuit and absorbing worship of the woman who had taken hold of his best self as well as of his imagination, and had become to him higher and purer than a passion, an ideal.

Yet there was no lack of passion either—quick jealousies, brief angers; all that sparkling and crackling of a fire which burns fierce, bright, and *fast*; but one cannot readily detect that while it is burning.

A young man passionately, deeply, and disinterestedly in love, has always in him something worthy of respect. Nor,

while women are still women,—and to be loved touches and ennobles their nature, as to love ennobles a man's,—did it seem any marvel or shame that this devotion of his was not altogether wasted on a mere idol marbly cold. For all Jean said, I, catching many a look and tone, less sedulously guarded now that the time of parting drew near, began to feel sure—though she might test her lover's faith, or for his own sake refuse to bind him by a formal engagement—that soon or late she would marry Lord Erlistoun.

The day before his departure his cab was at the door by nine o'clock. I heard his quick footstep springing up the stairs, and his familiar entrance into the back drawing-room, where Jean stood watering her flower-stand. Of all the gifts he would have loaded her with, she refused every thing but flowers.

"I am come to stay all day; may I?"

Jean smiled; she was busy over a sickly heliotrope withering in London air. "I can't keep it alive, you see."

"Never mind it; keep it while 'tis worth any thing, and then throw it away. But you did not answer me. Say, may I stay? or do you wish me to go?"

"No!" Her hand slipped into his. "This last day? No."

He had never spent a whole day in Baker Street before. He soon became very restless, pacing up and down the dull drawing-room suite, which was all our establishment. No charming nooks to sit and talk in as at Erlistoun House; no sunshiny garden to make love in as at Lythwaite Hall;—if, indeed, Jean had allowed any "love-making," which she did not. Only in the eyes that, however quiet she was, seemed always to take note of him and his enjoyments, you could see the utter unselfish love which, abhorring all coquetry, found its best demonstration in silence.

At last, when he had sat listening amiably to my good mother's long-winded confidences of our lodging-house woes, Jean put her work away, and proposed we should all go once more to our frequent haunt, the Crystal Palace.

"But it is Thursday—one of the people's days."

"I am one of the people. I should like to go."

So we went.

Already it is half forgotten; soon it will become a mere tale to tell our children, that People's Palace of 1851. Yet, O the beauty and wonder of it when you came out of dusty London, and stood in the lofty nave, with its captive trees, green but motionless; its lines of white statues; its crystal fountain;—the fairy-land it was! till advancing, you caught the "hum innumerable" of the moving crowd, which thenceforward never left you. Such a grand, touching, infinitely human crowd; its huge mass giving an impression of solitude; its confused incessant noises producing a sense of silence.

I liked to be carried along by that living sea; or else from one of the end galleries to watch it rolling on, each atom bearing its unknown individual burden of pleasure or pain. I liked to recognise, by my yearning over them, that every one of those was my brother or my sister; noble or ignoble, rich or poor, learned or unlearned, sinful or innocent, no less my brother and my sister; and as such, never to be overlooked by me, since not one of them was forgotten before God.

Sometimes, too, when the great organ began to sound, I would try to solve many a troubled problem concerning myself and these by thinking of them, not as now,—the most of them laden with useless sorrow, or tainted with apparently irredeemable sin,—but as that "great multitude which no man can number," which out of all "nations and kindreds and people and tongues" shall yet make the innumerable company of the Church of the First-born.

Feelings like these dwarfed all minor ones, and caused me, when every hour or so I saw emerging from or disappearing in the throng its only two units in which I had any personal interest, to look on them much as I should have done on meeting in that wondrous Company, where we believe we shall have lost all personality that is not too pure to suffer pain.

I think they enjoyed that day. I myself can still see, as then, Lord Erlistoun's tall head, and Jean's slender sober-hued figure, moving down the long transepts, or loitering in the gorgeous courts. And once, fixing a rendezvous, I found them sitting among "the people," who were dining out of big baskets, and filling clumsy drinking-cups at the crystal fountain. Nay, Lord Erlistoun rose, and took much pains to do the same for some cross child-laden woman, whose sole answer was a gruff "Thank'ee; you be civiller than most o' the young gentlemen."

Would he have done it of himself, I thought, or only for Jean's smile? Anyhow, it was better done than undone.

Day waned; a semi-twilight shadowed the courts, while quaint refractions of sunshine flitted about the many-coloured carpets and motionless banners of all nations hung along the aisles.

"Let us all come and sit quiet somewhere until the bell sounds."

They two went and sat in the alcove: many will remember it—made of iron-work from Coalbrook Dale. They talked earnestly—of what, I did not hear, nor ever wish to know. Let no one desire to break in upon the sanctity of another's past.

I can think of Jean even now as sitting there, her hands crossed, her eyes declined on her lap, listening or speaking, with sweet eyes lingering on his face—a face beautiful in itself, and beautiful to her, Heaven knows. I will not deny it, or him. God love him! he was Jean's first love.

The gong of dismissal sounded. It made her start: she was often nervous now. That dull heavy boom seemed to pierce her through and through. When she rose from her chair she could hardly stand.

"She is worn out," I said; "we must take her home."

"Yes, yes. Only five minutes more, for one last walk through the beautiful nave. Can you, Jean?"

She smiled assent.

So, leaning on Lord Erlistoun's arm, she walked slowly through, till at the door she stopped, and turned to look back.

Last year, crossing to Kensington Gardens, I too stopped, as it might be, on that very spot, and called to mind how we three stood and looked back on that fairy palace, with all its glory of colour, form, and sound. What was left of it? Nothing! Save,—and I thought, happy for those to whom this is left, after the clearing away of their youth's crystal palaces!—save free space, light, and air, where the sun may still shine and the grass grow.

Coming home, Lord Erlistoun found a note from his mother, which, with a gesture of annoyance, he passed on to Jean.

"But I will not go; I wonder she can expect it. This my last night to be wasted at the bishop's; she knows I hate going there. Jean, if you knew—" He stopped.

"I know one thing," said Jean's persuasive voice, "that you will not refuse your mother; it is her right."

"And have you no right? Not even this last night!—you are cruel."

"Am I?" Jean took out her watch; her hand shook much, but she spoke decisively: "You will have time enough for both. See; one, two, three hours longer with us, then you shall go."

A few more restless reproaches, such as she often had to bear and to smile down, as now. But her smile always calmed him, and—another of those facts which sometimes set me pondering as to the future—her will always ruled.

A quiet hour or so in the slowly-darkening drawing-room. I read at the window for as long as I could; my mother dozed on the sofa. Lord Erlistoun protested against lights; so we had only the fantastic glimmer of the street gas-lamp dancing on the wall. By it I could just trace Jean's motionless figure leaning back in the arm-chair; another figure sitting beside her, lastly on the hearth-rug at her feet. One would have smiled, remembering the first

dignified behaviour of Lord Erlistoun at Lythwaite; but it was a matter beyond smiling at now.

"Will nobody talk?" said Jean, after a long silence.

Some desultory conversation ensued about people and books, and then,—his thoughts deserting him, or assuming lover-like forms that were necessarily limited in expression, though on the whole he observed little restraint in the presence of my mother and me,—Lord Erlistoun took to repeating poetry.

What a voice it was, rich, deep, and low! how, stealing through the dark, with intentional emphasis, it must have gone direct to any heart that was young, and loved him! Even me it touched in a measure; some fragments in particular; because I afterwards found them in a book, and because of the deeper meaning they carried than I then wist of. It was a love poem, of course:

"In many mortal forms I rashly sought
The shadow of this idol of my thought:
And some were fair, but beauty dies away;
Others were wise, but honeyed words betray;
And one was true,—ah, why not true to me?
Till, like a hunted deer that could not flee—"

The young swain goes rambling on in language intoxicating with loveliness, half-earthly, half-heavenly, till he finds the one, the last love, and thus describes her:

"Soft as an incarnation of the sun
When light is changed to day, this glorious one
Floated into the cavern where I lay,
And called my spirit; and the dreaming clay
Was lifted by the thing that dreamed below
As smoke by fire, and in her beauty's glow
I stood, and felt the dawn of my long night
Was penetrating me with living light;
I knew it was the vision veiled from me
So many years; that it was—"

"Emily," supplied Jean, with a little soft laugh. "Why did you pause over it? 'tis one of the sweetest names I know."

"I hate it."

Lord Erlistoun started to his feet, and would say no more poetry. Certainly it had struck me as odd that a lover on the eve of parting should expend his feelings in another man's words, or, indeed, in any words at all; but love takes so many forms, that what seems false to one nature may be essentially true in another.

He continued his old restless walk up and down the room. Jean sighed, and then went and opened the piano.

"Do you remember this, Mark; you used to like it, though you do not care for music?"

Not every body's music; but this—it was a "song without words,"—Mendelssohn's. She had played it with the sunbeam dancing on her head that May forenoon at Lythwaite. Before many bars, it was broken in upon by Lord Erlistoun.

"'Tis too tame, too quiet; Jean, play something I like, or rather do not play at all. Hark!"—the church-clock struck—"only one hour now."

He seized her left hand, the other moving vaguely over the treble keys, and began talking to her in a low voice, as lovers do.

I went back to the window. In the middle of the street, singing in a high voice, cracked now, yet not without the ghost of former tunefulness, stood a woman with a baby in her arms, and a boy at her side. Clustering round the gin-palace farther down was a knot of still wretchered women, some with children likewise, dragging in or out refractory husbands, or worse; while, appearing and disappearing under the doctor's red lamp opposite our door, passed score after score of all sorts of faces, hardly one in the whole number a contented or good face,—which make up the phantasmagoria of London streets of a night.

Without, such sights as these; within, those two repeating delicious poetry, and whispering together over soft music! "God help us!" I said to myself, "is there nothing in the world but love, nothing to live for but happiness?"

O, Jean, I was hard to thee!—hard even at that mo-

ment; and blind, as we almost always are, when we severely judge. I caught Lord Erlistoun's voice, so impetuous that it was impossible not to hear.

"At least you will write to me. You will not forbid my writing to you as often as I please?"

"Did I not promise long ago?"

"I know; you have made every promise I could desire, though you will take none from me. Once again, why will you not? Do you think me changeable?"

Jean repeated, half-jesting, half-sadly, the lines—

"In many mortal forms I rashly sought
The shadow of this idol of my thought."

"I was not the first of these, you know."

"But you will be the last. O, Jean, do you not believe I love you?"

"I do; yet—"

"Stop; I know what is coming—the old argument, that your experience and mine have been so different; that you have lived for work and I for enjoyment; that my youth is but just begun, while yours—"

"You brought me back my youth," she murmured. "O, yes; I have been very happy!"

"Have been! 'Tis always *have been*," and he said something more, rapidly, incoherently, his manner being fierce and tender by turns.

"No," Jean replied; "it is not these things I am afraid of. External differences are nothing with union at the core—love, and trust, and faithfulness."

"Enough; I know," he said bitterly. "I am not one of your 'faithful' temperaments. You judge me—O, most wise woman!—by the tinge of my skin and the colour of my hair."

"Lord Erlistoun!"

"No, I deny it not; I am a very different person from your cousin Mark there. I am southern to the core; my blood seems to run like fire sometimes; and you set it alight—you stand by and watch it burning. Jean, you do not love me; you never loved me!"

Jean did not answer for a minute. "Then you think when I promised—you know what—I was false to myself, and worse, to you, after the cruellest falseness any woman can show?"

"Forgive me—O, forgive me! I love you; yet I am always grieving you."

Again Jean paused before replying. "I take the grief with the love, and would have done the same twenty times over, because I have hope in you."

She did not say "faith"—faith, the very root and foundation of love; but he never noticed that. "Yes," Jean repeated, "great hope. That is the way with us women; we care less for your loving than for what you are; we can be content if, quite apart from us, we see you every thing that you ought to be. I could."

"Jean, I will be any thing, every thing, if you will be my Jean."

He tried to clasp her, apparently; for she shrank visibly from him.

"O, do not!" in an accent of pain; "I feel as if it were not right; I could not unless"—she dropped her face upon her hands. "I know we shall never be more to one another than we are now."

What he replied I cannot say, nor what farther last words passed between them. Let all rest sacred, as last words should.

When Jean called me from my room to bid him good-by, Lord Erlistoun was standing by the lighted lamp exceedingly pale, but proud; more like the Lord Erlistoun of Lythwaite times than as we knew him now. My mother, out of her dear warm heart, extended her hand with a good wish and blessing; when, very much to her surprise, he lifted the hand and kissed it.

"Thank you all for all your kindness; I hope to return it one day, two years hence. Two years; and remember,"—

he turned to me; whether he liked me or not, I think he trusted me,—“however free she holds me, I hold Jean Dowglas as my wife. Take care of her until she is my wife. Good-by.”

He had not been gone a month, when there befell our family what,—as I am not writing our history, but that of Lord Erlistoun,—I will state briefly, as things fatal for life, more terrible than death, often are stated.

A defalcation, in its character worse than mere recklessness, and involving years of long-concealed systematic fraud, was brought to light concerning a partner in our firm of Browne and Co. His name matters not; it is now blotted out from the face of the earth; the wretched forger destroyed himself.

My father did the only thing an honest man could do,—sacrificed his wealth to his integrity. He paid his liabilities to the last penny; then laid down his head in peace, and died. The sight of his coffin borne out through its gates one snowy winter-day is almost my last remembrance of Lythwaite Hall.

PROGRESS OF SCIENCE.

FEARS having been entertained lest the shock of a comet some day, against our world, in the course of the next twelve months might be apprehended, and that such shock might cause us serious inconvenience, if not altogether annihilate us,—it may be well, before commencing our monthly summary of less important matters of scientific interest, to announce that the chances of such accident are so exceedingly small, that we may dismiss all fear of it from our minds. The proposition is almost self-evident, that the amount of danger from the impact of a cometary body against our globe must be proportionate to the density of the former; and that if the wanderer be a thing of air,—a mere phantom; almost inconceivably less dense than our atmosphere,—it may come, and welcome; we need take no heed of it. On this point testifies M. Babinet, an astronomer who has lately devoted much attention to the subject of comets. According to this observer, the attenuation of comets is so much less than what people have hitherto imagined, that although we like as much as possible to avoid figures and formulæ in these columns, we are driven to do so, inasmuch as mere verbal description becomes unmanageable. According to M. Babinet, the density of comets is not a hundred, a thousand, or a million times less than that of the atmosphere, but no less than ~~xxxxxxxxxxxx~~ times! We trust our readers may recollect their numeration table sufficiently well to realise the immense remoteness of the danger which may have oppressed them, on account of the comet. All-convincing in respect of safety as these figures would seem to be, M. Babinet does not rest contented with them. He advances other arguments to prove that comets will fall lightly (when they do fall) on the abode of mortal man. His first reason, however, is so tranquillising, that our readers will pardon us for omitting the others.

Attention is now being drawn in France to the best method of preparing bread for military purposes; the chief object being, to convey the maximum of nutriment in the minimum of space. The general result arrived at is a confirmation of the views of Parmentier, enunciated by this philanthropist in a pamphlet printed, though unpublished, upwards of sixty years ago. Parmentier held the office of *Pharmacien-Inspecteur Général* under the first Republic, and was a member of the Military Council of Health. The subject-matter of the pamphlet was read on the 21st of Brumaire, year V. This brochure of Parmentier demonstrates that it is advisable to separate the greater portion of bran, or husk, which can never be made really nutritive, however finely it may be ground.

M. Kuhlmann has been recently turning his attention

to improved methods of imparting permanence to many intractable colours employed in calico-printing, and distemper-painting. Many of the colours employed in the former operation are not chemically united with the woven texture. French ultramarine is of this kind; it is totally insoluble, and has to be mechanically attached to the cloth by the intervention of some glutinous body. Albumen and gum have been used for this purpose; but, all things considered, the glutinous body most generally eligible for the purpose has been caseine. A large quantity of inferior cheese enters into consumption as a fixative material for these intractable colours. M. Kuhlmann, taking advantage of the known chemical relation of tannic acid and gelatine, by which the two, when they come in contact, generate an insoluble solid (leather), mixes, in certain cases, his colours with gelatine, paints the woven surface, and finally renders the matter of the painted figures insoluble by fixing them with a solution containing tannic acid,—such as infusion of gall-nuts, for example. In the application of this process to distemper-painting, the great difficulty at first experienced was in getting evenness of tone; every touch of the pencil leaving a stain. Ultimately this drawback was surmounted by weakening the wash of tannic acid; the great point consisting, as it would seem, in the use of several solutions of that agent, each successive wash increasing in strength. M. Kuhlmann has also been trying the effect of soluble glass or silica-medium for the same purposes. Had this gentleman been familiar with the practice of some of our British artists in aquarelle, he would have been made aware that the use of silica-medium as a fixative agent in this variety of the fine arts was no novelty. A still less obvious means, proposed by the same chemist for accomplishing the fixation of refractory colours, consists in mixing them with starch-solution, and rendering the latter insoluble by cream of lime, or of baryta. Either of these agents, according to M. Kuhlmann, fixes this material completely.

M. Coste read before the members of the Paris Academy of Sciences during the past month the description of an apparatus devised by M. Noel for the transport of live fish. It is a well-known fact, that fish, like terrestrials, require air for the maintenance of their life; consequently, when a large number of fish are assembled in a smaller quantity of water than they would enjoy in a state of nature, the water should, to be in accordance with theory, be impregnated with a larger amount of air than ordinarily belongs to it. So sensible are the Swiss of this fact, that when they have collected, as is their custom, a large number of trout in a tank, where they are retained until the market-day which consigns them to the epicure, arrangements are made for causing water to fall into the tank from a considerable elevation in the form of a cascade. The efficacy of this treatment is undoubted, but it can only be had recourse to when the tank is a fixture. M. Noel accomplishes a similar purpose by immersing in the portable reservoir an endless chain, to which flaps are attached; the chain being drawn round a pulley by means of a winch, portions of water are successively elevated and caused to fall into the reservoir with a splash. Necessarily, portions of atmospheric air are entangled in the water; and diffused through the tank for the benefit of the finny prisoners.

Louis Helot, one of the French Jesuit missionaries resident for some time past in China, has forwarded to his superiors at home some important points in connection with certain Chinese industrial secrets, and has made himself acquainted with the process of manufacture of a beautiful green pigment, the “lo-kao,” the composition of which had long puzzled in vain the chemists of France. During the year 1848, the French minister of commerce received from China a piece of textile stuff dyed of a sea-green colour of exquisite beauty. Chemists forthwith submitted the cloth to analysis, in order to discover the nature of the pigment which had been employed. Their labours were unsuccessful; nothing certain was made out; but the opinion was entertained that the pigment in question had for its base an

organic substance unknown in Europe. Some time afterwards, M. de Montigny managed to obtain some of the actual colouring-matter, and succeeded in proving that it was extracted from a plant of the *Arbustus* tribe, a specimen of which he also obtained. He nevertheless was unable to ascertain completely the nature and derivation of the lo-kao. Considering that the pigment might be turned to good account in the arts, the president of the Chamber of Commerce at Lyons made application to the Jesuits, soliciting them to obtain, if possible, further particulars through their missionaries in China. This the Jesuit missionary Helot was finally able to accomplish. He discovered that the substance was chiefly prepared at Azé, a large town situated at eight leagues' distance from Kia-Hin-Fou. There being many Christians in the immediate neighbourhood, the missionary had no difficulty in obtaining all the information he required. The pigment is not made from the leaves, but from the bark of the tree; and it is unfortunately inapplicable to the dyeing of silk. We are informed that the Jesuit Helot has also addressed to the manager of the *Annales de la Propagation de la Foi*, though his communication is not yet printed, some interesting particulars respecting the process of distillation as followed by the Chinese, and details connected with the management of silkworms in their native land.

More than one hundred locomotives are now worked by coal instead of coke, the substitution having been rendered efficient by the introduction of a peculiar firegrate, the invention of M. Cavé. Steam is generated with sufficient rapidity, and so much of the smoke is consumed, that the portion which escapes is too small to inconvenience the passengers. The fireplace is of open bar-work, arranged like a flight of steps, and is designed to furnish a large supply of air. The combustion is most active at the foot of the stairs; but little else than coke arrives there, most of the volatile matters having been already evolved.

The meetings at our own Society of Arts during the past month have been fraught with interest. On Wednesday, March 4, a paper was read by Major H. B. Sears, "On the Appliances for facilitating Submarine Engineering and Exploration." The chief object of this paper was to introduce to the notice of the Society of Arts a new subaqueous self-motive machine, called the "Nautilus." It differs from the diving-bell, not only in shape, but in the circumstance that it can lift weights, and that it is shifted by the operators within it totally independent of external control. On the evening of March 18, Dr. Letheby read a paper, "On the Economy of Food," in which he showed that the statistics of crime, disease, and mortality, even the general prosperity of a country, are intimately associated with the food-supply. In the course of the discussion which followed, the chairman, Dr. Lyon Playfair, went further in the same direction; expressing the opinion, that the character of a nation depended on the quality of food it consumed; stating, as corroborative of his views, that the difference between the flesh-eating Mahomedans of India, and the rice-eating Hindoos, was attributable to the difference of viands. The Rev. Dr. Booth warmly impugned this theory, maintaining that race, not food, was the cause to which the difference is attributable; illustrating his proposition by the fact, that the Jews, whose diet varies in every land which they occupy, still maintain all their original physical peculiarities. Another interesting paper was read on March 25, by Mr. C. Dresser, "On a new system of Nature-Printing." The first records of this beautiful and useful art are no less than two centuries and a half old; the original process consisting in drying the plant, covering its dried surface with a layer of soot from a candle or lamp, then placing it between two sheets of paper, and subjecting it to pressure. Minute directions for performing the operation in this way were published in the year 1650. At a later period, about 1707, Linnæus adverts to this process as having been performed by Hessel, who allied himself with a bookseller for the publication of impressions thus taken. The next step in the art of nature-

printing was to colour by hand the black imprints; but the process was not very successful. In the year 1833, the operation of nature-printing took a new form. Peter Kyhl, a Danish goldsmith, discovered that if a vegetable leaf were dried, then laid between two metallic plates, the one of steel the other of lead, and the whole subjected to pressure, the lead-plate became indented with an accurate copy of the vegetable. The next step of importance in this art was made by Professor Liydolt, of the Imperial Polytechnic Institution of Vienna, in 1849. He applied it, not to vegetable, but to the purpose of obtaining the imprint of agates. He exposed the agate to the action of hydrofluoric acid, which was found to dissolve certain layers leaving others untouched; the surface was next washed with dilute hydrochloric acid, dried, and blackened with printers' ink. Such a prepared agate is capable, as will be seen, of giving impressions to paper. Dr. Ferguson Branson next suggested the application of the electrotype, which constitutes the main feature of the present operation. He took casts of the object in gutta percha, deposited copper electrotypes upon these casts, and printed from the latter. Lastly, the old process of taking the first impression on lead-plates instead of gutta percha was readopted; and this, in connection with electrotype deposition, is the foundation of our system of nature-printing as at present adopted. The process, however, which it was the especial object of Mr. Dresser to set forth, was one of nature-printing by means of lithographic ink, as fully explained in the specification of a patent dated December 22, 1855.

Photographic science is still advancing in many directions, though unfortunately not without a little of the angry feeling with which the heliographic art was inaugurated. Herr Pretsch has come before the world, as our readers are aware, as the discoverer of a process of photolithography, the priority of which M. Poitevin disputes; whilst Mr. Fox Talbot considers the latter to have infringed his patent, and hints at legal measures. Mr. Hardwick has made further investigations relative to the employment of fused nitrate of silver for photographic purposes. It would appear that no great apprehension need be entertained of the decomposition of the nitrate by the employment of a temperature necessary to promote fusion; the heat of a large spirit-lamp, acting upon a porcelain capsule, is sufficient; and except the temperature be raised unnecessarily, no fear of decomposition need be entertained. Mr. Maxwell Lyte has communicated to the Photographic Society a description of a new preservative process, enabling collodionised plates to be retained in a dry condition, and subsequently rendered fit for development, by simple immersion in water. The material employed is chiefly composed of gelatine; the coagulating property of which has been destroyed by prolonged boiling, either alone or in conjunction with an acid. In addition to a solution of the changed gelatine ("metagelatine," as Mr. Maxwell Lyte calls it) in water, the preservative agent contains honey; the proportion being, five fluid ounces of metagelatine, two drachms (weight) fine honey, and five fluid ounces of distilled water.

Amongst the other items of heliographic news, we are sorry to announce that methylated ether does not seem so good as the more expensive ether from ordinary alcohol, for photographic purposes. This is to be lamented, inasmuch as the methylated substitute is considerably cheaper. Mr. Hardwick finds that the presence of chloroform in collodion renders it a little thicker, and removes certain injurious markings on the fibre. Iodoform lessens the sensibility of collodion, and impedes the formation of the half-tone of the negative.

Mr. Grove, who has already done so much to elucidate the connection which subsists between the physical forces, raises expectations in the minds of photographers that they may soon be able to add electricity as a subsidiary resource to their art. Certain German experimentalists have found that when a metal bas-relief is laid in apposition against a polished and electrified metallic surface, or an electrically

excited pane of glass, and the bas-relief removed, the metal of glass is unequally acted upon by solvents. Mr. Grove has been trying to produce analogous effects by electric light, and with some success.

Breech-loading small arms have long been a desideratum; but the breech-loading carbine of Colonel Greene, of Cambridge, Massachusetts, a specimen of which we have examined, completely solves the problem. As a large number of this powerful and ingenious arm are being supplied to our cavalry, a short exposition of Colonel Greene's principle will not be devoid of interest to Englishmen. Hitherto the great objection to the general use of breech-loading arms has been the difficulty of providing against the escape of gas at the breech-joint. The carbine of Colonel Greene, by a simple and ingenious contrivance, has admirably succeeded in overcoming this obstacle, so that even after firing 400 or 500 rounds not the slightest escape is discernible. This is effected by means of the chamber to receive the cartridge being at its base a truncated cone, and having a cup or valve fitted into a recess cut into the breech of the barrel, so that on discharging the piece the force of the powder drives back the cup or valve against the face of the breech; thus the greater the charge, the more perfect the action of the principle. Like all arms used by the United-States army, this carbine is discharged by means of the Maynard primer; and although the barrel is only eighteen inches long, the shooting at 600 paces, or even more, is admirable. The great shooting-accuracy of these carbines, combined with facility of loading and discharging (ten times in a minute), prove them to be the most formidable small-arm weapon yet invented, and will doubtless greatly enhance the efficiency of our cavalry in the field.

A WORD FOR THE HOMES OF OUR WORKING-MEN.

MANY years ago the discovery was made, that our poor increased a poverty, already hard to bear, and materially added to its bitterness and humiliation, by their ignorance of the mode of laying out their hard-earned wages, and the helpless manner in which they disposed of the produce. Since then it has been a question constantly before the public; and whether this thing could be helped or no, formed a problem the solution of which has not yet been found. The fact, as we have stated it, has been deplored by philanthropists; reprobated by political economists; silently grieved over by optimists; and grumblingly allowed by the poor themselves. Treatises have been written on the subject, so complicated as to be unreadable, or so pretentious as to be unpalatable to the class they were intended to benefit. There are also *Soyer's Skilful Cookery for the Million*, *Mothers' Receipt-Book*, *Family Economist*, and papers in various popular magazines,—excellent in their way; but those who delight in them, and study and practise the dogmas contained therein, are chiefly intelligent and thrifty young wives, whose husbands may be clerks, writers, &c., with incomes of perhaps 150*l.* per annum. These are not the people to whom we refer. There are labouring men, whose earnings average from 1*s.* to 18*s.* per week. Their wives do their own business at market; lay out perhaps 9*s.* in provisions: generally the best and most wasteful portions of joints are selected. The fire is hastily heaped up, the meat is submitted to the roasting or boiling process, as the case may be; and with new bread, composed of the finest flour and alum, or potatoes more or less diseased,

an unpalatable and unsavoury meal is concocted and despatched. The quantity of meat that is charred or raw, of fat that is burnt or wasted, is really wonderful; and the same unprofitable result is to be remarked with respect to the other meals. Stale cheese, new bread, and drugged beer, are not a very nourishing supper to a working-man. We say less about tea. Mistakes cannot so well be made in preparing it; though, according to Johnston, refuse tea-leaves contain a large percentage of gluten, which the water fails to extract, and which, therefore, is invariably wasted. He suggests that a pinch of soda would remedy this; and it may be worth the trial. Tea for the working-man, if not apparently very nutritive, is at any rate a beverage which prevents the waste of the tissues, and thereby lessens the necessity for food. But it is a question how much of the real principle of tea is to be found in the sort purchased by the poor at such low prices. Now a French workman with the same amount of money to spend on food would live almost *en prince*. Excellent digestible dishes, soups, and the like, would be manufactured at the same, or even less, cost than that of the dinner before described.

This state of matters cannot be denied by those who have used their eyes when on the Continent, or who have had much insight into the homes of our operatives and agriculturalists. Almost any native of France or Germany, be they male or female, can make good coffee; and on the small steamboats which ply on the Saone, dinners may be had at a most reasonable cost which would not disgrace the table of an English nobleman. Let us grant, that with some nations cookery is an instinct; may not plain practical teaching in some measure remedy this defect in us? With reference to casual illness, the same absence of ready sense, the same want of power in adapting means to the end, is remarkable. The panic of a pestilence will certainly cause some extra precautions; but they consist, not in white-washing or ablutions, not in procuring additional pure air and water, but in tea-gatherings, in much talk and great terror, in sudden changes of diet, and frequent applications to stimulants to "keep off the cholera." When we behold one girl poulticing a whitlow on her finger with a mixture of different sorts of rotten fruits, and a labouring man treating erysipelas in the leg with some farrier's stuff, originally procured for splint on his horse's hind-leg, and tying up the afflicted member tightly with calico and green baize (literal facts, to our knowledge), we must own that a little plain teaching on common sense, as applied to common things, might often save an arm or a leg, and not unfrequently a useful life.

There is no call in this class for female doctors or professional cooks. We want to know that a poor woman lays out her money to the best advantage, and uses what she procures in the wisest manner; that she does not buy an adulteration, and then cook it into an abomination. We would have it made certain that she has something less disastrous and more precise in the way of guide than the English instinct of cookery, that there should not be at the same time trials on the hearth and "death in the pot."

There is now in operation, in one of the largest parishes in London, a school where these things are taught in the best mode, by practical and experienced women. We believe we are not wrong in ascribing its promotion, and mainly its origin, to Miss Burdett Coutts. Here the children who attend bring the materials for their own dinner, and prepare it under inspection. They wash, clean, scour the pans and apparatus; they are taught practically the price and value of all articles of consumption in families; the best mode of sewing, cutting-out, washing, &c.; and the why and wherefore of each thing is thoroughly explained to them in language suited to their age and capacity.

Now this institution is in the best spirit, and on the wisest system; and if it is followed out in other places, too much can hardly be hoped for from it. It is beginning at the right end; for children may be taught, but grown-up women will not submit to it. All ladies who visit among

the poor know how jealously any scrutiny into the dinner is regarded, how coldly any suggestion of improvement is received, how many blunders and vexations generally occur, even when, at rare intervals, a woman can be persuaded to alter her ways. With children there are no difficulties of this sort to contend against. They learn new ways as a matter of necessity, and practise them in after-life as a matter of course. We do not want to make rich men's cooks, but poor men's wives; though, by the way, we may remark, that good cooks are so rare as almost to command their own wages in the present day. And we may just hint, that among domestic servants the cook has invariably the most lovers, and marries the earliest and best. Perhaps the reason of the fact is somewhat ignoble, tending to show that consideration for creature-comforts has still great ascendancy. But if the race after matrimony is as universally contested and hard run among the poor as it is among the rich, we deserve thanks for drawing attention to this truth; and we commend the consideration of it to servants in general. Working-men like to have a comfortable home, and a wholesome savoury dinner. A little persevering exertion would soon set similar teaching on foot among the schools in our agricultural districts, where in general, though the conceit and impatience of being taught is less universal than in towns, the tendency to be wasteful, and the bigotry to old forms, are much greater and more deeply rooted. We cannot, and ought not, to evade our duty in this respect to our poorer neighbours. It is no use saying, as the little girl did when her mother explained to her the duty towards her neighbour, "Please, mother, I had rather not have any neighbours." A noble example has been set in high quarters; and a visit to any of these schools will convince any one of their excellent system and their practical utility.

H. B.

DESIGN FOR A RUSTIC SUMMER-HOUSE.

We do not purpose writing an essay on the subject of the accompanying sketch, and a few words will be sufficient as to the best mode of working it out.

Where would you place such a structure? In some half-secluded spot; not where it will be hidden utterly, but where it will give character to a scene made up of sloping sward and shrubby leafiness. It should form the key to the particular scene in which it is placed; and for that purpose, must be slightly elevated on a mound, and visible from one or two good points of view; but must on no account obtrude itself on the eye in connection with statues, or architectural ornaments of any kind. Such rustic work as this does well

in the retired portions of the ground, but is out of place in connection with terraces and Italian gardens.

In constructing such a bower, rough unbarked timber is the best; and the lattice-work should be selected, if possible, from the loppings of old apple-trees, and should be barked and varnished, so as to stand out brightly amongst the darker portions of unbarked timber. Oak is very much used for rustic work on account of its gnarled outlines; but it is the least durable of any timber for such purposes: the sun shrivels and splits it, and the rain swells off the bark. Yew, larch, birch, apple, and acacia, are the best kinds of wood for every sort of rustic work; the robinia, or false acacia, especially, for it never parts with its bark, and is the most durable of wood when exposed to the weather.

In the ornamentation of such a structure, a due admixture of the smaller loppings from apple-trees will produce pretty effects, on account of their light clean colour. They should be sawed up into proper lengths, and then steeped in boiling-water to loosen the bark; then well dried, worked into their places, and varnished. Against the more massive portions

of the building they contrast very prettily.

In the design, the portico is open up to the pitch of the roof, and this is an important matter. If a summer-house is built with a close roof and pediment, the heat of the sun will convert it into an oven; and it will be impossible to remain in it more than a few minutes during the hotter part of the day. But if there is an open space immediately beneath the roof for a circulation of air, the roof itself will get less heated, and there will be no shutting in of a stifling atmosphere, which is the case with nine-tenths of the structures called summer-houses made by carpenters unblest with rustic tastes. Either bark or thatch may be used for the roof; and a camera-obscura fitted in the dome will increase the attractions of the retreat. Rootwork, rockeries, ferneries, and water-scenery, associate well with all kinds of rustic structures; but they should never be placed in clean open spots of grass and flowers; they must be backed by shrubs and trees to look appropriate, and to be really useful.

To varnish rustic woodwork, proceed as follows: Wash the woodwork with soap and water; and when dry, wash it again with boiled linseed-oil, choosing a hot sunny day for the operation. A few days after, varnish it twice with "hard varnish," and it will last for years. To give a dark oak-colour to rough wood, another plan may be adopted. Take a quart of linseed-oil and two ounces of asphaltum, and boil over a slow fire till the asphaltum is dissolved, stirring the while. This is not sticky, and lasts for years. As the ingredients are terribly inflammable, the boiling had better be done out of doors.

SHIRLEY HIBBERD.

THE ANGEL GUIDE.

By R. REDGRAVE, R.A.

CONFIDENTLY pacing, as childhood does, among the thorns and briars which bestrew the paths of this world, Mr. Redgrave's little maiden clasps the hand of the "Angel guide," whose look tracks backward the path from heaven. How expressive is the child's face of the clear joyous innocence of youth, with her happy eyes, assured mouth, and clustering girlish hair!

The motive of the picture is suggestive of the feeling which Wordsworth so finely expressed when he spoke of "the heaven that lies about us in our infancy;" a thought which, perhaps unconsciously, Mr. Redgrave has carried out by the fresh morning sky, and the breezy wholesome aspect of the landscape throughout.

The character of the painting is marked with elegance, breadth, a certain purity of design, taste, and a calm quietude of composition.

The reader will observe the graceful massiveness with which the draperies are disposed. The wings of the angel, although apparently somewhat too weighty, are not without a certain grandeur and power which is strictly in keeping with the whole character of the figure. We cannot avoid the thought, however, that this result might have been obtained quite as thoroughly by a more considerate arrangement of line in placing these appendages so as to have retained the appearance of swiftpy vigour which they possess, and yet have avoided a certain bulky, or, as we have said, *weighty*, look they present, which is much at variance with one's ideas of the function and aspect of a wing. L. L.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

A SHORT time ago newspapers, in reviewing the commercial doings of the past year, enlarged with much emphasis on the vast amount of goods imported and exported into and from the United Kingdom of Great Britain and Ireland. To give any person an adequate idea of the value of those articles of merchandise as represented by the current coin of the realm was declared impossible; as easily might a true conception of the distance separating the sun from the earth be given to an individual as the vast size of the glorious luminary be made apparent to him by giving him its dimensions in feet or inches.

We can imagine some patriotic Briton in a foreign country gloating over these brilliant statements, feeling proud of a country whose commercial operations are on so magnificent a scale; and we can fancy him hastening to communicate to some wondering Frenchman or German such of the details as he can remember. We will not blame him. We are free to confess that, when abroad, this means of gratifying our insular vanity at the expense of the outside barbarians was at times too great a temptation to be easily overcome. To tell a Havre merchant that more cotton was bought and sold in a week in Liverpool than on his exchange in a year,—to hint to a Bordeaux merchant that some London trader loaded more ships than the united commerce of his town, was occasionally an agreeable occupation.

There is something in vast magnitude which of itself, and without any intrinsic merit in the object, attracts admiration. Thus an Englishman who at home, whilst he feels its pressure, grumbles sadly at the National Debt, will abroad exult over its vastness as compared with the debt of any other nation; and we do not know but that the failure of an English firm to the amount of some half-a-million ster-

ling, if properly told, may not be made to redound much to the narrator's glorification from the glare thus thrown on his people, even although the light be thought somewhat lurid. At home vanity is not so easily satisfied, and the feelings require to be gratified by something more substantial than by the mere reading or talking of national commercial greatness. Still, we can fancy an elderly sedate book-keeper, who receives perhaps but a paltry salary from some great city firm, opening his ledger with more solemnity, and feeling rather higher than usual on his stool, after reading a leader in the *Times* on the great doings of London traders; whilst his superior, the great merchant-prince himself, will walk home with a somewhat firmer tread, enter more majestically the hall of his mansion, and receive more graciously than usual the chaste salute of his spouse, in whom he will condescend to see reflected some of the effulgence of his glory.

But let us now look a little closely into the operations of Mr. Merchant-Prince; and suppose we first say a few words to Mrs. Merchant-Prince.

You undertake to supply the house which you inhabit with Mr. Merchant-Prince, his children, and servants, with meat and drink, food and clothing, do you not? Of course you do. Now in this respect your duties are precisely similar to those of your estimable husband. He undertakes to supply his countrymen with like commodities. For your labour, madam, you are paid by kind words, liberality, and affection; for we shall suppose Mr. Merchant-Prince to be a good-hearted kindly person, although he does not, as we think, quite understand his business. Your husband is rewarded for his doings by an increased balance at his banker's.

Having specified your duties, let us see how you perform them. We see you sitting at your little desk with the book of weekly expenditure before you, listening to Betty's account of her outlay. We may notice incidentally, that, although we rather pride ourselves on our arithmetical powers, we are overcome by the rapidity with which you check calculations, such as eleven and three-eighths of a yard at twopence-farthing, and seventeen ounces and a half at threepence-three-farthings. But to resume. Betty proposes to order some bread. You immediately ask, What bread is there in the house? So much stale, but no new, which the children like. Well, Betty, get so many loaves from Hotuffen, make a pudding of the excess of stale bread, and send up the remainder in the evening; you know your master prefers his bread to be stale. In this way we shall manage till Monday, and have no waste. And the butcher, ma'am? we have so and so in the house. O, that will do for the kitchen-dinner and parlour-breakfast; the family are to dine at a friend's house to-morrow. And so on.

We call attention especially to this simple fact, that the housewife takes careful note of the stock she has on hand, calculates how long it will last, and is therefore enabled to suit the supply to the exact requirements of her household. She fully meets its demands, but carefully avoids waste by over-supply; and so far from glorying in a large sum-total of expenditure, her endeavour is to furnish a maximum of enjoyment by a minimum of expenditure,—the very quintessence of economic wisdom, and one of nature's chief attributes.

Now, dropping metaphor for awhile, let us see how the traders of this nation manage to supply their countrymen with the articles required for their consumption; and in order to bring our subject within a somewhat reasonable compass, let us select the important commodity, corn; although our remarks will apply with quite as much justice to the buying and selling of every other article of trade. To follow up our investigation, and find out how minor traders deliver corn in the shape of bread, must be deferred to another opportunity. If it be possible, we shall discover greater waste of time and labour, and still more dire confusion in their operations. The prudent housewife, we have shown, before making a purchase begins by carefully taking

stock; and being already well acquainted with the exact demands of those who supply, she runs no risk of purchasing either more or less than is wanted.

Now let us ask whether the British trader has ever any but the vaguest notion of the stock of corn existing at any given time in the country. He has sometimes an indefinite idea of the quantity in mercantile warehouses; but can he tell what corn there is in farmers' hands, in millers' stores, and on board of ship on the way to this country? Does he know how much seed will be required at sowing time; and are not his guesses as to the prospects of a coming crop about as wild as they well can be? Is it not a matter of notoriety that it is only now, within the last two or three years, after England has been priding herself for some centuries past on her commercial greatness, that it has occurred to some few progressive minds that agricultural statistics would be desirable; and will it not take much thundering on the part of a well-known morning paper, and much speechifying at public meetings, in order to insure the establishment of a system for obtaining the required information? And what share do we see the great traders of this country taking to aid the promotion of this first simple step towards the regular supply of food to their countrymen? But we are here only speaking of the means of learning the stock of grain in the gross throughout the country. It is quite evident that the transfer of so bulky an article for even a small distance ought to be avoided, except when absolutely necessary; and that therefore it would be well accurately to know the exact quantity of corn required and existing in every district of even a small radius. The slightest investigation will show that no reliable information is to be had on this head; and as secrecy of operation is considered a main element of a trader's success, we shall not unfrequently find a Liverpool merchant bringing corn from Hull to Liverpool, whilst a neighbour is ordering the same article to be sent from Liverpool to Hull. And in this way corn wanders up and down the country by cart, by canal, and by railroad; so that when we see grain we always think of the nursery-rhyme,

"Goesie Goesie Gander,
Where shall we wander," &c.

But besides that accurate statistics of the growth of corn, its supply, and consumption in this country are very necessary, it is nearly as important that we should have precise information on these heads regarding the foreign countries in which we are frequently large purchasers. And not only that, but it would be well to be acquainted with the comparative economy and facility of transit by different routes. Now, will the greatest admirer and worshipper of England's commercial greatness tell us that these particulars are at all within the cognisance of the generality of traders, and that the information some do acquire is not made use of to subserve private interest instead of public welfare?

We think an impartial judge will agree, that so far our lady-friends have the best of the battle. Mrs. Merchant-Prince knows at all times what stock she has, Mr. Merchant-Prince does not.

But to resume. The information we think so desirable failing them, the British traders make a series of guesses, and their united guesses form what is called the market-price. The senior partner of Messrs. Guesitilpay and Co., on his way to Mark Lane, gets wetted in a thunder-storm; accordingly he opines (it is near harvest-time) that the crops will be damaged, so he holds out for one shilling more for his corn than he did the day before; and in the *Mark Lane Express* we read: "Large holders were firm, but millers being cautious, few purchases were made; and we therefore cannot notice a greater advance than one shilling." Next day a junior partner of the great firm, who, under pretence of business, has been to see a pretty cousin in Norfolk, tells his senior: "Splendid weather—crops glorious! As I was walking with—ahem—I mean, as I was

going through my uncle's fields, I pulled some splendid cars of wheat; see, here! are they not full and heavy?" With such precise information, the firm think they may as well not "stand out" for the extra shilling; and the newspapers have it: "To-day's bright sunshine brought holders to their senses, and sales were effected at one shilling below yesterday's current rates." These are, however, only the smaller interludes of the great drama. We shall now show how the excess in the number of traders, and their disunited efforts to supply by purchase any deficiency known to exist in stocks of corn, would neutralise the benefits resulting from the most perfect and reliable agricultural statistics either at home or abroad.

A time comes when to the most careless observer there are unmistakable signs of an impending scarcity. A hot sun seems to have withered every green blade, and the guesses of traders have now a larger substratum of truth than usual. Curiously enough, that which throws a gloom over the faces of the million seems rather to cheer corn-dealers, who are supposed to labour for their benefit. Do not, reader, hasten to blame them; it is the system, not the men, that are at fault. Mark Lane is unusually well attended: the youngest clerk pushes his hand into the open bags of corn with more dignity than usual, and scatters its contents, after a solemn scrutiny, broad-cast over the stones of the Exchange. Heaps of letters go to the Post-Office. These are but the preliminaries—the scattered firing of troops before a general engagement. A little hesitation, the plunge is made, credits are opened at bankers', and orders are sent out. To give an adequate idea of the confusion that from this moment reigns in the mercantile community would require a pen of more power than we can lay claim to. One pen, did we say? why it is a theme that would serve to stock with incident the pens of a whole generation of novelists, or those of dramatic authors in tragedy, comedy, and farce. We must therefore content ourselves with the faintest sketch of the wild medley of the conflicting doings and interests of merchant-princes, dealers (native and foreign), ship-owners, and speculators, whose name is legion. Messrs. Guesitilpay send orders to Odessa, to Galatz, to Riga, to Dantzic, to Rotterdam, to New York, &c., possibly limiting their correspondents to certain prices, taking the precaution of directing vessels to these ports to load the corn they require. Encouraged by their example, the whole alphabet of traders send orders to the same places, some limiting, others not limiting, the prices of purchase. Some send vessels, some take the chance of their foreign correspondents finding the necessary ship-room. Mean time speculators buy up corn at home, Mark Lane and all the markets in the country are in a fever, wealthy farmers hold back supplies, and thousands of persons of all conditions in life, attracted by the hope of the sudden attainment of wealth, purchase and hoard up corn. The rumour of this excitement finds its way abroad, and in foreign countries farmers also demand higher prices; commission merchants, in anticipation of receiving orders, buy up grain; and some ship on their own account, and others buy on account of their correspondents, at the most reckless rates. Messrs. Guesitilpay and Co.'s limits are found too low; and so their ships lie idle, while other merchants have no ships to take the corn where it is so urgently required. Ship-owners, of course, think it but fair to ask for higher freights, and instruct the masters of their vessels accordingly; these demand exorbitant rates, which merchants demur at; or perhaps an overplus of shipping is sent to Odessa, whilst there is a scarcity in the Baltic ports. So some have ships and no corn, and some have corn and no ships; some have corn and no orders, and some have orders and no corn. Bills to an enormous amount are drawn in London, for the corn bought must be paid for; bankers and money-brokers, carried away by the existing excitement, scrutinise signatures with less severity, and endorsements hardly recognised a short time before now command thousands. Jollity reigns in the shipping-ports; Englishmen,

with large orders for corn and bankers' credits in their pockets, are there fêted with unbounded hospitality; dinners and balls are the order of the day; and truly humane, just, and honourable men are revelling on the profits, fully persuaded that they are the fruits of well-directed and useful industry. The price of wheat has risen perhaps from 50s. to 110s. per quarter. No one can tell what the price ought to be, for no one really knows what exact ratio the supply bears to the demand; notwithstanding all the teachings in theoretical works, practical men, as we have amply shown, have not yet taken the first steps to the acquisition of this important knowledge. This was virtually admitted not long ago by a merchant-prince, in a letter to a morning paper, where he pointed out that a little scarcity occasioned an inordinate rise in price, a little glut an unreasonable depression. Be that as it may, as sure as high-water is followed by still water and then by an ebb, so sure do stagnation and reaction follow on a commercial fever such as we have attempted to give the symptoms of. Traders guess that prices are high enough; agents, that stocks are large enough; bankers, too, begin to look stern, and bills are falling due; it is time to find the necessary money. Every one is now ready to sell; to use a sailor's phrase, prices go down by the run, and wheat that was at 110s. is now again offered at 50s. without a chance of sale. Now let us have a survey of the consequences of all this effervescence. First, how have our merchant-princes fared? How many do we find fallen from their high estate! Instead of being spoken of as highly-respectable, clear-headed, and far-seeing men, they are now termed reckless and extravagant speculators. Others, more fortunate, are able by patching to hide their losses from the world; but in a few years more the results will be made plain to all by an unexpected failure. This is published in the papers of the day as follows: "We are sorry to inform our readers that the extensive firm of Messrs. Straw, Stubble, and Co. have found it necessary to suspend payment, to the surprise and regret of all who know them. There is every probability, however, that the stoppage will prove to be of a temporary nature." Next there appears a paragraph to this effect: "The attempt at settlement made by the house whose suspension we noticed the other day has failed; the hopes once entertained of a good dividend are greatly diminished." And lastly comes: "At a meeting of the creditors of Messrs. Straw, Stubble, and Co., held yesterday afternoon, there was a disclosure of reckless extravagance and wild speculation such as we have seldom had occasion to comment upon. It is really time that some legislative enactment should be made with a view to put a stop to conduct which savours of criminality and disgraces British commerce. We recommend this case to the particular notice of the Hon. Mr. Lawpanacea when he brings in his new Bankruptcy Bill."

Some few speculators, by extraordinary good fortune, manage to realise great wealth; but although willing enough to take credit for superior prudence and skill, the probability is, that they have gone as blindly to work as their more unlucky compeers.

We were once acquainted with a merchant who made his business a study. He was ever in search of information; collated all he got, with a view to comparison with previous years; and possessed a whole collection of those funny zigzag papers which may be seen in the shop-windows of booksellers near the Exchange, to indicate the rise and fall during a lapse of years of the prices of corn, stocks, &c.; but he was seldom successful in his operations. He constantly bought too late, or held out too long; whilst others, who could give no other reason for buying or selling than the opinions on 'Change, managed to scrape money together. The reason simply is, that in the absence of accurate information of the wants of the community, and concerted and well-organised action for its proper supply, the opinion of men who buy and sell necessarily influences prices, just as very vague rumours serve to affect betting at Tattersall's. But how, let us inquire, has the British na-

tion fared in all this turmoil? Has Mr. Merchant-Prince supplied it with corn as well as his wife has supplied her family with bread? Like the frogs in the fable, who, when pelted by little boys, exclaimed, "What is fun to you is death to us," so might the majority of the British people say, "That which is a question to you of a little more or little less wealth is a question of life and death to us." If prices have varied in the course of six months between 50s. and 110s., by stationers the average may be found to have been 80s.; but it is too frequently left out of sight that the thousands who live from hand to mouth are totally unable to pay the highest price; and do not live to see the lowest one, which establishes the average. "Every augmentation in price diminishes consumption, which is very desirable where scarcity is anticipated," says the political economist, with great truth, and we shall, therefore, not gainsay him; but had he said, every diminution in the food of people who have barely enough lays for them the foundation of disease and death,—had he said that there was an exact ratio of weakness, sickness, and actual starvation, for thousands, corresponding to the prices of 60s., 80s., and 110s. per quarter for wheat,—had he in those tables, of which he is so fond, put lusty health at the bottom and grim want at the top, he would have called attention to the importance of preventing the slightest unnecessary rise in price, never compensated, but rather aggravated at some future time by an unnecessary extra diminution of price; and thus, perhaps, he would have incited some one to the discovery of a means of preventing the "guesses" of our merchant-princes, and insuring somewhat more of order in operations of so important a nature.

Do not let our readers for a moment suppose that we look to any benefit from legislative interference or the action of rulers. We owe lasting gratitude to those who have so perseveringly fought for free trade. We do not attempt to criticise Adam Smith or any of his disciples; nor do we call for imperial provisioning such as is vouchsafed to a neighbouring people by a condescending sovereign. With this word of warning, which may be necessary, we shall proceed in our remarks.

The importance of our subject warrants us in the attempt to make our criticism as clear as is possible; and we shall therefore try to do so by showing how Mrs. Merchant-Prince would act were she to imitate in the supplying of her household with bread the method pursued by her husband when he seeks to provision his country with corn. Suppose that instead of being sole manager, she were to allow John the footman, Bob the coachman, Betty the housemaid, and Jenny the cook, to supply the household with the bread required according to their own fancies; supposing they were unacquainted with how much bread was in the pantry, and had no conception of how much was eaten by the family; supposing that the four personages we have named sometimes flocked to one baker, bidding one against another, and finding prices raised in this manner, refrained from buying any bread at all; that they were allowed to charge any price they thought fit, and take what profit was pleasing to them, the only check upon them being the fear of a rival's competition;—supposing all this, our lady-readers will have some faint, very faint conception of the manner in which their husbands, the merchant-princes, arrange to supply corn to the inhabitants of this magnificent empire in this enlightened and progressive nineteenth century.

Put in such plain language, it is possible that traders may cavil at our remarks. Instead of stopping to argue with them, we shall, by an example familiar to the whole world,—for it has frequently been commented on by the public press,—strengthen our case.

We allude to the manner in which Melbourne was supplied a few years ago, on the discovery of its gold-fields. To traders who boast that they carry on the business of the world, it would certainly seem a very paltry, a very simple matter to care for the wants of a population not exceeding 200,000 or 300,000 in number with some degree of regularity.

It is true that the emigration to the Australian continent at that time was comparatively extensive; but then the greater number departed from this country, and the slightest investigation would have allowed their numbers to be estimated, and the supply required carefully calculated. And what was actually the case? Was not Melbourne at one time bare of almost every requisite article of consumption, and next so overloaded with goods, that a large portion was thrown away as worthless from a deficiency of store-age, or brought back to this country? Did we not first hear of fabulous gains made by what were termed keen-witted traders, and then of losses as extraordinary, incurred by men who were of course accounted as dolts and idiots? It may be said in extenuation, that this confusion was mainly occasioned by the doings of men technically called "outsiders," and not by those of the regular men of business. Supposing this were strictly true, could there be afforded a stronger evidence of the unscientific nature of commercial operations, and of the exorbitant profits to be made at times, than that men with a little loose gold in their pockets should be tempted to believe in the possibility of successfully competing with the practical men of the Exchange, whom we are called upon to acknowledge and reverence as princes? But with those who have visited our colonies, especially the settlements at our antipodes, this excuse will not serve; for they well know that an alternation of glut and scarcity is there the rule, not the exception. This irregularity is the origin of the large fortunes occasionally accumulated by the possessor of some empiric rule correct for a time. We were told by a trader that he always ordered from England any article that happened to be in excess at the moment in the colony. He calculated that other merchants would refrain from doing so, and that therefore his goods would come to a profitable market.

In Europe the same evil exists, but from the mass of transactions it is not so apparent; individual irregularities are hidden, and only made apparent by investigation.

When a man boasts of his ignorance, he may generally be believed. When the uncertainty we complain of is made a matter of glorification, it will not require much writing on our part to prove its existence. We cannot now quote the precise remarks of a politico-economical writer, who, after expatiating on the extent of London, and the enormous quantities of commodities required for the sustenance and comfort of its inhabitants, expressed himself with much magniloquence to the following effect: "that although no one could tell with any degree of accuracy where London got its food, how much was wanted, or who supplied it, somehow it was supplied." There is no *satire* equal to truth. In this way does an admirer of British commerce speak of the manner in which it cares for the first city in the world. Had the writer looked a little farther, he would have easily discovered the source of this apparent regularity.

No motive power, indeed hardly any kind of automatic machine, will work with certainty unless it be provided with a fly-wheel to correct occasional irregularities. In a proper organisation of commerce, the regular storing-up of provisions in times of abundance, to be made use of in times of scarcity,—not in the hands of those who benefit by fluctuations, as traders do now,—would furnish the fly-wheel required. In the present state of disorder, the regulators relied upon are the patient compressible stomachs of the poor. To this fly-wheel London owes the apparent regularity of its supply. When articles of food are cheap, the poor indulge their appetites, when these are scarce, they do without. Very simple, but as true as simple.

Shall we recommend the plan to our lady-friends for their adoption?

To conclude, as commerce is carried on, the hope of profit is the lure which incites to industry; but the sole corrective to the selfishness thus excited is competition. Competition, usually termed rivalry in other spheres of action, is not in itself evil; it is based on two most important and useful passions in the human breast,—self-

esteem and love of approbation. A healthful play of these wherever men are congregated together and actively engaged may be made to bear the most useful results; but the competition known to commerce is invariably the calling two at least, if not scores of men, to do the work barely sufficient for the occupation of a single individual. Competition in trade as it exists at present offers a premium to meanness and the lowest selfishness. To obtain a bare remuneration for an immense wear and tear of body and mind, men are constantly called to do all in their power to ruin their fellows; to fulfil the necessary duty of providing for the wife and children dear to them, they are forced to be utterly blind to the rival who is attempting conscientiously to perform similar behests of affection. It speaks much for a native nobility of character in our countrymen, when considering how destructive to all generosity of sentiment this direful trade-competition is, that so many high-minded men are to be found among our merchant-princes.

These confused operations of buying and selling may be dignified by high-sounding terms, and carried on by men of great intellect; but, as the French general said of the bold charge at Balaklava, "This is not war," so may we say, with far greater truth, "This is not a scientific method of exchange; this is not commerce."

THE STEPPING-STONES.

THOUGH an artist, and as such having travelled through the greater part of Europe,—having enjoyed the sublime in Switzerland, and the picturesque in Italy with its sunny skies and warm colouring, I have never yet met with any country, or part of a country, that could vie in picturesque beauty with the nooks of loveliness that lie embosomed among our Surrey Hills. I have returned to them again and again, and have never yet failed to leave them refreshed in mind by the peculiar charm that clings about this, in many parts wild, but extremely interesting district; which now possesses many a pleasing association in my mind, one of which may perhaps interest others besides myself.

Worn out, suffering, both mentally and physically, from a long and busy London season, I, at the end of July 1855, packed up my easel, with the other necessities of an artist, and departed for my rural lodging at C—, not very far from Guildford. I was not long in finding a subject for my pencil; and having selected the right point, I proceeded to establish myself and my easel in the pretty country-road, with as much composure as if it were the Elgin gallery in the British Museum, and with the assurance of meeting with far less annoyance than in that building; where visitors are continually either impeding the view of your subject, or disturbing your attention with impertinent remarks.

Although I had run away from town and town-society, I was not at all misanthropically inclined; therefore, as I was no visitor for any of the few noblemen's residences scattered at rare intervals in this part of the country, I did not repel the kindly advances of the simple cotters around me, many of whom became quite friendly and loquacious when they found that, besides rubbing colours over a piece of canvas, I was capable and willing to take an interest in country matters in general, and their own in particular. After a week or two, not one passed my post without a hearty salutation, whilst many did more, and entered into conversation.

Landscape-artists, professional or amateur, are peculiarly open to intercourse with passers-by. It is so natural, so convenient, to a talkative person to pass behind the artist he may come upon in his walk; and after some remark,—often ludicrous, always civil, and sometimes just,—upon the subject in hand, to fall gently and easily into a good long chat with this godsend to a gossip.

One scene after another beguiled me to protract my stay into October; and I had become so thoroughly interested in my neighbours, that I felt I should find a difficulty in leaving them. I had shared first in the anxiety, and afterwards in the rejoicings, at the state of the crops; had assisted at a most inspiring harvest-supper; and had since gravely discussed the prospects for the winter with various sage old farmers.

At last, however, I set about what I had determined should be my last painting, not without a presentiment that I should linger long and lovingly over it. I cannot produce it here for the benefit of my readers, but will try a little word-painting. The principal object was a magnificent group of elms standing on a sloping bank covered with fern, rich in every variety of hue, from the first slight touch of autumn on the green, to the fine red-brown of the decaying plant. Behind them, and separated only by a warm stream of sunlight, lay a wood, composed of every variety of tree, from the graceful birch, whose slender branches allowed the bright sunbeams to flicker through and dally with each leaf, to the sturdy oak and sombre fir, whose dark thick masses of foliage disdained all such pastime. A path ran through this wood, winding along the edge of a rather steep declivity, and which, as it approached the foreground, widened and made a sudden dip and bend. Immediately in front of the elms a clear spring of water had found egress in the side of the hill, and trickled down unnoticed through the fern until it reached the above-mentioned hollow, where it collected and spread so considerably, that stepping-stones had been placed for the convenience of foot-passengers. After filling the hollow, the waters, again released, danced merrily down the rest of the hill, and hastened to join the placid stream that slept at its foot.

An hour's labour would, by levelling the road and cutting a drain across it, have rendered the path quite dry; but by a fortunate chance, as I deemed it, the folks around had overlooked this easy and obvious remedy, and had instead arranged the picturesque stepping-stones. Most picturesquely inconvenient they were; for at the abrupt bend of the path, where the water was deepest, they had sunk a large but sharp-pointed piece of rock, on which it was impossible for two to stand, trusting, I suppose, to the scarcity of passengers to prevent the chance of two meeting at the awkward point.

I had sketched in the trees, had bidden two ploughmen, one fern-cutter, and two cottage-maidens, "Good morning," and was now happily at work laying on the first shades of colour. My thoughts were very busy,—for that morning I had had the unusual pleasure of seeing a newspaper not more than four days old,—and I was far away, wandering with our brave fellows among the ruins of Sebastopol, when suddenly and involuntarily my thoughts recurred to the camp of our noble allies, and there remained fixed. I was for a few seconds unaware of the cause of this change in my meditations, till, raising my eyes, I saw coming sauntering down the wood-path a young sailor clad in the dark-blue woollen shirt and trousers common to man-of-war's men, and vigorously whistling "*Partant pour la Syrie*," as he switched away at the leaves nearest to him with a hazel-wand he had cut himself.

On he came: now stopping to crack a nut, and now to switch down a bunch of acorns, until he reached the stepping-stones. At the same moment a pretty little maiden of about eighteen, bearing on her head a pail of milk, started from the opposite side; and I watched with some amusement the rencontre that I know must take place at the bend of the stones. The girl had just reached the pointed stone when the sailor appeared on the next.

"Halloa!" he cried, in a clear ringing voice; "who'd have thought of my bearing down on such a pretty craft as you? Come, one salute, consort, and I'll wear to leeward, and leave the open sea to you."

So saying, and before the girl was aware of his intention, he had snatched a kiss, at the imminent risk of the

milk-pail, and leaped lightly down into the water, leaving the girl so utterly amazed at what she called his "impudent outlandish manners" as to be incapable of pursuing her way for a second or two.

The sailor watched her down the wood; then quickly wading out, he took off his boots, shook the water out, put them on again, tightened his belt, and, as he would have said, steered his course towards me.

"Well," I said, "I little expected to see a salt-sea rover so far inland as this. What brought you here?"

"Ay, I suppose it does look a little queer to others; but you see, sir, my mother lives in that next cottage, and so I've come inland to see her."

He did not seem in any particular hurry to meet her; for, seating himself on the bank by my side, he began cracking nuts most industriously. The reason presently appeared.

"Well, master, I must say, without flattery, you *have* got the old place as like as like can be, and a very pretty place it is, too, though when I lived here I didn't use to think so; but I've seen a many places since then, and some very fine; and, after all, I haven't seen any that beats this."

And he looked about with such genuine affection, that I could not quite reconcile it and the indifference with which he spoke of his poor blind mother; for blind I knew the occupant of the cottage he had pointed out to be.

Presently I asked, "But does she not expect you? Have you been long absent?"

"Ay, about eighteen months or thereabouts. But you see, sir," he said, with an embarrassed jerk of his head, "since I was last in this latitude I've joined the '*Billyruffian*,' pointing to the worsted letters worked in his cap (which, for the benefit of those who may not recognise the name as one belonging to our fleet, I had better state spelt '*Bellerophon*'), and she thinks I am cruising on still with the *Saucy Sal*. So that I rather expect it will give the old woman a turn to know that I have had a brush with the Russians, and hope to have many a one more. I trust she'll weather it though; for I shall be able to make her more comfortable with my wages, besides the chance of prize-money." After a moment's pause, he added, in a lower tone, "Ay, and now, perhaps somebody else won't look down upon a man-o'-war's man quite so much as she did upon a mere merchant-seaman."

I took no notice of this last speech; for though I saw there was a story behind, I was pretty sure I should hear it in time; and I was vexed at the careless way in which he had spoken of his mother. At last, after some more desultory conversation, he said, with somewhat of an effort:

"Well, master, I suppose I must be moving on a little further; so good-day;" and on he strolled. Presently he met an old sow, that, after a moment's consideration, he seemed to recognise as an old acquaintance, and gratified the animal with a friendly scratch, such as pigs delight in—any thing, in fact, to delay his meeting with his mother.

I painted on until the fast-setting sun, and certain cravings, reminded me that the time of my five-o'clock dinner-tea was near at hand; so, folding up my easel, and depositing it in its usual resting-place, I took my way home. As I passed the old blind woman's cottage, I witnessed a scene that left a favourable impression on my mind as to my sailor's reception. He was half-leading, half-supporting his mother up the garden-path, with every imaginable care and attention; whilst she, with uplifted face, that actually glowed with satisfied joy, was listening to some tale he was telling her, and evidently hanging on his every tone. They were both so occupied with each other that I passed on unnoticed.

The next day, I had not been long seated at my work before a quick decided step, the very opposite to the slouching gait of yesterday, made me look up and salute the young sailor who now approached.

"Well, you found your mother well, I hope?"

"Did you know that she is blind—my poor old mother blind?" he asked in a choking voice.

"Yes; surely you were not ignorant of it?"

"But I was, sir," he cried vehemently. "Do you think I would have spoken as I did, if I had guessed what she has been brought to. When I was last here her sight was not so good as it had been, but that we thought all in the course of nature; and I remember well the loving look she gave me when I left her, and that's the last I'll have to remember now, for she is quite blind." After a few minutes' silence he went on: "But for all that, she is a true heart of oak. Why, sir, you know when I found how matters were, I'd a deal of difficulty to screw my courage up to tell her what I had done; I know I'd rather have fought a Russian in a good stiff breeze. But bless you, sir, after the first blast she took it quite hearty, and said she hoped I'd serve my country well (see if I don't), and something about God's caring for the widow's son. Ay, she's a true Briton, every bit of her; and it shan't be my fault if she's not kept comfortable in her old age."

"Well—and what about the somebody else?" I asked.

The young man blushed to a sort of burnt-sienna tint, and, stooping over my painting until I feared his nose would act as a novel stump to my last touches, he said:

"Ah, sir, she's gone through a deal of trouble since I saw her last; and though she did refuse to take up with me, and I thought and called her a proud quean and a jilt, I can't somehow keep up my ill-will now that she's in trouble. You see, Lucy Bell and I were schoolmates, and sort o' cousins besides; and a tighter, prettier lass you couldn't wish to see; and I used to fancy that she liked me better than the other chaps; and so I think she did, till she came to know a fellow, a sort of under-gamekeeper of Lord —'s. Well; and so I, like a fool, spoke up to her. Of course she would have nothing to say to me, though she assured me she liked me as a cousin, and plenty of that sort of thing, which didn't suit me, and so I told her; and then we came to words. So the end of it was, I left my place with Farmer Dobson, and went to sea, to try if that would spite her. Not a bit of it. When I came home next, says she, as cool as any thing, 'I think you've done quite right, cousin John; for you never would have settled down to a farmer's life.' Well, next time I came I didn't see her, only I heard that Jim French was keeping company with her. And now, sir, only think, the sneaking coward, after gaining Lucy's love,—and that's not easily got, I know,—if he has not jilted her in the face of the whole country, and is going to be married to Ann Spots, the baker's daughter,—a little, white-faced, dumpty thing,—all because she's got some money. O, sir, I saw Lucy last night, and I shall never forget her face: she was very kind, but so grave, so pale, I shouldn't have known the pretty blooming girl I have so often gone a-nutting with. I wanted her to marry me right off, just to spite the fellow, who can't really care for that little money-bag, and show him she had got some spirit; but she only gave me a wan sort of smile, and said she did not mean me to have such a poor sort of wife as she should now make. The folks she lives with,—for you know she's an orphan,—say she never rests, working away from morning to night. She says it lightens her trouble. Poor girl, it doesn't seem much lighter yet."

Later in the day he was again by my side. Why he made me his confidant on such very short notice I cannot say, unless because I was a stranger. His first words were:

"Well, I've begun to think, that do what you will, there's no understanding women."

A remark with which I entirely coincided.

"There's never one like another, that's the worst; so that however many you may know, your knowledge don't help you a bit. So I suppose, sir," he said, looking up with a puzzled air, "we weren't meant to read them through entirely."

"Not a bad conclusion to come to, Jack. But what is the immediate cause of this little Philippic against women?"

"I don't exactly know what you mean, master; but if you want to know what has riled me just now, it's that cousin of mine. I used to think she was a girl of spirit, but I can't get

her to show a bit. She's not like Sissy Blake, that little craft I fell foul of yesterday down there, who, it's my belief, if she was jilted on the quarter-deck would be married in the fore-castle before one could get wind of it. No, Lucy's quite a different sort. She won't have a word said against him; and if she can't stop us, she just slips away. Well, I've done all I can, and if she won't be spliced there's an end of it. Only she's an orphan; and I've been thinking, now my mother's laid aside, and there's nobody to look after her and the old place rightly, that it would be a good thing if Lucy were to come and live with her. They take kindly to one another; and I fancy I should feel more comfortable to know they are together when I'm tossing about in the Baltic."

I quite agreed with him; and seeing that I was really interested in the arrangement, he entered into numerous details about its accomplishment. Just as he had finished, Sissy Blake appeared at the turn of the wood-path, with her pitcher of milk on her head. She was indeed a pretty object; rather below the middle height, with a pliant, graceful, yet well-developed figure, and true Saxon features. Her blue eyes were seldom without a merry twinkle; plenty of golden hair was neatly gathered to the back of her well-formed head; whilst not all her exposure to the sun had destroyed the brilliancy of her complexion. Over her dark brown dress the fresh autumn evening had induced her to throw her red cloak, thus supplying in the right place that precious bit of scarlet so dear to many landscape-painters. I own I was not proof against the temptation, and hastily sketched her in as she advanced, demurely balancing her pitcher on her pretty head. No sooner did Jack discover what I was about, than he shouted to the girl that she was having her picture taken; "and wasn't she ashamed to come for such a purpose with a milk-pail dancing on her head instead of her Sunday bonnet?"

Thereupon commenced a flow of rural badinage, which ended in Jack's declaring that such a giddy head could never carry a pail steadily, and that he must convoy her safely home.

From that day forth, Sissy seemed regularly seized with a fit of vertigo when milking-time came, and required Jack's assistance in the carriage of her pail. For the month that I yet lingered on in the country, I was continually coming upon them, as it seemed to me, at every turn in the wood-path, and every stile. Jack had completely mesmerised her with his dark brown eyes and wonderful tales of his Baltic life; and we all know pretty well how such mesmerism generally terminates. In fact, the day before I left, Jack, true to his sailor-nature of losing no time, informed me that he seriously thought of bringing down the wedding-ring, and the "other bits of finery," after his next trip; and then requested my advice, which, as matters were so far settled, I gave, in the only shape left me, of entire approval.

Before I left, I had the pleasure of seeing Lucy Bell, with her calm though sorrowful face, comfortably established at the cottage, where, if I mistake not, she will remain; for I think she is destined to form one of that large sisterhood so useful to, and yet, I fear, not properly appreciated by the generality of mankind.

E. M. H.

LORD ERLISTOUN.—A LOVE-STORY.

BY THE AUTHOR OF "THE HEAD OF THE FAMILY," "JOHN HALIFAX, GENTLEMAN," ETC.

VI.

It was a little first-floor lodging, sunshiny, neat, and clean. Nothing remains of it now. A month since, on a new line of railway, I dashed through what had been the parlour, with its two balconied windows, each adorned with three pots of evergreen; over which, on fine evenings, a broad ray of sunshine came across the head of the sofa. "See that the house faces westward," had been Jean's private orders, "that she may always have the sun at the end of the day."

THE PINCH OF SNUFF. BY M. ROBINSON.
[Society of British Artists.]

Blank now appear those poor walls cut out of the line of Pleasant Row; yet I thought how many a quiet hour we had passed within them, and what a harbour of rest the place had been for my mother and Jean!

After the general break-up, we thus disposed of the family. Charles took Russell with him to his curacy. I, being offered a situation of trust in a London house, stipulated for a small clerkship there, where Algernon might begin the world. Poor lads! a far different beginning of the world to any they had looked for; but the stout honest working-man's blood in them was stronger than their luxurious rearing; after the wreck they plunged in fearless, and prepared to strike out for the land.

"Now, about my mother?"

"Your mother is mine, Mark," said Jean determinedly.

And so from that morning, when she had dressed her tenderly in that cruel garb which custom compels (I never thought how cruel it was till then), had brought her downstairs, and set her in the midst of her children, a widow, with her gay gowns laid aside for ever, her life's story closed, henceforth bound to receive from every one of us double honour and double care,—from that hour Jean took altogether upon herself the place and duties of my mother's own daughter.

They had not always agreed together before, being in most things so opposite; but now my mother's every weakness was held sacred, every failing gently borne with; all patience accorded to her fretfulness; all trouble silently taken out of her hands. For from the time of her widowhood she grew suddenly old; her energy and activity forsook her; she leant upon all of us, in turn, for every thing, and upon no one so much as Jean Dowglas.

So I brought them with me to London, settled them in Pleasant Row, and left them to comfort one another, as women can. They had Algernon too of evenings; but I did not live with them myself, for many reasons.

My mother's daughter! So she was; and I had sense enough to be thankful, though the fact had its painful phase at times. But no man ought to be a hypocrite in the smallest word. I do not remember ever once calling Jean Dowglas my "sister."

About Lord Erlistoun. During our time of trouble she never mentioned his name; it did not seem to be one of those names that one does turn to in time of trouble. But after we were settled, I brought to her, redirected from Lythwaite Hall, a foreign letter. I might have known who it came from by Jean's eyes; she was no hypocrite neither.

"Does he know what has happened?" ~~As I wished to learn.~~
 "I wrote and told him; at least as much as was necessary, as much as concerned myself."

"And what does he say?"

Jean's vivid blush answered.

"I see. Of course. Cousin," I said, feeling that some of us ought to say it, "you must decide for yourself without reference to my mother. We have no claim upon you; Lord Erlistoun has."

"I know he has."

"Then go; go, and be happy."

She shook her head. "Mark, that is not like you. How could one be happy with any duty left undone? Besides,"—she stopped short here, and re-commenced the sentence,—
 "I do but keep to my first resolve, made not unadvisedly, nor in haste. I think it was scarcely wrong, or hard."

"Hard! the love that must last a lifetime may surely wait two years."

I spoke bitterly, mindful of the scores of young lovers whose "small weak flame" cannot endure from month to month even; who believe the greatest misery on earth is this "waiting." Fools and faint-hearted! what is a man's love worth if he cannot love on to all eternity?

As for a woman's—I glanced at Jean. Her fingers were tightly folded over the letter; her mouth, though it smiled, was somewhat drawn. It had not, and never had had, that look of rest which I used to fancy the kiss of betrothal ought to leave behind—sacred and satisfied, never to be obliterated by any after-care.

"Cousin, if you please, we will not discuss this subject."

I obeyed her; delivering in silence any letter that came afterwards; they being, from Jean's uncertainty of residence, always addressed to my care. Sometimes we heard nothing whatever of their contents. Sometimes, of Sunday afternoons, my mother, who was never denied any thing now, would beg for a bit out of Lord Erlistoun's descriptions of Vienna and Constantinople; of desert-marches, camels, and Arabs; the Pyramids and the Nile; Easter in the Church of the Nativity; moonlight nights under the cedars of Lebanon;—a life such as a young man glories in; full of incessant excitement, beauty, and change. Change especially seemed to be the necessary element, the craving delight, of this young man's existence.

"He seems very happy," my mother would often say. "Eh dear, it's a great thing to be happy!"

"Yes, yes;" and Jean's happiness, which evidently lay in those letters, or fragments of letters, which she did not read, would follow her for days and days like an invisible atmosphere; making a Santa Sophia out of the small parlour at Pleasant Row, and brightening the dull suburban streets she paced along into a veritable Holy Land.

I suppose most people have, some time or other, had such illusions.

They are most vivid, if not most natural, in a colourless life, such as now was hers. In vain she said that she was "used to it;" that it was only going back to the straitened ways of her early youth: it must have been a change. Even to my mother, far less sensitive in tastes or feelings, the task of making sixpence do the work of a shilling, after half a lifetime of plenty, came bitterly hard. Gradually I discovered that the whole cares of the dwindled household had fallen into Jean's hands.

It used to cost me many a pang then; it does not now. I glory in thinking of her in her well-worn dresses and neatly mended gloves, while somehow or other my mother's were always fresh and new; in remembering the miles she would trudge down muddy London streets,—
 "O, we can do, Mark, we're young and strong, but we must take your mother a drive somewhere soon;" in calling to mind her thoughtful ways, as she followed me to the front-door for some private word or two: "I did not like to say any thing up-stairs; it might trouble your mother."

My mother, mine! May heaven forget me when I forget thee, Jean Dowglas!

Looking back, one often wonders to see through what strangely opposing circumstances one has been happy, positively happy. We were so, I think, that year. Our change and loss were both sudden, not lingering; the first left behind it neither disgrace nor anxiety—it was all over and done with; we started anew without a single debt or fear. And for the death which ended worthily an honoured and beloved life, why there was peace in that too. I have at times envied my dear father the smile with which, that Saturday night, he turned himself and closed his eyes to his last rest. "Twelve o'clock, is it, Susan lass? Well, I ha' done all my work, and now it's Sunday."

And now I must say a word about myself, though the most of this history belongs to a portion of me as distinct from my every-day self—patent to my neighbours among men—as Liverpool was from Lythwaite Hall, or Mincing Lane from Pleasant Row.

My father, as I have indicated, was a man of indomitable energy, and rough-hewn but remarkable power. To the last he held his affairs in his own hands, and did every thing himself that was possible for him to do. Even I, his son, became at times a mere supernumerary. Until his death my work had been almost that of a machine; I had never had any responsibility. Afterwards the sense of it, doubled by its exceeding newness, by my peculiar temperament, and by other facts, which it is needless now to particularise, yet which passively, if not actively, will always influence a man's life, never left me for a moment.

After a time, Jean found it out,—I mean this grinding sense of responsibility, this terror of the future, "balanced between health on the one side—I was, or looked, not strong—and pounds shillings and pence on the other, which by me must be earned. When pressed, I made this confession.

"I see; I had not thought of that before. Poor Mark! we must take better care of you. I am glad you told me."

A few weeks after, coming in unexpectedly one evening, my mother met me with, "Where do you think Jean has gone?"

It might have been across the seas for the start it gave me, but it was only to Belgravia,—that region familiar once, foreign as Africa to us now. A host of imaginations took wing at once, but I only said,

"She should not have gone alone. Who did she want to see?"

"She wouldn't tell; she said I must wait till she came home. Ah, here she is. Well, my bonny Jean?"

"Bonny" was hardly the word, and yet she looked strangely lovely; the old sparkle of the eye, the old stateliness of carriage, which among ever such splendours made her seem at once familiar with and superior to them all. She kissed my mother, and then went away to take her bonnet off, saying we should hear all in a minute. But it was several minutes; the unwonted flush had faded; she returned our own quiet Jean.

"Yes, Mark, I have done a daring thing,—entered on an engagement without your knowledge, advice, or consent. Look here."

She showed me an advertisement for "A first-class singing-mistress. No professional or operatic artists need apply."

"Do you notice—a singing-mistress? They are afraid of a master for her, poor thing. She is hedged in by propriety on every side; she is an heiress,—actually our own poor little heiress, Lady Emily Gage."

The cathedral, Lythwaite Hall, and that "night of June" in the Sunday-meadows,—how they came back to me!

"Lady Emily Gage! How strange!"

"Not so strange, its being herself, as that she should have remembered me. She did."

"At the cathedral?"

"No; but last year, at Erlistoun House. If you recollect, they knew her."

This, then, caused Jean's brightness of mien; this sunny rift out of last year's history, which but for the foreign letters

often seemed no more than a dream, to us at least. Such security must end.

"Jean," I said, "you should have told me before you took such a step as this. For you to teach at all, is, to my mind, ill-advised; to become governess, or singing-governess, or whatever you call it, to the Bishop's niece, strikes me as simply impossible."

"Hardly, since I have already promised."

Here my mother, catching my meaning, followed it up loudly.

"My dear, what have you gone and done! what will Lord Erlistoun say?"

Jean was silent.

"If you had been Miss Anybody, it would have been hard enough, my poor child; but for you to turn singing-mistress—you, Jean Dowglas, who are to be Lady—"

"O don't, don't." Her expression of acute pain silenced even my mother. "Let me say a word, and then you and Mark must let me alone. Being Jean Dowglas, I must act as Jean Dowglas, without reference to any body. I believe"—her voice shook a little—"no man would think the less of one he cared for, for doing any thing that she thought right. It is right for me to help to earn money; I can do it, and wish to do it; this is the easiest way. Besides, I have promised. Don't let us talk any more."

She then gave us a detailed account of her proceedings; and described Lady Emily, now nearly grown up, and one of the loveliest creatures ever seen.

"There is a curious simplicity about her, too, like a plum with the bloom on it. She said she knew my face quite well, and used to creep into dark corners to listen to my singing. Afterwards, she had often wondered who I was, and what had become of me."

"What, doesn't she know?" broke out my mother.

"You forget, nobody knows, nor must know. It is much better thus, and much easier for me."

It stung me,—the idea of her going among these people with "nobody knowing." The whole position of matters indicated something jarring, something not right. True, Jean's own will had governed every thing. There was, strictly speaking, none to blame; yet I was irritated and sore. The feeling did not wear off for some time.

Yet good rather than evil apparently accrued from this plan. Money was the least thing Jean gained. She soon taught out of love also, which is a teaching that makes happy. It filled up a certain blank in her life which I had already begun to notice, between the somewhat irregular and lengthening spaces when those foreign letters came, and supplied the lack of many things that, in our narrow humdrum way of existence, a young woman constantly occupied in tending an old and friendless one was sure to feel—refinement, cheerful sympathy, associations with those after her own kind.

Those explanations I used to make regarding her ardent delight in this new interest, foreign to us and ours. But mine was an external judgment, as those of mankind often are.

One Sunday Lady Emily alighted like a bird-of-paradise on the mundane regions of Pleasant Row; and then I found out, or thought I had, a good deal.

"Jean, that 'child,' as you call her, is just like a little lover to you."

Jean smiled. "Well, am I not better, certainly safer, than a lover to her? Don't laugh, Mark. Girls often choose their 'first loves' among women; I did myself. What do you think of Lady Emily? Is she altered?"

"I forget what she used to be; but I think she is growing very like you."

Jean laughed in merry incredulity. "What, dark and fair, thin and soft-rounded, seventeen and nearly twenty-nine?—how old I am growing!" She turned grave for a moment, then went back to the argument in question.

Yet my observation had a truth in it. That similarity, either natural or acquired, which, as I have before noticed, is

often discernible in people attracted to one another, already showed itself between these two. The stronger nature, of course, made the impression; in twenty different ways I could trace in Lady Emily the influence of Jean.

I remarked one day, "that she seemed to come to Pleasant Row a good deal."

"Yes, they trust her with me, and she likes coming."

"Truly, I think she would come to Newgate if you were there."

"I know she would," Jean answered, with a soft grateful tenderness in her tone. "Mark, I am neither Quixotic nor romantic now; yet it goes to my heart that this child loves me. She has been brought up like a nun almost; she is as harmless as a dove, and as sweet as a flower. I want to keep the dove her 'silver wings,' to let nothing soil the lovely white flower."

"You cannot. Her lot is cast in the world; she must meet it."

"I feel that, and I would not wish to keep her from it; but I would like to make her strong for her perilous place—safe in it, and worthy of it. I want—"

"To 'do her good'?"

Had I thought that phrase would have so wounded Jean, I would have cut my tongue out before I uttered it. Her lip quivered with pain as she answered,

"Do not say that. I shall never say it again."

"Perhaps it is safest not said, or thought; but you need not cease to do it. One like you has only to live in order to do people good."

"Thank you, cousin." Her eyes swam in tears; she sat down silent.

I had brought her a letter that day, which I think she had been expecting a long time. Correspondence seemed more difficult to Lord Erlistoun in the capitals of civilised Europe than to the amateur Bedouin in the Syrian desert.

We men, accustomed to take our sweetest draughts in small gulps during the intervals of our busy or ambitious lives, can never fully understand how women actually live in letters. They may not own it even to their own hearts; when the deep root of love, and safer than love, *trust*, is there, you may cut it down over and over again, and it will blossom up afresh; but—'tis cruel handling.

I found this out, when, during an absence of Lady Emily's, her fond girlish letters came regularly once a week, never missing a day. "As sure as the sun," my mother observed, "real lovers' letters."

Jean turned away.

When her pupil returned, there was a gratefulness almost pathetic in the way Jean responded to this love; childlike in its demonstration still, though in most other things the young lady had ceased to be a child. She had learned to have a will and a judgment of her own, and to exercise both in the innumerable ways with which one of her rank and fortune can use a woman's best "rights"—personal influence. A lovely and loveable creature she was; beside her exquisite fresh bloom, I sometimes fancied even Jean looked faded and old.

Jean faded? Jean growing old? I pondered. Would a man—say, any man—regarding the face he loves, think with alarm, or with a solemn and yearning tenderness, of how it will look when it is growing old?

Another winter passed, another summer; in the autumn my father would have been dead two years.

Two years! Was it with another chronology than this of death that Jean now laid aside her black gowns? Her looks and her step lightened; voluntarily or involuntarily, she was evidently hoping, if not believing.

About this time I myself received a letter from Lord Erlistoun.

It stated his extreme regret that circumstances of which Miss Dowglas was aware—he had written to her by the same mail—prevented his immediate return to England; that he must leave in my charge for a few months longer "his best treasure in the world."

I gave Jean the letter without comment, and she made none. Her time was just then fully occupied; for Lady Emily was going on a tour to Switzerland, I believe; and it was hard for Jean to refuse her "little lover's" earnest wish for her companionship.

"I can't," she said, when I urged too, promising to remove all scruples on account of my mother; "I can't go abroad. O, no! I was never fit for any thing but quiet and home."

And after Lady Emily was gone, she seemed to turn more than ever to what—if peace, unity, and affection could make it so—was indeed, with all its narrowness, a "home." I can see her now, as she used to sit on Sunday afternoons, crouching down with her arm across my old mother's lap, and her great wistful weary eyes fixed opposite on me, as I tried to amuse them and make them merry. Sometimes, after listening and laughing a little, she would end with a sigh of relief:

"O, Mark, how comfortable you are!"

These "treasures," which some are readier to prate of than to prize, yet others must neither covet nor steal! Thank God, I was always true to myself, and to both of these two.

Day by day I watched Jean's round cheek straighten into the line which marks youth's departure. Once, stooping her head as she sat, she said, "Mark, see here;" and in an under-lock of her hair were distinct white threads, too many to count.

I hardly know the sort of feeling it gave me, except that it was not altogether one of pain.

CHARLOTTE BRONTË.

In the autumn of 1847 there appeared a book,—a "novel,"—unrecommended by a known name, unheralded by any portentous announcements, which nevertheless achieved what few books, even with all such appliances, attain;—it made a "sensation" in the English literary world. *Jane Eyre* aroused immediate attention; there was a "rush for copies" at the publisher's; people of generally phlegmatic temperament condescended to be curious as to the unknown author. The book was reviewed, criticised, talked about, on every hand. The reading public—insatiable giant!—for once laid itself down complacently after its meal, and growled approval. This for a brief space. After a while came soberer thoughts; compunction and dubitation began to trouble the monster. He had enjoyed his dinner, but he mistrusted the wholesomeness of the viands; he had partaken greedily, but thought it well to enter a protest against the *chef-de-cuisine*. *Jane Eyre* was striking, original,—its descriptions were masterly, its writing both forcible and brilliant; but it was of an evil tendency, it was immoral, it was wicked, it was, in a word, improper—most fatal ban of all! And curiosity strained her eyes anew. Who *could* have written this queer book? Man or woman, old or young; a masculine mind gifted with unusually subtle perceptions; or a "strong-minded" woman, whom life had embittered, whom experience had hardened,—who *could* be the author?

We know now, or shall know when we have read through the two volumes now before us. Death makes all things sacred; and we believe that the curiosity, often vulgar and mean enough while its object breathes and lives amongst us, becomes a nobler feeling when the infinite barrier between two worlds divides us from it. Were it not so, there would be much pain in seeing the veil drawn from before the quiet life of a gentle, retiring, sensitive woman like Charlotte Brontë, even when the hand was as careful and as loving as it has been in this case.

But Charlotte Brontë is no longer of us. No critical misconceptions or harsh judgments can sting her, nor friendly appreciation arouse her quick gratitude any more. No more of those "strange" books,—good and great, spite of

their mistakes,—will again stir us with their fearless eloquence, their vivid pictures, their magnetic truth. She can do the world no more service by her writings; it only remains that the record of her life shall edify and benefit us. That it will do good, more good than many novels, we do not doubt. Two lessons at least it may well convey to all who read it. The first, that even critics, like other fallible men, may be mistaken; and that they are most likely to be so when they judge an author by the accidents, and not by the essentials, of his or her writings. The author of *Jane Eyre* was a woman gifted with some of the best and noblest womanly qualities in no less degree than she was intellectually endowed. Whoso studies her life will find that authorship formed but a subordinate portion of it; that writing was the least part of her "work;" that the daily, yearly round of her home-duties, little and great, was fulfilled as conscientiously, as cheerfully, as deftly, as though she knew no higher faculties, and possessed no more recondite tastes than those of the housewife. And secondly, we shall learn how compatible a woman so minded may make the sweetest and homeliest duties,—in the performance of which lies her normal vocation,—with the exercise of rare powers, and the cultivation of that intellect which was bestowed on her to turn to good account, *not* to give her an excuse for forfeiting or ignoring one iota of her womanhood.

It is a pregnant fact, indeed, that a writer, one of the most original, powerful, and popular of her day, stands out from the rest of the world still more by her life than by her genius. The reader of these volumes will find it more possible to forget *Jane Eyre* and *Lucy Snowe* than this small still woman, with her indomitable soul; her quiet self-denying heroism, both active and passive; her strong, but not stubborn will; her warm and generous, but steady and consistent feelings. Her genius was brilliant, but her soul shone, we think, with a fuller light than that which through her writings has flashed upon the world.

And what a strange poem-picture have we in this true narrative; what an eerie strain of wild music runs through it; what an atmosphere of moorland-air surrounds it, fresh, sharp, sweeping,—sometimes thick with mists, and anon torn with fierce gusts! She herself never imagined any thing more instinct with that sort of sad grandeur which pervaded all she wrote, than is her own history. The secluded home in that wild region; the motherless childhood, from which all the brightness was struck by the early and painful death of her two sisters; the premature responsibility of her own eldership over the others, which so deeply impressed the thoughtful little girl of ten years old,—how simply touching are these details, and how well they indicate the course of training that her mind was undergoing thus early! Interesting also is the description of the recreations of the four singular children,—their strong political sympathies, their literary achievements, and in particular, Charlotte's detailed catalogue of her writings, "making in the whole twenty-two volumes," completed in fifteen months by the authoress of thirteen.

Here is a characteristic specimen of these productions, presenting a quaint combination of child-life and most unchildish fancies and predilections.

"June the 31st, 1820.

The play of the *Islanders* was formed in December 1827, in the following manner. One night, about the time when the cold sleet and stormy fogs of November are succeeded by the snow-storms and high piercing night-winds of confirmed winter, we were all sitting round the warm blazing kitchen-fire, having just concluded a quarrel with Tabby concerning the propriety of lighting a candle, from which she came off victorious; no candle having been produced. A long pause succeeded, which was at last broken by Branwell saying in a lazy manner, 'I don't know what to do.' This was echoed by Emily and Anne.

Tabby. Wha, ya may go t' bed.

Branwell. I'd rather do any thing than that.

Charlotte. Why are you so glum to-night, Tabby? O, suppose we had each an island of our own.

Branwell. If we had, I would choose the Island of Man.

Charlotte. And I would choose the Isle of Wight.

Emily. The Isle of Arran for me.
Anna. And mine should be Guernsey.

We then chose who should be chief men in our islands. Branwell chose John Bull, Astley Cooper, and Leigh Hunt; Emily, Walter Scott, Mr. Lockhart, Johnny Lockhart; Anne, Michael Sadler, Lord Bentinck, Sir Henry Halford. I chose the Duke of Wellington and two sons, Christopher North and Co., and Mr. Abernethy. Here our conversation was interrupted by the, to us, dismal sound of the clock striking seven, and we were summoned off to bed. The next day we added many others to our list of men, till we got almost all the chief men of the kingdom. After this, for a long time, nothing worth noticing occurred. In June 1828, we erected a school on a fictitious island, which was to contain 1000 children. The manner of the building was as follows. The island was fifty miles in circumference, and certainly appeared more like the work of enchantment than any thing real," &c.

And we have a description of her soon after this time.

"In 1831, she was a quiet thoughtful girl of nearly fifteen years of age; very small in figure,—'stunted' was the word she applied to herself; but as her limbs and head were in just proportion to the slight fragile body, no word in ever so slight a degree suggestive of deformity could properly be applied to her;—with soft thick brown hair and peculiar eyes, of which I find it difficult to give a description, as they appeared to me in her later life. They were large and well shaped; their colour a reddish-brown; but if the iris was closely examined, it appeared to be composed of a great variety of tints. The usual expression was of quiet listening intelligence; but now and then, on some just occasion for vivid interest or wholesome indignation, a light would shine out as if some spiritual lamp had been kindled which glowed behind those expressive orbs. I never saw the like in any other human creature. As for the rest of her features, they were plain, large, and ill-set; but unless you began to catalogue them, you were hardly aware of the fact; for the eyes and power of the countenance over-balanced every physical defect: the crooked mouth and the large nose were forgotten, and the whole face arrested the attention, and presently attracted all those whom she herself would have cared to attract. Her hands and feet were the smallest I ever saw; when one of the former was placed in mine, it was like the soft touch of a bird in the middle of my palm. The delicate long fingers had a peculiar fineness of sensation, which was one reason why all her handiwork, of whatever kind,—writing, sewing, knitting,—was so clear in its minuteness. She was remarkably neat in her whole personal attire; but she was dainty as to the fit of her shoes and gloves."

The readers of *Shirley* and *Villette* will be interested in the account of Miss Brontë's life as school-girl and teacher at Roe Head, and at Brussels, if only because they will there trace the scenes and impressions which long after she reproduced in those books. But authorship,—its cares and its pleasures, its discouragements and its triumphs,—was as yet far from her; if thought of, checked and driven back, in accordance with advice she had received on the subject.

School-life, governess-experiences, diversified by illness, home-anxieties, and plans for the future,—it is of all this we read now. It was necessary that money should be earned; and teaching appeared the only available means, although it was a vocation for which all the Brontës seem to have been peculiarly unfitted. So chafing were its restraints, so trying were its demands upon Charlotte, that again and again her health gave way under her persistent efforts to maintain a way of life which to her involved so much positive suffering.

"No doubt," says Mrs. Gaskell, "all who enter upon the career of a governess have to relinquish much; no doubt it must ever be a life of sacrifice;—but to Charlotte Brontë it was a perpetual attempt to force all her faculties into a direction for which the whole of her previous life had unfitted them. Moreover, the little Brontës had been brought up motherless; and, from knowing nothing of the gaiety and sportiveness of childhood,—from never having experienced caresses or fond attentions themselves,—they were ignorant of the very nature of infancy, or how to call out its engaging qualities. Children were to them the troublesome necessities of humanity; they had never been drawn into contact with them in any other way. . . . It must be borne in mind by those who, surviving her, look back upon her life from their mount of observation how no distaste, no suffering, ever made her shrink from any course which she believed it to be her duty to engage in."

And this brief letter, written from one of her "situations" to her sister Emily, expresses something of the intolerable

yearning for freedom which it was her continual struggle to keep down and endure:

"MINE BONNIE LOVE,—I was as glad of your letter as tongue can express. It is a real genuine pleasure to hear from home; a thing to be saved till bedtime, when one has a moment's quiet and rest to enjoy it thoroughly. Write whenever you can. I could like to be at home. I could like to work in a mill. I could like to feel some mental liberty. I could like this weight of restraint to be taken off. But the holidays will come. *Coraggio!*"

We now arrive at the details of her sojourn in Brussels, of her zealous and resolved efforts in the acquirement of languages, &c., and of the painful episodes which marked, and at length terminated, her stay. The fast-increasing blindness of her father summoned her home at the beginning of 1844. And there ensued a time of much trial;—futile efforts on the part of the girls to establish a school at Haworth Parsonage, till these very efforts were stopped by the bursting of a new cloud of piteous, terrible, domestic trouble which had for long been overhanging them. But Branwell Brontë and his wretched fate need not be discussed here.

Let us pass at once to the consideration of the time, some two years later, when Charlotte Brontë had made the first unnoticed step towards that literary career afterwards so renowned. "Poems by Currer, Ellis, and Acton Bell," published in 1846, were unheeded, passed by, ignored by the great busy world. The risk had been their own, the failure was theirs also; but they appear to have been undaunted by it. They tried again. August 1846 found Charlotte at Manchester with her father, who came there that his eyes might be operated upon. The sisters' second literary venture seemed hopeless enough. Each had written a prose tale, which had been sent, together and separately, to publisher after publisher with continued ill-success.

" . . . Among the dispiriting circumstances connected with her anxious visit to Manchester, Charlotte told me that her tale came back upon her hands, curtly rejected by some publisher, on the very day when her father was to submit to his operation. But she had the heart of Robert Bruce within her; and failure upon failure daunted her no more than him. Not only did *The Professor* return again to try his chance among the London publishers, but she began, in this time of care and depressing inquietude,—in those gray, weary, uniform streets, where all faces save that of her kind doctor were strange and untouched with sunlight to her,—there and then did the brave genius begin *Jane Eyre*. Read what she herself says: 'Currer Bell's book found acceptance nowhere, nor any acknowledgment of merit; so that something like the chill of despair began to invade his heart.' And remember it was not the heart of a person who, disappointed in one hope, can turn with redoubled affection to the many certain blessings that remain. Think of her home, and the black shadow of remorse lying over one in it, till his very brain was mazed, and his gifts and his life were lost; think of her father's sight hanging on a thread, of her sisters' delicate health and dependence on her care; and then admire, as it deserves to be admired, the steady courage which could work away at *Jane Eyre* all the time that the one-volume tale was plodding its weary way in London."

The following is significantly characteristic:

"It was not every day that she could write. Sometimes weeks, or even months, elapsed before she felt that she had any thing to add to that portion of her story which was already written. Then, some morning she would waken up, and the progress of her tale lay clear and bright before her in distinct vision. When this was the case, all her care was to discharge her household and filial duties, so as to obtain leisure to sit down and write out the incidents and consequent thoughts, which were, in fact, more present to her mind at such times than her actual life itself. Yet notwithstanding this 'possession,' as it were, those who survive of her daily and household companions are clear in their testimony, that never was the claim of any duty, never was the call of another for help, neglected for an instant. It had become necessary to give Tabby—now nearly eighty years of age—the assistance of a girl. Tabby relinquished any of her work with jealous reluctance, and could not bear to be reminded, though ever so delicately, that the acuteness of her senses was dulled by age. The other servant might not interfere with what she chose to consider her exclusive work. Among other things, she reserved to herself the right of peeling the potatoes for dinner; but as she was growing blind, she often left in those black specks which we in the north call the 'eyes' of the potato. Miss Brontë

was too dainty a housekeeper to put up with this; yet she could not bear to hurt the faithful old servant by bidding the younger maiden go over the potatoes again, and so reminding Tabby that her work was less effectual than formerly. Accordingly, she would steal into the kitchen, and quietly carry off the bowl of vegetables without Tabby's being aware; and broaking off in the full flow of interest and inspiration in her writing, carefully cut out the specks in the potatoes, and noiselessly carry them back to their place. This little proceeding may show how orderly and fully she accomplished her duties, even at those times when the 'possession' was upon her."

In 1847, *Jane Eyre* was published. And this may appear a fit opportunity for discussing the merits and the faults, the excellence and the defacing drawbacks, of Miss Brontë's writings. But we reserve such discussion; we waive for the present all arguing thereabout. We are learning to know Charlotte Brontë,—not Currer Bell. Whoso wills, may carp and cavil at the author; we deal with the woman as she *lived*, not as she wrote. Imaginary incidents, fictitious scenes and characters, are out of place here; they fade away in the strong clear light of a reality such as this.

Domestic distress of the bitterest kind was assailing her at the time that "London literary circles" were speculating as to the author of *Jane Eyre*. The year passed sadly; though we may imagine her as cheered by the success of her book, tidings of which reached her in her quiet secluded home. But, in the autumn of 1848, the brother died. Connected with him had been the cruellest of the family troubles, and his death seemed to be the herald of further desolation. At intervals of only a few months Emily and Anne Brontë sickened—declined—died. The one sister, after months of devoted nursing, of gnawing anxiety, was left alone, to resume as she might the story (*Shirley*) of which she had written two-thirds at the time of Branwell's death. "The pen, laid down when there were three sisters living and loving, was taken up when one alone remained. Well might she call the first chapter that she wrote after this 'The Valley of the Shadow of Death.'"

The reader of *Shirley* will remember the chapter so called—(read now, in the light of this new knowledge, how inexpressibly touching are its simple details!); and he will remember also the commencing passages in that chapter headed "The West Wind blows,"—one of those outbursts of passionate prose-poetry which truly are only to be "learned in suffering." But, we are told,

"She went on with her work steadily. But it was weary to write without any one to listen to the progress of her tale,—to find fault or to sympathise, while pacing the length of the parlour in the evenings, as in the days that were no more. Three sisters had done this; then two, the other sister dropping off from the walk; and now one was left desolate to listen for echoing steps that never came, and to hear the wind sobbing at the windows with an almost articulate sound."

Her literary triumphs were thus well chastened. Moreover, *Shirley*, though successful on the whole, was much maltreated by sundry authorities. And what a new idea is given of the masculine-minded reckless writer of *Jane Eyre*, when we hear of her quietly shedding tears of grieved feeling over a harsh criticism in the *Times* newspaper! Occasionally she was now to be tempted from her seclusion; occasionally she went to London, staying with the family of her publisher, who strove to make her visits as interesting as her extreme love of quiet and painful shyness would permit. She made some valued friendships also. Life, it would seem, was at least expanding somewhat for her. Her correspondence becomes varied and extensive. It is interesting to mark the clear practical sense of her letters on business-matters, the lucid criticisms on the books she reads, or the new scenes she passes through. Vigorous, and full of life and warm generous feeling, are these letters, and graphic as was all she wrote.

But meanwhile she experienced intervals of profound depression, of utter prostration both of mind and body. Sad indeed is it to read such records of a lonely life,—of mental suffering and longing for the lost,—as we have in some of her letters of the time during which *Villette* was in progress.

But we can dwell only briefly on these and subsequent details. The scroll is nearly unrolled; the life draws towards its close. On its last salient incident, her marriage, we will not touch. Her few brief months of wedded life seem to have been happy ones, and it was surely meet it should be so. There had been a long, dreary, hard winter before the short spring of happiness blessed her with its brightness. And struggle and trial and suffering had done their work upon the fragile frame during that troubled season. Sunshine could not kindle anew the fast-decaying spark that had burned so brightly when its light was needed most, because of the darkness around. She died.

"Early on Saturday morning, March 31st, the solemn tolling of Haworth church-bell spoke forth the fact of her death to the villagers, who had known her from a child, and whose hearts shivered within them as they thought of the two sitting desolate and alone in the old gray house."

Few beyond that circle of hills knew that she whom the nation praised far off lay dead that Easter morning. Of kith and kin she had more in the grave to which she was soon to be borne than among the living. The two mourners, stunned with their great grief, desired not the sympathy of strangers. One member out of most of the families in the parish was bidden to the funeral; and it became an act of self-denial in many a poor household to give up to another the privilege of paying their last homage to her; and those who were excluded from the formal train of mourners thronged the churchyard and church, to see carried forth and laid beside her own people her whom, not many months ago, they had looked at as a pale white bride entering on a new life with trembling happy hope."

And such was the end, yet *not* the end, of Charlotte Brontë's tried, troubled, unpraised life.

One word more before we let the book go which tells us of that life. That we have hardly mentioned the merit of this biography in our warm interest in, and sympathy with, its subject, is perhaps the highest testimony we could render to its excellence. It is not so much a book as a *life* we have been making acquaintance with. To express approval of the arrangement, to laud the style, would appear out of place under these circumstances. And we feel sure that Mrs. Gaskell, in her generous friendship for Charlotte Brontë, will accept as the most welcome praise to her own portion in these volumes, that tribute of admiration and reverence for the Dead, which we believe few will find it possible to withhold when they close the book.

NOTHING IN THE PAPER TO-DAY.

I ALWAYS think a man a dolt who tells me "there is nothing in the paper to-day." *Nothing!* The newspaper is the daily history of thirty millions of people, with possessions scattered all over the world,—a people whose aggregate number at home and abroad is not much less than three hundred millions. And their daily actions are as "nothing" to those who skim the surface of a paper in search of a war, an insurrection, the death of a prince, or the explosion of a powder-mill; and who in one week forget every incident which for the moment was a real bit of news for them. Not one person in a hundred knows how to read a newspaper. They hear a great deal about strychnine, and are delighted to see the portrait, or read the biography, of a criminal; but do they turn to any chemical dictionary or work on medical jurisprudence for accurate information, on which to ground a calm judgment of that which excites them so much? To read and understand a newspaper, requires us to take pleasure in its several details, as matters of contemporaneous history; and there is scarcely any single narrative,—whether of politics or police, of law or war, of destitution or mortality,—but is fraught with a true historical lesson, the dates and circumstances worthy to be made note of, and the outlying facts affording matter for many a curious literary or scientific study.

I remember, during the late war, we used to lay the paper on the table, and, in family council assembled, trace out on a few maps every movement of the armies and fleets,

and form our judgment of the struggles and acts of the belligerents. By the aid of geographical studies, my daughters made tracings of the maps of the Crimea, the Black Sea, and the Baltic; and as each new item of intelligence arrived, we used to mark in on these skeleton maps every new position of the armies, every movement made by them, lines of march, points of attack, positions of fleets and batteries, and, in fact, every minute detail that could be illustrated by geography. Then we saw the meaning of the glorious feats of arms which called forth the plaudits of thousands who knew the places and positions only by name. We saw the whole scheme of the Russian attack: eastward, through the Caucasus, towards Erzeroum; westward, through the Principalities, towards Adrianople; and centrally, by the Black Sea, from Sebastopol,—a grand threefold attack on Constantinople. We saw, too, the wisdom of the allied concentration on the central position of Sebastopol: destroy the enemy's centre, and his wings suffer with it. Besides this, we learnt that by the allies attacking the remotest part of the Czar's dominions, his forces were compelled to march enormous distances to the relief of the besieged city; and those distances were additional enemies, and helped us to conquer.

Now, Bushire and Herat and Canton are uppermost in political geography. We are making skeleton tracings of the maps of Persia, and we shall mark out, in coloured lines, the track of the Persian forces; the respective positions of the fleets and land-forces of the British; the nearest Russian posts on the Caspian; and the route which a Russian army of relief would most likely take, if the Czar were to side with Persia. China also comes in for study, and we are now busy with its coasts and harbours.

Then, as to this sad labour question, we fill up the sketch which the paper supplies in the history of want. Statistics of the population, the produce, and the resources of the British empire, are easily attainable. My note-book of dates shows an awful list of failures of great firms, also gleaned from the newspapers. Emigration returns and reports from the colonies give us further items of information; and if I form an opinion as to the cause of distress, or its most likely remedy, I at least do not content myself with mere surface observation. Indeed, there is nothing in the newspapers, not even excepting the advertisements, but which to me is a reflection of some striking phases of our social and political life. I can separate the temporary and the passing from that which is permanently characteristic of our habits and history; and the newspaper is a great mirror, or rather a lens of enormous focus, through which I can see the whole world in its physical and mental developments arrayed before me as a living panorama. P. P.

POLYGLOT READINGS IN PROVERBS.

HE THAT DOES YOU AN ILL TURN WILL NE'ER FORGIE YOU (Scotch). "The injurer never pardons" (Ital.).—*Chi offende non perdona mai*. "Since I wronged you I never liked you" (Span.).—*Después que te erré, nunca bien te quisé*.—The same thought is thus expressed by Tacitus: "It is in the nature of man to hate one whom you have injured" (*Agric.* 41). Voltaire wrote to a person who had behaved very badly to him, *Je vous demande pardon de vous être moqué de moi*,—"I beg your pardon for having been treated scurvily by you."

EATEN BREAD IS SOON FORGOTTEN. "A morsel eaten gains no friend" (Span.).—*Bocado comido no gana amigo*. "The bread eaten, the company broken up" (Portug.).—*Pão comesta, companhia desfeita*. "A favour to come is better than a hundred received."—*Val più un piacere da farsi che cento di quelli fatti*.—This is suggestive of the definition which makes gratitude consist in a lively sense of future favours. "He who obliges makes ingrates" (French).—*Qui oblige fait des ingrats*. "When I grant a favour," said Louis XIV., "I make one ingrate and twenty malcontents."

SAVE ME FROM MY FRIENDS.—An ejaculation often called forth by the indiscreet zeal which damages a man's cause whilst professing to serve it. The full form of the proverb—"God save me from my friends, I will save myself from my enemies"—is almost obsolete with us, but subsists in many languages. The French and others apply it to perfidious friends. "From whom I trust God save me, from others I will, &c." (Italian).—*Da chi mi fido guardi mi Dio; che da chi non mi fido me ne guarderò io*. On the wall of one of the horrible subterranean dungeons of the doge's palace at Venice, M. Quitard found these words in the handwriting of a prisoner, who had escaped by removing a large flag in the floor, under which was a sewer that ran into the adjacent canal—"One is never betrayed but by one's own people" (French).—*On n'est jamais trahi que par les siens*.

W. K. KELLY.

CORRESPONDENCE.

DEAR MADAM,—I read with inexpressible pleasure the letter of "A Daughter," in the NATIONAL MAGAZINE, vol. ii. p. 31,—I hope the Editors paid her liberally for it,—and I am convinced that in every large family the advantages of her ingenious suggestion would be peculiarly appreciated.

What eagerness would there not be to fulfil every household want; what anticipation of each wish; what jealous watchfulness of the beloved parent's eye, and loving contest to be first in reading its desires!

To descend to lower considerations, the arithmetical faculty (often so lamentably defective in a woman's head) would by this means be wonderfully developed. Consider the accurate valuation of each little service; the habits of regularity cultivated by the strict account strictly kept, and periodically presented for liquidation. I say periodically, as it may not be always possible for mamma to put her hand in her pocket at the very moment the chimney-ornaments are dusted, or the fresh tapes sewn on the pillow-cases.

I have given the subject serious consideration, and think it will be found advisable to draw up a tariff of prices, which may give to parents some insight into their family-expenses, and prevent those little disagreements to which every scheme, however invaluable, is liable, and especially one involving the pecuniary element. The following table will, I hope, be found not incompatible with justice on both sides:

For making breakfast, 4d.
If with both tea and coffee, 6d.
Washing tea-cups, 2d.
Making beds, 1d. each.
Marketing for family-dinner, 6d.
Mending father's or brother's socks, 1½d. per pair.
Brushing father's coat, 1d.
Sewing buttons on shirt, ½d. each.
Making pudding, 3d.
Making pie (large), 4d.
Lessons to little sister, 1s. an hour (and cheap too), &c.

This is necessarily but a bare suggestion. Every daughter will of course be the best judge of what services are likely to be required from her, and will place her own valuation upon them. It will, however, be advisable to modify the latter according to the number of the family and the income of its head. A man with, let us say, 200l. per annum, three grown-up daughters, and four or five smaller fry, to be taught, mended, washed, and generally "done for," at so much a head,—in addition to the necessary rent, taxes, coals, candles, and provision for so large a family,—might find the

weekly account of Jane, Maria, or Fanny, an occasional inconvenience. I am sure I need not point out to the young ladies that these circumstances might sometimes justify a bargain with mamma; or that even, under great pressure, an occasional pinafore might be made, or a collar washed free of charge.

As I have put the case, no parents can surely object to so reasonable a demand, nor be blind to the advantages that must result from it, when they see their daughters valuo and economise their time, become active and industrious, and feel that it proceeds, not from the old-fashioned law by which youth in its turn lifts the burden from the weary shoulders of age; not from the gratitude that seeks to repay, however inadequately, the filial debt of years; not from the loving instinct that necessitates the ministration to those we love;—but “from the wholesome stimulus of gain, which is the mainspring of most of man’s labours, and surely cannot fail to act well with woman also.”

ANOTHER DAUGHTER.

STAND FOR CUT FLOWERS. [MARION.]

ARTIFICIAL SEA-WATER FOR THE MARINE AQUARIUM AND FOR BATHS.

Mr. Gosse, the eminent naturalist, first propounded the possibility of manufacturing from the salt-box and the water-butt a preparation in which to preserve living marine animals, so as to obviate the inconvenience of obtaining supplies of water from the sea. That was in July 1854. The possibility was soon settled; and so admirably did the artificial sea-water answer its purpose, that many aquarists declared it to be superior to the real thing; and Mr. Bolton, operative chemist, of Holborn Bars, gave all his attention to its manufacture, and succeeded in producing it to perfection. In London, there is no difficulty in procuring either real sea-water or the prepared salts: the first is retailed, like porter at a public-house, by Mr. W. A. Lloyd, of Portland Road; the second is sold by Mr. Bolton at the rate of three gallons for a shilling, that is to say, in packets of a pound each; so that the saline materials for three gallons may be conveniently carried home in the coat-pocket. But there are many who live in remote districts who cannot readily avail themselves of either Mr. Lloyd’s or Mr. Bolton’s services, and there are many more who would prefer to prepare the sea-water for themselves as a pretty chemical exercise; and to these we offer the following instructions. Take of

Common table-salt	3½ ounces.
Epsom salts	0½ ”
Chloride of magnesium	200 grs. troy.
Chloride of potassium	40 ”

The above are the essential ingredients; but three elements of sea-water are omitted from the receipt, and these are, bromide of magnesium, sulphate of lime, and carbonate of lime. These occur in such minute quantities, that none but an expert chemist can introduce them. We believe Mr. Bolton does not omit them in his preparation.

Having the quantities of the above four ingredients correctly weighed out, mix them together, and pour three

quarts of water over them, and leave them some hours to dissolve. For this purpose, bright spring-water is the best. When the salts are thoroughly dissolved, place in the vessel a hydrometer registered as low as from 1·000 to 1·030, or in place of that, one of the specific-gravity beads sold by Mr. Bolton or Mr. Lloyd; and at the time of purchasing it, be sure to ascertain if it should sink or swim in sea-water. Stir up the mixture, and note what the hydrometer registers. You will find that the water is too dense, and you must add sufficient spring-water to it to bring it to the standard of 1·027, or till the bead slowly sinks to the bottom, if it should sink, or threatens to sink, if it is intended to register by floating.

Now the usual way is to do all this in the tank or vessel in which the animals are to be kept; but, as shown in the *Book of the Aquarium*, such a practice is wrong, because there is invariably some amount of sediment, which must be removed before the water is put to use. If the mixture

is made in a spare pan, it is very easy to fix above the tank a small filter, and through that filter pass the water into the vessel in which it is to remain. Take a bee-glass with a hole in the centre, or a common flower-pot which has been well seasoned. Into the hole in the centre thrust a piece of clean sponge, just loose enough to allow the water to run out in a thin stream. Over the sponge place a handful of charcoal; and then fill up, and keep the filter at work till the whole of the water has been transferred bright and pure to the tank. Once more test it with the hydrometer or the glass-bead, and make it a shade weaker than the register, to allow for evaporation. A few healthy plants of sea-lettuce, or the grassy sea-weed called *Enteromorpha compressa*, must be thrown in and left for a week, to season the water, and prepare it for the reception of animals. If exposed to moderate daylight, these plants will diffuse an abundance of oxygen through the water, and impart to it some minute portions of the three ingredients that were omitted from the formula. In a week or ten days it is fit for the introduction of animals. Begin with common anemones; but do not attempt to keep fishes or rare kinds of zoophytes in it for some time. The first weeds will probably decay, and their places must be supplied with fresh ones; and these will, if properly exposed to subdued daylight, live and flourish. Time will ripen the water and fit it for the preservation of any of the animals that are usually kept in aquaria; and the same preparation may be used for years, and will continually improve if occasionally drawn off and passed through the filter, and kept to the proper standard of strength by the addition of fresh water from time to time. In this latter particular, the hydrometer or bead must be the guide. A few handfuls of any sea-side drift, such as fresh sea-weed, tangle, &c., if obtainable, will be found useful in quickening the preparation of the water by conveying to it those elements which it is so difficult to include in the manufacture. When purchasing marine animals, a handful of fresh waste weed can always be obtained, and is of great service in bringing newly-made sea-water into a proper state; but any such waste materials must be removed before they begin to decay.

REPRINTED FROM THE ENGLISH SCHOOL, NO. XIV.

PAINTED BY C. LUCY.

THE PARTING OF LORD AND LADY USSELL.

PARTING OF LORD AND LADY RUSSELL. [1683.]
By C. LUCY.

MR. CHARLES LUCY is favourably known to the public by a series of pictures that exhibit a quietist turn of mind, verging sometimes upon sadness and pain; and which are characterised by a reserved power of design such as we advisedly designate quiet, in order to mark a wide distinction between that quality and the more obvious one which is simply tame and weak. He has never, so far as we know, produced a picture wherein any violent demonstration of emotion is required by the subject; preserving thereby an individuality as an artist, following a preconceived system to develop his powers to their utmost fruition. This intimate self-knowledge is remarkable, and worthy of all honour.

His principal works are—the picture we here engrave; a cartoon, "Religion," at Westminster Hall (1845); "The Departure of the Pilgrim Fathers," for which he received at that exhibition in 1847 a premium of 200*l.* from the Government; "The Landing of the Pilgrim Fathers" (Royal Academy, 1848); "The Death of Cromwell's Daughter;" "Nelson in the cabin of the *Victory* before Trafalgar." These are, without naming others, sufficient examples of the artist's choice of subjects, his manner of executing them, and of the remarkable persistency of aim which it is our duty to eulogise.

In "The Parting of Lord and Lady Russell" we see grief without violence, a calm human dignity, and a self-respect which also spares others. Lord William Russell being wrongfully accused of participation in the Rye-House Plot, was brought to trial for treason, and pleaded "Not guilty," adding, that he had not received a copy of the indictment against him. On its being demanded how he would be tried, he replied, that he had never heard of a prisoner being arraigned and tried at the same time. This objection, though founded on both law and justice, was overruled; the trial proceeded, extending to great length, during which he received from his wife the utmost assistance which a noble-hearted woman could render, by acting as his secretary. Despite the clearest reasoning, and in the face of the most absolute law, he was found guilty, and sentenced to decapitation.

Many others who appear to have been really concerned in some sort of conspiracy were executed; amongst them, Algernon Sidney. To save Lord Russell from a like fate, the most strenuous efforts with the king were made, but without avail. Abandoning the legitimate means of delivering his friend, Lord Cavendish—between whom and Lord Russell the warmest attachment existed—volunteered to exchange clothes with him in prison, so that he might escape. This magnanimous offer was rejected, and the noble victim prepared for death. The account of his imprisonment and execution, which Burnet gives at length (that is he whom the artist shows withdrawn weeping at the window), is singularly affecting. On the evening before the day of execution, Lady Russell visited her husband for the last time. After praying, he said to her, "Stay and sup with me, and let us eat our last earthly food together." Before she left, he took her by the hand, saying, "This flesh which you now feel in a few hours must be cold," he then kissed her several times. "She so governed her sorrow as not to add by the sight of her distress to the pain of a separation." When she was gone, he said, "Now the bitterness of death is past;" and lauded her highly as the best of wives and friends. Retiring to rest, he slept soundly, and awoke betimes to devotional exercise. He gave his watch to Burnet, as a last gift, with the remark, "I have done with time; now eternity begins." The execution took place in Lincoln's Inn Fields. Burnet relates: "When arrived there, he had lain down (before the block); I once looked at him, and saw no change in his looks; and although he was still lifting up his hands, there was no trembling, though at the moment, when the executioner happened to be laying his axe on his neck (to direct him to

take aim), I thought it touched him, but am sure he seemed not to mind it." Thus died the noblest son of the house of Russell, at the age of forty-four, the victim of a king whose tyranny novelists and romantic historians have slurred over, and whose systematic libertinism has been described as a gay foible. L. L.

AT WOLF'S CASTLE.

THERE is a tottering red-brick inn in the city of Toulouse; an ancient hostel, well scored with many cracks and wrinkles. There is a traveller inside, uttering imprecations against the institutions of the country; moreover, waiting for the horses. They have set him, poor souls, for peace-sake, in their best apartment,—one with a famous bow-window, and noble prospect of the town; but he only yearns to cast the dust from off his shoes, and have done with them utterly. Mean time, while he performs an unholy tattoo upon the window-pane, it may not seem wholly unprofitable to set forth how that traveller came to be bestowed in that unpromising neighbourhood, and under so provincial a sky.

The year previous, I—no other than the wroth *voyageur* of the inn—had the good fortune to make M. Dangeau's acquaintance at the famous baths of Ems. A pleasant man, M. Dangeau, like most of his countrymen; pleasantest, perhaps, when assisting at little private fumigations, or in exhorting one from that Slough of Despond, a *table-d'hôte* of strong Anglican complexion. Just before my departure, it became known to me that my friend was, to use a delicate phrase, somewhat peculiarly circumstanced. M. Dangeau was, so to speak, becalmed, and drifting about uneasily, waiting for the wind. In this extremity, I was not found wanting; and M. Dangeau went his way rejoicing, provided with the needful funds. To say the truth, I had misgivings as to the fate of my napoleons; for, with all faith in my late *commensal*, I could not shut out a truth known to all of any Brunnen experience, that those with the laxest notions concerning money-matters are the most gentleman-like and insinuating of their species. At no distant date, however, arrived my moneys, together with exuberant thanks; the despatch concluding with an earnest request that I would come and take up my abode as soon as convenient at the Château des Loups, on this side of the Pyrenees. So came I to be bestowed in doleful Toulouse,—in Toulouse of the rueful countenance, at the very back of God speed; so came there to be a moody traveller in its crazy red-brick inn, looking from the bow-window, and waiting for the horses.

They came round at last,—those steeds so ardently desiderated, and I was securely fastened up in a rickety vehicle; red-brickdom was soon a pleasant prospect in the distance. We journeyed on all that day, catching glimpses now and again of other little red towns; for a brief span, too, floating sluggishly down the Garonne; until at last, about ten o'clock that night, a whip-handle was pointed in the direction of a dark clump of trees, indicating that the wished-for Château des Loups was in that direction. A few minutes more and we had pulled up before a tall repulsive gateway, all over plates of iron, like a prison-door; which, after long ringing at a bell, hung high among the trees, came at last to be opened by two strange salvage men, very wicked-looking and unkempt. One held a flaring torch high over his head, by whose light I made out a black aisle-like avenue, formed of great yews meeting overhead,—a veritable yew-tree tunnel, exceedingly disquieting to weak minds. It was then bluntly notified to me that I should have to walk up, there being a part of the road, where a bridge had broken down, impassable for carriages. Accordingly my mails were got down, and shouldered by one of the salvage men, while the torch went on a good hit in front. After a dark and dispiriting journey of some ten or fifteen minutes, we suddenly emerged, to my great comfort, upon a grateful *plaisance*, garnished abundantly with

fountains, statues, cool bowers, sun-dials, and other such pleasant conceits, the moon shining tranquilly over all. Exceedingly refreshing was the prospect after that awful probation. There was a stately chateau before me, with its broad sloping roof pierced for many windows, with the usual high minaret, or bell-tower, most likely place of congregation for the rooks. Before I could take note of any thing else, a figure came running down the steps to meet me, and in a moment more I was heartily bidden welcome to Wolf's Castle.

An hour after I found myself bestowed before the fire, in a venerable oak-room, with a bottle of miraculous Burgundy between us. I was infinitely refreshed by that noble fluid. We were very glad to see each other, and got very pleasant over certain Brunnen experiences, when we had heard the chimneys at midnight, and later too.

"After all," said M. Dangeau, stirring the logs with his foot, "this is a dreary place to have brought you to; you will die of ennui in a week's time. Rude wild sports, such as the *chasse au sanglier*, mountain shooting, and a little music of an evening,—behold all the poor entertainment I and my sister have to offer you."

His sister! I felt a sudden chill,—a dim presentiment of coming dangers, of hidden shoals and quicksands. His sister! wherefore his sister? how came I not to hear of her before? I shook my head, mentally, and held that here my friend Dangeau had slightly protruded the cloven hoof.

Later on we took our way to the drawing-room,—a very wilderness of huhl and marqueterie and delicate colouring, over which a soft and subdued light, as of shaded *modérateurs*, was playing. Afar off on the sofa, I could see the presiding beauty of the wilderness; a being with dark round eyes and darker hair, with great gold pins and chains at the back, and a dress of lace and bright colours, after the Spanish fashion. As I stood before her, the large eyes roamed over me with a sort of haughty inquiry, which, to say the truth, rather confused me. A regular Spanish Circe, this sister of Dangeau, thought I; but nevertheless seated myself on the sofa in dangerous proximity to the sorceress.

"Angélique," said Dangeau, "thank the *bon Dieu* in your prayers to-night for sending us this stranger. We must make much of him, my sister. Though for that matter 'tis a crime to bring a Christian man to such a place. Wolf's Castle! call it rather Ghoul Palace!"

Circe looked up. "Do you think so badly of our old mansion? It is a fashion with my brother to abuse it—only a fashion."

Being thus appealed to, I of course was loud in praise of its beauties. There was one thing, however, I must protest against, and that was the awful avenue of yews.

"It is a horribly suicidal place," said Dangeau; "I am always expecting to see a woodcutter dangling from one of the branches. It should have been cut down years ago but for the Mère Angélique here." (He had got this name for her out of the old Jansenist controversy.)

"O, monsieur," said Circe, turning to me, "I love every one of those old yews, and should grieve were but a branch touched."

"As for that," said her brother, "we must have them thinned, and let in a little daylight. Am I not right?" he added, turning to me.

"Why—yes—that is," I said hesitatingly,—for they were both looking to me for an answer,—"that is, if mademoiselle—"

But mademoiselle's lip was now curling scornfully.

"You would have him sell them, perhaps, monsieur? They would bring money."

"No, sweet Angélique," said Dangeau coolly, "they are too old for that; but Antoine and his woodmen shall certainly visit them to-morrow."

Circe's eyes flashed out; but it seemed to me that I was the chief object of their wrath. "You would not be so cruel, so barbarous," said she at length; "I declare it would be a crime. And all because this stranger here (a quiver-

ing finger pointed me out to public scorn) would have you follow the cold-hearted principle of his nation! 'Sir, you would have us turn our heart, soul, affections, every thing, into gold! Ten thousand thanks!'"

Very much hurt at this unprovoked attack, I said, in a halting kind of fashion, that mademoiselle accused me very unjustly; that I had given no advice whatever on the subject; that M. Dangeau, I was sure, would bear me out in this.

"For Heaven's sake, Angélique," said Dangeau, evidently vexed at the turn matters were taking, "be not so wilful. You shall have your trees, spoiled child—there!"

But the Mère Angélique had swept indignantly from the room, the black mantilla streaming behind her. I looked after her in exceeding astonishment.

"She will come round in the morning," said her brother. "She has Spanish blood in her veins, and is a little wicked sometimes. *N'importe*, she is a noble creature; and so you will think when you know her better."

That night I had long before my eyes the figure of the wayward Spaniard, as she swept so haughtily past me. "A very scornful dame," I thought, as I settled myself to sleep, "but fair, passing fair! If one only knew how to tame her, I should not mind playing *Petruchio*. Suppose I try."

After breakfast next morning, I was sent forth to view the lions in the neighbourhood, that being a kind of duty incumbent on all strangers; the inhabitants taking great pride in their lions. These, of course, included a famous healing spring of the place; the fearful hollow where the man was killed last year; also the gap in the mountain-side with the curious and delightful echo. This duty performed, but utterly wearied out, I was permitted to return home, just in time to get ready for dinner.

Mademoiselle was not well enough to assist at that meal; and I cannot help fancying I should have found it more entertaining had she been present. There was one little incident during dinner that struck me as rather curious. Just when the wine and fruit were being set on, some one came in and whispered Dangeau; who thereupon rose up, and left the room hastily. I sat there, I suppose, for more than half an hour, and then thought I would go to the drawing-room, where I would find him, most likely; perhaps Mademoiselle Angélique. Passing through, I ran full against two conspirator-like men, with cloaks, who, in much confusion, stepped hastily aside into the shadow. What might be the business of those suspicious-looking gentry?

In the drawing-room I found the Mère Angélique alone, arrayed in the Spanish picturesque fashion, with perhaps a shade less colour in her cheeks. I had not forgotten the rather pointed manner in which I had been held up to scorn the night before; so I assumed a reserved and stately manner as I inquired after her health. She was well now, she answered coldly enough. I was sorry to hear she had been suffering from headache. It was gone; and now that I had sufficiently complied with the ceremonial of society, suppose we talked of something else. Had I seen her brother?

Here was a thrust for *Petruchio*! I should have hoped, I said, with a wounded manner, that the fact of M. Dangeau being my friend would interest me in the well-being of any of his family; but it was quite evident that mademoiselle was prejudiced against me.

"No," said she; "I should scarcely be so unreasonable. Recollect that I have the misfortune of knowing you no longer than a single day."

"Mademoiselle is very severe," I said.

"Very, no doubt. For not discovering your perfections in that short time. It would be possible, would it not? And yet I know what were your thoughts when you entered the room. You thought you would encourage me—perhaps patronise me—with that grand air. Ah, you islanders can be read like books!"

I was decidedly making a very poor figure. When was the taming à la *Petruchio* to begin? But though smarting under this treatment, I determined to keep my good-humour;

and so answered, with a *very* forced laugh, "Mademoiselle has wonderful penetration; but I hope to give her no more trouble, as I mean to remove myself without delay to my own wretched island."

The large eyes here settled on me for an instant; they were filled with compunction.

"Forgive," said she, putting out her hand. "I have been very malicious, and you so good-humoured. Let us be friends."

This was really magnanimous; so I struck my colours, and wisely forebore all Petruchian ideas. It is surprising what excellent friends we became. Later on, a guitar was brought out, and little ballads of a fervid tendency were chanted sweetly enough, and excited boundless enthusiasm among the audience.

It was late that night before I found myself in my room. Some way I did not feel sleepy; and the moon was shining so gloriously, that, instead of turning into bed, I threw the shutters wide open, and walked out upon the balcony, with a kind of veranda overhead. There I sat and cogitated and admired, and cogitated again,—not a little, I must confess, upon the Mère Angélique and her strange ways. Just to my right was the Yew-Tree Cave, as I had christened it, with a great black cloud hovering over the entrance. A very mysterious ill-looking region it seemed. "He was right," I said, "in calling this Ghoul Palace; most certainly the ghouls live down there." What particularly struck me, being something of a painter, were the strange and fanciful shapes the shadows had fallen into. For instance, hard by the mouth of the cave I made out the shape of a horse, with the high Spanish saddle and accoutrements all complete. I speculated long upon the horse, and tried hard to shape a rider for him out of the neighbouring shadow. At times, too, the breeze would stir the branches behind, and give the appearance of the shadow's moving its hind-leg. How singular, how curious, is nature in her vagaries!

Singular indeed! If what followed was to be accepted as one of her eccentricities; for at that moment a loud neighing seemed to come from the shadow. I was startled. It was plain there was a genuine *bonâ-fide* horse there. I was welcome to that fact. What to do next was now the question. It would be easy to rush blindly to the yard, and pull frantically at the alarm-bell. But a simpler and more judicious course would be to go to Dangeau's room, and bring him to view the mysterious quadruped. I was turning away on this errand, when I thought I heard the sounds of footsteps on the gravel below. The next instant I was looking cautiously over the balcony, and was much confounded at seeing a tall man in a cloak stealing across the lawn; no doubt making for the shadowy steed. "The plot is thickening," I thought to myself, looking after him through the trellis-work of the veranda; but there was more yet to come. For the caballero turned round suddenly, as if he had been called back, then hastily retraced his steps. (Intense excitement in the veranda.) Just as he reached the trees, I saw another figure glide out and join him; a woman's. Some Pessita or Nina, no doubt, belonging to the house, meeting her swain by moonlight alone. No mystery, after all! *Tenez, mon ami*, the caballero is moving, and both have come a little forward out of the shadow. The next moment Nina's (or Pessita's) face was turned up full to the moon.

I was utterly confounded; it was incredible! I would look again. It was no mistake. I knew those eyes and that white forehead too well. Hark! speaking, too: "Tomorrow night!" There, she is taking leave of the noble caballero. O, false, fleeting, perjured Mère Angélique!

Here was a discovery! This was the cold haughty creature that so brought me to book the night before; this was the proud Castilian dame who took so much to heart the impending fate of an old tree. Pessita, Nina, forsooth! honest respectable girls that never indulged in such pranks; though when their mistress does so, why not they? A man in a cloak! It was as good as a play. I was so

amused at the idea, that I flung my cigar into the grate, and threw myself with desperate violence upon the bed. I dreamt all night long of men with cloaks, who distressed me exceedingly; particularly a series of large men, who came one after the other, and sat on me for varying periods. I must confess that, on waking next morning, I felt very much mortified; for I fancied I had made a little way, especially after the reconciliation of the night before. But the man with the cloak had cured me of such delusions. I felt in a savage vein, and only wanted to feed fat my rage and vexation. Should I tax her with it openly; bring on a grand scena,—furious brother, tableau!—and leave the house in a storm? No; I would fright her guilty soul with strange allusion and mysterious hints. I would keep her on the rack; that was better. So I finished dressing in all haste, and went down to breakfast with a very grim countenance indeed.

Dangeau was waiting for me, with tidings that the Mère—mademoiselle, I mean—Angélique was too unwell to come down.

"My dear friend," said he, taking up the tea-pot, "when the excellent Père Methusalem reached that fine old age of his, believe me, he knew as little about the ways of women as you or I do. It is an awful riddle whereof no man hath the *mot*."

So present vengeance was snatched from me. But I could wait; it would come later. There was to have been *chasse au sanglier* to-day; but the rain streaming down in torrents, put that wholly out of the question. So the men with the queer horns round them went to their homes; and Dangeau and I, by the aid of pistol-shooting, lunching, lounging about, and such dreary devices, managed to prolong existence until dinner-time.

I felt a little nervous when I found myself in presence of the frail being so addicted to moonlight and men with cloaks. She was full of spirits, and welcomed me with great good-humour, which civility I acknowledged with an executioner's smile. We sat down to dinner; and after a proper interval, when the soup had been removed, I thought it time to fire the train.

"A miserable day, truly," I said; "and yet last night the moon was shining most poetically—towards one o'clock, that is."

"Why," said Dangeau, "you won't persuade us you were up at that hour."

"Pardon me, I was; and what is more, sat in the balcony for hours enjoying the romantic prospect. Shall I help mademoiselle?"

Mademoiselle was in great disorder, and had turned very pale. But she had her pride to help her; and when I next stole a glance, she was looking at me with scorn and defiance. It was impossible to break her spirit, yet I would try again. Certainly, I would try again.

"By the way, Dangeau, that reminds me. Have you any person that goes round of nights, any watcher?"

"Not I," said he. "Why do you ask?"

"Because,"—here I looked steadily at her,—"because it seemed to me that people were going about last night. I certainly heard voices."

She was paler now, but still sat unsubdued. I only felt more remorseless.

"You astonish me!" said Dangeau, who now struck me as being a little discomposed himself.

"If I had had only common curiosity," I went on, "I need only have looked over the balcony to have seen their faces. In fact,"—here I looked steadily at Mademoiselle Angélique,—"I thought I recognised one of the voices."

She was conquered at last, and dropped her eyes upon the table. Dangeau abruptly changed the conversation, and the rest of the meal was as dreary as could well be imagined. To say the truth, this constant warfare must have been wearying to all parties; in spite of all good intentions, I was only making myself disagreeable. The best thing, in short, was to depart on the first available excuse.

And yet I would have found it pleasant—perhaps too pleasant—if the Mère Angélique had been only a little tractable. But, then, last night; and the tryst for to-night. No; I had done with her for ever.

A cloud fell upon us for the rest of that evening, and the conversation grew spasmodic and disjointed, like the dropping fire of musketry. The "situation" was growing painful; and I must confess it was a relief when mademoiselle got up to retire for the night. Dangeau went out to fetch her candle, when she turned hastily to me, as if she had waited for the opportunity.

"Don't judge me harshly," she said in a haughty manner, as though issuing a command. "I may not speak to-night, but to-morrow I shall explain every thing."

I thought of all I had heard below the balcony, and I suppose an incredulous smile was upon my lips.

"Well, you disbelieve me," she said. "It is little matter. To-morrow you shall hear me. Good night."

It was about twelve o'clock when I shut myself in for the night; and my first thought was to throw open the window, and take up my post in the veranda. There was no moon out that night, but a heavy drizzling rain falling. "He will not come to-night," I said aloud, "that man with the cloak. But she will be waiting. Yes, he will come. The precious meeting will be. How lucky it was I found her out! I might have been taken in by her tricks and minauderies. And yet what eyes! what an appealing look she gave with them! I must have a heart of stone. I was cruel; certainly very cruel. But the man with the cloak!"

Soon after this soliloquy, I think I must have fallen asleep in my chair; for I recollect finding myself of a sudden, and the lamp burning very dimly indeed. On looking at my watch, I found it was close upon two. I pushed away my chair in disgust. I was always doing something absurd and extravagant.

I started up; for at that moment I heard a shot close by, in the direction of the dark avenue. Then came another and another. What could it all mean? I was out on the balcony in an instant, but could hear nothing more. Yes; I could hear something now—a dull hollow sound, coming nearer and nearer, as of horses tramping,—all, too, in the direction of Ghoul Avenue. Perhaps the ghouls were abroad to-night. It was drawing nearer. And suddenly from out the black mysterious cloud at the entrance came riding forth furiously a long train of horsemen, each leading a mule, and making straight for the hall-door. Two o'clock in the morning—shots—and a band of wild fellows at the door: was I dreaming? What would come next? Going out upon the gallery, I heard voices and strange confusion below, and ran down with all haste to the hall.

It was filled with people. All the servants and retainers of the house were there, together with strange-looking men in picturesque jackets and Spanish hats, all talking at the same time, and dragging in huge bales just unstrapped from the mules. And there, in this wild scene of confusion, directing, inspiring, and encouraging,—the guiding spirit of the whole,—was to be seen the Mère Angélique.

I knew what it all meant now, what was the significance of the mules, the packages, and the dark-looking men.

I gathered from voices near me that the gens-d'armes would be there in a moment, having only gone back for reinforcements. They had the worst of it in the Yew-tree Avenue. But she, the Mère Angélique, to be in such a place, mixed up with so desperate an enterprise!

I found myself beside her. She seemed filled with excitement.

"Ah!" said she, with a curious laugh, "you have come down at a strange moment. Well, perhaps it is for the best. You shall see what the brave contrabandistas can do. I know what you suspected last night; but you were wrong."

She stopped. There was a sound of horses tramping outside; a sign the enemy was at hand. Dangeau came running down stairs with a musket in his hand. He started on seeing me.

"Forgive me," said he, "for having brought you into this. But it is too late now for excuses; you had better go to your room."

"And Mademoiselle Angélique?"

"I can protect my sister," he said coldly. "Go while there is time."

As he spoke there came a loud knocking at the door, and voices were heard demanding admittance. The besiegers were at hand. I looked round for the Mère Angélique. She was standing on the stairs, with her black hair falling about her shoulders, looking like a heroine of old.

"Now, dear friends," said she, bringing them all round her with a wave of her snowy arm, "now is the hour. Fight like brave men as you are."

And with a shout they all flew past her upstairs to take post at windows and loopholes, or any spot that commanded the enemy. She was following them slowly, when she suddenly turned, and saw me looking after her with wonder and admiration.

"We are friends now," she said, with a bright smile I often thought of afterwards, "though very late."

I caught the hand that was extended to me. "I have many things," I said, "to beg forgiveness for; but let me prove my sorrow by this day doing battle for you."

Once more the knocking was repeated, together with, "Au nom du roi, ouvrez!"

"Quick," said I, "give me a sword!"

"What," she said, "fight with them? impossible! You would be fatally compromised."

"No matter, I shall protect you."

"Look out," said Dangeau, "they will force the door."

All in the hall rushed in that direction; and, catching the enthusiasm, I was hurrying after the rest, when suddenly I was seized from behind by strong arms, and was borne away in spite of all resistance. I just caught a glimpse of the white figure on the stairs waving an adieu to me; and that was the last I ever saw of the Mère Angélique.

Then was I led away violently towards the back of the house by long subterranean ways, as it seemed to me, and at last a trap-door was raised, and we found ourselves in a kind of cottage, which was hidden in a small wood. So had the Mère Angélique providently taken thought for my safety. The chateau was still in full view; they were defending it right gallantly. I walked on, sorrowfully enough, to the next village, some four miles off, where I found horses, and lost no time in placing myself beyond the reach of the constitutional authorities of *la belle France*.

* * * * *

Passing that way long after, I found the Château des Loups abandoned, and falling to ruin; and heard from the neighbours that Dangeau was dead, and his sister La Mère Angélique a nun in a convent at Seville. P. F.

NEW BOOKS.

Valisneria; a Midsummer-Day's Dream, by Mrs. Pfeiffer, is a charming fairy-tale, set in the framework of a human story, of which it both points the moral and is the chief ornament. Kate Mordaunt, the autobiographer, is the only child of wealthy parents. Her girlhood falls in those days when a young lady's first acquaintance with romance is through an introduction to *Sir Charles Grandison* or *Pamela*; and she attends her first ball with her head dressed in the style euphoniously entitled "a crop," and her feet in high-heeled and blue satin shoes. At her first ball, our heroine falls in love, and is fallen in love with at night by the very man for whom she had been designed,—a rare good fortune. Of course they are married without any difficulty, and retire to an Italian chateau, where they render themselves up entirely to the sweets of their new existence, till, as a natural consequence, the appetite sickens, and might soon die, but for the appearance of a cousin Mary, who,

wedded the same day with Kate, after a long and troublous attachment, comes to visit them with her husband. The anguish of the young wife, who sees the absorbing devotion of her six-months' bridegroom begin to fade, and her self-abasement as she recognises that her own wings no longer sustain her at the same height of passion, is brought to a crisis by the contrast of her cousin, in whom love but opens a deeper sympathy with the outside world, and is doubly precious as the sweetener of many cares. The excitement of Kate's overwrought feeling induces a trance of fever, in which she is admitted to the mysteries of Flower Land; where the fate of two spirits, who, allowing the one absorbing love to blind them to all natural duties, share in consequence a common grave, gives her a lesson,—which, on her awakening, she in turn teaches her husband,—that, in order the better to love one another, they must learn to love all mankind. Alas, why is it only in story-books that the lessons of life are learnt so easily? In this tale of Mrs. Pfeiffer's there are not a few pleasant touches, while the magic dream is graceful, piquant, and fairy-like. We confess to feel a stronger interest in the loves of Valis and Neria, his womanly little spirit-bride, than in those of their human prototypes.

Parables from Nature, by Mrs. Alfred Gatty, bear on the title-page their own recommendation; the book being announced as entering on its third edition. It has also undergone a German translation; no small honour, when we consider how much more we are given to borrow from our German neighbours the fanciful allegories which adorn rather than disguise the solid meaning beneath, than to be ourselves the creditors. These Parables, wherein the insect and floral world play the principal *dramatis personæ*, are gracefully written, and enclose many an admirable meaning. *Worlds not Realised* is by the same author, and contains within its little red cover more wisdom than many a folio volume. The fireside-talk of Lord D— with his children may be sometimes rather above the heads of the little ones,—no bad thing, by the way,—and many taller folk even will have no need to stoop in listening.

In *Curiosities of History*, by John Timbs, we recognise the faces of some once-familiar but forgotten facts, and have the pleasure of an introduction to many new ones. The widely-diffused popularity of Mr. Timbs' previous work, *Things not Generally Known*, will insure a welcome for this, his latest.

The Frithjof Saga, by Esalas Tegner, translated into English, in the original metres, by C. W. Heckethorn, of Basle. We opened with pleasure the volume thus somewhat pompously headed, but our anticipations were not a little clouded even by the preface. Therein the translator, with the self-eulogistic humility characteristic of prefaces generally, informs us, that though, in order to reproduce the smooth and polished verse of his author, he had frequently been obliged to have recourse to a somewhat free translation, he yet was of opinion that the spirit should not be sacrificed to words, and that an easy-flowing line, though not an exact counterpart of the words, or even, to a certain extent, of the meaning of the original, was preferable to a forced and rugged verse, which had nothing to recommend it but its being literal. A free translation truly! For the sake of the good bishop, already well known at English firesides through the translations of Longfellow, let us hope that the following quotations, culled at hazard from scores similar, are specimens of those lines in which Mr. Heckethorn has preferred "a smooth and flowing verse" to the words and meaning of the original. The hero, returning to his native land after a short absence, finds his home in ashes and his love forcibly carried off, the announcement of which melancholy tidings is prefaced by his aged foster-father in the following terms:

"My son," says Hilding, "too soon thou'lt hear
The story, at which thy heart won't cheer."

The consequences of which story being as Hilding had fore-

told, Frithjof determines to forsake his country, and bids it farewell in the following pathetic lines:

"O, pole, thou centre
And brow of earth,
No more I enter
My land of birth!
O, nurse of lions,
With pride I tell
One of thy scions
I'm! Now, farewell!"

A touching instance of the satisfaction with which a good old man reviews the deeds of his life when about to leave it, will be seen in the verse in which King Ring recalls his career with well-merited satisfaction in the following words:

"Often carousing,
Friends entertaining,
Peace I did cherish, of blessings so full;
Spirit arousing,
Called to campaigning,
Sonorous shield, I broke many a skull."

We should, in conclusion, say that the translator in his preface gives the following testimony, from high authority, to the purity of his English: "It would indeed be necessary to be informed that you are a foreigner, for your verses appear to have all the freedom and raciness of the most native idiom."

Sir Francis Palgrave's *History of Normandy and of England*, of which we have now two volumes, has been republished. Here we find chivalry and piracy, old monarchy and ever-new barbarism, in fellowship or in collision, as the case might be; Charles the Bald and Rollo the Invincible; civilisation retiring before the conquering squatter, the robber-colonist, who wrested from Charles the Simple the possession of Neustria, afterwards known as Normandy, and then claimed to hold it by Divine right. Here, in fact, we have the middle ages revived. We next see them in decay, as the Carolingian line gradually expires; while the Norman dukes grow in power and daring, until the establishment of Hugh Capet, and subsequently the landing in England of William the Conqueror. The history of Normandy is itself interesting, and full of extraordinary mutations. Lost to France for about three centuries, it was for awhile recovered to that kingdom by Philip Augustus from our own King John in 1204. In the fifteenth century, we find it again an English province, and so remaining for thirty years, when Henry VI. was obliged to yield what Henry V. had subdued. Notwithstanding, by a fiction, the province was still claimed by our country,—a fiction repeated in mock-solenity at all coronations of our monarchs down to that of George III. The Norman ruler illustrated the final struggle between Christianity and Paganism. William Longsword, the great Rollo's son, was the victim of this great spiritual encounter. Christian himself, he married a pagan princess, and otherwise betrayed much inconsistency and incoherence of character. His personal interests and pleasures appear to have been his only guides of conduct—the only criteria for his conscience and his judgment. A career like this found its end in assassination. William's son Richard reigned in his stead. He lived to acquire glory by repulsing a German invasion, and enforcing the King of France to guarantee his dominion. He was present in a prominent manner at the assembly of the Estates at Senlis, when Hugh Capet was selected and proclaimed king, in which revolution Richard had taken great interest.

Passing from this valuable contribution to our national history, we have next to record a similar worthy enterprise in the republication of Lord Bacon's works, which have been collected and edited by James Spedding, M.A., Robert Leslie Ellis, M.A., and Douglas Denon Heath, barrister-at-law. This promises, indeed, to be the most complete and beautiful edition ever issued of the works of our great inductive philosopher. The arrangement observed is altogether novel, and will present his writings in three divisions. First, the works in philosophy and general history; second, professional works on legal subjects; and third, occasional works, con-

sisting of letters, speeches, charges, tracts, state-papers, and other miscellaneous productions. The philosophical portion will consist of three volumes, of which the first, including the *Novum Organon* and the *De Augmentis Scientiarum*, has already appeared.

A highly valuable biographical work also has just seen the light. We allude to Sir W. Napier's *Life and Opinions of General Sir Charles James Napier, G.C.B.* This work is divided into "epochs" and "periods," an arrangement which has great chronological advantages. The biographer, in depicting the childhood of our hero, tells us that, "At ten years of age, having caught a fish when angling, he was surprised by the descent of a half-tamed eagle of great size and fierceness, which, floating down from a tree, settled upon his shoulders, covering him with its huge dark wings, and took the fish out of his hands. Far from being frightened, he pursued his sport, and on catching another fish, held it up, inviting the eagle to try again, at the same time menacing the formidable bird with the spear-end of the rod." Among much interesting matter, we meet with some fine details of the battle of Corunna, as witnessed by Sir Charles himself, and recorded at the time. They speak trumpet-tongued of the personal valour of Sir John Moore. Here, too, Napier himself was severely wounded, and made prisoner by the French. We find him afterwards associated with Lord Byron in the Greek war of independence; then in England, with the perils of Chartism to encounter; and then in India, where for the present we leave him fully employed.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

"WELLS OF FIRE AND RAIN-STORMS AT DISCRETION."

Such is the title under which a French writer in a public journal takes a novel view of the physical possibilities of this globe we inhabit.

Regarding volcanoes as the natural escape-valves for "the high-pressure gasometer" existing beneath the crust of the earth, and constantly kept full by the decomposition of water in the great retort of the under-cortex, he gravely proposes to bore artesian fire-wells, i. e. to tap the gas for fuel and illuminating purposes; and thus dispense with volcanoes as safety-valves, and with coal, coke, wood, turf, and every other kind of fuel.

"It is only necessary to pierce very deeply through the cuirass of the globe to reach, not the fire, but the subterranean gas; for the Chinese have reached it at the depth of 1033 mètres. We should be glad to see the water fail in the brick-wells of Passy as the brine failed in the wells of Outing-Kiao; for it was in deepening the bore to regain it that they found the gas, which has proved so valuable for the purpose of evaporating the water found in the bed of the rock-salt, gathered from more than two thousand holes in the space of ten leagues by four."

The writer goes on to deprecate the indignation of the coal-owners at the utter depreciation of their property; but sets up in compensation the enormous advantages accruing to the city of Paris, by the present made to it of a gratuitous source of light and heat in perpetuity; which, if the public press would only do its duty, would be accomplished by "voluntary contributions of a million of francs as capital outlay in this crusade against the empire of the gnomes and salamanders."

Moreover, it is just possible that the municipality of Paris may sell this gas at the rate of one centième the cubic mètre; in which case there will be a revenue of 800f. per minute, or 158,420,000f. per annum.

This is not all. The gas-fuel being so cheap, whenever the city of Paris shall feel the need of a rain-storm, the gas

will be allowed to escape into the air for a few minutes, and then be set on fire, by the means of an electrical kite, when resting over the city. "A beautiful rain, regulated to perfection by the gas-meter, would refresh the city, sprinkle the marsh-gardens and the promenades, while permitting the despatch of water-bearing vehicles to make mud in the streets of Algiers."

And then the writer bursts into a gush of patriotic enthusiasm on the noble national pride wherewith Paris city would present an artificial storm to stranger-princes coming to convince themselves that France had attained the power of giving rain and sunshine in physical as well as moral order.

Nothing apparently impossible in this. Manchester, they say, is very rainy by virtue of its large consumption of fuel; and a rain-storm is a common result of an earthquake. It is very likely that, had Vesuvius or Etna been located at Snowdon, various means of turning the heat to account would have been discovered, just as the Icelanders utilised the Geysers of Hecla in their monasteries. But why this should be peculiar to Paris we are at a loss to understand; and whether, if a rival bore were made at London, and thus turned off the Paris supply, it would be a *casus belli*, as between old mill-owners and new water-companies? Would it be turned to account in war-making? Would the French generals, in case of a future war, take advantage of a peculiar state of the winds to utterly drown Ireland with added moisture; or would the philosophers prevail, and turn the currents over the sands of the great African desert, to clothe them in verdure? Will it be practicable to set to work in Greenland with a sufficient number of jets to thaw the North Pole, and open the North-West Passage? Or would it not be better, instead of boring at Paris in the first instance, to lay on a main from Vesuvius and another from Etna direct to Toulon, for the supply of the arsenal, and then carry a branch to Paris? If the "crust" should be thinner at London than at Paris, it is clear that it might draw off the Paris supply, and lower the pressure, unless the gasometer be continuous all over the globe. We shall wait with impatience for the commencement of the *Puits d'Enfer* as the means of converting the Puits de Grenelle into a steam-boiler.

The only difficulty seems to be the bore. That accomplished, the French philosopher may say of earthquakes, *Nous avons changé tout cela.*

LORD ERLISTOUN.—A LOVE-STORY.

BY THE AUTHOR OF "THE HEAD OF THE FAMILY," "JOHN HALIFAX, GENTLEMAN," ETC.

VII.

"In a few months" had been Lord Erlistoun's date of return, indefinite as most of his dates were. During November, December, January, February, March, I brought his letters to Pleasant Row, at the usual uncertain intervals, and with the usual variable post-marks; then they paused.

It was again spring. I think there is a time of life—before we learn to recognise and acquiesce in the mysterious law of mutation in ourselves as in the external world—when the return of spring is intensely painful. Walking with her by the railings of budding suburban gardens, catching at street-corners bits of soft white and blue spring skies, I could trace in Jean's profile an expression that went to my heart.

Not a word she said; but often a knock at the door would make her start and tremble; and I noticed that she never went out or came in without leaving the careful message, "I shall be back at such and such an hour;" or the question, studiedly careless, "Has any body been?"

No! There never was any body; and she used to walk up-stairs slowly, wearily; then, after a few minutes, come out

"I AM HELPING MAMMA." BY S. ANDERSON.
[Society of British Artists.]

of her own room, with her bonnet off and her hair smooth, pale and quiet; that day and its chances were over.

I broke through my customary rule, and used to come up to Pleasant Row almost every evening. One day I got a holiday, and invited myself to dinner with them, laden with a nosegay, and "many happy returns of her birthday" to my cousin Jean.

The tears started involuntarily as she said, "Thank you, Mark; *you* remembered it." Alas, no one else.

I had formed my plan a little to lighten the heaviness of this day; I laid before her two green tickets inscribed with "Sacred Harmonic Society, Exeter Hall." It did one good to see the brightening of her eyes.

"To-night! and it is the 'Lobgesang' and 'Requiem.' O, Mark!"

"You'll go, then, madam? In an omnibus, with your bonnet on, and sit all in the crowd among the people; with an individual who doesn't understand music?"

"Cousin Mark!" She laughed, which was all I wanted.

So, cheerily out into the spring evening, then shutting the omnibus-door upon the sunset, and jolting into the gas-lit London streets, we went together, my cousin Jean and I. Her hand on my arm, her voice talking at my side, her bright look turned back every minute as I put her in front of me, and tried to keep her safe amid the waiting crowd; thankful to my heart that for ever such a little while I could have her to myself, and make her happy,—that this night, at least this hour, should be marked with a white stone.

I suppose nowhere in the world are music-meetings like those at Exeter Hall, counting musicians by hundreds and audience by thousands. Nowhere, probably, can a true music-lover feel keener pleasure than to be among that sea of heads, looking up the sloping hill of music-stands, gradually appropriated, till on the sweet discords of universal tuning

booms out the solid majestic C of the great organ. Then the murmurous human waves calm down; the feast begins.

Mendelssohn's "Hymn of Praise." Every body knows it,—its noble opening symphony, which musicians love; and the chorus, "*All that hath life and breath, sing to the Lord!*" Jean turned to me, her eyes beaming. The great music-flood came pouring out, rolling and rolling round us; with a happy sigh, she plunged into it, and was swallowed up and lost.

And to me, better than music it was to watch her absorbed listening face, as the soft notes of "*I waited for the Lord*" dropped like oil into her troubled heart, till after "*Watchman, will the night soon pass?*" burst the chorus, "*The night is departing, departing;*" then it brimmed over. Large tears gathered and fell, washing away the hard lines of pain, and leaving her dear face as peaceful as a child's. I knew it would do her good; and though the features quivered, and tears were dropping still, I saw that her spirit as well as her voice was joining in the line which makes the beginning and end of this "Lobgesang," "*All that hath life and breath, sing to the Lord!*"

I let the healing dew fall, and would not talk to her. In the interval I stood up, vaguely noticing the people round us: intelligent expressive countenances, as one mostly sees in an audience at Exeter Hall; then across the division to the ten-and-sixpenny "reserved" folk, who probably did not enjoy it near so much as we. It amused me to glance along row after row of those bright-coloured opera-cloaks and bare decked heads, and then think of the bent head beside me—the one among all those thousands, every hair of which, poor gray hairs and all, was more precious than gold to—
one other.

I think, I am sure, for that moment,—in its silence fuller than whole months of my usual life,—I had quite forgotten

Lord Erlistoun. It was a shock almost like seeing a ghost rise from the dead,—or, better simile, like the quiet Elysian-dwelling dead being suddenly confronted by an apparition of flesh and blood,—when out of these rows I saw a young man's tall head rise.

The height, the carriage, the impetuous toss back of the hair—I could not be deceived, it was Lord Erlistoun.

Lord Erlistoun here in England? going to concerts, sitting gaily among his own friends: his mother and two other ladies were with him. And what of Jean Dowglas?

I sat down doggedly, without a word or sign, placing myself so that when she turned to me she must turn from him. I need not; for she never stirred, only said, with a soft comfortable sigh,

"O, Mark, this has been such a happy birthday!"

That decided me. Come what would, this day, perhaps the last, should be hers—and mine.

So I sat by her, careful and close, and heard in a sort of dream Mozart's Mass for the Dead: the crash of the "Dies iræ," the "Rex tremendæ," the "Agnus Dei," with its heavenly close, like the shutting of the peaceful gates of the grave upon all human pain,—"*Domine nobis requiem.*"

Then the evening was over.

Very quietly, close arm-in-arm, Jean and I went out with the press. Just one minute, and I should have had her safe out in the street; but it was not to be.

There is a spot at the foot of the staircase, just where the two streams of audience mix. Here, direct face to face, we met Lord Erlistoun.

Smiling and talking, with that air of absorbed attention which it was his habit to bestow on any woman, as if she were to him for the time being the only woman in the world, with his handsome head stooping over, and his careful chivalric arm protecting the lady in his charge,—undoubtedly Lord Erlistoun.

He might have passed us by unperceived, but this lady's eyes were quicker. "Miss Dowglas, my dear Miss Dowglas!" cried the happy voice of Lady Emily Gage.

So, a pause and a greeting. It lasted only a moment; for there was a call of "Lady Erlistoun's carriage;" and they two were pressed onwards in the crowd, Jean and I being left together. She hung heavily on my arm. I said, "Shall we go home?"

"Yes."

We had scarcely got clear out into the Strand when some one touched me.

"Mr. Browne, where is she?"

Jean leant slightly forward; he sprang to her side and caught her hand.

"I must go home with you; where is your carriage?"

He had forgotten, doubtless, our changed fortunes. "It will be pleasanter walking. You must allow me." Taking firm possession of Jean's passive arm, he hurried her on, as if hardly knowing what he said or did.

"My mother is gone home with them. We are staying there; we have not been in England more than a day or two. This meeting is so strange, I can hardly believe it. Jean, O Jean!" with a sudden alarmed glance; for hitherto she had not uttered one word.

I called a vehicle; Lord Erlistoun almost lifted her into it. He sat opposite, holding both her hands, and gazing at her, till slowly the colour came back into her face. She took her hands gently away, saying, in a tremulous voice,

"You are welcome home."

We reached Pleasant Row. The narrow door and dark staircase, the little parlour with tea laid out, and the kettle singing on the fire, seemed considerably to surprise Lord Erlistoun. When my mother came forward in her widow's cap and altered look, he was more than surprised—moved.

"My dear Mrs. Browne, my dear Mrs. Browne," he kept saying, greeting her with a friendly sympathy that was even affectionate, and by its unexpectedness startled the dear old lady into a few natural tears.

"You find us sadly changed indeed, Lord Erlistoun."

"No, no, no," he repeated several times, replacing her in her arm-chair, and taking his seat by her with an air of earnest friendliness.

And Jean Dowglas? She stood looking on, forgotten for the moment; yet her pale face was all radiant. When at last Lord Erlistoun turned round in search of her she had gone. Several minutes, and various though brief explanations passed, before we heard her hand on the door.

Lord Erlistoun rose, took that hand and kissed it openly. "Jean, I have been hearing from Mrs. Browne a great deal which you never told me. In all those long good letters of yours, you never once told me."

Half-reproachfully he spoke; and again, with a sort of tender deference, kissed her passive hand.

Then, her manner being equally passive though composed, Jean took her place, and began to pour out tea.

Lord Erlistoun was certainly altered. Younger-looking if possible, as a man in his settled prime is often younger than an unsettled *blond* boy. His impetuosity was lessened, and there was about him a new atmosphere of repose, which in itself is strength. He talked as much as, or more than he used to do, chiefly of his travels; mentioning incidentally, in reply to a question of mine, that they had travelled home with the Bishop and Lady Emily, whom they met in Switzerland; but his conversation was on the whole general rather than personal, and interspersed with fits of gravity and silence.

Thus we all sat till very late; Lord Erlistoun and Jean side by side, like lovers. Yet I noticed not one lover-like whisper, not one glance of discontent at the presence of my mother and me. He was evidently satisfied with things as they were; content to have her sitting by him, himself unengrossed and unengrossing; testifying none of those exquisite sweet selfishnesses, that passionate personality of right, which mark the line, often so fine as to be all but imperceptible, between mere affection, however trusting and true, and love, absolute lordly love, that, giving all, requires all, and will have it, or nothing.

Did Jean see this; or seeing, feel it? Did she understand as a man would, that to any true lover it would have been torment to have to sit looking at her sweet face, two other faces looking on; that after this long parting, to part from her again, though but for twelve hours, with that quiet good-night, that easy lifting of her cool fingers to cool lips, would have been intolerable, impossible?

Where was all his passion gone to? *His* passion? Pshaw! A petty flame,

"That doth, in short, like paper set on fire,
Burn—and expire."

What had he known, this boy "in love," of the real passion, strong as silent, capable of any endurance, daunted by no opposition; like the fire in the heart of a mountain, out of its very fervency growing pure; patient under loss, yet content with no medium between total loss and total gain; exacting, perhaps, yet supplying all that it exacts,—the love that swallows up all other petty loves, and rises sole and complete, unalienated and unalienable, the love that a man ought to have for his wife?

Again, for the hundredth time, I was unjust to Lord Erlistoun. Once more, as I paced the solitary street, till the moon set behind the terrace opposite, and Jean's long-lin-gering candle went out in the attic-story of Pleasant Row, I judged hastily, uncharitably, as we always must when measuring other people by our own line and rule. I forgot—alas that we less seldom forget!—how Providence never makes any two trees to grow after one pattern, or any two leaves of the same tree exactly alike.

This was Friday, or rather Saturday, for I did not reach home till dawn. On Sunday morning, I rose and walked ten miles out into the country to a little church I knew, not appearing at Pleasant Row till evening.

Jean was out. They had called for her in the carriage,—

Lady Erlistoun and Lady Emily Gage; the latter was to return with her after dinner.

"Does Lady Emily know? I think she ought," I said to my mother, after a long pause.

"About Jean's engagement? Most likely. But I take no notice; Jean is so very particular."

"He was here yesterday?"

"O yes, and Lady Erlistoun likewise. They treat her with great respect, you see. Poor Jean, how I shall miss her when she is married—"

"Hush! I hear carriage-wheels."

They entered altogether,—Jean, Lady Emily, and Lord Erlistoun. The latter, of course, was invited by my mother to remain.

Lady Emily looked surprised, but said nothing; except afterwards, with a pretty childish wilfulness, observing, that "if he stayed, he was not to interrupt the thousand and one things she had to say to her dear Miss Dowglas."

No; it was plain the happy innocent creature did not know; Jean had not told her. I thought, was it right or wrong of Jean?

She gave them—Lord Erlistoun and Lady Emily—the guests' places at either corner of the old-fashioned sofa, and herself sat opposite, at the tea-table. The smile always ready to answer Lady Emily's, though exceedingly soft, was very grave, as if she were a great deal older than either of these.

A strange evening. I often now look back and wonder at it; at the mysterious combinations of fate that arise, not only among evil but good people, placing them in positions where right seems hardly distinguishable from wrong; where every step is thick with netted temptations, every word, even of kindness or affection, like the whipping of another with a rod of thorns.

Lord Erlistoun comported himself blamelessly. If by Lady Emily's artless admission it came out that they had been incessantly together, dreaming over art and poetry in Italian cities, learning great lessons and forming noble plans of life under the shadow of the Alps,—it also came out that this bond had hitherto never passed the limits of simple "friendship." Likewise that its foundation had evidently been in a certain other friend, whom, without naming, he said she resembled, but whom she in her humility never thought of identifying with that dear friend of her own, who used to talk to her "just like Lord Erlistoun."

"The noblest woman he ever knew," he said you were," whispered she with her arm round Jean's waist. "I might have guessed it could be none other than my own Jean Dowglas."

Jean kissed her. They were standing at the window, where, far over chimneys and roof-tops, spread the bright soft sky.

"What a lovely evening! Lord Erlistoun was saying on Friday morning, at Richmond, that he never remembered so beautiful a spring."

No? Not that at Lythwaite Hall? He had forgotten it. He was gazing, with an uneasy air, at the two faces, strongly contrasted, and yet bearing a shadowy likeness each to each, the woman's and the girl's.

Steadily, with the manner of one not startled into any very sudden conclusion, but to whom prevision has been already preparation, Jean looked down into those happy eyes.

"My child, at your age, and Lord Erlistoun's, every thing is, and ought to be, beautiful spring."

He heard, as she must have meant him to hear. Shortly afterwards, I noticed that he took occasion to sit by her side, and talk desultorily but pointedly to Miss Dowglas, and her alone. Jean—listened.

People think that they can be generous hypocrites, and hide their feelings marvellous well; but they cannot. All vain tenderness, conscience, pride of honour, fear of giving pain, cannot swaddle up a truth. Through some interstice of glance or action it will appear, naked and cold, yet a tangible living truth.

Thus, though he sat by her side, paid her every observance, though in every tone of his voice was unfeigned regard, even tenderness, as if conscious of some involuntary wrong, still, to one who knew what love is and is not, it became clear as daylight that Lord Erlistoun's present feeling for Jean Dowglas was no more that of two years since, than the wax simulacra he was now eloquently describing to her, set in church-niches and dressed up with flowers, compared with the warm breathing womanhood, adored yet beloved, of the saint that once had been.

His reverence, his esteem, remained; but his love had died. Of natural decay? or perhaps, at his age and with his temperament, of an equally natural change—substitution? If so, that fact had been carefully and honourably concealed. He was neither coxcomb nor brute; he was a gentleman. His attentions all that evening, without being marked, remained sole and undivided, and the object of them was undoubtedly Jean Dowglas.

Once or twice I saw Lady Emily glance at them both with a ffitting troubled suspicion, then smile her happy smile. No; it was not possible.

This young man, in the full glory of his youth, toned down by a maturer wisdom, learnt—no matter how or from whom; his career just opening before him—a career worthy of a true English nobleman; in his hands the triple power of rank, wealth, and education, and the will worthily to use all three. And Jean Dowglas, a woman past her prime,—youthful pleasures having ceased to be her pleasures,—having been beaten to and fro in the world, till even in her brightest moods her very enjoyment was grave, and you could trace at times a certain weariness of aspect, which betokened that the haven she sought was less happiness than rest.

No! Love might exist; or that lingering regard which assumed its name; but unity, that oneness of sympathy in life and life's aims, which alone makes marriage sacred or desirable, between these two was no longer possible.

Lady Emily departed; Lord Erlistoun put her in the carriage; then, instead of returning, asked me if I would walk with him for half-an-hour.

We strolled up the road together; at first in silence, then, as with a tacit right, he asked me various questions concerning our family and Jean. Finally, in a mainly serious way, he thanked me for my fulfilment of my "charge," and hoped I should ever remain his "good cousin."

Returning, we found Jean sitting by the newly-lit lamp, a book open before her: she had been reading to my mother the Evening Psalms. She looked up as we entered.

"Did you think I was gone?" said Lord Erlistoun.

"No; O no."

He sat down by her, and began to enter more fully into his plans about attempting the sole vocation which is readily open to young men in his position—politics. All his remarks were clear and good, evidently the result of much thought and a deep sense of responsibility for all the blessings of his lot.

"They are many," Jean said gently.

"Do you think so?" He sighed. "Yes, you are right. Surely you did not imagine I thought otherwise?"

"I should not be likely to imagine any thing unworthy of you."

"Thanks, thanks." He then asked if she approved of his plan of life? "I used to call you my conscience, you know. Are you satisfied?"

"I am satisfied."

Something in her manner struck him. He gave a quick glance at her; but under the shadow of the long thin hand, the mouth which spoke looked not less sweet than ordinary.

Still Lord Erlistoun seemed not quite at ease. He began to move about the parlour, taking up one or two things that ornamented the chimney-piece—small relics saved out of the wreck, which Jean had bought in at the sale.

"I think I remember this vase. It used to stand on the side-table at—"

"O, do not!" At the sharp pain of Jean's voice, he turned—took her hand.

"Did you think that I had forgotten Lythwaite?"

"No, no; you will not, you could not. If you wished ever so, you could not forget."

"I hope," he began; but Jean had recollected herself now.

"It hurts me to talk of Lythwaite. We will not do so any more."

"As you please."

And I saw that either she had removed her hand, or it had slipped from his. He did not attempt to take it again. They sat talking, side by side, as friend with friend, until the time that his carriage arrived.

Lingering about, still restless, he began turning over the books on Jean's little bookshelf.

"Ah! did I give you this? How fond I was of it once! Here is my mark too;" and he ran through the lines to himself, warming over them as he went. They were the very same he had repeated with such fervid passion the night before he left England. With the same intonation, yet different, he repeated them now, up to the same close:

"I knew it was the vision veiled from me
So many years; that it was—"

"Emily."

Again, for the second time, Jean had supplied the word, in a low steady voice, as conveying the simple statement of a fact; no more. Lord Erlistoun started violently, crimsoned up to his very brow, shut the book, and pushed it away, saying hurriedly:

"I must take to the blue-books now; I have done with poetry. Good night, all; good night, Jean."

INTERPRETATION OF EGYPTIAN HIEROGLYPHICS.

By NOEL HUMPHREYS,

AUTHOR OF "THE ORIGIN AND PROGRESS OF THE ART OF WRITING,"
"THE ILLUMINATED BOOKS OF THE MIDDLE AGES," ETC.

SOME have fancifully supposed that the first rude efforts in the art of writing were in the form of attempts to express the sounds of language in a manner analogous to that in which those of music are expressed, by a series of arbitrary signs. But it is now well understood, that the first steps in all systems of writing consisted, not in the representation of the *names* of ideas or things, but of a symbolism, or portraiture, of the ideas or things themselves.

Among the monumental records of the art of writing in its early stage of progress, those of Egypt are perhaps the most interesting, as being, through the medium of the Hebrew, the Phœnician, the Greek, and the Roman systems, the remote parent of our own. The term "hieroglyphic," in reference to the ancient writing of the Egyptians, was first applied by the Greeks, after their conquest of Egypt under Alexander the Great. It means literally, a thing carved or sculptured by a priest, from *hieros*, a priest, and *glypho*, to cut or carve.

This system of writing, invented by the priests of Egypt, or received by them from Æthiopia, was in use, in the highest state to which it ever attained, full seventeen centuries before the Christian era, as proved by existing monuments; and there is every reason to believe that it was known, though perhaps in a ruder form, as early as four thousand years before that epoch, full ten centuries earlier than the earliest recorded existence of a somewhat analogous system in China. As it is now found, the full hieroglyphic character consists of three principal classes of signs: the purely iconographic, or portrait-characters, which are simply pictures of the objects expressed; the symbolic, or those which have a figurative meaning; and the phonographic, or sound-expressing, signs, which were necessarily the last to be introduced, though in succeeding systems they have superseded all the others.

The first, or portrait, signs are such as

Altar.

Star.

Entrance to Temple.

Moon.

The Greeks termed this class of characters *MIMESIS*, as being a method of expressing an idea or thing by simple imitation.

Symbolical signs, were such as the palm-tree, where it was used to denote a *year*, because it was said to put forth one fresh branch each season; or an ostrich-feather, which was used to express *justice*, on account of the perfect equality of all the filaments, which is its peculiar characteristic. In a similarly symbolical manner, the *heavens* were represented

The Heavens.

Night.

by a *canopy*; and night, by the same canopy accompanied by stars. A kind of water-lily, generally considered the

Upper Egypt.

Lower Egypt.

lotus, represented upper Egypt; while the papyrus, growing in the marshes nearer the mouth of the Nile, represented the lower country.

Signs of this description, when of complicated outline, were sometimes abbreviated; thus, two arms, one with a shield and the other with a lance, represented a combat, as expressing both attack and defence. Colours were expressed by similar means; a hawk or onion represented *white*, or *whiteness*; and in conjunction with a crucible, *silver*. States of being, and qualities, were represented by following out the same system. Thus a calf in the act of running, combined with the sign of water, which consists in a representation of waves, mean together *thirst*; as a bee and honey-jar togo-

Thirst.

Sweetness.

ther mean *sweetness*. Such characters were generally accompanied by what is termed a determinative sign in the form of a half-circle, as in that of *sweetness*, to denote that the figures are to be taken in their symbolic, and not their positive sense. Even purely abstract ideas, such as the "soul" or "life," are expressed with equal clearness by acknowledged signs of great ingenuity. For instance, the *heart*, which was formerly considered to be the seat both of the soul and of the principle of life, was in this feeling used to represent them. There are many other details connected with hieroglyphic characters of this description which space will not permit us to describe in this place.

The third and latest class of characters in the hieroglyphic system is that consisting of signs representing *sounds* instead of *things*. We may easily imagine that this important addition, which became the immediate parent of a purely alphabetic system, arose out of the necessity of recording foreign names, which no native thing or image was able to express. Let us suppose a foreign name to be, for instance, *Achiro*, which would immediately suggest to the hieroglyphic scribe the use of the plant *Achi* for the representation of the first half of the name; and the sign of the sun, the name of which was *Ro*, or *Re*, for the remainder. The figure of a man placed close to those characters would be used as a determinative sign to show that those figures expressed the name of a man; or a globe to denote that of a country.

Thus we have the first rude step towards the notation of sound. Thenceforward the image of the plant Achi would represent, under certain circumstances, the sound of its name instead of itself, while the figure of the sun would represent the sound *ro*. A still farther modification, beyond which the Egyptians never advanced, reduced such signs to the representation of their initial sound only: thus the image of the plant Achi became A, and the figure of the sun R. But even after thus fluttering over the achievement of a pure phonetic, or sound-expressing, alphabet, the Egyptians never realised it; and their phonetic characters remained to the last encumbered with all the pictorial and symbolical paraphernalia of the entire hieroglyphic system.

As I have divided the hieroglyphic characters into three classes, so the method of their execution may likewise be described in three divisions. First, the full monumental hieroglyphics, in which each character is sculptured in all its completeness in the solid granite, and then richly coloured; or in less important positions, remaining without the last-named enrichment. Secondly, the linear hieroglyphic, as done in mere outline on papyrus, and also its further abbreviation known as the "hieratic"—a style used in sacerdotal affairs. Thirdly, the demotic, or popular style, which is simply a still further abbreviation of the hieratic manner reduced to what may be called a running-hand. This style, though it has the appearance of a series of arbitrary signs, resembling at a glance the writing of some of the modern nations of the East, still contains all the purely pictorial and symbolic elements as completely as the full hieroglyphics; though perhaps with a somewhat larger admixture of purely phonetic characters.

Notwithstanding the existence of several ancient works on the nature of Egyptian hieroglyphics, their meaning was utterly lost after the forced adoption of the Greek alphabet by the Egyptians when under the dominion of Rome; and notwithstanding the efforts of modern investigators, with the aid of the existing ancient works, or fragments of them, treating of the subject, no steps were made towards the interpretation of hieroglyphic writing till the invasion of Egypt by Napoleon led to the English occupation of the country, and the subsequent transport of the Rosetta stone to London. The bi-lingual inscription of that interesting monument,—that is, an Egyptian one, written both in full hieroglyphic and demotic, with a Greek translation beneath,—eventually led Dr. Young to make the first steps towards the recovery of the long-lost art of reading the hieroglyphic records of Egypt. Champollion had the honour of developing those first hints into a secure system, which has formed the basis of all subsequent advances; among which those achieved by our countryman, the indefatigable Samuel Bird, of the British Museum, are not the least remarkable.

The actual interpretation of two historical names will be all that can be attempted in our remaining space. When it was once ascertained that royal names were always enclosed within a shield, or cartouche, as it has been termed, and that in the later monuments they were always written in phonetic characters, they became the chief objects of attention; and it was thus that those of Berenice and Cleopatra were the first deciphered.

The sign expressing the title *ran* (royal) is a shield, which was doubtless the original cause of the names of princes being written within such a form. It was also soon discovered that the names of females were accompanied by the sign of an egg as well as the half-circle denoting a pro-

per name; so that the shield, the half-circle, and the egg at once gave the information that the combination of signs to which they were attached expressed the name of a queen or princess; and it only remained to decipher the phonetic characters in which it was written.

The name "Berenice" is to be read thus: the cartouche, with the egg and semicircle, denotes the name "queen." Within it, the upper character (1) is B, being found to re-

present that sound in many other cases. The *e* is omitted, as the vowels were in many Oriental systems subsequent

Berenice.

Cleopatra.

to that of Egypt. The next character (2) is the figure of a mouth, the name of which, in the Egyptian language, began with an *r* sound, and it thus became one of the permanent representatives of that intonation. The third character (3), omitting the second *e* like the first, represents water, the name of which had the initial sound of N. The fourth character is formed by two feathers, one of which would represent A, while in its double form, as in the present instance, the broader sound of the diphthong AI is expressed. The fifth character represents the sound of K, as the name was written in Greek. We have thus the name, supplying the three omitted *e*'s, BeReNAIKE, as pronounced by the Greeks.

In a similar manner, the name of "Cleopatra" may be read in its Greek form, as "Kleopatras." The upper character (1) is another means of representing the sound of K; that is to say, it represents another object, the name of which began with the K sound. These duplicate characters are termed homophones, as invariably expressing identical sounds. There are sometimes as many as ten different characters used in the same inscription to express the same sound or syllable; a method which was deemed a kind of luxury in the richest class of writing, just as a modern printer would vary an important title-page with different kinds of type. But to return to the name of Kleopatra. The first character is K. The second figure immediately below is that of a lion, the name of which being *Labo*, the initial sound furnishes L.

The *e*, as in Berenice, is omitted. The third sign represents the sound of O, and the fourth P; both being well-established characters in the accepted list of Egyptian phonetics. The fifth sign is the figure of an eagle, *Ahom* (the homophone of the feather), which furnishes the initial sound A. The sixth is a hand, in the Egyptian language, *tot*, the initial sound of which gives us the T; the mouth (7) gives us R, and the repeated eagle the final A. We have thus the complete word, which, with the cartouche or shield, and the determinative signs, the egg and half-circle, give us the name and title "Queen Kleopatra." Egyptian inscriptions are to be read from right to left, like the Hebrew and the early Greek; and when written in columns, the right-hand column is to be read first, beginning at the top.

CORRESPONDENCE.

MY DEAR YOUNG LADIES,—In a former letter I took the liberty of giving you a few practical hints for the preservation of your youthful attractions; I would now proceed to another portion of my subject, and give you the benefit of my experience as to the best means of making those attractions available. First of all, I must tell you that I suppose, as a matter of course, you desire to please; nay, I am quite sure you do—as who does not?—especially among the young

and handsome. And yet how varied are the *plans* adopted; and how signally unsuccessful they are frequently proved to be! Then the question arises, Why is it so? Why, it seems to me a very easy riddle to solve. Just this; because *they are plans*. Nothing in the world is so lovely, and (I regret to say it) so rare, as *simplicity*.

Simplicity in thought and deed; in word and in action, in dress and in bearing,—how graceful, how lovely, how fascinating it is! Because it is *real*, and not *artificial*; the *true thing*, and not the *seeming thing*; the true golden article, and not the trumpery gaud.

Suppose, instead of sermonising, we take a glance at a few home-scenes. Of course we have a convenient little fairy, who, with a touch of her magic wand, can introduce us into the penetralia without once betraying our presence. We are not confined to any particular sphere or class, so we may glance at several, though we generally prefer to limit our range within the compass of those known as the middle classes. Well now, our fairy, with a whisk of her wand, has drawn up the curtain, and we see a neat, pleasant-looking, little room opening into a pretty flower-garden, in which are seated several young ladies; their ages ranging from seventeen to three-and-twenty. They are sisters, and one of them is very lovely; her beauty is of that languid drooping kind which one generally associates with Eastern beauties reclining in kiosks, and amusing themselves with plucking the leaves off a rose, admiring their charms as reflected in a mirror, toying with a fan, or imbibing coffee.

Our lazy English beauty is turning over the leaves of a novel; we cannot call it reading. Her sisters, equally unoccupied, are by no means equally good-looking. They are all dressed in perfect good taste; for this is an art in which they are truly accomplished. There is no tight-lacing, no redundancy of ornament; it is graceful and elegant; only we as censors would greatly prefer a more simple and inexpensive toilette at so early an hour in the day. It is not a style of dress adapted for any active employment; but what do we say, *active employment*? Why, this vulgar idea evidently does not occur to them. Ah, perhaps they are very rich, and have many servants. Then, indeed, it may not be necessary.

The fairy gently lifts the veil a little higher. What! only two household-drudges to do the washing and every thing? Why it is almost one person's work to attend to Miss Emily's bell, and get up her lace-sleeves. And the poor mother sighs, and laments the fine education which has made her daughters worse than useless to her. She knows that they are ashamed of her, and her homely ways and homely virtues. Ah, dear mother, if your daughters had received a truly *fine* education, it would have taught them different things. This is the mere vulgar tinsel of education; it has failed to refine the heart, the mind, or the manners: for these manners we as censors totally repudiate. And the father,—the honest rugged father, who has toiled for this,—what does he say?

"How I wish my girls would come down at a regular hour and breakfast with me; there's no getting them down until between ten and eleven! How I wish they would be obliging and kind to me; they are very polite to strangers! And O, how I wish they would take a fancy and help their mother in the house, or attend to the garden! I'm sure they'd be the better for it, and so would the flowers." It is all in vain, dear sir. We are very sorry for you; but you should have enforced all this when they were younger.

But look, our busy fairy has changed the picture; we have ascended a step in the social scale. We see a very handsome and stately old lady, seated in a handsome and stately room, among a bevy of handsome and more or less stately daughters; an old benevolent-looking gentleman is reading a portion of Scripture and conducting the morning service; while quite at the further end of the room, ranged near the door, are several servants of various ages and both sexes. Stay, is not this a lovely picture? What can be

more charming than a beautiful family-group assembled to worship the Creator and Giver of Good? Every thing, too, is in such order: the simple attire of the pretty young ladies, the bright morning-sun streaming in over the elegantly arranged breakfast-table, bringing in a perfume from the rose-embowered casements; the very spaniel on the rug, with his sleepy eyes and silky ears, makes the picture more perfect. What does it lack? Every thing. There seems—I may be wrong—but there seems to be no heart-worship. The servants feel it: the ladies are turned from *them*; they hardly seem to be worshipping the same God; their manner is repellant, while their attitude and words are humble. But perhaps we judge too harshly. Let us see. It is evidently a well-regulated household; every thing is strictly *convened*. These young ladies have received most elaborate educations, one and all: this is very charming; they are highly accomplished; and reading, drawing, music, &c. fill up their morning-hours. After lunch they go out, and only after lunch. This is a rule, no irregularity. This is well, as far as it goes. Now what is to be done? Why, the stately old lady, accompanied by one of her daughters, goes to see old Betty C— and Mary D—, and exchange their tracts. Why, surely this is very right. Very right indeed; only old Betty C— and Mary D— evidently regard these visits as of necessity; there is still that terrible manner which takes away from the grace and loveliness of the act; and old Betty has seen the supercilious sneer passing over Miss Gertrude's face as she was detailing her sufferings from the rheumatism, and so poor old Betty was fain to stop short for very lack of sympathy. And just now a carriage full of ladies stops near the door, and Miss Gertrude's face is wreathed with bright smiles. Betty can hardly believe that it is the same; and gay words and ringing laughter make quite a pleasant sight and sound. But the carriage goes on, and Miss Gertrude is more sullen than ever; and so they go forth on their rounds. They make a haughty recognition to Mrs. F—, who, though perfectly lady-like and well-bred, is still only the wife of a merchant, and keeps neither livery-servants nor carriage. They stop, shake hands, and have quite a long chat with the Misses M—, who are their rival leaders of *ton*; and as soon as they are out of hearing ridicule their rosy faces and buoyant manners.

Well, we have no desire ourselves to be censorious: we wish this well-regulated and elegant household had more of *truth* than of *seeming*; and so we follow our fairy to another scene.

On a low couch, in an elegant drawing-room, is seated an old old lady; her face is pale and furrowed with age; but there is an unspeakable beauty in the calm radiance which seems to have found a resting-place in every feature. Some might say, "How beautiful she must have been when young!" Others, more wisely, would say, "How beautiful is her age!" It is early morning,—you know we love to see our friends early,—and our dear old friend is sitting before an open casement busily plying her knitting-needles. Occasionally she looks up to watch the light toil of her granddaughters, who, in simple morning costume, are tending their flowers. But look, one is bounding across the lawn to show dear grandmamma a beautiful fuchsia; for she knows grandmamma takes an interest in all their enjoyments, and especially loves flowers. We will just linger one moment to describe Annie; for she is every thing we would wish young ladies to be. She is, in fact, the very impersonation of elegant simplicity. No artificial graces, no affectation of superiority; gentle, loving, earnest, and true, and so cheerful withal. How thoughtful to minister to the comforts of her aged grandmother; how affectionately cheerful to her parents; how kind to her brothers and sisters! Annie is, in short, the light and brightness of her elegant home; ay more, were Annie still higher placed in the social scale, or were she in a far humbler sphere, I feel sure she would still be the centre, the life-spring, and the ornament thereof; for Annie's nature is *real*,—she is actuated by noble holy mo-

tives. You may believe in Annie, for she is true; and her truth is derived from a source wherein she herself can never be deceived.

Well, now it is past midday, and she is dressed. How graceful is her simple costume; it seems like a type of her own fair character! She is always quietly occupied, and there is a cheerful usefulness in all she does. See her on a Sabbath afternoon, gently teaching a few poor little ones to read and say their childish hymns; see her visiting the poor, and hear how they bless her! Yet not for this she does it; O no, her religion is not for show; unless, indeed, you say it is quietly shown in all the bright tenor of her lovely life. She does not eschew society, neither does she find her whole happiness and excitement therein. In a few short words, Annie is what thousands might be, what I trust many are—of a sweet and loving nature, trying to do good to all around her, *free from guile*;—what noble Florence Nightingale could not fail to have been, even if the crisis of the Crimean war had never made known to the wondering world her many many loving single-minded virtues.

M. H. D.

A NOSEGAY FOR DINNER.

It is very difficult to associate the idea of usefulness with flowers; and to boil a bouquet would seem the very height of absurdity. In our practical way, we do, as a nation, pretty well understand how to combine the beautiful and the useful; but we have not yet attained to the art of effecting a marriage between the terrace and the cabbage-garden, or of producing, in a way that shall gratify a refined taste, the simplest necessities of our life. Lady Violet looks lovely in her lace and feathers; but what a close, stifling, musty hole were they manufactured in! how the poor fingers that produced them tremble with weakness, fatigue, and the absence in them of a little healthy blood! Lady Violet doats on her garden; she has a thousand pretty pets, whose welfare the head-gardener must keep uppermost in his mind; but she takes no pride in potatoes,—does not know a cabbage except as a botanical curiosity, and we may be sure she *never* would listen to a proposal for making salads of dahlias. But it can be done, and thereby hangs an idea, namely, the union of the flower and kitchen garden, which heretofore have only glanced defiantly at each other over the fence or through the lattice that separates them; the flower-garden always standing on its pride, and frowning down the useful cabbages that are compelled to keep their plebeian countenances out of sight from the drawing-room windows.

It is quite true that, however neat the kitchen-garden may be kept, it is not highly attractive to eyes polite, and to a certain extent it must occupy the rear of the field, where the baggage and provisions are wont to be; but it would be something new, and might interest many who take a pleasure in gardening, to select such things for culture as would serve for ornament while growing, and for food when out.

Now this may be easily done; and where an amateur has a limited plot, and is struggling with himself, or maybe disputing with his wife whether it shall be wholly kitchen-ground or wholly flower-garden,—it being too small for both,—it will not be difficult for him to make such a selection of plants as will secure him many pretty ornaments, and every one of them acceptable vegetables for the table.

In the first place, we have many varieties of handsome gourds: the huge mammoth, the citrouille, the turban, the common vegetable marrow, and the common pumpkin. They are all noble ornaments, fit for the covering of a trellis, a bank, a wall, or to grow on poles as ornaments to the borders. A row of edible gourds on short stakes has a fine appearance. People grow the rock-gourd for ornament only because it is useless, but disdain the edible varieties, which in many cases are more showy, simply because they suggest ideas of that

much-abused dish, pumpkin-pie. Whoever wishes to commence such a scheme as we propose, may dash boldly into the gourd tribe, and secure a show of magnificent foliage and bloom, and many a delicate dish besides. They are half-hardy, and hence should be sown in pots indoors in March, and transplanted to the open ground in May. A hotbed or Waltonian case will afford means for raising any moderate number, and they will be found of great service in many ways. Every body knows that a vegetable marrow is a fine thing with roast beef; but every body does not know that *all* the edible gourds are as good, when boiled green, as the vegetable marrow. The common pumpkin affords a splendid dish when cooked in the same way; and the young green tops of every one of the edible varieties make the most delicious dish of greens that can be eaten, far surpassing in delicacy the marrow itself, and when cooked are of such a lovely green as to give a grace to the most sumptuous of tables.

Then, again, what a noble thing is the common scarlet-runner bean! Where, in the whole list of trailing plants, is there one that surpasses it in beauty? It is the poor man's vine; and were its pods poisonous, instead of being one of the finest vegetables in cultivation, it would be the rich man's pet, and have pretty bowers made for it in conservatories and windows. Another pretty thing among the climbers is the love-apple, which is frequently grown as a border-ornament; and as it rises in estimation as a curiosity, it goes down in an equal ratio as an excellent esculent. All the sorts are good, but the pear-shaped red are the prettiest and the best. Raised in heat at the end of March, and planted out in a warm aspect and a rich soil at the end of May, it will be found worthy of a well-kept flower-garden; and as its fruits come in abundance, they may be pickled green, or boiled as a table-vegetable; or, when ripe, converted into that very first-class relish, tomato-sauce—a rare addition to a well-browned cutlet.

Then there is another very noted and highly-prized trailer—the *Tropæolum*, or nasturtium. These are splendid things to cover a sloping bank or a trellis; they flower abundantly, and produce one of the best of domestic pickles. Those who prize this old favourite should no longer be content with the common orange-coloured kinds, which have loose flowers and straggling stems. The lovely dark *Tropæolum atrosanguineum* is as fine a thing as ever graced a trellis in a duke's garden; its habit is neat and robust, its blossoms beautifully formed and superbly coloured—some of them of so deep a tinge as to be nearly black; and among its "sports" occur many that are curiously marked. The seeds of this are just as good for pickling as those of the common kinds which we see in cottagers' gardens, the cultivation just as simple, and the effect charming. Its near relative, the *Tropæolum tuberosum*, which is a favourite window-flower, sold in thousands at Covent Garden, and elsewhere, is still more strictly edible; a fact which will no doubt be new to many who have hitherto looked upon it merely as a floral pet. The tubers of this variety may almost be said to serve as a substitute for the potato, except that it is more delicately flavoured than a potato, when boiled in a similar way; and they are produced abundantly, when the plant is grown in a light soil, and treated in every way the same as dahlias. Half-a-bushel of tubers of large size and fine flavour have been raised from five-and-twenty bulbs; so that, as an esculent, this pretty thing would pay for its culture, for every single bulb will cut up into half-a-dozen eyes; and they ripen long before the autumn frosts can do them harm.

Now that we have got amongst the plants that are every where recognised as ornamental, let me ask if you grow that old English favourite, Love-lies-bleeding. It is a pretty darling, easily cultivated, thrives every where, and is a first-rate vegetable for the table. The globe amaranth is another of the family equally useful; so is the cockscomb, a high-class florist's flower; and every one of these may be used in precisely the same way as spinach. A new ama-

ranth has lately been introduced to this country, and at many of the large establishments is regularly forced for my lord's table. It is the white-stemmed amaranth, *Amaranthus albus*, a native of India, and requires to be cultivated under glass with a moderate amount of heat. The necessary conditions are, a rich light soil, an ample supply of water, a moist atmosphere, and an average heat of 90° in the day-time, and from 70° to 75° at night. A common melon or cucumber bed and frame, made sufficiently high inside for the plants to attain eighteen inches in height, would be the most suitable place to grow them in. Much sunshine is not necessary; and with the proper heat they may be grown at any season of the year. It comes to perfection in five weeks from the time of sowing, and is therefore one of the quickest-growing esculents we have. It is used in two ways: in one the plants are pulled up and cut off just above the roots, the leaves are plucked and dressed like spinach, and in that way its flavour and wholesomeness are unquestionable; another mode is to trim the stems and side-branches, cut them into suitable lengths, and boil and serve in the same way as asparagus, when they form an elegant and inviting dish—succulent, tender, and in every sense "cut and come again." If simply cut over, the plants will push again, and afford a second crop.

Ladies are particularly fond of egg-plants; thousands of them are sold every summer by the florists; and very neat and curious things they look in the windows, with their waxen fruit, imitating the produce of the poultry-yard. Here is another first-class esculent, which our lady-readers may first admire and then boil in salt-and-water, and they will acknowledge themselves indebted to us for a useful hint. But instead of buying one or two at sixpence each, why should not the lover of a garden grow a few dozen to adorn a stage, a greenhouse-shelf, or to scatter about the window-sills in summer, for both ornament and use? As fast as the fruits arrive near maturity, they should be removed, and the plants will produce more, so that the beauty of the plants need not be sacrificed; for it is the rule every where throughout the vegetable kingdom, that the heaviest crop is obtained by a successive removal of the fruit just before it ripens. To grow them is easy enough. Raise the seedlings in a gentle heat in March or April, and pot them off, when large enough, in such soil as would be used for ordinary greenhouse-plants, and thereafter treat them as you would a fuchsia,—plenty of light, moderate moisture, and full exposure to the air, after the 1st of June. The variety known as *Solanum Melongena esculentum* is the best; it is prickly on the stem, the leaves, and the calyx.

The capsicum, is another of the same class of favourites,—indeed, we usually meet with potted egg-plants and capsicums together; but there is no reason why every lady who takes a pride in family-pickles should not have abundance of pickled capsicums and chili-vinegar without having to pay a high price for the fruits; for they may be grown just in the same way as the egg-plants, and are every where as much admired for the curious and gay appearance of their scarlet pods. All the sorts are good, and may be put out in the garden, either in open borders or in pots, after the first week in June; but the annual capsicum is the most useful for making chili-vinegar; and the French sort, known as the *Tomatum capsicum*, is the best to use green as a salad.

In old times stone crop was a favourite pot-herb; but it is too brisk in flavour for the present generation. The tree-primrose was another of the old esculents, and is adaptable to the modern palate, whether cropped above for a salad, or

OXALIS DEPPEI.

the roots boiled as a vegetable. Another, and the very choicest of salad-plants, is the *Oxalis Deppei*, a plant at present known only to those who grow choice greenhouse bulbs. It is an exceedingly pretty thing, well adapted for the open border, if planted out in a rich sandy loam in the middle of April, and well watered during dry weather. Its foliage is of that delicate character common to the oxalis tribe, and its flowers are of a cheerful pink, the calyx marked with yellow stripes. It is to be found in every bulb-catalogue as a high-class greenhouse or border bulb; and those who like it for its beauty will like it all the more when they have once tasted its green leaves in a salad, or its roots boiled and eaten with butter and eggs, or treated in the same way as asparagus. The leaves may also be used for putting into soup, like the common kinds of sorrel; they may be eaten with bread and butter, or boiled as we boil spinach, and in every case are delicate, refreshing, cooling, and antiscorbutic.

We began with remarks on dahlias and cabbages, and we shall close with a hint to dahlia-growers, that the petals

of the dahlia-blossoms are among the very best additions to a salad. The flavour is delicious, the wholesomeness not to be denied; and as a last garnish at the top of a dish of crisp green vegetables, what can be more beautiful than the petals of dahlias of two or three distinct colours,—red, white, and blue; enjoyment, elegance, and health combined!

In the matter of cabbage, it is not every where known that many of the most charming bouquets that glitter at the opera, or that lend a grace to the breakfast-table and boudoir-window, owe their finish to the very humble Brassicæ which Hodge gives to his pigs, and which pretty Lady Violet doats upon as a rare piece of vegetable colouring for winter use. Among the many varieties of cabbage, the common Scotch kale is given to strange freaks, and amongst its sports is a coloured variety known as variegated kale, brought to great perfection by the Messrs. Clarke, of 25 Bishopsgate Street. From a patch of a hundred seedlings of this variegated kind an artist might select at least five-and-twenty that would be worth a study; some of them come of a snow-white, the leaves crimped and curled like triple parsley, and edged with emerald green; and the texture of these white ones is similar to parchment. Others produce heads of the deepest purple, veined with black and carmine-red, and others, again, are of an intensely bright rose; and these rose-coloured leaves are in great request during winter by those who make up bouquets. They are used to surround the flowers; and with yellow and white blossoms within, the outside edging of closely-puckered rose-coloured cabbage-leaves has a very charming effect. Mr. Melville has effected great improvements in these coloured kales, and it is becoming fashionable to adorn the walks in wildernesses and shrubberies with selected specimens of them; their bright colours and elegant forms being very acceptable in winter, when so few gay tints are to be seen. They are grown in the same way as other varieties of kale, and are as hardy and as useful for the kitchen. This is a subject that might be extended vastly, perhaps to the formation of a complete list of ornamental edibles of various heights, and habits, and colours, sufficient of themselves to furnish any moderate garden-scene; but as our limits are already exhausted, we must beg the reader to accept the foregoing in the way of a suggestion rather than a performance completed, and leave it to the cultivator to turn to what use he will the several favourites that have been mentioned.

SHIRLEY HIBBERD.

SPECIMENS FROM RECENT EXHIBITIONS: NO. IX.

PAINTED BY F. SMALLFIELD.

THE DIVINING PEEL.

THE DIVINING PEEL.

By F. SMALLFIELD.

IN our review of the exhibition at the National Institution, we commended this excellent little picture. The rustic legend has it, that a fallen apple-paring will form, if fortune be favourable, the initial-letters of your sweetheart's name. Upon this small hint Mr. Smallfield has produced "The Divining Peel."

Apple-parings appear odd love-mediums, if we may use a phrase of the spirit-rappers; but upon consideration, we can recal several examples of their use in this way; we particularise one,—the Grecian legend of Acontius and Cydippe. Acontius was a youthful hunter of Cea, desperately in love with the matchless virgin Cydippe. Vain had been his prayers and pleadings to obtain her grace, till Love, that master of all subtlety, instructed him to write these words upon the rind of an apple:

"By Artemis, I will marry Acon!"

Armed with this hand-grenade, if we may so call it, he took his station in the temple of that goddess, and awaited the presence of Cydippe at a great festival. The reader should here be informed that a vow pronounced in this temple by the name of the presiding deity was absolutely indissoluble. Cydippe came, and the deft Acontius cast into the bosom of her robe the inscribed apple; thence taking it and reading the words, Cydippe became irrevocably bound to the ingenious lover whose subtlety made her delude herself.

L. J.

OUR LETTICE.

By ASHTON KER.

I SAID to Lettice, our sister Lettice,

While drooped and twinkled her lashes brown,

"Your man's a poor man, a cold and dour man,

There's many a better about our town."

She laughed securely: "He loves me purely;

A true heart's safer than smile or frown;

And nothing harms me when his heart warms me,

Let the world go up or the world go down."

"He comes of strangers; strangers are rangers,

Aye trusting nothing that's out of sight:

New folk may blame ye, or e'en defame ye,

A gown o'er-handled looks seldom white."

She raised serenely her eyelids queenly:

"My innocence is my whitest gown;

No ill tongue grieves me, while he believes me,

Whether the world goes up or down."

"Your man's a frail man,—was ne'er a hale man,

And sickness knocketh at many a door;

And death comes making bold hearts cower breaking:"

Our Lettice quivered, but once—no more.

"If Death should enter, smite to the centre

Our small home-palace, all crumbling down,

He will not blight us, nor disunite us:

Life bears Love's cross, death brings Love's crown."

AN ALGERIAN MARRIAGE.

By BESSIE R. PARKES.

ONE morning came a servant from Algiers to the suburb where I was residing, bearing the following printed missive (in French), my own name and the dates being alone filled up in writing:

"Je prie, Mademoiselle —, de me faire l'honneur de venir passer la soirée chez moi, le douze février 1857, pour assister à la célébration du mariage de ma fille, Mademoiselle la Princesse Nessissa Moustapha Pacha, qui aura lieu le douze février, à 9 heures du soir.

Recevez, mademoiselle, mes salutations bien distinguées."

Here followed an intricate scrawl, which I was informed stood for Moustapha. The above was dated 1 Rue de la Gazelle.

It seems that Moustapha, one of the chief Moors in Algiers, lost, at the French conquest, much of his property, which had been gradually restored to him. Being on this account anxious to keep on good terms with the Europeans, he had taken the resolution of inviting a large number of Algerine ladies to the marriage of his daughter, and in this invitation the English residing here for the winter were for the most part included. The young lady was said to be nineteen years of age, the bridegroom to be a wealthy proprietor of Blidah, and the affair to be on a scale of the highest Moorish magnificence.

At nine o'clock we started, and having ascended by the road which winds outside the walls to the top of the town, entered at the gate of the Casbah, and thence prepared to plunge into the tortuous labyrinth of narrow streets composing old Algiers.

Several Arabs were lounging about the neighbourhood, one of whom led us to the Rue de la Gazelle, in front of a large house, whose barred windows, half-modified according to French fashion, were brilliantly illuminated. Here we entered, and having shown our notes of invitation to two soldiers, who were appointed to watch that none but those invited gained admission, we ascended a flight of steep narrow stairs to the court. At the head of the court stood three Moorish gentlemen, one of whom was singularly handsome, and attired in a splendid manner. Round his head was wound a white shawl; he wore white stockings and white gloves, which gave a Parisian finish to his Oriental costume. He received the foreign ladies one after another with the politest of bows, and so ushered us into the court, in which was passing an extraordinary scene.

The top, usually open to the sky, was roofed over with flags, so that the whole formed a large square hall, on the floor of which sat half-a-dozen women playing with might and main upon tambours, and chanting in what seemed to me a very lugubrious manner. The combined noise was deafening, and swelled by the murmuring voices of more women than I ever saw assembled together in my life before. Every French lady in Algiers must have been there. They were crowded like bees about the cloisters of the court, both upper and lower, and thronged the small staircase in the corner to such a degree that it was nearly impossible to pass. As they one and all wore the very stiffest of crinoline petticoats, of course the confusion was greatly increased thereby. The rooms opening into the court were full of Moresques. In one on the ground-floor sat the bride, under a sort of tent, of which the curtains were down. I was told that her nearest female relatives were with her. Round the walls of the room sat a number of very aged women, some of whom, oppressed by the heat and the noise, had already gone to sleep, while others blinked lazily at the gazers with the peculiar indifference of aspect which none but an Oriental can assume.

In a room on the upper floor sat, or rather squatted, a large party of the bridegroom's female relatives. These ladies, attired in gorgeous coloured stuffs and silks, laden with gold-lace, and having on their heads the most magnificent diamond-tiaras of which feminine heart could conceive, were eating from a round table about a foot in height, on which negresses were placing one dish after another of meat and vegetables. Specimens of *la haute noblesse* though they were, they were all eating with their fingers, coolly turning over the separate pieces till they secured the morsels which pleased them best. Not one of them appeared to me beautiful. The Moorish female face is too coarse in its lines to please a European; and though the men have much nobility of aspect, this gives place in the women to a gentle ignorant expression, which hardly any natural gifts could elevate or spiritualise.

On the opposite side of the house was the nuptial chamber. The bed was richly decorated with gold em-

broidery, and a large party of French and English ladies were seated *à la Turque* upon the floors.

Where was the bridegroom all this while? He was said to be making merry with the male relatives and friends in another house; but about him we could obtain no very precise information. This establishment was entirely consecrated to the ladies.

Being asked if I had not seen the bride, and being assured that she was meant to be looked at, as the children say, I made my way towards her tent, where, the curtain being lifted by a French lady who was speaking to a Moresque, I saw seated in the shadow a pale immobile figure, which might have been made of wax, for any sign of life which it gave. Whether it was heat, or weariness, or a dislike to being married, or crossness at being looked at, it was impossible to say, so fathomless was the silence of expression. There was nothing particular about her dress, she not being as yet fully attired for the ceremony.

The drumming, the chanting, the talking, and the rustling went on without intermission till half-past ten, when the heat became so great that we decided to leave; but the most ample details of what followed were given to me by an English lady. After sitting patiently on the floor, counting cloven, twelve, one, two o'clock, as each hour successively slipped by,—the heat constantly increasing, and no refreshment but a little coffee and sweetmeat,—at half-past two in the morning was heard a redoubled cry upon the lower story, and lo, the happy bridegroom, with a few male friends, walked into the room. He was a young and very handsome Moor, and appeared somewhat nervous, as he well might be, having never seen his fair lady. The laws of Mahomet forbid all courtship; and though the lady sometimes peeps at her future out of a window, he never sees her till the hour of his marriage. All the negotiations are managed by the relatives, and by gossips, who are frequently bribed on both sides to give favourable reports. The male friends who formed his *cortège* having disappeared, the bridegroom seated himself on the divan, and conversed politely with the French guests, turning his eyes nervously every moment towards the door whence his future fate was to appear. Messages came to the effect that the bride was not dressed, and could not possibly be ready yet, &c., on which the unfortunate man took up his polite conversation once more. At last, at half-past three, arose a deafening noise of drums and chanting; it was in honour of the bride, who was coming up-stairs, surrounded by women who walked backwards before her, carrying candles. Almost carried by her companions, she came forward like a statue, closely veiled, and was borne into the room where the bridegroom, surrounded by the guests, awaited her. Her two young brothers were present, but no other creature of the male kind. The ceremony, simple enough, consisted in pouring a little orange-flower water into the hand of each, whence the other drank, as from a cup. The civil ceremony, before the Kadi, had been previously performed with all the necessary formalities. I am told that the bride coquetted, and would not allow her husband to drink from her hand, and that he gallantly possessed himself of the offending member, regarding her with an air of tenderness, which, under the circumstances, must have been sufficiently absurd. Her veil being then raised, he, for the first time, saw the face of his wife, which was spotted and spangled all over with gold-stars in honour of the occasion.

And so ended the wedding of the Princess Nefissa Moustapha Pacha.

Five days after the husband appeared at the governor's ball, and was overwhelmed with congratulations; as for the lady, nobody will ever hear any thing more of her. The Moresque, once married, disappears absolutely. The veiled figures which steal forth to the baths or the cemetery are absolutely without individuality; young or old, pretty or ugly, of high or low class, it is all the same, the veil effaces every distinction. It is held to be in the highest degree indecorous for a man to ask after the health of his neighbour's wife.

Dr. Foley, who is attached to the civil hospital, and who, in conjunction with a colleague, has published a valuable work on Algerine statistics up to 1848, observes, apropos of the extreme difficulty of procuring accurate returns of births, that the slightest detail of the domestic existence of the wife is hidden under a veil. At present, owing to the rigour of the French law of inheritances, the birth of sons is generally registered, that of daughters is constantly omitted; and the statistics of the female Mussulman population remain highly inaccurate.

When the French entered Algiers in 1830, it was stipulated, among the terms of capitulation, that no private house should be entered. Accordingly the invading army filed into the barracks appointed for their reception, leaving the domestic privacy of the town wholly untouched. Unless this had been acceded to, it would have been a war of extermination.

The Moors rarely avail themselves of the religious permission to marry more than one wife; but divorces are facile, and so numerous, that many Moresques now demand to be married under the French civil law, which allows no divorce, and secures a fixed position to the wife and her children. The position of a Moorish wife, divorced by the fantasy of her husband, and thrown upon a society in which a woman has next to no chances of gaining her bread, is truly pitiable. It is curious that the Jews in Algiers have likewise renounced their facility of divorce, and have taken to marrying under the French law.

Very slowly, but surely, is European civilisation progressing among this stationary people. The most obvious sign that strikes a traveller, in looking at the ghostly-veiled figures, which glide about like creatures of another world, is, that while at Blidah and Medeah the all-enshrining veil barely leaves an aperture by which *one* eye can avail to pick its owner's way over the rough roads of the interior, at Algiers, under the favour of contact with the ideas of a more enlightened people, a narrow slit under the forehead actually allows to the female pedestrian the inestimable advantage of both organs of vision.

THE BOURSE.

"The Purse" is literally the name of the handsome edifice which serves as the Stock Exchange of Paris. A building of the Corinthian order of architecture, as simple in its plan (a parallelogram) as elegant in its proportions, and isolated in a square that bears its name, is the national theatre where-in dramas of unrivalled interest, and farces of tragi-comic power, are acted daily, Sundays and fête-days excepted. As soon as the clock strikes one, the curtain rises on a multitudinous *dramatis personæ*, who are actors, audience, supernumeraries, directors, claqueurs, critics, either all in one, or respectively by turns. The Bourse is perhaps, at this moment, the most vital element of Parisian life. It is here that the heart of the Gallic capital throbs most energetically; and the reason is plain. Expensive habits strike deeper root from day to day amongst the upper ranks of French town-society; incomes that sufficed twenty years ago suffice no longer. The Luxury of the Age is as fair a topic now for poetical censors as it was two thousand years ago for the classical authors, from whose tirades grammar-schoolboys derive the inspiration of their weekly thems; and that able censors are not wanting, is proved by Messieurs Ponsard and Alexandre Dumas, Fils. See, for instance, *L'Honneur et l'Argent* and *La Bourse* of the former, and the *Question d'Argent* of the latter writer.

The men of the day, who float with the current, and think they must do as others do, are thus driven to search after the means both of increasing their revenues and of receiving them punctually when the sun rises on quarter-day. The public funds, the shares of railways, or of Crédits, Foncier and Mobilier, pay their interest when the clock strikes the hour that it is due, and never ask for delay nor for a lower-

ing of their rent, like backward farmers or mortgagees. Consequently the Bourse has put landed property out of fashion. Shares bought for five hundred francs each may suddenly run up to two thousand; but no estate, purchased at a fair price per acre, is likely thus to quadruple its value by any galvanic influence of prosperous times. Therefore mortgages are a drug; and the notary and the estate-agent have to abdicate their rank in the moneyed world to the stock-broker as to a superior potentate. Wealth is the one thing honoured in modern France; and every one rushes where wealth may be made the fastest. It matters not that there also fortunes may be dissipated as speedily as at the gaming-table; no heed is paid to the numerous unhappy wretches who grasp at great riches, only to fill their arms with destitution and ruin. The Bourse continues equally attractive to the prodigal spendthrift, to the respectable substantial family-man, to the ambitious aspirant, and to the sordid miser. The foregoing sentence is not a rhetorical flourish written for antithetical effect, but is really true. Mammon is the god before whom the Parisians of the present day fall down and worship. The Legislative Chambers may be shut, the churches interdicted, the theatres closed; no matter. If the Bourse be open, all the rest will count as nothing.

The Bourse absorbs the thoughts of thousands and thousands of men and women born with reasoning faculties, to the exclusion of other subjects of interest. It supplies never-failing allusions in every-day talk. A lady appears dressed with unusual splendour; of course the remark is made, that her husband must have succeeded in some lucky stroke at the Bourse. Young dandies are observed to be taciturn and grave; their thoughts are supposed to be occupied by the sorrows, not of love, but of speculation, whose course does not always run smooth. And the excuse is admitted as valid and good. Witticisms endless spring out of Boursean tendencies. Thus great bankers, like Monsieur Mirès, become proprietors of daily papers, in order to convert them into financial organs. Hence it has been suggested, that a good motto for the drop-scene of a drama inveighing against Bourse transactions would be, *Castigat ridendo, not mores, but Mirès*.

"What has become of Tournesou?" was asked by an inquiring friend. "I have not seen him in the Bourse today. Has he bolted?"

"He will not be here. He has lost—"

"On the Crédit Mobilier?"

"No;—his mother."

"Ah! In that case I need not be uneasy. We shall see him to-morrow."

Not long since, at an evening-party, every body was talking about Bourse affairs. The lady of the house on-treated them to change the subject, so the conversation modulated out of money into politics. An eloquent description was being given of the terrible cannonade of June 1848. In the midst of it (the description) an ex-captain of the National Guard sighed deeply, and sorrowfully said—

"Ah, if at that time I had but had the courage!"

The revolutionary orator continued his narrative of the battle of the Faubourg Saint-Antoine.

"O," repeated the retired hero, "if I had but had the courage then!"

"Well, tell us what you would have done, if you had had the courage. I suppose you would have charged the mob at the head of your company."

"No," replied the gallant officer; "that's not what I mean. If I had but had the courage, I should have bought up the Cinq at fifty-two francs, and I should now be twice or thrice a millionaire."

What is most extraordinary in Paris is, that little and low people mix themselves up with Bourse transactions quite as much as great and middle-class people. The *hausse* and the *baissse*, the rise and the fall, are to them what the excitements of the betting-shops are to the lowest order of London gamblers. French stock-jobbing is

of no rank. The waters of Pactolus are boldly fished by mighty adventurers, whose nets are strong enough to catch a whale; but the banks of the golden stream are likewise haunted by wretched anglers, whose tackle is no better than a willow-rod and a bent pin. Almost every Parisian passage witnesses every night some vulgar sanhedrim of financial nightmen, of rag-pickers of stray shares, of brokers of all sorts of monetary marine stores. Very lately there lived in Paris, in the Quartier Popincourt, a little man who was better known as Le Petit Vieillard than by his real name. He was forty-six years of age; but his grisly hair, his lean figure, his sordid dress, and his stooping shoulders, made him look much older than he really was. He occupied a small chamber in the topmost story of a house in the Rue Menilmontant, and appeared to be in a condition nearly approaching to want. He was constantly complaining to his neighbours, and expressing his fear of dying by starvation; for he said he had nothing to live on but a scanty income which a former friend of his family allowed him. Nevertheless, it was remarked that he took great interest in the fluctuations of the funds, and of the different shares quoted at the Bourse. Every evening he used to take his station close to a news-vender's stall, imploring either a chance purchaser or the newsman himself to favour him with a sight of the financial bulletin. One evening, the Petit Vieillard came home at seven o'clock, in a state of such agitation that the porter remarked it.

"What is the matter with you to-night, monsieur?" he asked.

"O," replied the other, "it is frightful! The public distress is on the increase. To-day there is a fall of fifty centimes (fivepence English)! What is to come of me in my old age, I should like to know?"

He mounted the staircase muttering and cursing. Next day he did not make his appearance as usual; and the porter, alarmed, knocked at his door. No answer. The commissaire of police was sent for; the apartment was forced open; the little old man had committed suicide by suffocation with charcoal-fumes. Great was the surprise of every one when on opening a drawer in an old commode, in expectation of finding the papers of the deceased, it turned out full of gold and silver coin. A minute search of the room was then made; and the result was the discovery of forty thousand francs, partly in specie, but principally in shares, vouchers, bills, and other negotiable papers.

It is evident that moralists, satirists, and even statesmen, may declaim in vain against a passion so ardent and wide-spread as that of Bourse speculation. They will be listened to as congregations listen to popular preachers: the preacher is followed, and so are the sins he denounces. To pretend to reform or correct frequenters of the Bourse, is an imitation of Xerxes' whipping the sea. You may stir up a little froth and foam with the tips of your rods; but the immense deep sea ebbs and flows as if nothing had happened. The Bourse is neither a corporate body, nor a national vice, nor a fashionable folly, whose abuses you can correct; it is a grand integral part of the social cosmos, like the atmosphere or the ocean which envelop our globe. It bears on its buoyant bosom the French world and its fortunes; into it all the affluent streams of riches discharge their contents, which are emptied therein, deposited at the bottom, or volatilised into vapour. If we only substitute gold for iron in the tale, the Bourse is the loadstone-mountain of the *Arabian Nights*. Whether the frailest skiff or the mightiest merchantman comes within the sphere of its attraction, every tiny nail or trifling napoleon, every heavy anchor or solid estate, flies away straight to the magic mass, leaving the unhappy Sinbad to float as best he may on his raft of boards, or the wreck of his fortune.

It is no more than just and candid to allow that the Bourse derives its attractive power quite as much from the spirit of the times as from the selfish propensities inherent in all mankind. We live, not in an imaginative, but in a business-like age. We have isthmuses to cut through, new-

discovered countries to clear and plant, antipodes to join together by a bond of steam, and continents to animate by a nervous and circulating system composed of railways and electric telegraphs. For all these enterprises capital is required; but as the petty capitals of individuals would be unavailing, aggregate capital must be recruited throughout the land to form by combination a resistless agent. The Bourse stimulates the innate avarice of the human heart; it draws from its secret hole the hidden hoard; it makes men gaze at their possible profits through a wondrous multiplying-glass, called Credit; and the Bourse is thus the parent and guardian of many a project of great public utility which could never have been accomplished without its support.

The Institution which we now call Bourse arose from the necessity of putting a restraint on the wild stock-jobbing which continued to exist after the fall of Law and his system. The government declared null and void all transactions that should be made without the intervention of persons commissioned by authority. A certain supervision was thus maintained over the excesses into which commercial gambling might rush. Such was the origin of the Parisian Bourse, and of the corporation of *Agents de Change*, or stockbrokers. The present edifice of the Bourse is a child of the first Revolution. Business having been transacted for a time in the church of the Petits-Pères, it was resolved, after the restoration of public worship, to instal the Bourse in a monumental building worthy of a great city; and capitalists and merchants were provisionally accommodated in the old scene-room of the Opera. The state possessed, in the heart of Paris, an immense extent of land, which had been occupied up to 1790 by the convent of the Filles de Saint-Thomas d'Aquin. A portion of this ground was granted to the city of Paris, on condition of building at their own expense a magnificent palace. The work was begun in virtue of an imperial decree, dated March 16th, 1808, and was not completed till 1827, although the inauguration took place on the 3d of November 1826. Its leading features are an external colonnade,—exceedingly lofty, but of so little depth as to afford no shelter against either sun or rain,—and a vast central hall, lighted from above, in which a want of air is always felt, and which at certain times of the year is gloomy and damp. Forgetting these defects, it is a magnificent temple, which the ancient Greeks might have worthily dedicated to Mercury,—their god of commerce and of theft.

Till the close of the past year, admission to this cathedral of speculation was gratuitous; but the throng was so enormous, and often so inconvenient, that it was determined to check it by demanding a franc from every visitor who should not compound for his admission by a monthly or an annual subscription. What the numbers must have been when there was no pecuniary impediment to their ingress may be guessed from the fact, that, after the impost, the various persons who came to take part in the operations of the great money-market amounted to upwards of 11,000 daily. Such an innovation could not be allowed to pass without its paying the tax of a joke.

"Why do they make you give a franc before they let you enter the Bourse?" asks a juvenile speculator of an older practitioner.

"Because they know that when they let you out of the Bourse you will not have a franc left to pay with."

You deliver, therefore, your twopenny toll, and you enter the vast area, which is paved with gold and with utter destitution and misery. You look around you, and exclaim, "What a fine palace is this!"—just the remark the sprat uttered when he turned up his eyes towards the roof of the whale's mouth. You may sow your money on that soil, and you may reap deceptions. A more pictorial, as well as a safer point of view, is the upper gallery, which runs round the grand hall. Thence you behold a noisy mixture of melodrama and pantomime, in the midst of which it would seem impossible to add up a milk-score, or to bargain for a dozen herrings. And yet millions may change hands in a minute or two, and a shoal of small fortunes may have deserted

their former owners, to assemble in the maw of some keen shark of the Bourse.

The central hall serves as the exchange both of merchandise and the public funds. It is open from one to five o'clock; but the sale of public effects is closed at three. At the further end of the grand hall an enclosure, called the Parquet, separated from the body of the building by a breast-high palisade, is reserved for the *agents de change*. In the centre of the Parquet is another circular enclosure, called the Corbeille, or basket, on which the *agents de change* lean in a ring, offering to each other the stock they have to sell. Every time that a sale *au comptant* alters the exchange, the price is audibly announced by a crier. At the end of every day's transactions the *agents de change* meet, to state, by their syndic, the course of stock and exchange. The *courtiers de commerce* assemble in like manner to fix the price-current of divers merchandise.

The *agents de change*, meeting in their Parquet, are principally occupied with transactions in the public funds, whether French or foreign, in railway shares, and in those of the bank, the *Crédit Mobilier*, and so on. They receive a commission of a quarter per cent. Their number is limited to sixty; but, in defiance of the law, they have almost all of them three or four associates, or partners, who are vulgarly called thirds or quarters of *agents de change*,—as we call a tailor the ninth part of a man. The price of their places (which are purchasable, like commissions in the English army) varies from six hundred thousand to a million francs, besides other heavy charges in the shape of caution-money, license, sureties, and similar imposts. Notwithstanding which, they handle such enormous sums, and their chances of profit are multiplied to such an extent, that they commonly make a clear income of a hundred thousand francs, and sometimes double that sum. In spite of their title, the Parisian *agents de change* have given up the negotiation of foreign bills of exchange, as well as the practical business of money-changing. The latter service is performed by shopkeeping *changeurs*, of whom there are thirty-five, designated by name and address in the *Annuaire de Commerce*.

The intermediaries recognised by the law for the commercial operations transacted at the Bourse are styled *courtiers*. There are courtiers of merchandise, courtiers of assurances, maritime courtiers for the freight of vessels, and *courtiers gourmets*, or epicurean courtiers, for wines. The first, who amount to sixty in number, have the sole right of conducting the purchase and sale of every species of merchandise at the Bourse, by auction or otherwise, and of officially announcing the price-current. But their office, which costs from sixty to eighty thousand francs, would bring in only a moderate income, if they stuck to their part as go-betweens in serious transactions; but the majority of these gentlemen disdainfully abandon to the *courtier marrons* all articles which are not subject to stock-jobbing, confining themselves to articles of speculation, such as *cau-de-vie*, soaps, and oils, since they reap from them a larger profit; in consequence of the perpetual recurrence of fictitious operations. The courtiers of assurance against loss at sea, of whom there are but eight, make larger and more legitimate profits; their place is therefore worth the sum of from a hundred to a hundred and twenty-five thousand francs, or from four to five thousand pounds sterling. The courtiers who confine themselves to the negotiation of *valeurs industrielles* usually charge an eighth per cent on the amount of the transactions effected, when the price of the *valeur* reaches five hundred francs. For inferior *valeurs* the charge is generally fifty centimes per *titre*; but business may be transacted for half-commission when it is important and continuous. All business done at the Bourse is generally settled after Bourse, that is, from three to five o'clock of the same day, or the next day before Bourse, from nine o'clock till noon.

The Parquet, the stage of the grand theatre of the Bourse, has also its side-scenes, or *coulisses*; whence the name of *coulissiers* given to the various speculators who

hang about the offskirts of the Parquet. A certain number of these are persons who manage to interfere in stock-jobbing transactions without being regularly commissioned to do so. They are designated *marrons*, or "chestnuts,"—the word also meaning "runaway slaves;" why, is not clear; the etymology is obscure. The *agents marrons* and the *courtiers marrons* owe their position entirely to their own intelligence, to their activity, and to the confidence of their clients, and also to the want which the public experiences of agents for the negotiation of property which is despised by those great personages the *agents de change*.

It will have been already perceived that the Bourse has expressions of its own, to which no French dictionary will give the clue. They are technical terms, whose meaning cannot be given in a short definition, but demand each a brief treatise to explain them. To buy *à découvert*, to buy *à prime*; to vary the same act by performing it *au comptant*, *à terme et ferme*, *à terme et à prime*; *lever sa prime*, *abandonner sa prime*, and other phrases for which there is no English equivalent, would require more space for their clear interpretation than can be allowed for the whole of this article; and they demand almost as much study for their thorough comprehension as is sufficient for passing a decent mathematical examination.

It is a characteristic detail of etiquette that the *agents de change*, within their Parquet, remain uncovered. They are at home, as it were, and are doing the honours of their mansion to the public. The courtiers, scattered over the area of the hall, are also uncovered; they make a point of observing the same politeness as the *agents de change*, and likewise, perhaps, of showing that they belong to the establishment. Another curious fact is, that till lately the Salic law was in force at the Bourse; ladies were excluded during business-hours, not only from the floor of the building, but even from the gallery of the first story, from which they were turned out by a former President of the Tribunal of Commerce. It required a no less powerful influence than that of the Revolution of February to effect the readmission of females to the gallery, which they boldly stormed as soon as the opportunity occurred, and have maintained firm possession of ever since.

E. S. DIXON.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable papers, except in cases where it may seem desirable to communicate with the writers.]

Nor long since the *Times* devoted an article to the fortunes of a certain ex-Chancellor of the Exchequer, who has risen to power from comparative obscurity. His position, like the well-known shield in the fable, was painted by the writer with a white obverse and a black reverse. On one side of the mental scutcheon were depicted the honours of him who achieves greatness by intellectual prowess. On the other side, we had the bar sinister, supposed by some to be appropriate to the man whose titles have been seized rather than inherited. On the one side we found a stigma; on the other a eulogy. Here the inscription ran, "Hero of Romance!" there, "Political Adventurer!"

These two epithets are quoted from the leading journal, which leaves its readers to judge as to the fitter appellation. The question is raised, moreover, not as to an individual (and we beg distinctly to state that we are not so arguing it), but as to a class. It is a question, not as to the moral bias which may either exalt or degrade mental endowments, but, as stated by the *Times*, the point at issue is simply the claim of intellectual power to respect.

We suppose that what the *Times*-leader assumes must be granted, that the man who wins for himself a position to which he was not born is still regarded by many as a mere "Adventurer or Intruder." Now we think it high

time that those who are the objects of such a belief should be more earnest than they have yet been for their own dignity, and that those who are the holders of such a belief should be left more utterly than they have yet been to the helplessness of their own dotage.

It is surely almost a truism to say, that no claim to social esteem can be so valid as that which resides in the personality of the claimant. The man who makes his way by force of character and mental power, holds his charter to respect under the very signature of Nature herself. She dubs him knight on the field of life because he has taken its strongholds by individual valour, and not with birth or fortune for allies. The influence he wields is of the noblest kind, because it rules the reason and the sympathy—"the immortal part"—of his fellows. Other kinds of influence are gained by accident; this springs from law. Other forms of honour may be conferred upon a man; this has its source within him. Other distinctions may cease at the will of the bestower; this is inalienable. Other titles may be inherited and transmitted; this admits not of succession. The man lives—there is a new power in the world; he dies—there is a void. Monstrous, then, is the logic which would pervert the plainest instincts of right, and distort the very credentials of honour into a reproach.

It has been ever true that the Mental Worker,—the poet, philosopher, theoretical politician, or man of science,—becomes ultimately the ruler of his kind; but in past ages the proofs of this fact were not direct and obvious, and disbelief in the fact itself was therefore excusable. It needed a keener insight than could fairly be demanded from average observers to perceive how the reasonings of a Bacon, the conceptions of moral truth embodied or uttered by a SHAKESPEARE, or the discoveries of a NEWTON,—the very life of popular thought, emotion, and knowledge,—gradually produced public opinion,—that opinion which dictates policies, collects or disbands armies, or regulates the social economy of empires. The connection in this respect between cause and effect, though real, was not self-evident; and men might be pardoned if they forgot the bard, the sage, or the discoverer in the minister or the general. The actor was on the scene, the dramatic mind of the world was behind it; and it was neither wonderful nor altogether censurable if the brilliant performer, whether in armour or ermine, bore away general homage to the exclusion of creative genius. In our days, however, no such grounds for misapprehension exist. With us the Thinker is directly the Actor. Not only do individual writers address the entire people, but the press, in the sense of journalism, wields an influence before undreamt of. Without disparagement to any other estate, it can scarcely be doubted that the dominant influence now resides with the Fourth Estate. It is the press which at once produces and reflects opinion; the press which, as a lever, moves the force that moves Cabinets; the press, embodying the national thought, that says, "Let there be war," and floating arsenals through the deep; the press that bears across an ocean the claim of desert or the cry of wrong,—that becomes a People's Almoner to its famishing defenders,—that bestows honours where a government has withheld them, or degrades them into toys if unworthily conferred,—that supplies the test for social worth and the spur to social progress,—that, like the heart of popular thought, pours its vital flood into every vein of the system, and receives back for its own life the healthful force which it has dispensed.

Nor, looked at in its final results, is the power of journalism less beneficent than extensive. Its sole agencies are those of fact and comment. It can prosper only by the assent of mankind. If it represents various, and sometimes partial, phases of truth, there is all the surer guarantee that every particular fact bearing upon the point at issue will be disclosed, and that no reasoning will prevail in the end except that which can enlist facts for its support. Yet this influence of journalism, so vast and so healthy, is but the obvious sign of the power which inheres in that great

literary class of which journalism forms but one section. In the entire body we would include intellectual labourers of every kind—the orator, who speaks his thought, as well as the poet, the novelist, or the essayist, who writes it.

The epithet "Adventurer," as applied to any member of the literary body, is simply the expression by privileged dullness of its hatred to intellectual superiority. It is the silly protest of ignorance against enlightenment—of material against spiritual forces—of fleeting shows against abiding truths—of the accidents of man against the Providence that has vested his chief dignity in his essence,—a delusion in barbarous times, a prejudice in more advanced ones, an absurdity and an impertinence in our own.

We dare not hope that society will ever be altogether delivered from the stupid and the vulgar. There will always, we suppose, be some minds incapable of estimating any honour except that which parades itself to the eye, or any wealth except that which rings upon a counter, or can be assigned by a deed. The verdict of such persons can little affect any question of real worth or greatness. Still, mental diseases, like material ones, are often contagious, and the virus engendered in what we may call the dark alleys of opinion must to some extent infect the air of its freer and nobler regions. It is a still more serious matter that the government of an enlightened empire should neglect the chief agents of its civilisation. We are indifferent enough to the establishment of orders of merit and the dispensing of red ribbons; but we think the period is fully come when literature, the noblest of secular professions, should have the external organisation of one, and when every literary man, exercising his calling uprightly, should feel that it is duly recognised and honoured by the Legislature. The details of such an organisation as we suggest it would be premature to enter upon; but we may say, that the foundation of an Inn of Literature, analogous to the Inns of Law, and requiring for membership simply the proofs of past literary labours, would probably be no difficult achievement.

Happily, however, the respect due to the mental producer (and we speak not here of the most illustrious examples of the class, but of those who in any degree minister to truth or refinement) is not ultimately dependent upon what governments can give or deny. Facts have a propensity to assert themselves; and in an age when the triumphs of mental power are so striking, the thinker cannot long be defrauded of his right social status. Only let him be true to himself, let him feel and declare that literature is his sole and sufficient title to respect,—a title that cannot be enhanced by his merely nominal connection with any other profession, that of the bar, for example,—and the great fact on which he relies will not fail him. The obscurity from which he may have emerged will become the measure of his own power to rise; the very title "Adventurer" will but denote his capacity to penetrate beyond the bounds of his original fortunes; every taunt will recoil upon those who utter it,—those whose chief and undeserved honour it is to share the same soil with men whom they have the folly to reproach, but not the ability to emulate.

LORD ERLISTOUN.—A LOVE-STORY.

BY THE AUTHOR OF "THE HEAD OF THE FAMILY," "JOHN HALIFAX, GENTLEMAN," ETC.

VIII.

LIFE, like love, has its passive as well as active phase; its season of white winter, when all external vitality ceases; and the utmost exercise of reason and faith is necessary to convince us that any vitality exists at all. We walk on, darkly and difficultly, as far as each day will carry us, no farther.

Thus, for many days, I know not how many, did I go to and fro between my lodgings and Mincing Lane, pleading press of business to excuse my absence, if excuse were needed, at Pleasant Row. In all there happening I was as powerless as if I abode at the North Pole. It was better to keep away.

But as firmly as I believe in the life of nature sleeping under the snow, so I believe, and did then, in the everlasting vitality of truth, of right, and what is in one sense lessor than, yet in its purest form identical with, both these—love. Yes, I believe in love. Despite its many counterfeits and alloys,—some so like it that for a time they may even pass current for it,—with all its defilements and defacements, too pitiable to be unpardonable, I doubt not that at the core of every honest man's and woman's heart lies that true coin, which, its value found, is a life's riches, and if never found, is yet a life's possession; being still pure gold, and stamped with the image and superscription of the Great King.

I had learnt much in these few years. I, Mark Browne, was no longer the Mark Browne whose rough-built castle in Spain crumbled down at a word or two lightly uttered under those chestnut-trees. It fell, as being baseless, it perhaps deserved to fall,—the sole architectural effort of a too-late developed youth; we men build differently. It seemed now as if I had never been thoroughly a man till the responsibility of those two dear women fell on me, making me conscious at once of my weakness and my strength.

Ay, my strength: *Magna est veritas, et prevalebit*, as runs the little Latin I ever had opportunity to learn. A man who has truth in himself must be very dim-sighted not to detect the true from the false in others, and he who can trust himself is not afraid to trust fate,—that is, Providence,—for all things.

My poor Jean! My sorely tossed, tempted, long-tried Jean, with neither father, brother, nor friend; not a heart, that she knew of, to lean against for council or rest! Sometimes I thought I would go to her; and then—No. My old doctrine, that silence may be lawful, hypocrisy never, took from me the possibility of being Jean's counsellor. Besides, all she did must be out of her own unbiased rectitude; all she had to suffer must necessarily be suffered alone.

O no, Jean, not alone! If people could tell, afterwards, the burdens they have borne for others, secretly and unasked; the days of sickening apprehension; the nights of sleepless care, when, rationally or irrationally, the mind recurs with a womanish dread to all possible and probable evils, and racks and strains itself, beating against the bounds of time, distance, or necessity, when it would give worlds only to arise and go!

At last, one evening, I snatched up my hat and went.

A carriage was driving from the door of Pleasant Row, I turned up the next street. There it passed me again, and I saw, leaning back in a thoughtfulness that was absolute melancholy, the sweet face of Lady Emily Gage. My cynical mood vanished in an abstract sort of pity for four persons who shall be nameless, but whose names, no doubt, ministering angels knew.

Lord Erlistoun I found sitting with my mother. Both started, and "thought it was Jean."

"Is Jean out alone, and in this pouring rain?"

"I can't help it, Mark; she will go. But I forget; you do not know she has taken fresh pupils, and works as hard as if all her life she intended to be a poor singing-mistress."

Lord Erlistoun sprang up, and went to the window. There he stood, till the knock at the door announced Jean.

Dripping, muddled, with a music-book under her arm; pale, with the harassed look that all teachers gradually get to wear,—she stood before this young man, by nature and education so keenly sensitive to external things. Perhaps she felt the something, the intangible something, which all his courteous kindness could not hide; she flushed up, and, with a word or two about "never taking cold," went to her room.

ANXIOUS SUSPENSE. BY P. R. MORRIS.
[Society of British Artists.]

Contrasts are good, but not such contrasts as these. Yet different from them, and more momentous, were other things that throughout the evening incessantly arose, making Jean start like one who, trying to walk steadily, is always treading here on a thorn and there a sharp stone,—those little things which involuntarily, unconsciously, are the betrayal of love's decay.

She took her work, Lord Erlistoun sitting by her idle. She asked him mechanically, where he had been all the week; and he answered, in a sort of apology, giving a long list of engagements "impossible to avoid."

"I did not mean that; I know you must be very much occupied. You were at the drawing-room on Thursday?"

"Yes, it was necessary; returning from abroad, and expecting soon to go back, on the diplomatic business I told you of."

Jean bent her head. "Lady Emily was there. I saw her dressed. She looked very beautiful, did she not?"

"I believe so."

Here my mother broke in with Lady Emily's message, and how, finding Lord Erlistoun here and Jean absent, she would not stay. "She was rather cross—if so sweet a creature could be cross. I fancy her gay life does not suit her;

she looks neither so well nor so happy as she did six months ago."

Lord Erlistoun's was a tell-tale countenance at best; it told cruel tales now, and Jean saw it. Hers expressed less of doubt or pain than infinite compassion; but when he looked up, he started as if he could not bear her eyes.

"What are you so busy about? You are always busy."

"I am correcting counter-point exercises of my pupils."

"Those pupils!" he repeated with irritation. "Mr. Browne, cannot you, whose influence here seems at least equal to my own, represent how unnecessary, how exceedingly unsuitable it is for Miss Dowglas to continue taking pupils?"

"She never had any until now, with the exception of Lady Emily Gage."

He was silent.

Jean said gently, "My pupils do me no harm, but good. To work is necessary to me. I have worked all my life; I believe it always will be so."

"What do you mean?"

"I will tell you another day."

"Jean—Miss Dowglas—I trust that you—"

"Hush, pray; I said another day."

Lord Erlistoun somewhat haughtily assented. For the rest of the evening he talked chiefly to my mother and me; scarcely to Jean at all. But just before leaving, he drew her a little aside.

"I have never, in the short time since my return, been able to have speech with you alone. May I call to-morrow; and in the mean time will you please me by accepting this?"

He placed on the third finger of her left hand a ring blazing with diamonds. Before she could speak, he was gone.

During the short time I remained after him, Jean sat where he had left her, the ring still flashing on her hand, which was now beginning to lose its shapely roundness, and grow thin and worn-looking, like an old woman's hand.

Next day, a carriage and pair astonished Mincing Lane; and in the dim office, which, at this time of the afternoon, I usually had all to myself, entered Lord Erlistoun. He was evidently in much agitation.

"Pardon me, I will not detain you two minutes; but I wished, before waiting upon your cousin, to ask you if you had in any way counselled or influenced this letter?"

My surprise was enough to testify my total ignorance.

"I thought so; I always knew you for a man of honour. You would suggest nothing that could compromise mine. Read this, and judge between us."

The idea of a third party judging between two lovers! I hesitated.

"I beg you to read it; you being in some sense her guardian, I claim this as my right."

A brief letter:

"MY DEAR FRIEND,

With this I return your ring. Some day I may take from you some other remembrance, as from a friend to a friend; but—no ring.

What I have for some time wished to say, I now think it better to write; namely, to ask you to remove from your mind any feeling of being engaged to me. The reasons which made me always resist any formal engagement on your part have proved just and right. You were always free; you remain free. I knew you better than you knew yourself, and I do not cast upon you the shadow of blame.

I believe that once you loved me dearly; that, in some degree, you will always love me; but not with the full and perfect love that you owe to your wife, or that alone I could consent to receive from my husband. Therefore I am determined to remain, as I shall be always,

Your sincere and affectionate friend,

JEAN DOWGLAS."

"Well, Mr. Browne?"

My heart beat horribly; yet I could not but answer him. "I am sure my cousin means what is here written, and that in the end it will be better thus for both."

"And by what right—But I forget, I requested your opinion. Now it is given, will you further favour me by accompanying me to Pleasant Row?"

The young man's state of mind was so obvious, that, as Jean's nearest and only friend, I resolved to go. We scarcely exchanged a word till we were in her presence.

Lord Erlistoun advanced haughtily. "Miss Dowglas, I intrude in consequence of a letter received;" but at sight of her he broke down. "Jean, what is your meaning? What have I done to offend you?"

"Nothing."

"Then explain yourself. I must have an explanation."

At his violence, Jean turned as white as marble; but once more, with the feeling higher than any thing that women call "proper pride," which had made her from the very commencement of his passion consider him and his good first, she controlled herself.

"Before I answer, answer me one word truly; I know you would never either say or act a falsehood. Do you love me as you did three years ago?"

He did not reply; he dared not.

"Then, whatever men's code of honour may be, in the sight of God it would be utter dishonour in you to marry me."

My mother left the room; I would have followed, but Lord Erlistoun called me back. "Stay. My honour, which this lady calls into question, requires that at this painful crisis I should have witnesses."

He then addressed Jean. "I am to understand that you consider my hand unworthy of your acceptance?"

"I did not say unworthy; but you know," steadily regarding him,—"you know well there does not now exist between you and me the only thing which makes marriage right or holy."

"What is that, if I may ask you to name it?"

"Love. Understand me, I never doubted your honour. I know you would marry me, be to me most faithful, tender, and kind; but that is not all; I must have love. No half-heart, charitably, generously given. My husband's whole heart, or none."

"Is it the old complaint of my 'faithless temperament'?" said Lord Erlistoun bitterly. "Because you were not my 'first love,' as the phrase is?"

"No, I am not so foolish. Most men's last love is safer than their first,—yours will be; but it *must* be the last. I had best tell you the whole truth." Jean spoke quickly and excitedly, as if out of long pent-up endurance. "You used to call me an angel; but I am a mere woman,—a very faulty woman too. I know what jealousy is; hard to bear in friendship, worse in love; but in marriage I could not bear it. It would madden me; it would make me wicked. Therefore, even for my own sake, I dare not marry you."

"Dare not?"

"Do not be angry; I blame you not; but let us not shut our eyes on the truth. Love can change, and does. Better in a lover, where it is still remediable and excusable, than in a husband, whom even to forgive would be in some measure to despise."

"You despise me? O, Jean!"

At the anguish of his tone her composure melted away in a moment.

"No, no! you could not help it; it was I that ought to have known: I was a woman, you were only a boy; it was natural—it was almost right you should change." She knelt down by the table where he leant, his hands before his face. "I did not mean to hurt you so. Nugent, Nugent!"

"You despise me," he repeated, "and you have reason, for I despise myself. No, Jean, I cannot tell you a falsehood; I do not love you—in that way."

Perhaps the truth, hitherto verbally unconfirmed, had not till then come upon her in its total irrevocableness, for Jean slightly shivered. Lord Erlistoun went on passionately:

"I know not how it came about; I do not know myself at all; but it is so. For months I have been a coward and a hypocrite; every day has been a torment to me. To escape, I was going to make myself a hypocrite for life. Jean, don't despise me—pity me."

"I do."

"Will you help me?"

"I will."

She separated, and took fast hold of one of his clenched hands,—a lover's hand no longer; then looking round, with a faint movement of eye and lip, she dismissed me from the room.

Once the bell rang to send away Lord Erlistoun's carriage; and once afterwards Jean came to the door, and called my mother.

"I want a piece of bread and a glass of wine."

When we came in, Jean was standing by him while he ate and drank this last sacrament of parting. He needed it; for he was ghastly pale, and his hands shook like a person in ague. What he had told her must have cost him much; but evidently every thing was told.

Jean spoke. "Aunt, and cousin Mark, Lord Erlistoun wishes to bid you good-by. He is going abroad again immediately. When he returns, I have told him he will find us all his faithful friends," with unmistakable emphasis on the word. No further explanation.

He staid a little longer, resting his head back on the sofa, while Jean sat watching him. O, what a look it was! Scarcely of love, but of inexpressible tenderness, like a mother's over a suffering child. Passion burns out; personal attachment dies out; the desire of individual appropriation altogether vanishes away; but I believe this tenderness over any thing once loved to be wholly indestructible. Shame upon any man or woman who would wish otherwise! for to kill it, would be to kill the belief in love itself, to doubt which is the very death of the soul.

Lord Erlistoun rose. Jean said she would walk with him a little way, and he sat down again without opposition. He seemed totally guided by her. Only once, as if some irritating thought would not be controlled, I heard him whisper,

"It is useless; I cannot consent. You must not tell her."

"I must; it is only right. Nothing is so fatal in love as concealment. I must tell her every thing."

"Jean!"

"You are not afraid of me? Of me, Nugent?"

At that, the only reproach she had ever made, he yielded utterly. "Only write to me. This suspense will be intolerable until you do."

"I will write—once."

"Not again?"

"Not again."

He looked up; just a little he saw—if a man ever could see into a woman's heart.

"One word. Say you are not unhappy?"

Jean paused a moment, then replied: "I believe it is not the will of God that any one of his creatures should have the power of making another permanently unhappy."

"And you forgive me?"

Jean stooped over him as he sat, and kissed him on the forehead; the first kiss she ever gave him, and the last.

They went out of the house together, walking slowly arm-in-arm along the quiet streets, where lamps were being lit in snug parlours, children fetched in from play to bed, and hard-working husbands waited for, late coming home.

There is here a burying-ground, surrounded with houses now, but then only shut in by a railing, through which one could catch both sight and scent of the flowers which grew luxuriantly over and about, bordering the graves. At the corner of this railing, I saw Jean Dowglas and Lord Erlistoun pause, stand a minute as if with clasped hands, then their ways parted. He went on towards town; she walked slowly back without turning.

No; on the pathway which with her here ended, we return no more!

One heart at least bled for thee, Jean,—my Jean.

At safe distance, I followed her to Pleasant Row; but she passed the door. Thence, up streets and down streets, with a pace sometimes rapid, sometimes heavy and slow, along the familiar places that had been, as I once called them, her "Holy Land," keeping out of her sight, but never losing sight of her, I followed my cousin, Jean Dowglas.

At last she went back to the corner of the cemetery, the spot where Lord Erlistoun had left her. There for many minutes she stood, leaning on the railing, looking across over the graves.

I let her stand. Better that she should bury her dead out of her sight. Who is there among us that has not at some time done likewise? Who is there that in all this busy world does not own some graves?

At length I crossed over, and touched her on the arm.

"Jean."

"O, Mark, take me home, take me home!"

I took her home.

A PATTERN OF PARTNERSHIP.

A NEW edition has been lately published of a delightful and at the same time a wonderful work. There are books,—and this is one,—which puzzle the reader to guess how they came into the world; they are so full of novel matter, gleaned from no one knows where, in such an accumulated mass, that they cannot have been written on ordinary paper with ordinary pen and ink. Human fingers would be incompetent to execute the task of so committing them to writing, not to mention composition, arrangement, and correction. The volumes must have grown from a stem like gourds, or have arrived unexpectedly by night by the Parcels Delivery Company, as valentines and babies do; or their authors must have found them lying in a bundle by the roadside at dusk, or in an old family-chest in a dark cobwebby closet. We can conceive the *printing* of the most ponderous treatises, because printing is the work of a multitude of hands; but we have a difficulty in imagining their being transcribed by the sole agency of four fingers and a thumb. Hence probably arises the popular notion, that successful authorship is an easy achievement; that all that is wanted is the talent, the gift, the genius; that with that a young man, not troubling himself with study or mental labour, has only to sit down before his open writing-case to dash off a thing which shall establish his fame, while picking his teeth and humming the last new ballad in the interval between breakfast and luncheon time. "It is like finding so much money in the street," observed a lady, in allusion to gentlemen who butter their bread by periodical essay-writing. But the late reissue, in a much cheaper form, of our good old friend Kirby and Spence's *Introduction to Entomology* tends to dispel the pleasing delusion, that great literary performances can be completed without diligent care and industry. I use the epithet "diligent" in its original sense of "loving;" a man must love his work to do it well.

This seventh edition contains an Appendix relative to the origin and progress of the work, which was the labour of the leisure-hours of six years. It is well worth the consideration of aspirants in letters. The authors, in following the plan which they had chalked out for themselves, had to wade through piles of volumes, often to glean scarcely more than a single fact; they had to undertake numerous anatomical and technological investigations; they had to keep up a long correspondence, almost as bulky as the entire work; and their profit, if by great chance there should be any, could not be expected to repay even the cost of the books required for reference during their undertaking. A rather up-hill prospect that!

As the joint writers resided at a distance,—Mr. Kirby at Barham in Suffolk, and Mr. Spence at Drypool, near Hull,—they could only continue their progress by the interchange of letters, which have fortunately been preserved. Those from Spence to Kirby amount to between four and five hundred; those from Kirby to Spence are nearly as many. About half of the two series of letters refer almost wholly and entirely to entomology and "our book;" but a great part of the remainder, exchanged during Spence's eight years' travels and residence on the Continent, and after his return to England, are more occupied with accounts of tours and of domestic matters. The entomological letters, in those days of dear postage, were mostly written on sheets of large folio paper, so closely, that each would equal a printed sheet of sixteen pages of ordinary type. These they called their "first-rates," or sometimes "seventy-fours," the few on ordinary paper being "frigates;" but there is one from Mr. Kirby, which he calls the "Royal Harry," written on a sheet nearly the size of the *Times* supplement, and closely filled on three pages, which he begins and concludes thus: "My dear Friend,—This doubtless will be the greatest rarity in the epistolary way that you ever received. I hope it will long be kept among your *keipijia*, and be shown, not as a black, but as a black-and-white swan, which, since the discovery

of the former in N. S. W., must be held to be the true *rara avis*. . . . And now, having manned this *Royal Harry* with as large a complement of men as I could muster, I shall launch her. I question whether one of equal tonnage before crossed the Humber." With the love of order which Mr. Kirby's study of natural history had so deeply implanted in him, all Spence's letters were folded across the sheet, so as to be of the same breadth, of about two inches, and have an index on the back of each referring to the various subjects (often from fifteen to twenty) of the letter, which he marked in it by large figures in brackets, so as readily to catch the eye; and they were then docketed with red tape into a packet for each year.

The mere letter-writing connected with their work was enough to employ a couple of private secretaries; and that, be it remembered, with great uncertainty of success, as far as a favourable reception by the public was concerned, and with a great prospect of pecuniary loss. The friendship between the collaborators was commenced by, and founded on, their mutual power of painstaking in behalf of each other. With each, diligence was the test of worth. Mr. Spence made the first step towards acquaintance by sending, through the hands of a common friend, a box of insects, rare and now, with a long clear business-letter respecting them, to Kirby. Kirby replied in the same style, with commentaries on every head (amounting to eighteen) of this introductory epistle, besides explanatory sentences and friendly expressions. And so the correspondents went on, fearless of hard work. One of Spence's letters, accompanying two hundred and fourteen insects, with remarks on them, and filling sixteen ordinary folio pages, received an answer occupying almost as many. These letters, being purely scientific, have no interest for the general reader, and not much for the entomologist now, seeing that the points so earnestly discussed, as to identity of species and so on, have been mostly long since settled. Still, the reader will bear in mind the trouble it must have cost at the time to decide uncertain questions and ascertain the tendency of dubious facts. The persons who now walk at their ease in the commodious streets of an American city, ought not to forget the obligations they are under to the energetic heroes who felled the forest and made firm the swamp. But similar efforts must be made for advancing science as well as for extending the material comforts of civilised life. All honour, therefore, to the pioneers of knowledge, to the backwoodsmen of intelligence, to the colonists on wastes of ignorance, to the mariners who steer boldly across oceans of doubt.

Long letters led to long visits. Spence soon spent ten delightful days at Barham, five or six of which were devoted to a minute examination together of Kirby's Coleoptera, species by species. Then there were entomological excursions to find new insects, which yielded various results, like other hunts, till the time came to separate. But both were ever on the watch for insect prey. One curious insect, *Oxytelus tricornis*, was at last captured one morning upon Mrs. Kirby's chemisette, "as the ladies denominate their neck-handkerchief," as she was walking before breakfast in Dr. Sutton's garden, in the Lower Close, Norwich. In vain Kirby laid traps of white linen for it afterwards; he could not meet with a second, although he placed the same attraction (Mrs. Kirby) in the same place.

At last an idea, which both had entertained simultaneously, found utterance on the part of Kirby; namely, that a general English work on British Entomology was wanted, and that he and Spence might very well do it in partnership. Spence had had the very same scheme for some time glancing across his mind. He had nothing more at heart than to be able to contribute to the advancement of his favourite science in this country; and while believing an English description of their insects (for Latin had hitherto been the fashionable language) the only mode of effecting this, the thought had struck him, "Could not my friend Kirby and I manage such a work?" But he dismissed the

idea as a pleasing fancy. However, as Kirby answered, their thoughts jumped; the project was destined to be realised.

The reader will note, that to herald the way for a "British Entomology," they deemed it necessary to write a popular "Introduction to Entomology." Popular literature, venturing to touch scientific subjects, was then an innovation; it was a novelty, an encroachment on the vested rights of learned men, the boldness of which we have a difficulty in appreciating in these days. It next became a matter of grave consideration to decide what form of popular composition was most expedient to select in order to produce a book which might be read with pleasure and instruction, even by those who have no intention of studying the technicals of the science. Mr. Spence suggested to throw the work into letters; a form which admits of much latitude in amusing digressions, and infinitely preferable to any dry chapter-and-verse bare enumeration of the parts of insects. Every body reads with avidity anecdotes of the uses, injurious properties, and habits of insects; only admit readers through such a vestibule, and you will win numbers to the science who would have been deterred at the very threshold of mere technical discussions. Having fixed on the epistolary form, the first letter would be devoted to refuting objections on the score of the trifling nature of the science; pointing out the advantages which man already derives from the insect world; the probability of his greatly augmenting them; the vast power of insects to injure him; the necessity, in warding off this evil, of ascertaining them scientifically; the pleasures to be derived from the study, and so on. Then, the mode of collecting insects and preserving them would fill three or four letters. Lastly, the terminology would have to be entered upon; first giving a general idea of the system, and then teaching the terms, by supposing the imaginary correspondent addressed to have before him some very common coleopterous species, the parts of which might be still further illustrated by a few good outline-figures. To the end of the volume would be added a closely-printed dictionary of terms, which would be useful for reference. A goodly plan. To carry it out, Spence transferred himself to Barham in the summer of 1809. For several weeks they were hard at work laying the foundations of "our book." Before parting, they had drawn out a general sketch of the whole, founded on the examination of Kirby's insects, and discussions, often very long, as to the propriety of various terms.

They had no leisure-time for excursions then, though at least one half-holiday prevented Jack from becoming a dull boy. Mr. (now Sir) W. J. Hooker was staying at Barham, and longed to gather with his own hands, from its native habitat, the rare *Targonia hypophylla*, first discovered by Mr. Kirby near Nayland, some miles distant. It was agreed that the three should walk thither, entomologising by the way, and after dinner proceed to the hedge-bank where the scarce plant grew. Entering the yard of the head inn at Nayland on foot, with dusty shoes, and with their insect-nets for their only luggage, they met with but a cool reception. On desiring to be shown into the best dining-room, and ordering a good dinner and wine, the temperature of the hostel rose to a more genial warmth. As it came on to rain after dinner, and as the bank where the *Targonia* grew was a mile or two out of the direct road, they ordered a post-chaise, merely saying they wanted to drive a short way on a road which Mr. Kirby indicated to the postillion. When they arrived at the gate of the field where the bank was, the rain had become very heavy. Calling to the postillion to stop and open the door, they scampered out of the chaise laughing in unison. Hastily telling him to wait there, they climbed over the gate without further explanation. Not to be longer in the rain than necessary, they all set off running as fast as they could along the field-side of the hedge to the bank they were looking for. Amazement covered the postillion's face. What possible motive could make three of his master's guests clamber pell-mell over a gate into a field

that led nowhere, in the midst of a heavy shower of rain, and run away, leaving the bill unpaid, as if old Scratch was at their heels?

"By jingo!" says the "boy" to himself, "they shan't come that dodge; I'm as 'cute as they are."

So, instead of waiting at the gate as directed, he mounted his horses with red-hot speed, and pushed on full gallop along the road on the other side of the hedge, to circumvent the nefarious conspiracy to bilk Boniface both of the dinners and the chaise-hire. The herbalists proceeded to gather specimens of their plant as well as their uncontrollable mirth would allow them; for wherever they stopped to pick up weeds, they perceived their Argus watching their motions through the hedge, halting when they stood still, and going on when they advanced a few steps. When he saw them run back, and not before, he obeyed their orders to return to the gate, where they got into the chaise, roaring with laughter louder than ever at the reasons he gave for not having waited where he had been told, and at the triumphant satisfaction with which he conducted to the inn the three Jeremy Diddlers whom he had so cleverly captured.

The *Introduction to Entomology* grew, little by little, as the bird builds its nest; not, however, without serious interruptions. Thus, to Mr. Kirby's great discomfort, the business of settling the affairs of a man who had deeply involved himself in debt unavoidably fell upon him, as only one little inroad on his time; but his surviving fellow-labourer records, that though his natural dispositions were, as he himself states, more contemplative than active, yet no man ever less suffered his inclinations in this respect to encroach on or set aside his social duties. During the long course of their correspondence, there is scarcely a letter without a reference to some executorship he had to carry out for a deceased relative or friend, to some secretaryship he had to fill for a charitable or other benevolent institution, or to some active services, like those referred to in the above letter, in arranging the affairs of persons often but distantly connected with him; but all these duties, however contrary to his natural inclinations, he scrupulously fulfilled, in addition to those of his sacred office, before giving up any portion of his time to his scientific pursuits.

And still the "Introduction" spreads its roots unseen, to send up a goodly stem by and by. He lays out work for his partner, and does his own. "I have been for some days hard at work," he writes, "upon our book. If you approve it, I will fill up the outline I have drawn up for the three first letters, the Introductory, Noxæ, and Beneficia. Then you may take the three next, Storgé, Food, and Habitations; then to my lot, again, might fall, Societies, Defence, and Noises; next, to you, Phosphorescence, Recapitulation, and Defence of Systematic Entomology; and likewise, if you please, on the States of Insects, in return for my having done the General Exterior Anatomy." And so on, share and share alike. And then, to carry out practically the dictum, that two heads are better than one, he adds: "The plan that strikes me as the best, with respect to the parts that each undertakes, is this: when you or I have finished a letter, or perhaps better, the whole of our parts, I to send mine to you, and you yours to me, that each may make his observations, and give his sanction to what the other has written, and add any particulars omitted by the other that may have occurred to him."

It is surprising with what little parade of apparatus his extensive and valuable acquisitions,—the materials, in short, with which the "Introduction" was built up,—were made. If going to any distance, he would put into his pocket a forceps-net and small water-net, with which to catch bees, flies, and aquatic insects; but in general Mr. Spence does not remember to have seen him use a net of any other description. His numerous captures of rare and new Coleoptera were mostly made by carefully searching for them in their haunts, from which,—if trees, shrubs, or long grass,—he would beat them with his walking-stick into a newspaper; and, collected in this way, he would bring home in

a few small vials in his waistcoat-pockets, and in a moderate-sized collecting-box, after an afternoon's excursion, a booty often much richer than his companions had secured with their more elaborate apparatus.

At length, the first edition of the first volume of the work, commenced in 1809, appeared in the spring of '15; Vol. II. was published in '17; and the concluding Vols., III. and IV., came out in '26. Numerous subsequent editions and translations have proved that, in this case, good speed at the end was better than haste at the beginning. The most recent edition, the seventh, which will not be the last, is a worthy monument erected by the surviving writer, Spence, to the memory of his departed friend. It is a welcome boon to the public, as placing the book within the reach of all desirous of becoming acquainted with the Natural History of Insects; and it is a lesson that the road to the honours of literature must be opened, every traveller for himself, by long-continued toil, patient thought, and unwearied perseverance.

POLYGLOT READINGS IN PROVERBS.

THE BURDEN IS LIGHT ON THE SHOULDERS OF ANOTHER.—A Russian proverb, for which we find this Servian parallel: "One does not feel three hundred blows on another's back;" and this Spanish: "It is nothing; they're thrashing my husband, that's all,"—*No es nada, sino que matan a mi marido*. Rochefoucauld says, "We all have fortitude enough to endure the woes of others." "Another's care hangs by a hair" (Span.),—*Curvado ageno de pelo cuelga*. "Another's ill is but a dream" (French),—*Mal d'autrui n'est que songe*.

W. K. KELLY.

"MOVING HOUSE."

"DIREFUL phrase!—by what possible aberration of reason can any lips utter it in the same breath with *Home*, nay even treat the reeling chaos of the one as something appertaining to, and to be classified under, the serene snugness of the other?"

Simply, dear outraged reader, on a principle developed about twenty-two centuries and a half ago by an obnoxious Greek reformer on the morning of his execution,—the principle "that all things are thus produced, contraries from contraries," waking from sleeping, life from death, and even home from house-moving. Every one arrived at years of discretion knows what a "flitting" is, either personally or relatively, and that the cosmical completeness of even the most ancestral dwelling may be traced back sooner or later to this same parental chaos. For generations back it may have maintained its dignified self-possession, laying the outer world under tribute for trophies of civilisation and luxury; but never in its turn compelled to a humiliating disgorgement of its contents before the public gaze. Like the sea-anemone, who has been so much before the world of late, this venerable home may for ever be drawing in with sweeping arms new goods and chattels that chance to float within reach, and may never, like that same hapless individual, be turned inside out for the gratification of students of the natural history of their neighbours. But even in these exceptional cases you have only to look back to the time when the Norman emigrant "trussed up his fardels," and conveyed them to the domicile which his Saxon predecessor had just received notice to quit,—and behold here you have the two

inseparable phases of house-moving at once! the wane-phase, or that of the man who goes out; the crescent-phase, or that of the man who comes in. And so, looking backwards through all family and national history, do the dwellings of man arrange themselves in an unbroken chain; so they loop into one another, link after link, till you reach the first house moving, when Adam and Eve departed from their bower in Paradise.

To move house is evidently a part of the primeval curse, and an evil from which humanity cannot hope to free itself entirely; yet let me ask pardon for the paradox, while in the words of a venerable contemporary I address to those about to move the startling advice—"Don't."

Unless your house has manifestly overgrown your purse, or your real requirements (not your purse merely) have outgrown your house—"Don't."

Unless your house is damp, or draughty, or smoky, or ill-drained (in either of which cases you were a goose to move into it)—"Don't."

Unless all your relations and friends fly to some distant neighbourhood (even under that wild supposition the wisdom of moving were questionable)—"Don't."

Before you change schools for your boys, or governesses for your girls, before you change servants, before you change churches, before, above all (for these presents), you change houses, remember the Danish prince's familiar soliloquy, and bethink you whether it were not wiser to "bear those ills you have, than fly to others that you know not of."

But if the evil is inevitable, bear it, and make the best of it; not by passive endurance, but by active forethought and arrangement. Perhaps a few hints from one grown gray in this same sorrowful flitting-work, and by no means "unworn in that service," may not be unacceptable to the victims of the approaching quarter-day.

Such admirable vans for conveying furniture, and such admirable plans for packing and unpacking it, or not packing it at all, have been discovered of late years, that nothing need be said on these branches of the subject, unless it be to remark on the dexterity and forbearance exhibited by the carriers' men. When these men are taxing their muscles to the utmost, and know perfectly what they have to carry, and the places they have to carry it through, what more aggravating than for the dust-besprinkled straw-wreathed owners of the said furniture to stand screaming, warning, and suggesting in doorways, passages, and stair-cases, literally in the way at every turn. In all such cases,—that is, in all cases whatever involving governmental direction,—it is a golden rule to explain beforehand, briefly and distinctly, what is to be done, and how it is to be done, and during the time of action leave the matter implicitly to the responsibility of the person intrusted with it. Interference destroys personal relish in work; it breaks the fine threads of thoughtful purpose which are necessary to the efficient performance of even the smallest actions, and so defeats its own object. Remember that, regarded as a mere machine, man is very inferior in strength and precision to a steam-automaton; it is only the free action of the living soul within which enables him to use his muscles harmoniously and discreetly: think of this in managing your children and servants, and think of it, too, in directing those who move your furniture.

"But are there any means by which the hopeless confusion of the most irreconcilable classes of household goods, hitherto considered inevitable in moving house, can be avoided,—any means by which things can be got into their places sooner, at a less cost than the innumerable breakages and the weeks of weariness and discomfort which we are all too familiar with?" Well, I was just coming to these practical questions. In the first place, for some weeks, or even months, before you leave your present abode take advantage of every wet day and leisure-hour to look over old lumber, from furniture and linen down to letters, and dispose of every thing which it is not worth while to keep, to your poor neighbours, who will be pretty sure to turn the

most unpromising "old junk" to some use or other. Even letters torn up by tiny hands into still tinier morsels will make tolerable pillows for hard-lying heads. Decide deliberately (having previously measured the rooms and the furniture) in which room of the new house each article of furniture from the old shall be placed; and let a parchment ticket be tied to it, with the destination plainly printed thereon. Measure all the windows, and arrange your plans about hangings and blinds; order in the new breadths, if such should be required. The week before the week of moving engage an upholstress, if you are not competent to carpet-fitting yourself (but this art, of course, like every other is far easier to an educated than an uneducated person), and having made previously an exact plan of the principal rooms in the new house, take up the carpets one after another, beginning with the rooms least used, and set your seamstress and servants to altering them for their new destination. Take down also any window-hangings that require alteration; and let this be done, too, remembering that it will be no hardship to be without hangings, or to have an ill-fitting carpet, for a few days in your old warm house, while it might be a serious evil in the new half-aired one; to say nothing of a more imaginative view of the subject, viz. that the sense of entire *unsettlement* is an unavoidable evil while still lingering in the house which is so soon to cease to be yours, while the mind grasps longingly at the idea of *settlement* and order in the new home. It is almost needless to remind the prudent wife and mother that a week before moving, if the house has been some time uninhabited, a charwoman, strong and active, should be sent in, not only to "scour it down," but, still more important, to keep fires burning in every room *after* the scouring. And let her also, before the fatal day of flitting comes, make inquiries about the tradespeople in the neighbourhood, and decide to whom she will give her custom, thus avoiding the serious evil of perpetual card-deliverings and requests for it, and saving the servants all trouble but that of civilly declining the services which are not wanted. Now comes the day before *the* day; and let it be arranged that on that morning the carpets, altered as aforesaid, and roller-blinds—for the principal rooms at least—shall be conveyed by cab, carrier, or railway, as may be most convenient, to the new house, and be there received by a carpenter, who shall nail them down or screw them up, each in its appropriate position.

The next day the vans arrive; and as each piece of furniture is taken out, it is dusted at once, and carried to its appointed place, where, the carpet being already nailed down, it is lodged finally, not to be disturbed again. The wonderful ease and rapidity with which a house is made habitable and orderly by this simple inversion of the ordinary plan can only be believed by those who have tried it, and contrasted its harmonious comfort with the well-remembered new rooms, in which every article of furniture was knocked about just where it was least wanted, and the poor defenceless things were huddled together in the middle of the room, and then driven back to the sides and ends, like a drove of elephants being instructed in quadrilles, to make way for the tardy laying-down of the carpets. Prudent housewives may be conscious of a delicate reluctance on the point of carriers' muddy boots traversing carpeted floors; but wisps of straw at such a time are plentiful, carpet-slippers are cheap, and if the journeys from road to parlour are too frequent to allow of rubbing or changing each time, dusting-sheets or scraps of oil-cloth can be laid down as paths to the places where heavy furniture must be carried, and the rest can be conveyed by clean-footed carpenters and maids, where there are no men-servants.

As to china, glass, and even kitchen-ware, let whatever will be wanted for the first day's use be packed by itself, and let the rest be left in peace in their cases and hampers till the storm of solid furniture is subdued. Then, when pantries and china-closet and dining-room cupboards are all clean and ready, let the main body of breakables advance from their ambush, and take up their appointed positions.

To give directions about each thing, how and in what order it should be done, were endless work, and quite an important piece of officiousness besides. "Forethought" is the magician whose wand is alone potent to arrange all in the best way, with the aid of Cheerfulness and Forbearance, in case our admirable arrangements are thwarted by untoward circumstances, as will most probably be the case in some degree.

Besides, I protest strongly, once and for all, against that Procrustean notion that there is only one right way of doing a thing. The right way for me might be quite the wrong way for you, and involve you in as much weariness as it saves me. I may have an insatiable appetite for planning; may find an indescribable gusto in taking accurate maps, half-an-inch to a foot, of every room and every carpet, with cabalistic signs in red ink, indicating to my vivid imagination the way the pattern goes, and the position of the seams. The delicious excitement of this pursuit may so engross my whole being, that I become absent at meal-times, leading my husband to infer mournfully that my affections are wandering, or that some sublime literary scheme has rendered me hopelessly mazy; I may be wholly unable to sleep at night, owing to the haunting phantoms of the book-cases, which, with a relentless obstinacy, wholly refuse to fit themselves into the recesses to which they are destined; I may suddenly wake up in church to a guilty consciousness that I have been absorbed in an alluring scheme for converting a straw-mattress, doubled, and a spare mill-puff bed, into an elegant divan for the drawing-room;—these things, and the wide fancy-universe, of which they are insignificant atoms, may keep my mind waltzing for weeks together in a state of exquisite delirious excitement, which the reflection that the house we are going into is distinctly mean and inconvenient, compared with the one we leave, is utterly powerless to subdue. But am I therefore to condemn you, my dear Mrs. Bustle, because all this you decidedly reject as unwholesome and fussy to the last degree? Am I to find fault because you prefer a real, stirring, loud, contradictory, business-like consultation with a voluble, thread-necklaced, steel-thimble upholstress over every carpet—as it arrives after the furniture—to be stretched out in all its unaccommodating formlessness on the unaccustomed floors, among legs of tables and chairs, and rolled up, in a wave that never breaks, against the rack of the unyielding side-board or cheslonier? No, by no means! All I would hint is, that, to some extent, the plans I humbly recommend might be advantageously carried out by all victims to the calamity which heads this article; and that by so doing they would all the sooner be repossessed of the blessing which heads the section,—the blessing of a "Home."

LONGEVITY OF CAGE-BIRDS IN TOWN AND COUNTRY.

The proverb, that "Use is second nature," may hold good in some cases, but certainly not in all. Accordingly, we find that the lives of our little feathered prisoners who are domesticated within the walls of cities are much shorter by comparison than those of their brethren who have the benefits of a purer atmosphere. This cannot be a matter for wonder.

It is not unusual to hear loud lamentations when a favourite pet is removed by death. Sometimes he dies quite suddenly; at other times his death is consequent upon attacks of asthma, wheezing, sore eyes, inflammation in the bowels, and a whole chain of nameless calamities. Most of these have their origin in the thoughtlessness of the persons to whom they belong; and many are the letters addressed to me for "advice." They generally come too late!

It must be remembered that the lungs of birds are very delicate, and that to keep them suspended in heated rooms, whose atmosphere is vitiated, exposes them to almost cer-

tain danger. They require pure air even more than we do. Sudden draughts, too, are equally dangerous; and to these our little friends are for ever exposed, by being placed immediately in the centre of open windows, whilst living in a cage accessible to the wind from every point. There is scarcely a street in London where this evil practice may not be daily seen.

The curious situations chosen out of doors, too, are worthy of note. We observe them in balconies, in areas, in verandas, on a naked wall, or on the side-heading of an open window. Thus placed, and with no protection from the sun, wind, smoke, and dust, they speedily become ailing; soon they lose their voice, then their trim figure and general sprightliness. All sorts of reasons are assigned for this; but the right one is rarely guessed at. The fact is, people who love innocent birds, and would keep them healthy, should learn to consider them in the light of young children. They require equal care and attention; also light, air, warmth, and exercise. This last might easily be contrived by giving them an occasional flight in a spare room, first placing a bird-bath on the table, and one of the many green salads in which they so much delight.

Some time since, a curious inquiry was instituted as to the effect of certain smells, gases, and effluvia, on the *physique* of animals, and of birds in particular. Professor Owen was present on the occasion alluded to. Amongst others who gave their evidence on the subject, was an intelligent workman, who was also a bird-fancier. He said he lived in Bear Yard, near Clare Market, and was constantly exposed to the combined effluvia from a slaughter-house and tripe-factory.

On being asked if this at all affected his birds, he emphatically said "Yes;" and he dwelt much on the losses he had sustained by the stench arising from the fat boiled down from the tripe-offal, adding, "You may hang the cage out of the garret-window in any house round Bear Yard, and if it be a fresh bird, it will be dead in a week."

The man had previously lived in the same neighbourhood, in a room near the Portugal Street burial-ground. That place, he said, was equally fatal to his birds. He had afterwards removed to a more healthy spot, and his birds lived longer. In town, however, ordinary birds did not usually live more than eighteen months. In cages in the country they would live nine years or more. When he particularly wished to preserve a pet-bird, he sent it down into the country now and then for a change of air.

This man's evidence quite confirms my own observations, and shows how needful it is to study the effects of natural causes. If we would have our birds well and happy, we must guard them from danger, and studiously provide for their comfort. Their lives will then be extended, and their usual ailments prevented.

An intimate acquaintance with many families residing in different parts of the country enables me to speak oracularly as to the longevity of birds which have the privilege of fresh air. Linnets, goldfinches, canaries, bullfinches, and others, thrive famously from year to year. Their plumage is always trim, their song ever cheerful, and their happiness perfect. As for their age, some of them are in their teens, and hearty withal.

To show how successfully tender birds may be reared in the country, I would particularly direct attention to a pair of very tame spotted flycatchers (*Muscicapa pisola*), which a young lady of my acquaintance has had *four whole years*. These birds seldom live long in a cage. Being insectivorous and very delicate, they require minute attention, pure air, and a great variety of food. Their young mistress, however, has succeeded admirably with them; and it is difficult to say whether their affection for her or her affection for them is the greater.

They have light, air, warmth, and exercise. Their cage is their mansion, the drawing-room their palace. Treat your birds thus, and whether in town or country, they will do well.

WILLIAM KIDD.

EFFECTS OF COLOURS ON OUR MINDS AND DISPOSITIONS.

"WOMEN and mackerel are best caught with red," says the proverb; and some men would be ready to subscribe to its truth. More than one sensible fellow in his black coat at a ball has been made to feel extinguished by the scarlet coats of our officers, ay, even when they have "only been militia officers," as I heard a young lady pathetically remark during the late war. Possibly Government originally selected that colour, not only to strike terror into the breasts of the adversary, but also to vanquish the hearts of our fair countrywomen, and so mean it as a cheap and easy, as well as perfectly legitimate, mode of rewarding valour. But why should a fish and a woman—the one proverbially cold-blooded, the other known to be a warm-blooded animal—be similarly attracted by this colour? Turkeys and bulls are irritated by it, and in some cases horses. I once possessed a very fine thorough-bred horse which was quite unmanageable at the sight of it, and several of his stock exhibited the like peculiarity. Naturalists have remarked the same of the buffalo and rhinoceros. It is now an undoubted fact, that certain colours affect the health in a marked degree, and in some cases excite pleasure and pain to a curious amount. An eminent professor* has named this excessive susceptibility to the effects of colour *Chroëphobia*; and we are indebted to him for many intelligent observations on the subject. To return to scarlet, it is obviously the emblem of excitement, unrest, and anger. In going round the wards of the insane, it has a very exalting, though apparently not an unpleasant, effect on the patients. Those people afflicted with St. Vitus's Dance, and the celebrated dancers of the middle ages, were uniformly irritated by its appearance. The Persians painted their idols red. The Polynesians think highly of it, and regard red feathers as emblems of their deities; and were accustomed to obtain the long tail-feathers of the man-of-war bird, and keep them in their hollow wooden idols. Vermilion, too, was considered the most gorgeous adornment in the ancient cities. On the other hand, the Egyptians held it in abomination, as being the colour symbolic of Typhon, who was to them the cause of all evil; and at certain periods they insulted red-haired people on this account. Some idea of a similar kind would appear in the colour chosen by St. John, in his mention of the woman sitting on the scarlet beast. A quaint old writer (Esquirol) affirms that those who dye scarlet become choleric, and indigo dyers are melancholy. White is the emblem of purity and gladness. It is the colour of the flag of truce, and of bridal garments; it is understood in general to represent cleanliness and all sorts of innocence. We wash out our churches with it, our fever-wards, and our poor-houses. It is proved that among a large number of people working in a room coloured yellow or gray, indigestion and other diseases were prevalent; whereas in the whitewashed rooms the case was the reverse. When both were whitened alike, the health of those before affected improved in a marked manner. On this principle, our paupers ought to be more

WHITE-STEMMED AMARANTH.—SEE PAGE 96.

cheerful than they are; and undoubtedly a man in solitary confinement should have his cell whitewashed. Again, listen to the Turkish proverb: "Death is the black camel which kneels at every man's gate." How differently we conceive of black! It is generally held in awe and dislike, the symbol of woe and death: the black flag denotes pestilence; the black cap announces hanging; the black hearse and plumes and crape are all associated in our minds with grief and sorrow. Insane patients are almost invariably unpleasantly affected by it. It is said those bitten by the Tarantula are unable to endure it. A youth who had been operated on for blindness, and a Chimpanzee exhibited at Exeter Hall, testified a similar abhorrence for it, of course in their different fashions; so that it appears equally disagreeable to a man and a monkey. In hydrophobia vivid colours excite gasps and convulsions; while in tarantism, blue and red are agreeable to the eye. In general blue and green, when of tender bright hue, are invariably welcome colours. We all look with pleasure on the stainless blue of the sky, speckled over with fleecy white clouds, which seem "shepherd home" to the West; while the earth is clothed

with green and the trees are tipped with it, and the black soil is first enamelled therewith in spring, and then summer gradually clothes it with glorious colours of every variety. In certain mountainous caverns, where salts of copper and potass predominate, the crystal stalactites are often exceedingly rich and beautiful. *Lapis lazuli*, *ultramarine*, and sulphates and nitrates of copper exhibit, perhaps, the most beautiful blues and greens in the world. It has been remarked, that spectral illusions are almost always clothed either in red or blue; and the difference in this respect is quite sufficient to the skilful physician to indicate a particular stage of the disease. Feuchtersleben says, "That colours have a decided though individually modified psychological effect. In general the positive colours, red, yellow, &c., excite the mind; the negative, blue, &c., calm it. The warm and cold colouring of painters, experiments with coloured glasses, &c., confirm this fact." In a mystical book, of the year 1724, these effects are thus expressed: "Red is seeking and desiring; yellow, finding and recognising; white, possessing and enjoying; green, hoping and expecting; blue, observing and thinking; black, oblivion and privation."

For the power of the sombre colours as exhibited in the stormy sea, we cannot do better than conclude our observations with Mr. Ruskin's magnificent description of a sea-wave.

"If one could but introduce the image of a true sea-wave, one massive fathom's height and rood's breadth of brine, passing by but once, dividing, Red-Sea-like, on right hand and left, setting close before our eyes for once in inevitable truth what a sea-wave really is: its green mountainous giddiness of wrath; its overwhelming crest, heavy as iron, fitful as flame, clashing against the sky in long cloven edge; its furrowed flanks all ghastly clear, deep in transparent death, but all laced across with lurid nets of spume, and tearing open into meshed interstices their churned veil of silver fury, showing still the calm abyss below, that has no fury and no voice, but as a grave always open, which the green sighing mounds do but hide for an instant as they pass!"

* Professor Laycock.

SPECIMENS OF FOREIGN SCHOOLS: NO. VI.

PAINTED BY KRUSEMANN.

THE MONK'S VISIT.

THE MONK'S VISIT.

By KRUSEMANN.

THE engraving with which we present our readers this week is from a picture by the German artist Krusemann, and was originally published, as a fine lithograph, by the Cologne Kunstverein (Art-Union) in 1847, for distribution amongst its subscribers, precisely in the same manner as the English Art-Union issue their annual copper-plate engravings. The subject is the visit of a member of a monastery in the neighbourhood of some Rhenish farm; his object being to maintain the religious communion, and afford that personal counsel, which the Roman Church so strongly inculcates upon its followers. These visits are performed at regular periods to every household in the district appertaining to each monastery, as much for the purpose we have stated as in order that the itinerant brothers may collect the alms of the charitable for the benefit of the poor, and also that of the house to which he belongs. For this purpose he carries the basket. The success of his mission, and its welcome from the communicants, may be augured by the expressions of the women, who have met him at the entrance of their dwelling, which promise that he will not proceed further without a substantial acknowledgment of the benefit to be derived from ghostly counsel, as well as assistance in judgment of worldly affairs, which it is part of his province, or custom, to afford.

The picture itself is a not unworthy specimen of the quietist school of German art, which in England is most fitly represented by the works of the President of the Royal Academy, Sir Charles Eastlake. Effort and powerful emotional expression are avoided in both, and the story explains itself by a placidity of look in the actors, always appropriate to the subject chosen, which is universally such as finds numerous admirers amongst those who prefer to look upon art rather as a contemplative illustration of life than as a direct and powerful teacher.

L. L.

IMAGINARY CONVERSATION.

By WALTER SAVAGE LANDOR.

TACITUS AND AGRICOLA.

Tacitus. Your daughter, my own beloved Julia, would have accompanied me hither, O Agricola, had I not reminded her that the bravest hearts are the least capable of uttering the sorrowful word "Farewell."

Agricola. Universal word! uttered in the same tone, although in other syllables, by every nation. Word of the lover, of the widow, of the widower, and sometimes of the commander in the very hour of victory. May it never be sighed by our Julia on either of the two she loves best!

Tacitus. I unite with you in this wish, my friend and father; but rather so than by the survivor over her urn.

Agricola. Away with idle thoughts, with forebodings, with reminiscences! I am standing on the verge of a wide and waste field; and must prepare to subdue and cultivate it. Most generals have attendants and followers: I have none beside a few domestics. In passing through Gaul, I shall collect the troops requisite for the expedition. The ships will have arrived before me, with sufficient stores for victualling them during many months, until fresh supplies from the coast of Belgium shall have landed. Wherever there is a scanty supply, there is a weak, because a discontented, army. Therefore even the least provident commanders have insisted that the naval forces be entirely under their control, and the commissaries be approved and appointed by them. The necessity of plunder is thus avoided, which alienates from us those we must conciliate before we govern.

Tacitus. Conciliation saves in great measure the expenditure of force. Every plunderer raises a hundred enemies; and what he seizes may in half-an-hour do a damage which

half-a-century is inadequate to repair. Barbarians soon forget an act of kindness: an injury sinks deep into the breast through woad and wolf-skin.

Agricola. The act of kindness then must be repeated, and the injury avoided.

Tacitus. This is true philosophy, which, to be consistent, must be founded on humanity.

Agricola. Since it is urgent I should leave the city by sunrise, I am rejoiced that much of the evening is left to me, and that I may continue to hear the expression of those sentiments which first engaged me and my daughter to cherish you so affectionately. Continue the remarks you were making on the Britons.

Tacitus. Forgive me, if in continuation I should appear less indulgent. The Celtic and Cimbric races, cognate in origin, and similar in character, are never to be trusted in peace, until you exhibit and demonstrate to them practically its manifest advantages. O Agricola, can any nation, should any nation, tolerate an invader? It may be for their ultimate good, certainly it is not for their immediate. The Britons seem to be more restless in a state of inactivity than in a state of war. Impatient of agriculture, ignorant and disdainful of commerce, at present they appear to be irreclaimable from perfidy and ferocity.

Agricola. Have not all nations been once in the same condition? the polished Persian, the scientific Egyptian; the forefathers of Pericles, of Sophocles, of Homer; the founders of Athens, of Corinth, of Miletus? Happy am I who am destined to conquer where I can destroy no cities, depopulate no habitations of industry, sink no transports of commerce; but, on the contrary, to show that, if Mars was our progenitor, the wolf has left in us no infection.

Tacitus. Immediately after the death of the Gracchi and the Scipios our people began to degenerate, and to become at once more effeminate and more sanguinary. The great Julius himself, no model of morality, was the only true reformer; for the Catos had in their character nothing of gentleness, of generosity, or even of humanity; and Brutus was little better than a copy-book for schoolboys, to throw aside when they had done with ciphering. We have seen better men in times no better.

Agricola. We have also seen men able to make the times better, and who did. Vespasian and Titus have raised the Roman name higher than ever it stood before, in the contemplation of the dispassionate and judicious.

Tacitus. Its fall is imminent; and I tremble at calculating the rapidity. They who live in the most disgraceful and disastrous times, are less aware of the vices and enormities around them, than they who were alive just before, and who continue to live through them. The effect of pestilential marshes is less perceived in traversing the road than it is in stopping and reposing. Under the worst of the Neros the citizens were contented, because the constitution of their minds grew adapted by degrees to their condition. After the death of Marius, the Romans lost utterly and irrevocably the Roman character. One high intelligence, claimant of descent from the daughter of Jupiter, could not, perhaps would not, restore it, even when the legions, the people, the senate, and the priesthood, had united in placing him among the stars.

Agricola. We belong not to the College of Augurs; let us on this subject hold our peace. Difficulties will arise before me on my landing, which I have prepared to obviate. Much iron may be bought with little gold. Generals must not always be philosophers. War is not to be put an end to at the present hour; it has been my business to direct its course. Coalition of the princes against me would be troublesome, would be dangerous; and I thought it more expedient that their arms should be turned against one another. I believe I shall find them in this position; but am ready for the contrary.

Tacitus. Indulge them in their love of war, even after you have deemed it politic to conciliate them; you may then, by special favor, bring them, one party or both, under your

eagles. Different from the Germans, they are no less mercenary than insolent. The first of their Roman invaders was not tempted to destroy their capital, which capital was necessary for his intercourse with the Belgian traders. These alone could supply his army with grain and oxen, and moreover with horses, of which the native breeds are small and scanty. Those which were harnessed to their chariots were Belgian.

Agricola. How seductive is novelty, even to the warrior! The bow and arrow were formidable weapons in the hands of such strong men as the Britons, who, if any thing could have taught them the least of military science, would have attempted to draw their enemy into the woods and marshes. There is little of solid ground for the evolution of cars with scythes attached to them; and neither their Druids nor their wizards have any such incantations as would bring down our legions to the places they might designate. Our business is to attract them around our fortresses, where, instead of starving us, they would themselves be starved; for all barbarians are improvident and wasteful. Our strongholds would at all times be replete with the necessities of subsistence. Any defect of precaution on the part of my commissaries will be punished by death, under the scourge of those they would have famished. Aware of the evil, and negligent in removing it, great would be my guilt; to be unaware of it, in my station, would be no less. Instead of triumph, or ovation, or any other species of military honor or civil dignity, the licitor should unbind the fasces and bring out the central axe for me.

Tacitus. Exemplarily just! gloriously impartial! no milder punishment should be inflicted on such defaulters in the commissariat. The intercourse of these agents with the traders is lucrative on each side, and promotes good-will in a large body of the population. It is easy to subjugate by the yoke of trade, a yoke well padded, and rendering the animal not only patient under it, but ready to travel any length of road leading to plenteous provender and warm stabling.

Agricola. Cornelius, if you run on in this flowery way, you will write no compacter or conciser a history than Cicero would have done, had he carried his design into execution.*

Tacitus. Contented should I be to have taught the extreme fringe of his flowing robe. A writer of equal wisdom and of higher genius executed the task thirty years later, to which our greatest orator and soundest philosopher was less fitted. Enough is remaining for me; too much indeed, if any other family so insane as the Neros should in any time be elected by the Pretorian bands to govern the Roman people.

Agricola. You are likelier to lose your tranquillity than your judgment. Yield we to necessity, knowing that if we resist, we fall; and that if we fall, we bring down many with us. The soil under us is too friable to support us. Willingly am I removed from Rome, foreseeing many vicissitudes and few improvements. Arbitrary power pleases me, because it leaves to me liberty, which it never does to the wicked or the weak. I shall be able to do good; and woe betide the man who stands between it and me! *Imperator sum.* How few who have said it have spoken truly! The most despicable of men have usually been the most elevated in station.

Tacitus. To humanise a barbarous people is less difficult than to raise a degraded; but neither the virtues nor the lifetime of any one man are sufficient to effect it. When you have only laid the foundation you have attained the summit of human glory.

Agricola. If the gods help me in my labor, I will do it.

Tacitus. It occurs to me at this moment, from these

* Tacitus, usually terse, is sometimes florid. He writes, "Alpium cacumina *sua nitidus*," and "Ne armentis quidem *suis honos aut gloria frontis*," on the cattle of Germany. Neither Cicero nor Livius wrote thus; nor indeed have I ventured to represent Tacitus speaking so youthfully. Few historians excel him in sobriety of style, none in sagacity and impartiality.

your words, that you will encounter opposing gods in the forest you are about to traverse.

Agricola. A conqueror who is resolved to maintain his conquest, must introduce first the laws of his country, then the language, and, by slower and imperceptible degrees, the religion. We Romans took every god we could seize upon in the captured cities; they did us great good. Our people prayed to them, some believing in their divinity, some unbelieving; but the conquered were highly gratified at our worship, and felt themselves in turn essentially the conquerors.

Tacitus. But this rabble of deities was excluded from the camp.

Agricola. Wisely; it would have been only in our way. Yet every troop of our confederates is permitted to enjoy whatever worship gives him hope and confidence. We shall experience some difficulty in subduing or assuaging the ferocious rites of the Druids. It can only, or chiefly, be done by the intercourse of our soldiers with their women. These will be captivated by the serenity of our Jupiter and the smiles of our Venus; in the one they will prefer a beard sleek and glossy from the fumes of frankincense to one begrimed and hardened by the blood of men; in the other, a beauty placed above the evil eye of jealousy, and smiling as they unfold to her the secrets of their hearts. Pertinacity in a religion is usually in proportion to its absurdity; much also is dependent on climate. Hence the gods of Greece and Italy are genial: the harsher stock on which they were engrafted is grown obsolete. Jupiter has long been father of them all; his father Saturn is without one worshipper.

Tacitus. Religions slip easily one into another where the priest does not lay his wand across the road.

Agricola. It appears to me that no commodity is more marketable than the sacerdotal. The priest relaxes his hold on the man to seize the purse. I will make this bargain with him. On his refusal, which is hardly to be apprehended, I drive him into the mountains. Thousands of the natives have imitated our habiliments, and have covered their suns and stars with woven clothing. The priests will reprove in them such proximity to themselves, and repress such a step in advance.

Tacitus. Justly have you remarked the necessity of introducing our Latin tongue, without which we shall be unable to inculcate our laws and recommend our institutions. No nation can long hold command over another unless this primordial impediment be removed.

Agricola. The Britons are reported to be proud and arrogant. The father is reluctant to allow his son the rudiments of Roman education. Some even of the most intelligent are persuaded that their language is more flexible and more sonorous than ours.

Tacitus. To them it naturally must appear so, and perhaps justly. It may even be more ancient; which they are not likely to know or to think about; if they did, their pride would increase. I have heard a few sentences spoken by captives; and certainly there was as much of the sonorous, and no less of the guttural, than in the Etruscan or the Greek. Our language is become less vigorous than it was in the *Heroics* of Ennius, and less copious than in the *Comedies* of Plautus. It was then at its spring-tide; it hath been ebbing ever since: Cicero and Cæsar, our great masters, equal in authority, filtered and refined it.

Agricola. Latinity is a composite, and, like the composite in architecture, is slenderer than in the former orders.

Tacitus. I was proceeding to modify my remark. Let me entreat you to acquit me of invidiousness; let me protest to you that, in my opinion, no Latin writer ever attained the grandeur and majesty of Titus Livius. The Muse of History hath placed him high and separate on her curule chair.

Agricola. Gravely and judiciously uttered! Our language, I trust, will continue to be spoken, in many regions of the earth, during far more centuries than it hath yet existed. We collected our first words from the shepherds

of Latium and from the agricultural Sabines. Perhaps the language of the Briton was spoken by his progenitors as early as the language of Homer by the inhabitants of Hellas. Perhaps the Briton too, at no distant period, may boast of his poet. Since the banishment of Ovid, we Romans have never produced so much of true poetry as would fill a single page; all of it put together is not worth a scazon or a phaleucic of Catullus, an ode of Horace, or a brief elegy of the tender Albius. Can you repeat, or do you regret to have forgotten, any ten verses?

Tacitus. The best are a few epigrams of a Spaniard; two or three of which are facetious and graceful; several more are by no means despicable. Epigram and declamation in vain assume the garb of poetry.

Agricola. Had I leisure, and could indulge in delay, I would willingly hear you discourse more at large on the lighter occupations of your youth. I do not think I shall ever afford you materials for an epic, or even an ode.

Tacitus. Let me trust in Providence that you never will for an elegy. Unwillingly would I write further than to the hundredth page of your Commentaries, which I would much rather transcribe at your dictation than compose.

Agricola. If life is granted me, you, or some other less able, may relate the circumnavigation of Britain. Nor shall a smaller island to the westward be unexplored by me. Carthaginians, with Mauritians and Iberians, have visited both countries; but it was not their policy to improve the manners and institutions of the people. The Tyrians had taught them the ceremony of human sacrifices, and left behind no other memorial than the rude and massive altars which they compelled the inhabitants to erect for this purpose. The Druids came out of Gaul long after them, not long before Cæsar's invasion. Their religion had extended over but a small portion of Gaul. Some of them had acquired the Greek alphabet, but without a particle of literature, from the traders of Massilia, and, like other priests, had employed their acquisitions in the subjugation of their more ignorant fellow-creatures. We must help them to extirpate the mistletoe, by supplying them with golden-sickles. The thirst of blood is nowhere so insatiable as the thirst of gold, which is moreover the cheapest instrument of conquest. I have enough of it for my purpose at the present time. An example of integrity and frugality will draw toward me the better and the wiser. Of all mercenaries, the priest is the most active. The British will probably be at first intractable. Pactolus flows easier over smooth and soft sands; but there are crevices in the hardest rocks for the grains it carries with it to insinuate themselves in. Let us look far beyond them.

Tacitus. Who knows but that you and your mariners may discover the vast unvisited island of the Hesperides, where, if we listen to poets, the heroes of old, after long and glorious strife, oblivious of contention, and beyond the cries of Discord, rest finally from their labors, and partake in the communion of god-like peace? Let us believe as much as we can of what is pleasurable and profitable, and encourage the same in others. Wisely hath discretionary power been confided to your hands over the naval no less than over the military armaments.

Agricola. Vespasian and Titus knew perfectly that no operations are sure of success on other terms. It is a solecism to call that leader a *commander-in-chief* whose power is not extended to the deck of a trireme. Dictatorial power, if not nominally, yet essentially, is necessary at the head of an army. I possess it; and will exert it to the benefit of many, to the detriment of none. The vanquished, their children, and their later descendants, are they who will honor me the most. Such is my ambition.

Tacitus. The best of men (you, O Agricola, are an example of it) have appeared in the worst of times; few indeed of them; else the times had not been the worst. Beginning with Julius, we have seen a greater number of intelligent, vigilant, humane, generous, and beneficent heads of the Republic, than in the same period while consuls held

the supreme power. Anxiously do men look forward at this moment to one who will repair the damages and disorders of the state; one who will not repose his power on the shoulders of drunken soldiers, acting from the excitement of festivities.

Agricola. Mine will run into no danger through a similar cause.

Tacitus. There is one exactly the opposite where lies the danger of this insubordination. Few among them ever inhaled the delicious breezes of Baiæ and Surrentum, few ever loosened their helmets to fill them from the refreshing waters of the Iberus and the Boetis; but many have enjoyed the umbrage of the vine planted by their grandsires above the spreading and sparkling Liger. How can these find comfort in the damp and dreary woods of inhospitable Britain, or under the tents on its tempestuous wolds? Men in all countries are the creators of their gods, created in their own similitude; now what hideous demons, devised by the Gauls, frown and grin and gibber over the Britons! Mockery will burst from the legionary, indignation and vengeance from the barbarian.

Agricola. Each party shall retain its own deities until they insensibly crumble down and drop away. The chief advantage of any temple or place of worship, whether in city or field, is to bring men together in unanimity and amity. They come either for petition or thanksgiving. Is there any one so insolent and audacious, of such stolidity and impiety, as to believe the gods are readier to hear him than to hear his neighbour; to believe that one tone of voice or one idiom of language is more agreeable to their ear than another? When children disagree and quarrel, the parent chastises them: is the god less prudent than the parent? Imagination will never form to itself any kinder or more compassionate than ours; and their decline may hereafter be regretted. The Sabines, and also the inhabitants of the regions along the Apennines, lived virtuously, temperately, and happily under their influence. Will future generations see them more virtuous, more temperate, more happy? Egypt, not long ago, sent us Isis; her priests made much of her and of her chastity. We may expect to be favored, by the same tonsured mystics, with the introduction of holy cat and thrice-holy crocodile.

Tacitus. Let us endeavour to preserve whatever is worth preserving, and leave the rest to be swept away by the scythe of time. Maggots will breed in corruption; so will priests. Pleasanter is it to look away from the encroachment of idleness to the trace of industry. What is under the surface of the earth will change the character of what is upon it, men especially. Minerals are abundant in the western parts of Britain. Tin and copper, both anciently and recently, have been thence extracted. It has even been reported that veins of fossil-carbon have been discovered in various directions to the north. Probably the deficiency of wood for fuel to the west, rather than exhaustion of the mineral, caused the Carthaginians to abandon an enterprise which had been once more lucrative. These minerals, and iron also, which is found in the center of the island, will require the aid of science, and then lead rapidly to civilization. Gold and silver in no country have produced any such effect, but quite the contrary. We are apt to value most what is least essential to us. Indolent slaves are the collectors of gold; slaves more indolent are its wearers. Iron requires a robust arm to render it malleable and apply it to its multiform uses; war was its first, but will not be its last; it will unite when it hath ceased to enchain.

Agricola. We must establish schools for the instruction of artificers. The teachers in these will excite at first no jealousy in the old masters. Dogmas will be extinguished in the air of the mine, and deadened by the hammer. Pride will urge the native laborer to be not behindhand with his overseer; and he will collect the grains of knowledge, until at last he finds out where to employ them advantageously.

Tacitus. Languages are the bonds of nations; religions are less efficient. The Latin is now spoken in almost every

part of Gaul; in Spain it was earlier disseminated by the sagacious and generous Sertorius. Within the period of little more than a century, what wide and vigorous offshoots it made in that country, which hath sent even to Rome teachers of rhetoric and of composition!

Agricola. Never was conqueror so popular or so prudent as Sertorius; never was one so mild in rule and at the same time so severe in discipline; never one so regardless of himself, so anxious for his country. He who could not bear to see her enslaved, would not enslave another, nor betray the confidence she reposed in him. Of all memorable men, Julius Cæsar alone overcame such complicated difficulties; Alexander had fewer in countries more accessible.*

Tacitus. He was too virtuous and too successful to be endured by the senate and the senate's master. I hope his poisoner saw his shadow before his eyes when he sank under the enunch's dagger, a runaway on the sands of Pelusium. Do not expect, O Agricola, to avoid the same invidiousness. May the immortal gods avert a similar fate!

Agricola. At least until I shall have performed a few similar exploits. I may fail in the enterprise I have undertaken; the greater Julius failed before me: but this I promise you, I will enforce discipline and maintain justice. The prince's favour may protect from the censure of senate and people the delinquency of my subordinates in command, if delinquency there should be; and effete old comrades may catch his nod and beck to compass them round and comfort them, protesting that the accused are worthier of dignities than disgrace; yet will I previously have reprimanded them in presence of my army, and, having performed this duty, I will deliver them over to you, my Cornelius, to fix that stigma on them which neither favor nor ages can obliterate.

Tacitus. Let us be generous; let them enjoy their offices and titles; the duration of a banquet; and, intent on our own immortality, let us permit them to pass away and be forgotten.

NEW BOOKS.

SONGS OF THE CAVALIERS AND ROUNDHEADS.†

MR. THORNBURY'S new book appeals to the eye almost as much as does a picture-gallery. The haters of subjective poetry should relish this specially objective minstrelsy; while we, though sufficiently removed from that class, find plenty to interest and attract us in these stirring songs and ballads.

They are stirring; there is movement and fire and vigorous life in many of them. The men start out in strong relief, like some old portraits we wot of. We not only hear about, but look at, these Sir Reginalds and Sir Richards, these barons and troopers, Cavaliers and Jacobites. And Mr. Thornbury revels in description of march and fray, sally and surprise, and such warlike matter. The words themselves trample and hurry, and scuffle and dash, in hearty sympathy with the theme.

The opening-ballad is too long to be quoted entire; but we give the first few verses:

"Carabino slung, stirrup well hung,
Flagon at saddle-bow merrily swung;
Toss up the ale, for our flag, like a sail,
Struggles and swells in the hot July gale.
Colours fling out, and then give them a shout—
We are the gallants to put them to rout.

Flash all your swords, like Tartarian hordes,
And scare the prim ladies of Puritan lords;
Our steel-caps shall blaze through the long summer days,
As we, galloping, sing our mad Cavalier lays.

It is only in our time that such obstacles have been surmounted, and only by the ill-requited conqueror of Seinde.

Songs of the Cavaliers and Roundheads, Jacobite Ballads, &c. By THOMAS W. THORNBURY. London: Murst and Blackett.

Then banners advance! By the lilies of France,
We are the gallants to lead them a dance.

Ring the bells back, though the sexton look black,
Defiance to knaves who are hot on our track.
'Murder and fire!' shout louder and higher;
Remember Edgehill and the red-dabbled mire,
When our steeds we shall stall in the Parliament hall,
And shake the old nest till the roof-tree shall fall.

Froth it up, girl, till it splash every curl,
October's the liquor for trooper and earl;
Bubble it up, merry gold in the cup,
We never may taste of to-morrow night's sup.
(Those red ribbons glow on thy bosom below
Like apple-tree bloom on a hillock of snow.)

No, by my word, there never shook sword
Better than this in the clutch of a lord;
The blue streaks that run are as bright in the sun
As the veins on the brow of that loveliest one;
No deep light of the sky, when the twilight is nigh,
Glitters more bright than this blade to the eye."

And here is a spirited rendering of

"WIGAN'S RETREAT.

Hurrah! for the trumpeter blowing his best—
Blood on his feather, and blood on his crest;
Here was old Warrener, trusty as steel,
Fitting a crimson spur fast to his heel.

There rode the banner-man—Lord! how his flag
Blow all about with its patch and its rag!
But he shook it, and made the old tawny and blue
Flutter its welcome words, 'Tender and true.'

Robinson's helmet had tokens of work;
Jenkin was powder-scorched, black as a Turk;
There were notches inch-deep in young Bellamy's sword,
He had shed his best blood at the Yellow-stone ford.

Powder-black, bleeding lads, hungry and torn;
Brown faces, wan faces, haggard and worn,
Laughing to think of the ups and the downs,
Riding rough-shod o'er the Puritan clowns.

Steady and slow, with a thought for the dead,
Some with a bandage on arm and on head,
Scarcely awake, till the rap at a flint
Showed them good coin, sirs, sound from the mint.

When the gun spoke, and long barrels looked out
From window and loophole, and gable and spout,
Then they struck spurs, and the trumpeter, Jack,
Blew till his yellow face clouded with black.

Like a swift lightning-flame, through the ripe corn
Ran the loud welcome of anger and scorn;
Up went the sabres—a flashing of light
Spread from the cheering left on to the right

A staggering blinding of shot and of flame,
Struck down the scarfs and the feathers that came,
But when the black thunder-cloud burst with a roar,
Out broke the Wiganers—thirty-two score.

Have you seen the sea leap when a dike has broke in?
Or a swollen Scotch torrent leap down in a linn?
Then you've seen the hot charge that swept Bolsover through,
When Wigan rode first of the 'tender and true.'

Wigan was bloody, and dusty and worn,
His buff torn with pike-head and bramble and thorn,
His scarf all awry, and his feather in twain,
His saddle-cloth purple with blood of the slain.

His collar of point-lace, all mudded and red,
A gash on his forehead, a rag round his head;
Yet still bowing low to the townsmen, who scowl,
And calling for sack at the 'Flagon and Bowl.'

The host by the sleeve, and the maid by the hand,
He praised her—the beauty of Bolsover land;
Then with strong shouting of hurry and force,
Crying with pistol-shot—'Gallants to horse!'

The nature of the subjects of many of these ballads no doubt necessitates a certain amount of allusion to the horrors of those fighting times; but we must complain that our author occasionally dwells too much and too complacently on similar "strong effects." *The horrible* is a dangerous adjunct, and should be used but rarely by the careful artist, or it is apt to degenerate into the simply revolting. Such records as that of "The Dance round the Plague-pit"

appeal, we believe, only to a morbid appetite, and will gratify no wholesome and well-balanced taste.

But, to turn to something pleasanter, here is a breezy and many-coloured "Restoration" scene:

"UP THE THAMES.
(Twenty-ninth of May.)

Up the Thames with flashing oar,
Let the Tower guns flame and roar,
Belching fire from every bore.

All the water ripples red,
Fiery shines the river bed
With the bonfires over head.

See the old bridge, black as jet,
Casting shadows, like a net,
Lights upon the parapet.

Pipe and drum in every boat;
All the Templars sing and float
To the merry bugle-note.

See the fellows' corselets flash;
How the bright oars drip and splash,
As beneath the arch we dash!

Now from every roof and wall,
Shop and garret, yard and stall,
You can hear the cannon call.

Varlet, yeoman, knight, and lord,
Wave their hat and wig and sword;
Every thief forgot his fraud.

Banners waved from London Bridge;
Pennons shook from roof and ridge,
Thick as wings of summer midge.

Ploughing water, dyed with flame;
Fast the royal galley came;
Blushed the river, as with shame.

Then again the cannon spoke;
And the clouds, as with a stroke,
Seemed in fragments to be broke.

Beating the black tide to froth,
Fell a thousand oars in wrath;
Cheers burst forth from south and north.

From the steeples rose a blaze;
Every casement in amaze
Shone with red and sparkling rays.

Bells swung madly through the mist;
Like a frown, the fog was kiss'd
Quite away to amethyst.

From the gardens came the cheers
Of a million cavaliers,
Some could scarcely shout for tears."

Among the miscellaneous pieces we find some graphic bits of description, some pleasant pictures. The "Riding to the Tournament" is gay, glittering, and sounding as the scene itself; and here is a succession of presentments given us in imagined

"SCENES AT A FOUNTAIN.

Here the proud peacock came to spread his fan,
Its emerald lustres and its purple eyes,
The water, then all molten sapphire, caught
The glory of those dyes.

Here the white doves came down to peek and prune,
Like melting snow their mingling shadows fell;
Driven in flapping circles round the elms,
Scared by the clamorous bell.

And here the goldfinch, like a magic bird,
Would perch and sing, unheeded and alone;
Flirting the bright drops from its hazel wings,
Upon the marble-stone.

And here the panting stag-hound, worn and weak,
Hurried, to dip its red and frothy tongue;
Sullen, not caring for the rippling fount,
Or for the bird that sung.

Mopping and mowing, came the jester quaint,
All red and yellow—ran to splash and dip;
A mad song lurking in his wandering eye—
A mad jest on his lip.

Here came the Queen of Hearts, sweet mistress Anne,
'By Hercules, a most excelling fair!'
So lisped Sir Ague; she spake not, but stooped
To re-arrange her hair.

The fat cook, reeking from his fiery don,
Waddled to rinse his salver and his dish;
Marking, with staring eye of foolish awe,
The gold and silver fish.

The falconer, busy with his bells and straps,
Used here to bathe the bruised wing of his hawk;
Smiling to see the bright eye of the bird—
Marking him strut and stalk.

Here old Sir Richard spurred his hot-plashed steed,
Faint with the sourry of a long day's chase;
A cold frown on his sallow leaden eye,
So full of pride of race.

And here the friar would sit and dip his beads,
'Thinking of Jonah and the water-world;
Or moralising, on the fallen leaf, when now
Autumn's gold banner furled.

And here the young lord, rosy through his curls,
Came stealthily to swim his gilded boat;
Clapping his hands to see the silver-jet,
And rainbow-bubbles float.

Here, too, that dreadful night when ruin fell
Upon the house, those red hands washed the knife;
As from the distant gable came a shriek
From the departing life."

But in this volume there are also instances wherein the graphic and the picturesque are blended with something of a higher and more satisfying nature. There is a passionate appreciation of natural beauty evident, which in some cases appears to have needed only a more careful utterance for the expression itself to have equalled the sentiment. We would cite "Winter Moonlight" and "The Fountain Spirit" as examples of this species of "narrow escape." Mr. Thornbury is sometimes faulty in his rhythm, and his epithets, of which he is lavish, are not always felicitously selected; they confuse rather than illustrate his meaning. Many of his verses have all the "dash" of improvisation about them; but they certainly forfeit in finish what they gain in freshness and force. The fruit he offers possesses bloom, vitality, flavour; but it is scarcely ripe. Patience, and let the sun shine on every side of it.

We have so much faith in Mr. Thornbury's possibilities, and, indeed, there is evident in all he writes so much sterling power and excellence, that we do not care to withhold our strictures on what we deem his faults and shortcomings. We should find less fault with a writer we less liked. But from the present one we expect much, and will not be easily satisfied with what he produces.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

PRE-RAPHAELITISM, as a distinct school of art, has no place in the Exhibition of the Royal Academy for 1857. Yet it must not be supposed that the principles of the school have ceased to be operative. What was true in them, and therefore kindred to the general laws of art, has been absorbed into its theory and practice. What was merely capricious has altogether evaporated. This is one agreeable feature of an exhibition the general effect of which is rather to satisfy than to surprise. We see a growing disposition to look at the meaning and forms of life and nature with a fresh eye; and there can be little doubt that this impulse is in a great measure due to Messrs. MILLAIS, HUNT, and their best followers. On the other hand, we seldom find the mere accessories of a picture obtruded as its chief attractions; and the doctrine that the aspects of beauty are

manifold is rarely strained into a license for the eccentric and grotesque.

Some high names are absent on the present occasion—Messrs. EASTLAKE, WARD, WEBSTER, ELMORE, and HOLMAN HUNT; but the several branches of art are nevertheless represented with an approach to completeness. The Historical School is nobly exemplified by the drawings of MACLISE. The career of Harold is the theme, and the whole series (forty-two in number) forms an epic told by illustrations. Dramatic incidents and poetic fancy have their interpreters in MILLAIS and WALLIS. Domestic life, humorous or pathetic, is rendered by MULREADY, COPE, LESLIE, FRITH, REDGRAVE, FAED, SOLOMON, R. CARRICK, MISS E. OSBORN, and others; and, without anticipating by detail our critical report of this department, we may say that it is more widely and strikingly maintained than any other. Subjects of local colour and character have their expositors in GOODALL, STONE, and PHILIP. STANFIELD contributes, besides other subjects, one of his noblest sea-pieces. We have still ecclesiastical interiors by ROBERTS. DANBY gives us a gorgeous sunrise. In two of his specimens of animal life, LANDSEER is at his best. The Portraits and Landscapes include the names familiar in each department; and Classical Art makes its claims visible in the graceful conceptions of FROST and the conspicuous examples of PATTEN.

Still, if we except the series of drawings by MACLISE, there is no work in the present exhibition which stands out as its feature, or as a new revelation of power,—no work, for instance, like the "Huguenot" of MILLAIS, uniting to technical excellence a command over profounder emotions than those to which Art now-a-days appeals. The wide popularity of the "Huguenot" was due, not only to its executive merits, but to the moral sentiment which it embodied. The highest point of art cannot be attained by the delineation of what merely gratifies or touches, unless there be present also that element which purifies and exalts. The self-sacrifice shown in the "Huguenot" fulfilled this condition. It reached the sympathies through the conscience. We cannot but regret that no similar example of a moral ideal has been given to us by Mr. MILLAIS or others. The heroic lies at the base of every great achievement, and the heroic in our time is the victory of man over circumstance without and over self within. This principle, understood and applied, might found for us a true school of Christian Art.

Of all the ties between the living and the dead, the strongest is the thought of beauty. History grows stale; affection settles into memory; the bond of lineage is but a skeleton chain, except the last link or two;—but beauty, once begotten and once incarnate, comes fresh and deathless along the ages, and joins us, as the grasp of living hands might do, with the souls it sprang from. The very forms of its original embodiment, the flesh and bones of its first advent even, are among the most enduring of mortal things. We have not, indeed, the handwriting of Homer or of Æschylus, but, among the ruins of the older world, its temples are still found standing where its strong towers have disappeared; rich capitals and rare tracery remain where we look in vain for abutment or foundation; sculptured marble lasts longer than granite walls, and urns and vases retain their lines of beauty where the lines of conquest and dominion have been obliterated for a thousand years.

Such possibly may be among the first thoughts of multitudes this summer, when, walking down the central hall of the Palace of Art at Manchester, they turn to look behind them. The roof is arched; there is a great arched window at the entrance-end, and over it, following the semicircular line of light, you see, in large plain letters, the first line of the *Ændymion*:

"A thing of beauty is a joy for ever."

This is the motto which Manchester has chosen. The crowds who visit her great exhibition will pass in beneath it. The window faces the east, with the whole city between it and

the sunrise; and every day this summer the first morning rays which enter the building will have passed over a factory-world to become an arch of light under the words of Keats. Manchester, the great centre of material interests, the fly-wheel of the world's spinning-mill, the place of all others where it matters most, not whether a thing is beautiful, but whether it will sell and pay, has built a temple to the Soul of Beauty, and has filled it, not with specimens of her own skill, or proofs of her own opulence, but with the works of men who spent all their power and passion in giving shape, substance, and colour to their inspired dreams. Art will never fail in England. We have our doubts, and qualms, and logical rebellions; but the love of beauty is at the bottom of our Saxon hearts. "We adore fair women and delight in flowers; we would part with our ears as soon as lose our skylarks; we call facts ugly when they are bad, and one of our fondest words is "loveliness." In the flush and hurry of material success, our faith in art has for a time been shaken; but in the midst of it all, and at the very core of utilitarianism, this palace springs up to prove that Englishmen look upwards as well as forwards, even among their mills, and feel instinctively what it is that is "a joy for ever."

For all the higher purposes of life the Exhibition of Art Treasures at Manchester is one of the most important events of this century. England is full of the greatest works of human genius, but hitherto they could be approached only at long intervals, one by one. A picture or a statue is seen at our annual exhibitions, attracts a momentary astonishment, is talked of and gloried in for a few weeks or months, and then suddenly disappears. It has been bought for some palatial mansion, and the vast majority of mankind will see no more of it. Let us recal the works we have most admired during any number of years. Where are they now? How can we refresh our memory or re-awaken our enthusiasm? Nobody knows. The productions, at least of modern art, pass before us like a phantasmagoria. They are comets, seen to-day and invisible to-morrow. We live in an artistic thunder-storm, where all the light comes in transitory flashes. There can be no doubt about the mischief, or rather the loss, entailed by this unavoidable state of things; but for this year at least it is repaired at Manchester. These works of art, which we have seen once, and longed vainly to see again, are brought together, like scattered lights in a burning-glass; not in single stars, but in brilliant constellations, and these themselves more numerous than the zodiacal signs. Not either from our own time only, but from century after century, in clusters whose light is fainter by degrees, but not less marvellous. We are among the shining thoughts of many ages. The souls of those who have loved beauty must come down to us with their works,—a noble brotherhood of the prophets and martyrs of art. It is a great sea giving up her dead.

We have no doubt the greater number of those who read the NATIONAL MAGAZINE will, some time this year, pass under the arch of triumph which Manchester has given to Keats, and spend some hours at least in examining the treasure-house of which it is at once the gate and the emblem. Our purpose in succeeding leaders will be to make such suggestions as may increase the interest and value of those visits. The occasion is a great and rare one, and ought not to be thrown away.

POLYGLOT READINGS IN PROVERBS.

MUCH LOVE BETWEEN THE OLD COW AND THE HAYSTACK (Irish),—of that sort which among bipeds is called "cup-board-love." "The dog wags his tail, not for you, but for the bread" (Span.).—*Menea la cola el can, no por te seno por el pan.* W. K. KELLY.

MAY. BY D. TASMORE.

[National Institution of the Fine Arts.]

LORD ERLISTOUN.—A LOVE-STORY.

BY THE AUTHOR OF "THE HEAD OF THE FAMILY," "JOHN HALIFAX, GENTLEMAN," ETC.

IX.

I took Jean home.

Saying this, it seems as if I had included all, as if it were the sufficient explanation of our two lives, external and internal, from that day forward. Knowing my cousin as well as I now did, I was fully aware that, even among her own sex, her character was a peculiar one. Their petty daily provender of work or play was not enough to satisfy the hunger of her spirit, active and restless as a man's, yet burdened with those especial wants and weaknesses that we are wont to designate as "women's nature." She might have conquered them all in time, and survived to dwell in that paradise of peace, lit with the reflected glory of the next world, which is possible even here; but in this world there was but one thing that her heart could ever recognise and rest in as *home*.

I loved Jean Dowglas. She was the only woman I ever did love. She came and stood over my life like a star;

clouds arose between me and it; I "wandered in night and foulest darkness," as the man sings in that "Lobgesang"—how its tunes haunt me to this day!—but my star never faded, never fell.

With us, as Jean said it was with her sex, the test of a true attachment—hear it, ye coquettes, ye selfish mean prudes, who think to make us the better lovers by making us the greater fools!—is, when we prize a woman less for her love than for herself; for what she is, and what she does; for that image of bright excellence which every man born of woman ought to see shining before him all his life through, attained or not, like a star in the sky. If it falls, God help him! for its falling is like that of the star Wormwood, which draws a third of heaven after it.

I loved Jean. At first, after this fashion of abstract worship; then nearer, nearer, recognising all her foibles; not blind even to her very faults; yet never losing the reverence, the sense of tender mystery, which all who love should have for one another, else, by a violent or a natural death, the love most assuredly dies. And so it happened that in the time of her trouble I took her "home."

She was perfectly ignorant of this, ignorant as a child; she looked to me for every thing with a tacit pitiful simpli-

city, also like a child. But I was a man, and strong as a man ought to be when Heaven apparently gives his destiny—perhaps more than his—into his own hands.

Young self-presuming simpletons may waver—I never did; cowards and passionate may shrink back, afraid of their fate or themselves—I was afraid of nothing. Fortune's vicissitudes, lapse of years, trouble, suspense, uncertainty,—all these things are as nothing, and less than nothing, to a man who truly loves a woman whom he esteems worth his winning. Either she is not, or he does not deserve to win her unless he can conquer them all.

So much of myself, which here I shall leave, as it is a subject which concerns myself alone.

Lord Eristoun quitted England; not immediately; but he never came again to Pleasant Row. Lady Emily did, more than once; pale and sad-looking, my mother told me, but more tenderly loving than ever to our Jean. Shortly she too disappeared from London, and I heard of her no more. If Jean did, she kept a passive silence, which it would have been cruelty to break.

At Midsummer, we left Pleasant Row—left it to the shriek of the engines and the curl of the gray spectral steam. They will never tell any tales—those two bare walls, roofless, open to the sky.

I found a little cottage, some miles out of London, where I established my mother and Jean. Algernon likewise, that he might have every chance of keeping up health in the work from which he must not shrink. Poor lad! but we all of us have something to endure.

"O, how pleasant!" sighed Jean, beholding the cottage, the fields, and the flowers. "Only my pupils—"

"You must give them up."

"Must?"

"If you please,—at least for the present,—while you honour me by taking charge of my mother and that obstreperous boy." They will give you quite trouble enough."

"O, Mark!" She smiled and consented.

Sunday by Sunday I found her cheeks looking less wan and her step lighter. There is hardly any trouble which cannot be borne easier in the country, among fields and flowers.

About this time I had a sort of calenture myself; a desperate craving that was granted to my coat. I fell ill, and was a month absent from Mincing Lane.

I had seen Jean's care over others, her watchful tenderness, her power of entire devotion, to those who needed her, but I had never experienced it myself till now. Every trivial circumstance of every day and hour of that month still remains vivid in my memory. I may yet bless Heaven for it. I did even then at times; not always.

When I recovered, it was winter; then, rapidly as time seems to gallop when one has fairly left youth behind, it was spring. For nearly a year the trains had been passing and repassing through our old parlour at Pleasant Row.

Not a syllable heard I of Lord Eristoun. He might have been dead—or married, as was indeed more likely. Caught, doubtless, by the next fair face that crossed his way, since, apparently, some retributive fate had swept from him that sweet fond one of Lady Emily Gage. As for Jean, hers, dear heart! was to him no more than dust and ashes now.

So thought I, but I was mistaken. One day I found on my table a packet addressed, "Miss Dowglas."

How dared he even to write her name?

I carried the letter in my pocket all Saturday, half of Sunday, in the village-church, up and down the peaceful fields. Jean's spirits seemed peaceful as they; she was a little more silent than usual, perhaps, but with an inexpressible calm in her and about her. I could not give her the letter.

After tea, when Algernon had gone out and my mother was asleep, she said,

"Mark, I wanted to tell you something. You sent me this *Galignani* on Friday last: did you know what was in it?"

"No."

"See."

I read: "*Married at the British Embassy, Paris, Nugent, Baron Eristoun, to the Lady Emily Gage.*"

I folded up the paper slowly, and returned it; as I did so, it was my hand that shook, not Jean's.

"You see," she said, "all is as was right to be. I knew it would happen so in the end. I am very glad. Only, somehow, if they had told me themselves—"

I gave her Lord Eristoun's letter.

Two letters I saw were enclosed. She read them one after the other without moving from her place, without even turning aside; then took up and unfolded a little packet which accompanied them. It was a ring made of hair, a dark lock and a fair one, set in gold, with their two names engraved inside: "Nugent"—"Emily."

Jean put it on her finger, looked at it, twisted it up and down, till slowly her eyes filled—ran over.

"It was very kind. God bless them! God bless them both!"

This was all.

For another year our life flowed on without change, or prospect of change; at least to three of us—my mother, Jean, and me. The boys were all grown up; Charles even contemplating matrimony, though he had faithfully educated Russell, and launched him as a private tutor before indulging in that luxury. Algernon had been transferred to a situation in Liverpool, where still lingered in good repute our honest name of Browne.

"They tell me, if I were to start as a merchant on my own account, I might make a fortune yet, Jean."

"Should you?" she answered me, with that open smile which showed at once her total ignorance of for whom alone the fortune would be worth making. And so, without referring to the matter again, I turned my ways back to Mincing Lane.

And still, in rain or sunshine, green leaves or snow, I came on Sundays to look after "my household," as I called my mother and Jean.

A quiet household, though dear and home-like. At least as much so as the just law of nature and possibility allows two solitary women, of different ages, opposite in character, and unallied by blood, to make to themselves a home, or rather a habitation. Sometimes I wondered if Jean felt this distinction, if her present life were sufficient for her; or, supposing her Monday-morning thoughts ever followed me from the sunshiny jessamine-porch into the shadows of Mincing Lane, whether she thought my life was sufficient to me?

I was no coward. I did not complain of my lot, nor dash myself to pieces against its stony boundaries. If Heaven had sent them, let them stand; if not, mine was a strong hand still.

Once only I confess to have been beaten by fate or the devil, or possibly both. I was hurrying down Cheapside, anxious to shut up the office, the business of which the firm now left almost entirely in my hands. I wanted to catch the last breath of an autumn afternoon down the river; less for pleasure than for health, which a man, whose sole capital it is, has a right to economise; and mine had somewhat dwindled of late.

There was a "lock" in the street, which detained and annoyed me; I was apt to be irritable at little things now. That pair of prancing grays which stopped the crossing—what right had they and their owners, caracoling lazily along the smooth ways of life, to come and balk us toiling men out of our only possession—our time?

I just glanced at the occupants of the carriage; only two, a lady and gentleman, talking and smiling to one another,—young, handsome, happy-looking. When they had passed I knew them: Lord and Lady Eristoun. They did not see me, and I was glad of it. I am afraid the devil was uppermost for many minutes after then.

So they were in England again! Would they seek us?

would Jean wish it? would she dare to wish it? I could not tell. I racked myself with conjectures; trying to measure a woman's nature by a man's, arriving at what is usually the only safe and wise conclusion, viz. that we know nothing about the sex at all. My sole certainty was in her own words,—that Heaven never allows to one human being the power of making another "permanently unhappy."

How a few quiet words, spoken naturally as we were crossing the Sunday-fields, settled all! I could have smiled.

"Mark, I had yesterday an invitation that I should like to accept. Will you try to take a day's holiday, and go with me to see Lord and Lady Erlistoun?"

"Certainly."

I called for Jean early one forenoon. She was sitting quite ready, in her bonnet and shawl, reading; but she looked up at my entrance,—that bright involuntary look which, caught unexpectedly, is worth untold gold.

The lanes to the station were sunshiny and dewy; Hollingbourne, the chief property of the heiress Lady Emily, was about thirty miles down our line of railway. We walked briskly, rejoicing in the pleasant day. Jean said she believed none but those who rarely had it could fully appreciate the deliciousness of a holiday.

"Then a life of labour is the best. Do you think so, Jean?"

"I do. Far the highest and noblest."

"More so, for instance, than that of Lord Erlistoun?"

I felt almost reproved at her grave and soft reply.

"Lord Erlistoun's is, and will be more so as he grows older, a noble life too. I always felt sure of that. He was like a good ship, gallant and true, but blown about hither and thither for want of an anchor to hold by. He has found it now in his wife's heart."

"Do you think a man's life is never complete without a wife?"

"Some men's are not; he is one. He needs to be happy in order to be good. I used to think the same myself once. Now it seems to me that those characters are nearer perfectness in whom to be good is the first aim; who, living in and for the All-good, can trust Him with their happiness."

I said, looking at her sideways for a moment, "I think so too."

Thus talking, we reached the station; and Jean put her purse into my hand with a wicked little trick of independence she was prone to, however unavailing.

"Well, second-class, of course," she warned me.

"No. I never mean to let you travel second-class again."

Jean laughed, and submitted. When we were in the carriage she leaned back, watching the whirling landscape in silence; but my landscape was her face.

No longer, by the utmost flattery, to be called a *young* face; roundness and colouring gone, the large aquiline features distinctly, not to say harshly marked,—it was noble still, but beautiful no more; unless for that mellowness, like the haze of autumn, which never comes until the summer of life is altogether gone by: a sweetness, a repose, indicating her total reconciliation to youth's passing away, her perpetual looking forward to that which alone gives permanent content in earthly pleasures—the rest which is beyond them, the pleasures which are for evermore.

The train stopped at a small wayside station. A carriage was waiting, and a gentleman.

"Miss Dowglas?"

"Lord Erlistoun!"

They met—not quite without emotion, but only so much as old friends might naturally meet with after long absence. No more; not a particle more.

"Emily is here too. She is longing to see you," and he hurried Jean to the little waiting-room, where Emily fell on her neck and shed a few tears. She seemed more affected than either of them,—this fortunate, happy, loving, and beloved Emily.

That day passed like a dream, in and about Holling-

bourne, which was a spot lovely as dreamland, and with those two, fit owners of it all, who seemed in their position and themselves familiar and yet strange, known and yet unknown, as people are whom one has to do with in dreams.

"We asked no one to meet you," said Lord Erlistoun; "we wanted this first visit to have you all to ourselves; and besides, we do not intend to be swamped in society just yet; we feel as if we never could have enough of solitude."

His natural unconscious "we,"—his evident delight in this same "solitude," at least so much of it as was possible in a house like a palace, and an estate like half a shire,—ay, Jean was right. His last love had been the true one; he had cast anchor, and found rest.

"Yes, she looks well, and happy too," I overheard him say; his eyes, fonder than any lover's eyes, watching his young wife as she flitted about her splendid conservatory, a flower among the flowers; "and I think, Jean, every day she grows more like you."

This was the only time he called her "Jean," or that in speaking to her his voice dropped into any thing of the old tone; the only time that Jean's countenance altered, though for no more than an instant. No angel in heaven could have worn a happier smile than Jean Dowglas now.

They both walked with us to the station; they seemed to be in the habit of walking together a good deal. Our last sight of them was standing on the platform, arm-in-arm; Lord Erlistoun lifting his hat in adieu, with his peculiar stately air, Lady Erlistoun leaning forward to catch one more look, in her fond childish way, of her "dear Miss Dowglas."

Jean closed her eyes, as if to shut in the picture and keep it there. Opening them a few minutes after, she met mine, and smiled.

"Have you liked your holiday?"

"Yes; and you?"

"I have had a happy day. I was very glad to see them."

"Shall you go again often?"

"No, I think not. Their current of life runs so widely different from mine. I do not wish it otherwise. I think, Mark, I am coming to that time of life when one's chief happiness is home."

We happened to be alone in the carriage; the lamp shone dimly on Jean's figure,—leaning back, with her hands crossed: outside was all pitch-black nothingness. There might have been nothing and nobody in the wide world but her and me.

"Jean, something happened to me last week that I should like to consult you about. Shall I now?"

She turned and listened.

I told her how, this Michaelmas, my salary had been doubled. How, then,—speaking to the head of our firm about Algernon's conviction that the good name of "Browne and Son" was still enough to launch "Browne, Brothers," and float them into smooth water, if they had only a handful of capital to start with,—the worthy old fellow, once a creditor of my father's, had offered me, as a loan, the amount of his long-paid debt, saying,

"Use it, or lose it, or give it me back any time these ten years. 'Tis as good as thine own, lad; for nobody would ever have paid me a penny of it, except thy honest father."

Jean's eye sparkled as I ended my tale.

"Would you like me to accept it, and start afresh? You think it would not be too late?"

"Nothing right to do is ever too late. And this seems right, for Algernon's sake. Also," her voice dropping tenderly, "for the sake of your father."

"Yes, he would be happy, if he knew, his memory could help us still,—my dear old father!" And for the moment I thought only of him, and of the pride of once more building up our honest name in my native town, and among my own people.

Jean asked if I had any hesitation in accepting this loan,

for which I might pay interest shortly, and repay the whole in ten years?

"But what if I do not live ten years?"

"Nonsense."

"So you think me immortal, as those seem to be whose life is valueless to themselves and every body else?"

"That is not my cousin Mark, as you well know."

After a while, I asked her if she could not understand my fear of taking this loan, and perhaps failing, and leaving the debt as a legacy to Algernon?

"But is it not for Algernon's sake that you would undertake the risk?"

"Not entirely. Jean," and out came the bitterness of years, "I have never in my life had any thing to live for except duty and honour. At least let me hold these until the end."

Jean sat thinking for some time; then she turned to me.

"Mark, I also feel that the only things worth living for are duty and honour. Will you trust me with yours?"

"What do you mean?"

"You asked my advice; this is it. Accept this good man's money; use it well; repay it if you can. If not, and I live, I will. Otherwise, at my death I will take care that it is paid. Now, shall you be content?"

Probably few men ever feel as I did then. Not for the matter of "generosity," "obligation;" there was that in my heart which counterbalanced both, nay, smiled at the thought of their existing at all between Jean and me; but the goodness, the tenderness, which, whether or not indifferent to my personality, understood and cherished, and was ready to guard to death the true *me*, which I valued above all things else—my conscience and my honour.

"Will you be content?" she said again. "Will you trust me? I would you, and always did."

"Do you trust me, Jean?"

"More than any body in the whole world."

Doubtless she wondered that I replied nothing; that I did not even touch her extended hand; that I lifted her out of the railway-carriage, and walked with her through the solitary star-lit lanes almost without a word; that when we found my mother gone out with Algernon, not to be back for an hour, I sat down stupidly by the parlour-fire, mute—as death, if you will. "Hold the last fast," says the proverb.

When Jean came down-stairs with her bonnet off, in her white collar and braided hair, she made a discovery of a change in the parlour, which, indeed, I had myself forgotten. She looked at once to me, and I attempted no denial.

"Yes, I thought the hired tin-kettle had been strummed enough in its day, and merited superannuation. Do you like your new piano, even though I chose it?"

"How kind you are!"

Not another word. No folly of "obligation." If there had been, if she had not taken it quite naturally, as I would have wished to see her take a mountain of diamonds, were it mine to offer her, I also should probably never have said another word.

She sat down, and played for some time, I sitting over the fire.

"Mark, have you forgotten this? you have not asked for it for a long time."

My tune, which always brought back my cousin Jean in the Lythwaite drawing-room, with the sunshine on her hair. Also, because this "*Lied ohne worte*" seemed to my fancy to tell a whole life's story; a duet in which you can hear distinctly the man's voice and the woman's, separate, together; then wandering apart again in troubled involved phrases; but always in extremity comes back the tune in the bass, sweet and firm; at last the treble air is caught up with it, and both fall into a melody more "comfortable"—to use Jean's word—than any bit of music I know; ending in two notes, several times recurring, which say, as plain as notes can say it, "Come home, come home, come home."

Sometimes, when a vase is brimful, a touch, the shadow of a touch, and over it runs.

"Did you like your tune?"

"Yes; but come and sit by the fire, Jean."

She did so; one on each side the hearth, making two of us. Only two. Supposing it had been "my ain fireside;" I, who never in my life had had a fireside of my own—my very own?

"How pleasant a wood-fire is, Mark! But when you go to Liverpool we shall cease to have one fireside to sit over and talk together."

"We never had, except on Sundays. You forget, I have only had you for my Sunday-blessing."

"Have I been a blessing? I am glad. It is something to be a blessing to somebody. It was more than I deserved."

She shaded her eyes from the fire, which blazed and crackled as if it knew winter was coming, but burnt cheerily, and was not afraid.

Now, or never.

"Jean," I said, "if I go to Liverpool, and can make a fortune there, or at least a competence, will you come home?"

"Your mother and I?"

"My mother, if she chooses; but I meant you. I cannot do without you. I could once, five years ago, because it was necessary and right; but now I cannot. 'Tis not worth making a home—I will not do it—except for you."

"Me? me?"

She looked steadily into my face, and found out all. She dropped her head lower and lower, almost into her lap, and burst into tears.

I said no more; it may be months, years, before I say any more. I would not take my life's ransom unless it were a free gift.

Algernon and I—"Browne, Brothers"—are working our best. We have hardly any holidays, except an occasional evening stroll, with a western breeze blowing in the tide, and the sunset throwing colours beautiful as Paradise along the sandy flats of the Mersey shore.

I write either to my mother or Jean every Sunday. Now and then Jean writes to me; only a line or so, expressing little or nothing; and so it may be for God knows how long, or for ever.

But sometimes I think—

END OF LORD ERLISTOUN.

THE CHATELAIN OF CHÈVREMONT: A STORY OF LIÈGE.

(FOUNDED UPON FACT.)

MANY hundred years ago, in the vast and lofty banquetting-hall of the grim Castle of Chèvremont, there met an assembly, round the loaded tables of the great chief Immon, to partake of his bounty on a very special occasion.

The birth of an heir, long looked forward to with the greatest anxiety, had at length crowned the highest hopes and expectations, not only of the lord of the fortress himself, but of all its rough inhabitants; and little was the joy of the event marred by the untimely death of the lady of Chèvremont, who had survived but a few hours the birth of her son. Though a truly faithful husband, as soon would Immon have dreamed of bewailing a warrior left on the hard-earned field of fight, as of lamenting the loss of a wife on this all-absorbing occasion. One sigh, while it honoured her memory, wafted it into oblivion.

And so the mirth ran high. With greedy eyes and appetites did the guests devour the delicacies, beneath whose unwonted display and rich profusion the tables literally groaned; a rarity indeed within those halls of Chèvremont. Accustomed frequently to long and vexatious sieges, Immon, himself setting the example, had so trained his force,

that, in even ordinary times, they partook of no more than the absolute necessities of life.

Beneath the banners won in a hundred furious fights, from both friend and foe, according as envy taught or policy dictated, sat the bold lieges of the Lord of Chèvremont. Armed from head to foot,—such was their standing law, even during their present peaceful occupation,—there was assembled there as brave a troop as ever joined the standard of rebellion. Brightly, their armour flashed in the golden light of the setting sun, as it streamed through the half-opened casements, while not an eye nor a word bespoke the presence of that enemy which steals away men's senses; for long had all approach to disorder of every kind been banished from those walls; and even now the amount of wine, poured separately by the master's hand for each of his men, was extremely limited, a precaution the less unwillingly complied with on account of the promise of a mighty scheme to be unfolded after supper.

For a full hour had the cup passed round, and the vaulted roof rung with the merry laughter of the gay troop; whilst Immon, seated in the midst of his warriors,—all treated as equals on that holiday,—discoursed of war and deeds of arms, which caused the blood of old and young to boil with the ardour of recollection or of anticipation, and made them burn to draw the swords that now hung idly from their belts, and rush upon some well-matched foe. Then with loud shouts the health of the young lord was drunk; and then in silent homage the memory of the mother, dead, followed by an involuntary pause, as if almost of sadness. Perhaps their rapid thoughts returned for a brief moment to those old days which each of them could couple with a mother and a home,—a mother, alas, too soon forsaken, a home too easily dishonoured.

The chief's loud voice first broke the silence. "To whom, my friends, shall the honour of baptising this young stranger be intrusted, think you?" he asked suddenly; while an ill-suppressed murmur of derisive merriment followed the question, so little were they used to think of holy things, or speak of aught but arms and war. But Immon himself looked grave, and almost threatening.

"Ah, ha! and who shall execute that office?" they repeated; and more than one volunteered himself to celebrate the rite, and the subject had already become one for renewed mirth, when the same commanding voice spoke once again:

"Silence, my friends! I have thought of one for this great purpose," he said, his eyes kindling mean while with fierce delight,—*"I have thought of one whom few of us have ever dared to hope for here, but whom, if his folly (and I doubt it not) lets him but come within the lion's den, we soon shall have among us—the Bishop of Liège!"*

"The bishop!—Notger!" burst from a score of tongues. The chatelain's arch-enemy baptise his heir,—impossible!

Yet it was nevertheless, Immon gravely assured them, true. Notger himself should be honoured with the commission.

"But will he come?"

"I myself will see to that. I part this evening for Liège; and to-morrow noon, or I mistake, shall see the holy man within these walls." And Immon glanced proudly round them as he spoke.

Astonishment was depicted on each face. To all questions Immon vouchsafed no answer; and his plans, though darkly guessed at, were still kept secret in the depths profound of his own bosom.

That same evening a council of a chosen few was held in the Castle of Chèvremont; and at its close these favoured warriors returned with flushed brows and eyes of flashing expectation, telling a tale of treachery and bloodshed yet to come.

At the same time the Chatelain, mounting his best horse, took, unattended, the road towards Liège.

Let us now for a few moments consider the position respectively occupied by those of whom this sketch would

treat. The Lord Bishop of Liège, not only a lofty dignitary of the Church, but a temporal prince also, with a yearly revenue of 100,000*l.* sterling, was acknowledged by all the wealthy province of Liège as its feudal lord; and noble indeed was the court, both spiritual and temporal, which gathered round him. The present incumbent of the see was, at the time of which we speak, the proud Bishop Notger; a man highly ambitious, and an implacable enemy to all who dared oppose his, frequently, too-grasping pretensions, both in the world and in the Church. A soldier originally by profession, he had, in the midst of a career most brilliant, resigned the tent for the cloister, and in due time the cowl for the episcopal mitre; and in each station of life he had always been, either by his own merit or fortune's favours, equally felicitous and successful. Cautious in all his enterprises, he engaged in nothing without having first counted the cost; to which temper of mind may be perhaps attributed much of what might else have been accounted, in vulgar parlance, "luck." Inured from early youth to situations of peril and severity, the idea of personal danger never crossed his mind.

Of the few who dared oppose this mighty prince, the Chatelain of Chèvremont was foremost. Established in the strongest fortress in the province, Immon was seldom content to act on the defensive only against the forces which the offended prelate sent to sit down from time to time before his walls, to compel, if possible, submission; but, as if scrupulously to return the compliment, and, it must be owned, with generally far better success, he would take the opportunity of sallying forth from his stronghold when he was himself unmolested, and not only harass the surrounding country, but even take possession of such of the citizens of Liège itself as might happen to fall into his hands,—wealthy merchants, who were called upon to pay a good round sum for ransom, which, if not speedily forthcoming from anxious friends at home, was hastened by a present of the captive's ears, and gentle hints of the production of sundry other corporeal fragments to refresh their memories or quicken their apprehensions.

It was nearly dark ere Immon had performed the distance that lay between his own castle and the bishop's residence. Arrived at length within a mile of the city, he tied his horse cautiously to a tree in a little wood skirting the road; and opening a small wallet that he carried with him, was in a few moments transformed into a wandering friar, which disguise, as being specially that of the bishop's own order, he doubted not would gain him easy admittance to the episcopal palace, and access to Notger's own immediate presence.

He then, with well-affected sanctity of manner, betook himself once more in the direction of the town, on foot. Entering the great quadrangle of the palace, and assuming the bearing of a timid stranger, he examined one by one the varied carving of the columns which supported, as now, that splendid edifice, until the last pale gleam of twilight had warned all stragglers thence.

He now prayed admission to the bishop, on business, as he said, of much importance; and so earnest were his supplications, that late as the hour in those times was considered, the attendants of Notger were prevailed on to admit him.

The Bishop of Liège had retired to his chamber, and was alone. At a sign from Immon, he directed the usher who had introduced the stranger to withdraw, and then stood waiting as if to know his business. Scarcely had the retiring footstep announced the servant to be out of hearing, than Immon threw off his disguise.

"Perhaps, my lord, you do not know me," he said, observing that the bishop regarded him with curiosity rather than alarm; and he then continued, "Immon, Chatelain of Chèvremont!"

Notger drew back a step, while a momentary imperceptible flush suffused his countenance; but instantly recovering himself, he sat down and waited further parley.

So, unasked, did Immon; and thus they paused some minutes. At length the latter spoke again:

"And now, sir bishop, that you know my name, you shall know my errand too. You have heard, no doubt, an heir is born to Chèvremont; another thorn has sprouted for the tender side of the saintly Bishop of Liège. You know it,—good! You know, besides, that a young scion of so great a house as mine,—though you may curl your lip, my lord,—the scion of so great a house must have a fitting entry to the world. Lord bishop," he continued, rising as he spoke, "I have come to you myself, *unarmed*, alone, to pray you very humbly—come and baptise my child."

So humble was the tone in which these latter words were spoken, that Notger could scarce believe the man before him to be the ferocious brigand that desolated half his province; but when he looked towards him, at the disdainful flashing of his eye, and the rude imperious position in which he stood,—his foot upon the couch on which the bishop sat,—he saw at once he had to deal with one who would brook no evasion, still less accept refusal or excuse. He perceived, too, how Immon had placed himself before the entrance to the chamber, and how that he played carelessly, yet significantly, with his sword's hilt, especially when boasting of having come "*unarmed*." He saw his peril; and, with characteristic rapidity, resolved upon his course of action.

A long silence followed the last words of the soldier, broken at length by Notger, who slowly, and in a low voice, said:

"And what is my security?"

"My word."

A sarcastic smile was the bishop's only recognition of the reply.

"I will come," he said; "and when?"

Immon felt the battle to be won. Few words had passed, but to one of them at least the conflict had been sharp. Drawing himself to his full height, he withdrew his foot from the couch, displacing one of the pillows, which fell upon the ground. On the episcopal device with which it was embroidered he placed once more his foot, and looked at his companion with a glance which ill concealed the triumph of his soul. Something of treachery, too, shot from his eyes, as he replied:

"To-morrow noon, and not an instant after. Noon!"

"I will come," repeated the bishop.

The other drew from his pouch a small gold-piece, and, in a tone which showed his determination to complete as far as possible his humbling errand:

"Your lordship's fee!" he said, as he tossed it to the priest. "We shall expect you, then; we have your grace's saintly word;" and then, without another look, he hurried from the chamber, locking the door as he passed out, and muttering, "Poor fool, how cheap he sells himself!"

That night the bishop also held a council. Knowing that no armed men would be admitted to the fortress, he was forced to be content with ordering that all his attendant priests should bear him company.

The first beam of the rising sun tipped the crimson banners that floated from the highest points of the Castle of Immon, who looked half-doubtfully towards the distant city of Liège.

The treacherous are over themselves distrustful; and Immon began to weigh the chances of so old a bird as Notger falling thus easily into the snare, which, truth to tell, he had prepared for him, and questioned if even his plighted word would on calm and secure reflection be held sacred. If he might judge the bishop by himself, such an event were more than doubtful.

As the day advanced he grew more anxious, and his suspense more fretful. It led him constantly up to his turret's height, whence he could command the highway to the capital, expecting and yet dreading a message of excuse, or even of defiance from his anticipated guest, and suggesting to his excited mind the reception such an envoy should meet with at his hands.

Within, the sound was heard of warriors furbishing their arms and buckling on chain-mail, "to make," as Immon said, "a worthy entertainment for his lordship of Liège."

A dozen times had Immon mounted to the summit of his castle to keep his impatient watch, when, precisely at the appointed time, the distant sounds of low soft chanting rose behind a little knob that hid the winding road. A moment more, and there appeared a priestly procession, with crozier and mitre, and all the insignia of the Church, conducting Bishop Notger in full state, and singing as they came slowly on the hymn that first announced them to their expectant host.

"Now, by my troth, good Notger, you do well," exclaimed the chief, apostrophising the procession, as, to the number of a couple of score or more, it glided over the lowered draw-bridge, which was significantly raised again immediately behind them. He now hastened down to meet the bishop, but was stopped an instant on the steps by one who whispered something in his ear.

"Not till the appointed signal, for your lives," he whispered in reply; "I myself will give it;" and he hurried on.

Notger and his train had already entered the castle-yard, and Immon, with affected courtesy, led him to the hitherto desecrated chapel. Here some burlesque attempts had been made at ecclesiastical adornment; a naked sword, reversed, served for an altar-cross; while the font, long since degraded to a water-trough for horses, was replaced by a great wine-cup, of massive gold, however (what else for the young heir of Chèvremont?), a rich spoil from some late outrage.

The bishop eyed these insults with a quick glance, more of disdain than of surprise, and calmly proceeded with the appointed service of the Church, the priests and acolytes chanting their parts, as in their own cathedral. Notger received the infant from his father's arms, and in a few moments the rite was ended.

"Thanks, sir bishop," cried the chatelain triumphantly, holding out his hands. "Now give me my son."

"Your son no longer, Immon," said the bishop calmly, folding the child to his bosom; "he is the Church's son. To her you have confided him, with her he must abide."

Immon laughed scornfully, yet with evident anxiety and impatience. Plucking the bishop by the sleeve, he said,

"Come, my good lord, and taste the fare my poor castle has provided for this memorable day."

But Notger stood immovable. "Your castle, Immon?" he replied. "No," he continued, as he handed the infant to his attendant priests,—*"no, it is mine!"*

"Yours!" cried the astounded rebel, his blood boiling with surprise and fury. "Indeed!" and he looked fiercely round on his retainers; but, following an order purporting to have issued from their chief, that no weapon should be allowed within that sacred place, they were all unarmed.

At this, with a howl of frenzied rage, he rushed upon the bishop, and with his heavy sword he dealt that holy man a stroke which would have set at rest for ever the question of right in the Castle of Chèvremont, but that it rang only on the armour of proof which now glanced beneath the cope and surplice of the bishop, as he disengaged his weapon from under them.

In those days churchmen were forbidden by the canon law to shed blood; they therefore met the difficulty by arming themselves with a heavy mace, loaded with metal, which, on an emergency, without gashing the flesh of the enemy, performed the work they had to do with wonderful success, when applied to the skull of their victim. It was with such an instrument, or rather with one familiar to the sight of Londoners, as displayed in the formidable grasp of Magog in Guildhall, that Notger now met the furious attack of his treacherous host, and in an instant a huge iron-ball, playing freely, by no inexpert hand, round a stem of steel, whistled about the traitor's head.

Astonished at this unexpected display of resistance, Immon for a moment staggered backward; then sprang with blinded fury upon his ecclesiastical opponent, dealing blow

after blow upon his iron casing and the metal-staff of his mace, each dexterously warded off by the more collected bishop, till an unlucky stroke upon the last snapped Immon's sword asunder near the hilt, and left the chieftain powerless.

Meanwhile the attendant priests, disrobing in an instant, displayed a band of armed men, well matched in all respects with any in the fortress. These, at a word from Notger, steadily advanced upon the terror-stricken menials, who, separated from the men-at-arms, now made frantic and useless efforts to break through the doors, which had been secretly fastened by one in the bishop's service. Driven into a corner of the building, they speedily surrendered at discretion, while the conquerors, easily, and without bloodshed, exacted from these unarmed soldiers terms of abject submission, enforcing the same with some stout cords, with which they bound their prisoners and placed them in security.

Which done, under the command of a lieutenant previously appointed, the priestly victors sallied forth to engage the formidable men-at-arms, who, ignorant of the drama enacted within the building, patiently awaited the prescribed signal, without which they were on no account to move. So remote from this quarter was the chapel, that no alarm had reached them during the conflict. Notger had been left, by his own command, to deal with Immon by himself.

Still keeping up a wonderful exhibition with his weapon, the spiked ball of which, revolving round the rebel's head, held him completely at bay, the bishop, step by step, had forced him out of the chapel by a small door in the north wall, leading, as he knew, from previous instruction, into a stone-paved hall. The wretched man now made vigorous attempts to evade his enemy, who, at the least suspicious movement, brought the ponderous globe nearer and nearer to his head, and could (for this eminent representative of the Church militant appeared a perfect master of his science) by the slightest motion of his hand have dashed his brains out. Such, however, was not his purpose.

And now, for the first time, the mighty warrior knew fear. He seemed fascinated by the conduct of the bishop, who appeared suddenly seized with an irresistible arithmetical desire to ascertain the number of the marble-squares that composed the floor, counting and recounting them with the utmost perseverance, though still holding at bay his frantic enemy.

At length a certain object seemed attained, as he left off enumerating the stones, and pressed still more resolutely upon Immon. Foaming with despair and rage, the latter bounded from side to side, striking with impotent fury at his mortal foe, as he still retained the fragment of his weapon in his hand. Upon the battle-field, Immon had neither shunned danger nor dreaded death, and a warrior's end would have been perhaps accepted as a triumph. But such, he now too well knew, was not reserved for him.

All effort, all frenzied effort, was in vain; for Notger drove him back and back, always towards one special square of marble. A hundred times he strove to fly from that one spot,—black as his own despair,—a hundred times he found himself again approaching it. And now at length his foot touched the stone which was the object of such dread; it rested paralysed upon it for an instant; a hollow sound was heard beneath, as the marble-square rolled back upon a hinge, hitherto cunningly concealed from view. A moment he paused, balancing upon the edge of the abyss thus formed, glaring with the intensest hate on Notger, then, with a shriek of wild despair, he vanished.

The latter stood in breathless silence till the heavy fall beneath told its own tale; then, approaching the chasm, he looked below. There was a surge upon the foul water at the bottom, as it settled over the dead man,—for his heavy armour sank him like a stone,—but there remained no other vestige of the once-dreaded Immon.

"*Pax tecum*," said the Bishop of Liège, as he raised the trap to its original level, and wiped the drops that stood

upon his face. They were the first words that he had uttered since those which hurled defiance at the now vanquished traitor. Then silently he turned and left the place.

Little more remains to tell. His entrance to the court found the episcopal troop victorious, and the garrison easily taken in a moment of so great surprise. The warlike priests had already made quick conveyance of their late antagonists, counselling quiet submission to their fate, and hurling *anathema* on all who did not respond to their advice.

And thus was Chèvremont subdued. The castle, too strong, and too well situate, to be allowed to stand a tempting stronghold for the disaffected, and wholly useless to a character so peaceful as the Bishop of Liège, was speedily demolished, and scarce a fragment now remains to illustrate to the traveller the tale to which he listens, on his way to Chandfontaine.

* * * * *

There was an old monk, in bygone days, who told this legend, the abbot of a monastery in Liège; who, when asked by his many hearers of the child, would smile, and say that he still lived, and add, "*I know he is more happy as he is than ever would have been the Lord of Chèvremont.*"

A HOthouse FOR THE DRAWING-ROOM.

In the papers on the Warden Case, it was suggested that, if its true principles were recognised, it would be found capable of many extensions, and one of those extensions is now to be described. Given a case for plants; what can be more reasonable than to apply heat to it, and so adapt it to the culture of exotics? There are many ways in which this may be accomplished. An ordinary Warden case, stocked with ferns or flowering-plants, may be heated in a very simple way. Below the soil-trough let there be a flat tin-boiler and a lamp, or a boiler without a lamp, but with a contrivance which will allow the water to be changed daily, and you have at once a safe system of bottom-heat; and this may be still further extended so as to add top-heat, and thus maintain both soil and air at any temperature that may be desired.

There is nothing particularly novel in this, for many have tried it with success; and in the hands of the scientific cultivator, who can apply the established laws of horticulture to window-gardening, a plant-case is no longer a vexatious toy, but a very practical and useful construction. The invention now to be dealt with is to be classed among the working and manufacturing contrivances; for though it may be made as ornamental as you please, and very fairly claim entrance to the drawing-room, yet its uses and functions are of a preparatory kind; it is neither fern-case nor a "rustic adornment," but a plain hothouse, which will perform almost any amount of work in preparing tender things for the window, the garden, the greenhouse, or the conservatory.

There are at least three names to be mentioned in connection with it,—first, Mr. Walton, the inventor; secondly, Mr. Beaton, the improver; and thirdly, Mr. West, the manufacturer, who has brought it to perfection. Mr. Walton made the first experiment of applying heat to a small plant-case, with a view to create a portable indoor forcing-pit. An old box was dressed up, with a tray for sand, a boiler of tin, a lamp, and lights over all, so as to look like a common garden-frame. This was set to work, and answered so well, that it became known as the WALTONIAN CASE; and subsequently many improvements were made for applying the heat

more constantly and efficiently, and now it has the completeness of a very practical invention.

To describe all the little incidents connected with the development of the idea would be to occupy valuable space to very little purpose; and I will therefore at once describe the case, and the mode of working it, premising that I have had one in operation since February last, which was supplied me by the original maker, Mr. West, of Surbiton, Kingston.

The annexed cut represents the Waltonian case in its complete form when in operation. It is in reality a two-light box, standing on legs, the framework being of wood, with glass at the front and ends, and a pair of glass sashes, or "lights," laid loosely on the top. Beneath the centre, in the front, is a tin lamp burning colza-oil; and this lamp gives heat to the water contained in a zinc-boiler placed underneath the plants, the smoke escaping at the back of the case.

The mode in which the heating apparatus is arranged is very simple. When the top-lights are lifted off, and the pots removed, it is an easy matter to lift out the tray and boiler, represented in the second cut. This tray is of zinc, and measures 34 inches long by 17 inches broad, and hence contains a working space for plant-culture of 568 square inches, or sufficient for 32 four-inch pots, in eight rows of four each. The tray *a a* fits into the bottom of the case, and forms the bed on which the pots are placed, and the medium by which heat is communicated to the plants through a bed of silver-sand, an inch deep, spread evenly over it.

In the centre of the tray is a tube, *b*, through which vapour escapes into the case, the amount of which can be regulated by a cap fitting into it. The tube *b* is also necessary as a means of filling the boiler, *d*, with which it communicates; and this boiler, when placed in the case, falls exactly over the lamp, and receives its flame in an orifice cut in its under side for that purpose, the hot air of the lamp circulating round the boiler below the tray, *a*, and making its exit by the funnel, *e*, which, when at work, fits over the orifice, *c*, in the tray.

To set the case to work, then, we have first to fill the tray with silver-sand, which must be moderately damp; then fill the boiler, which holds two quarts, by means of the tube, *b*; then lower the tray into its place in the case, fit the flue-pipe, *e*, over the hole, *c*; trim and light the lamp, and wait for the result. As a matter of course, a gentle heat is soon perceptible; and if the case is filled with pots stocked with seeds or cuttings, this heat is communicated to them from the bed of damp sand, and a temperature of from 70° to 90° may be commanded at pleasure.

Now what is the use of such a contrivance? It will do every thing that we employ a dung-bed for,—raise seedlings

things; and have raised seedlings of several choice aquatics, besides melons, cucumbers, gourds, celery, tomatoes, asters, Thunbergias, Cobaeas, Delphiniums, and no end of other delicate summer bloomers,—all in the same case, where they have been steaming and growing beside me in my study, and calling for no more attention than one is obliged to give to half-a-dozen flowering-plants in pots when committed to the window.

But it must not be supposed that there is nothing to learn in using a case of this kind. You may burn or boil your plants in no time if you do not use proper precautions.

The sand must always be damp, the cuttings should never flag for want of water, and nothing in the case should be wetted with cold water; it should be as warm as the air inside. The lamp must be trimmed morning and night, and kept constantly burning, for the case being small soon cools if the flame expires; though, as it burns twelve hours at a stretch, it must be very careless work to have that happen. Then air must be admitted according to the state of the plants. As soon as seeds come up, give them more light and air, or they will be drawn and sickly; and they must be gradually brought towards a cool corner of the case preparatory to being removed altogether, for nothing should remain there to grow on. When once started and fairly rooted, prepare them for removal.

Of course a hundred hints might here be given as to the working of a Waltonian case, so as to make the most of it; but as this paper is simply intended to introduce the invention to the readers of the NATIONAL, we must here cry, "Hold, enough!"

SHIRLEY HIBBERD.

of every kind of tender plants, whether cucumbers and celery for the kitchen-garden, half-hardy annuals for the borders, greenhouse-seeds for the greenhouse, the conservatory, and the window; and, in the way of cuttings, strike almost any thing to a certainty. Suppose you have half-a-dozen old geraniums, a few fuchsias, calceolarias, mimulus, a pinch or two of seed of half-hardy bedding-plants, you have only to get your pots ready, prepare some light compost with a good admixture of silver-sand, and set cuttings and seeds to work with heat and moisture, and in a few weeks you will be astonished at the quantity of plants you have manufactured. In geraniums every joint will make a plant, whether there is a bud visible or not. You have only to stick them in round the insides of small pots, letting every cutting touch the pot; sprinkle silver-sand over the soil in the pot, keep all moist and at 75°, giving air occasionally; and out of a few old geraniums you may manufacture hundreds of young healthy plants. I have this season struck geraniums, pansies, fuchsias, calceolarias, summer chrysanthemums, petunias, verbenas, and dozens of special odd

LORD PALMERSTON.

FROM A PHOTOGRAPH BY MAYALL.

In forming a portrait gallery, which we trust will ultimately include all the foremost men and women of our time, in every department of intellectual endeavour, we shall not of course exclude eminent statesmen and politicians. But we do not intend to append critical and biographical papers to their portraits. If we did so, one of two things must follow: all individual expression of opinion must be suppressed, and consequently the result possess neither interest nor value; or the editors of the NATIONAL MAGAZINE must step beyond the boundaries they have chosen, and become identified with special party and political views. We abide, therefore, by our original declarations; and in now presenting the first of our political portraits, reserve for other opportunities such remarks on the social and national questions that may be affected by the noble lord's policy as will fairly come within the scope of this publication.

LITTLE RIDLEY'S LOVE AFFAIR.

It was one quiet morning, at the commencement of what is familiarly called the "long vacation," when Sydenham—lovingly termed the "Doctor"—and your humble servant were breakfasting with our common friend, Duval, a great legal luminary, at his chambers in Pump Court, Temple. The long vacation, as most civilians are aware, is that ungenial season when briefs are no longer sown broad-cast, but are merely dribbled in as a sheriff's-court or sessions case may render necessary; when outstanding fees are carefully gathered by provident clerks, whose shadows become daily more and more attenuated as they noiselessly glide about the inns of court, dreaming of terms, and sighing for the fatness of Hilary and Easter.

The *locus in quo*—to speak professionally—of our matutinal repast was not so much a matter of choice as of compulsion. According to the original draft of our campaign, we should have been seated, not in Pump Court, but on the cold and craggy peaks of the *Grande Mulets*. Various untoward circumstances had, however, conspired to baffle our aspirations. *Imprimis*, Duval had been plucked at his examination, and had sentenced himself in consequence to six months' imprisonment and hard labour. Sydenham, who was grinding at the mill of medical science, with his intellectual eye upon the "college," was suffering like Duval, but from a wound of a more material character. In performing his celebrated necromantic feat of breaking a poker over his arm, he disqualified himself for scaling acclivities by severely bruising his shin. My own little domestic calamity was more touching, and not quite so ridiculous. Having, after an unusually prolonged *valse à deux temps* with a most ethereal partner, been induced to take a moonlit ramble into the conservatory, we had just begun to enjoy the unspeakable charms of seclusion, when I was suddenly seized with a most violent fit of sneezing, which speedily drew public attention to our retreat, and nipped our delightful tête-à-tête ere it had scarcely unfolded its blossoms. Between cold and mortification I had no desire for Continental travel, but remained gloomily in town, toiling hourly at a sonnet on "Influenza," which I purposed sending to Maria, as a memento of that fatal night, and which I had not yet finished satisfactorily, though my sufferings for three weeks had been very acute.

"What has become of little Ridley?" inquired the Doctor, as he curiously dissected a box of sardines.

"Gone to Jersey, I believe," replied Duval, "on a love mission—*re* Laura Blanchflower; a case on which we have already advised."

"He is a special original, if ever there was one," said Dr. Sydenham. "The age of martyrdom is gone by, or little Ben, with his great soul, would long since have

perished at the stake—A small piece—well done—thank you."

"Does he walk in his sleep now?" asked Duval. "He was a perfect *Aminia* when we were at school together. One night, I remember, he upset the washhand-stand; and the water percolating through the floor, acted as an extemporaneous shower-bath for the refreshment of Monsieur Mercredi, our irritable old French master, who slept immediately beneath."

"You should have seen him at Exeter Hall, listening to Mendelssohn's *Athalie*," observed the Doctor. "There he sat, speechless, with his eyes raised to the ceiling, apparently lost in solemn rapture. He told me afterwards that he had a presentiment he should marry a widow—Cayenne, please."

"I can tell you a better story than that," said Duval laughing. "When Ridley supped with our friend P—, one night last summer, he was taken very ill, and P— made him up a bed in the chamber which Oliver Goldsmith once occupied, and where it is stated he wrote one of his best works. Well, Ridley, inspired, I suppose, by the *genius loci*, had a dream—a terrible dream—so he described it. He fancied he was in China, in Pekin, where all is sunshine, pagodas, babies' feet, and satin-slippers. Suddenly a procession came in sight—a most magnificent widow, under a flaming parasol, and attended by her slaves. She glanced at Ridley, and killed him with one shot. Her beauty was magnetic; she drew him along; he strove to turn (remembering Laura), but he felt that where she went he must follow. Poor little Ridley, his heart smiting him for his inconstancy; still he went on, till the widow, killing him more and more by her smiles, conducted the martyr to a sort of tea-gardens, where, in a Chinese summer-house, she sat down, and presenting Ridley with a cup the size of an acorn, sweetly requested him to fill it from a tea-urn in the centre of the garden. Two hundred and forty-seven cups of strong Bohea did that luxurious widow consume, and as many times did little Ridley run backwards and forwards, till, overcome with fascination and fatigue, he at length sank exhausted at her feet. It was then that, to his horror and bewilderment, he discovered that the widow had a glass-eye; and he woke up, shivering all over as if he had got an ague. From that time little Ridley has had a dismal presentiment that he shall marry a most inexorable widow."

When we had done laughing at Ridley's superstitious terrors, Sydenham observed that he thought their eccentric but estimable little friend was engaged to that handsome girl whom he met at Matlock.

"Well, he corresponds with her," said Duval, "and I suspect has now gone on a visit there; but he has never proposed exactly, because he fancies in his extreme conscientiousness that he is not quite rich enough. If any thing should happen to his old Welsh aunt, then, roll drums merrily, march away."

The above conversation took place, as I have mentioned, over the breakfast-table at Duval's chambers, where those universally interesting subjects—matrimony and muffins—were frequently discussed with liberality and philosophic candour. Little Ridley's monomania was utterly inexplicable. A phantom-widow confronted and appalled him wherever he went. Yet he was constitutionally brave, and devotedly attached to Laura, before incidentally referred to, and who, I have been informed and believe, entertained for her ardent but respectful adorer that pure esteem which is the nicely macadamised thoroughfare leading direct to the dwelling-place of Love. Ridley's introduction to his enchantress took place under remarkable circumstances. Laura, a fine, flashing, and high-spirited girl, was driving a pair of young horses in a phaeton, when they took fright, and Laura, though a good whip, with a strong nerve, lost all command over them. Little Ridley, who was out shooting,—it was the First of September,—saw the danger, and throwing away his gun, he sprang into the road, jumped up behind the vehicle, as agile as a squirrel, seized the reins,

and brought the refractory steeds under subjection with astonishing facility and success. How Laura complimented him for this chivalrous act little Ridley's modesty would never permit him to disclose. But Benjamin had evidently made an impression, and had received one also, which neither time, pleasure, nor study could efface. Laura, unfortunately, however, for little Ben's disinterested attachment, was an heiress with twenty thousand pounds, and Ridley was only a special pleader by courtesy, with a reversionary interest in an equivocal silver-lead mine in the euphonious district of Cwm-y-dyllyud, expectant on the decease of an old Welsh aunt, who was just entering in her eighty-fifth year, and of whose family no member had ever died under the age of ninety-nine.

We had just finished the sardines, and were smoking a pensivo cigar, when the small but tenacious brass knocker of Duval's outer chamber-door was violently set in motion by some unknown visitor. Finding that his *petit laquais* neglected to attend the summons, Duval rang his hand-bell, and shouted with angry impatience the kingly name of Rufus; mean time the summons was repeated and made peremptory.

"Confound that boy!" cried Duval, starting up. "I shouldn't wonder if he's in a comatose state again."

So saying, Duval stepped into a narrow apartment like the steward's cabin of a Margate steamer, and which was neatly furnished with a plate-rack and a wine-cooler.

"Now who has been and mesmerised this unhappy minor?" demanded Duval, addressing the Doctor, who was smiling through his spectacles. "You have, Sydenham?"

"Pon my life, I quite forgot it," replied the student of Guy's.

"Why he must have been in this state for nearly twenty minutes," replied the conveyancer. "For goodness-sake mesmerise him, and let him go and open the door."

During these remarks, the unconscious subject of them—a wan and vacant-looking youth, with furzy red hair—sat on the wine-cooler, his right arm outstretched, and finger pointed, like young Norval denouncing the trembling coward who forsook his master.

Sydenham having adopted the usual means practised by electro-biologists for restoring suspended animation, Rufus, after sundry pungent shivers, woke up, and waited for orders.

"There's somebody knocking," said Duval. "See who it is. If it's income-tax, tell him to call again to-morrow."

"Perhaps it's little Ridley," observed the Doctor, as the knocking continued with renewed vivacity. "It sounds very much like Pope's *Iliad*, all iambs—five feet in a line—ratat, ra-tat, ra-tat, ra-tat, ra-tat."

The Doctor was right. It was that noble though small individual. He had just returned from his sea-side trip, and looked remarkably well. A shepherd's plaid was skillfully wrapped round his plump little body, a Glengarry bonnet surmounted his bald head, and a large sandy-coloured "imperial" decorated his benevolent chin.

We were all delighted to see our learned little brother, more especially as his appearance was so premature. Duval's first question was respecting Laura; had he seen her? was she as charming, bright, and sparkling as ever? were all the ante-nuptial arrangements completed? and was Ridley to become in a short time the happiest man alive?

Alas, he had not seen Laura; his arrangements were completed, and he should never see her again.

He told us this with a badly-acted air of indifference, splitting his glove all to pieces, and breathing heavily through his set teeth.

So singular and abrupt a termination of Ridley's love-suit could not but pique our curiosity, and we entreated him—speaking his own language as a special pleader—to furnish us with further and better particulars. At first he demurred; it was an unpleasant subject, and would only give us pain; but this being overruled, he briefly stated his case, heaving one or two interlocutory sighs, and rejoining,

gratis, "You will call me a simpleton, but I can't help that."

From the issue, it appeared that our little special pleader had been pleading to some purpose, having already delivered his declaration to a young widow, with twins, not quite three years old.

It appeared that Laura and her guardian, Colonel Gauntlett, were residing at St. Helier's; and just before the long vacation commenced, Ridley received a curiously crossed and puzzling letter, but beautiful nevertheless, from Laura, pressing him to spend the recess with them at their marine villa in the island of tranquil delights. A brief, with a fee of fifty guineas, could not have yielded Ridley more ecstatic delight than did this letter, which contained a sweet little sea-side sketch, in water-colours, painted by Laura, with a fine feeling for shrimps. It was a misty evening on which Ridley arrived at Southampton, whither, in haste to reach his destination, he had travelled express. At her accustomed hour for starting, the Jersey boat, apprehensive of danger from the density of the fog, could not venture out to sea; and Ridley, who would willingly have embarked in a wherry, had one been then and there available, had no alternative but stopping till the next day at a mercenary family-hotel. Disgusted with the wax-lights, for which he knew that he should be charged exorbitantly, Ridley retired early to his chamber, and would fain have slept, but was prevented by circumstances, and mice, over which he had no control. After flinging his boots without success at the wainscot,—behind which they had laid out their race-course,—Ridley struck a light, and, much to the amazement of the enemy, who, sitting upright on their respective tails, regarded his nightcap with silent reverence, proceeded to entertain himself by reading a popular novel which he had wisely put under his pillow in case of distress. Unhappy man! the more he read the more he doubted the propriety of his own conduct, and long before he reached the nineteenth chapter he discovered with shame and chagrin that he was an imposter. What claim had he upon Laura's regard? he had stopped a pair of ponies, which any postboy could have done, and thought himself munificently rewarded with half-a-sovereign. There was a wide gulf between gratitude and love. The first Laura *might* entertain; the latter impossible. *She*, an heiress and the pride of the country; *he*, a small pleader, with a reversionary interest in the equivocal silver-lead mine of Cwm-y-dyllyud, expectant on the decease of an old Welsh aunt. Was it not cruel of him to take advantage of his position, and press a suit which, however repugnant to her feelings, poor Laura could not gracefully ignore?

It may seem somewhat chimerical, but I have no reason to doubt what Ridley assured us was the fact, that his sudden conversion was brought about by reading the fiction above-mentioned, which, written by a lady (name unknown), so strongly inculcated the duty of self-sacrifice, and presented such a beautiful picture of passion subdued by principle, that Ridley, who had in him a nice sense of moral harmony, was conscience-stricken, and could scarcely believe that Laura's image, set in a guilty frame, had taken possession of his honourable breast.

The result was, that after long and painful deliberation, poor little Ridley abandoned all idea of going to Jersey, and determined to write Laura that he had sprained his ankle, feeling perhaps that a lame apology was better than none. He could not reconcile himself to the thought of withdrawing his declaration, and commencing another process of attachment. His present object was to gain time for pleading; if Laura would only wait a year or two his practice might increase, or something might turn up so as to bridge over the gulf between her fortune and his own, and enable him to set down his cause with every prospect of obtaining a favourable verdict when it came on for hearing.

Fearing, perhaps, that if he remained until the Jersey boat started he might be tempted to forego his meritorious resolution, he settled his bill at the hotel, and started off for the purpose of returning to town as early as possible. On

entering the waiting-room at the railway-station, his attention was arrested by a very young and innocent-looking little widow, who was sitting amongst a heap of boxes, with two little round-faced fair-haired boys, who were so like each other that no one could doubt that they were twins. Ridley, who, as an honest lawyer, regarded every unprotected woman as his client, and sympathised with her accordingly, felt strongly moved at this interesting picture of bereavement and helplessness; and entering into conversation with the young widow, elicited from her by a subtle examination (auspicious presage of his *Nisi prius* fame!) the full particulars of her sad and singular history. It seemed that, at the tender but unreflecting age of fifteen, she eloped from a Swiss *pension* with an artist of great but unrecognised talent, and who six months after their union died of a lingering decline. Owing to her imprudence, all her relations disowned her except one brother, a wild and careless fellow, who had gone to sea, being fit for nothing else, and had now settled down in a log-hut in the State of Texas, and was prospering with his wife and olive-branches around him. The regular remittances, for which she was indebted to the spontaneous kindness of this brother, coupled with her slender earnings from modelling wax-flowers, proved our little widow's sole means of subsistence. By the urgent advice of this good brother, she was going out to Texas with her two little boys, and had just arrived at Southampton, where she had arranged to meet Captain Weatherby, who had received from her brother the amount of her passage-money, and who had kindly promised to take her under his fatherly protection.

Such was the little widow's story, to which our embryo Lord Chief-Justice listened with profound gravity and attention. She had scarcely done speaking, when two travellers entered the waiting-room, one a sea-faring man in a pilot-coat and fur-gloves, the other apparently a courier with a despatch-box and a valise.

"What ship was that which struck on the Needles last night?" demanded the latter of his companion.

"The *Inca*, bound for Halifax, and every soul lost," rejoined the courier; "captain and all. I knew him intimately; poor Weatherby!"

During this brief conversation the little widow had risen, and with an expression of breathless interest advancing to the speakers, as soon as she heard the name of Captain Weatherby she uttered a faint shriek, and fell senseless into Ridley's arms.

Ill-fated Benjamin! What was to be done? Here was a very young and innocent little widow, with two round-faced little blue-eyed boys, and no one in all the wide world to cheer, comfort, and protect them. Is it to be wondered at, even though the age of chivalry is past, that our little pleader was penetrated with compassion? He thought of Laura; and the more he thought of her, the more hopeless and unwarrantable appeared his passion and his advances. • He had a short but stubborn struggle with himself. It was Sympathy contending against Love; a contest where kisses went for blows, and in which the latter fell vanquished by the tears of his gentle adversary.

Not to detail the interlocutory stages, the final issue of this process was, that Ridley made the little widow an offer of his hand; and, marvellous to relate, was accepted without a moment's hesitation.

As Ridley, with a solemn countenance that left no doubt of his sincerity, made this extraordinary statement, he raised his handkerchief to his eyes, and—else I am very very much mistaken—wept.

"Come, Ridley," cried the Doctor, after a long and painful pause, "confess that you have been romancing,—plumbing, in fact, the depth of our gullibility."

"It's not a feigned issue, eh, Ben?" said Duval, our great legal luminary winking at his learned brother.

Ridley shook his head, and heaved an audible sigh.

"And where is that tricky—I beg pardon," said the Doctor stammering, "that innocent little widow?"

"In a cab at the top of Inner Temple Lane," replied the special pleader.

"And those two round-faced little boys?"

"They are all together," said Ridley, rising to depart. "You must excuse me; I shall see you again."

"Ben!" cried the Doctor, approaching him, and shaking his hand with emphatic cordiality, "you are an honour to our common humanity."

Duval and I echoed the sentiment. We had often read of young and gentle women seeking a union with the maimed and the blind, but we had never before heard or dreamt of one of our own sex exhibiting a similar spirit of self-sacrifice.

"Stop one minute!" cried Duval, who had just taken the morning-paper from Rufus, who, as he handed it over the table, remained transfixed, his arm stretched out in a cataleptic state. "Bother the boy; he's off again. Sydenham, look sharp, and demesmerise him; for it's your doings I've no doubt."

While the Doctor was engaged in the process of demesmerisation Duval glanced over the "shipping intelligence."

"What was the name of the vessel that your little widow was going out in?—the *Inca*?"

"That's her," said Ridley, adjusting his plaid with an air of melancholy resignation to the will of fate.

"Six hundred tons burthen, A 1, copper-bottomed, and so on; warranted twelve years; Captain Weatherby, commander."

"Your description," replied the pleader, "is, I believe, strictly correct."

"Why, then, she is not lost!" exclaimed Duval; "she hasn't left the London Docks yet; those gentlemen at Southampton must have been mistaken in their parcels."

"You don't mean that?" cried Ridley incredulously.

"Read for yourself, my good fellow," said Duval; adding facetiously, "you must amend, or allow judgment to go by default."

Ridley took the paper with trembling eagerness, ran his eyes over the paragraph pointed out to him, then throwing the journal up in the air, he whistled aloud and snapped his fingers in a paroxysm of wild but speechless joy; he then fell back in his chair, and we all thought he had fainted away.

"Now then, Ben," cried the Doctor, slapping him on the shoulder: "Up rouse ye, then, my merry merry men, this is our opening day."

"So it is," returned the little Scotchman, springing forwards; and as our hearts warmed, we all joined hands and danced and sang the "Reel of Tullochgorum."

How little Ridley settled matters with the widow we could never accurately learn; but from his borrowing twenty pounds from Duval, ostensibly to pay his old nurse her half-year's annuity, I suspect that he did not see the little woman on board without bestowing upon her some substantial token of his regard. Owing to the demise of his aunt at the premature age of ninety-seven, which put him into possession of his reversionary interest in the — Mines of Cwm-y-dyllyud, we lost sight of him for some time. Shortly, however, after his return with Laura from their wedding-tour, Ridley received a foreign-post letter. It was from the dear little woman herself, informing him, in sprightly language, of her safe arrival some months before at Texas, and stating, without any nonsensical circumlocution, that she was married to the gallant Captain Weatherby, and was already blessed with two little pledges of affection, both of whom were girls, and almost facsimiles, on a smaller scale, of their little twin half-brothers.

Having carefully and conscientiously made up the above "record," I read it over, as in duty bound, to Ridley's wife. She smiled, and said: "I fear that many will doubt the existence of such a hero as you have drawn, but I can certify," placing her hand on Ridley's miniature, "that it is no imaginary being. Experience is on our side, credulity on theirs. Some have great faith in man's egotism; I, happily, have none."

PROGRESS OF SCIENCE.

It is not many years ago that organic chemists were ridiculed by some, and scorned by others, for their creative aspirations. Day by day organic chemists are now vindicating the justice of those aspirations, and it is hard to predict a rational limit to the realisation of their hopes. The last triumph we have to record in the field of synthetic organic chemistry is, the artificial formation of glycerine; a substance familiar, by name at least, to most persons, since it has been extracted from palm-oil in such enormous quantities by the managers of Price's Candle Company.

The discoverer of the synthetic method of generating glycerine artificially is M. Adolph Wurtz. It would be foreign to the objects of these columns to give a precise chemical description of the theory from which M. Wurtz set out; much less the process by which glycerine is formed. Chemical readers who are desirous of learning these particulars will find them recorded in tome xlv. of the *Comptes Rendus* for April 13th. All which properly belongs to our office is to chronicle the fact. Here, then, is another substance, "glycerine," hitherto considered to be only obtainable from oils and fats, as generated within them by the agency of life, formed by the hands of man. Suppose, one of these days, some lucky chemist shows us how, artificially, to make sugar of the cane, as we can already make sugar of the grape? Who shall aver, seeing what we have seen, that the solution of that problem affirmatively is not on the cards?

Writing of glycerine, we are led to chronicle some beautiful generalisations recently made by M. Berthelot, the result of which is to connect glycerine chemically with sugars; bodies to which its excessive sweetness connected it in popular ideas long ago. Although glycerine is sweeter than the sweetest sugar, yet chemists did not even consider it to be a variety of sugar, because it could not be made to ferment. It seemed to be totally unsusceptible of either the alcoholic or the mucous fermentation. M. Berthelot's recent experiments place in the category of real sugars, not only glycerine, but mannite, dulcine, and sorbine; if the capability of undergoing fermentation be held to be the true characteristic of sugar.

We chronicled in our "Progress of Science" some time ago the achievements which had already been made in the production of gems artificially; and begged our lady-friends to learn humility in presence of their diamonds, whilst these gems were yet valuable. M. A. Gaudin now announces that he has manufactured white sapphires in limpid isolated crystals. He tells us the process, moreover; which being so very simple, we shall announce it thus: An ordinary crucible being lined with a coating of lamp-black, equal parts of alum and sulphate of potash, previously calcined and powdered, are introduced. The crucible being then covered, is exposed to the most violent heat of a smith's forge for a quarter of an hour; afterwards left to get cool, and broken. It is proper to add that M. Gaudin pronounces very dubiously concerning the beauty of his new gems; but he says they are so extremely hard,—much harder than rubies,—that they admit of being advantageously employed in watch-making.

From sapphires to Minié's bullets the transition is sudden; but we shall make it nevertheless, in the way of announcing a new contribution to the surgery of gunshot wounds recently made by M. Baudens; forming the subject of one of the memoirs read before the Paris Academy of Sciences on the 6th of last month (April). Perhaps we need not do more than advert to the circumstance, that the Crimean war afforded the first opportunity of witnessing the effects on a large scale of the conical bullets, which constitute an essential part of the new rifle-system. The first significant fact is this: when a man has been shot through by a conical bullet, the aperture through which it enters and the aperture through which it departs are almost always coincident, in a straight line with each other; whereas with the old, or

spherical, bullets, this was the exception, and a rare one too. Many a soldier struck down by an old-fashioned musket-ball has been given up for lost prematurely. The surgeon perceiving two apertures, one on either side of some vital part, and apparently joined by a straight line, would take the fact for granted, until, the patient not dying when expected, probing revealed the secret of the ball's semicircular course. A Minié ball is no such roundabout traveller. Direct through and through it goes, changing its form, according to the statements of M. Baudens, in a most extraordinary manner. Sometimes it flattens; sometimes it elongates; and not unfrequently it throws off a spiral shaving of lead whilst pursuing its screw-like course. It is sufficient to mention these peculiarities of the conical bullets to prove their increased fatality over the old form of small-arm missile.

The same epoch which is conspicuous for the ingenuity it has displayed in devising aids of destruction endeavours, by scrutinising the latent causes of infection, to lessen the fatality of disease. Dr. Angus Smith read on the 22d ult. a paper before the Society of Arts, on disinfectants, in the course of which a masterly epitome of the whole subject, in its numerous relations, was set forth. Commencing with the history of the subject, the lecturer showed that many of the deductions we moderns have arrived at, not without much discussion and the parade of scientific proof, as bearing upon the subject of disinfectants, were known and applied by the ancients. Long before the term "marsh miasma" was known, or its nature speculated upon, or its influence on the production of disease imagined, Hercules delivered the Elians from pestilence by draining their marshes. Hippocrates, too, was not a mere physician, in the narrow application of the word; he was a sanitarian, inculcating the hygienic benefits of ventilation and a copious supply of water as strenuously as the most fervent disciple of Sir Benjamin Hall. The drainage of ancient Rome is a miracle of constructive skill; and notwithstanding the facilities of water-supply which pipes of iron and steam-pressure throw in our way, it would be difficult to find a modern city so well supplied with water as was ancient Rome. The word *disinfection* originated in France during the last century; it has usually been accepted as the synonym of deodorisation, in some cases doubtless with impropriety. By a disinfectant the public means a substance which either prevents the occurrence of putrefaction, or decomposes into their final elementary forms the organic odorous emanations from substances undergoing putrefaction. Taking cognisance of this distinction, the bodies to which the appellation "disinfectants" belongs range themselves under two well-marked classes. Creosote, carbolic acid, &c., may be accepted as types of the former; oxygen, chlorine, nitrous fumes, sulphurous acid, &c., as representatives of the latter. The special object of Dr. Angus Smith's lecture was to explain the superior advantages of sulphite of magnesia mixed with a portion of carbolic acid as a disinfectant; especially of manure. Looking at the disinfectants previously used, though many of them, especially chloride of lime and chloride of zinc, are efficient in some respects, they are nevertheless attended with some countervailing disadvantages. Chloride of lime decomposes ammonia, and liberates nitrogen; the latter, not only a noxious gas, but valuable to agriculture as a constituent of ammonia. Chloride of zinc (as, indeed, perhaps all preparations of ordinary or calcigenous metals) is prejudicial to the fertility of manures. The chemist will immediately perceive that sulphite of magnesia, when added to the focus of ammonia-generation, subserves two important ends; it will precipitate some of the ammonia in the condition of insoluble phosphate of ammonia and magnesia, and will form another portion of ammonia in the condition of sulphite; which latter salt, rapidly becoming sulphate under atmospheric agencies, furnishes ammonia to the soil in perhaps the very best condition for applying it. There can be no question as to these effects; the only moot point is their extent. Upon the whole, however, Dr. Smith's appears to be the most rational means of disinfection com-

patible with agricultural and sanitary necessities which has hitherto been devised.

Attention still continues to be drawn, both here and abroad, to the relative value, considered as to nutrition, between the different constituents of wheat. In a previous Number we announced some experiments which have recently been performed in France, with the object of determining this point. Messrs. Lawes and Gilbert have been following up a similar inquiry at home. They remark, "that the higher percentage of nitrogen in bran than in fine flour has frequently led to the recommendation of coarser breads as more nutritious than the finer. Nevertheless popular experience is at direct issue with chemical teaching in this respect. The testimony of navigators (navvies) is apposite to the point. The circumstance need not be indicated that men of this class work hard on no very high rate of remuneration; they may be supposed, therefore, to be desirous of laying out their money, in such an indispensable article as bread, to the best advantage. So far from employing brown bread, they are averse even to seconds. According to their experience of their own necessities, the bread employed cannot be too white. The writers call attention to what we believe to be a fact; one which has been very much lost sight of in theoretical estimations of the value of food, by mere reference to the chemical elements it is found to contain on analysis. They remark, that it is in accordance with all experience in the matter to assume that, not only the chemical composition of a food, but the *state* of its chemical elements must be considered; in other words, its digestibility and aptitude for assimilation. Clearly this must be so, beyond certain limits which bound extreme cases; otherwise the carbonaceous parts of our bodies might be furnished by ingesting the same pabulum which we store away for our fires, *i. e.* coals and wood; and by a parallel argument, the remark may be made to extend to nitrogen as well.

When we last made war upon the Chinese, almost the only trophies which found their way to Europe were the hair-tails of the celestials. The *Photographic Journal* announces an improvement on that kind of spoliation. We are sending out apparatus for taking the pictures of our enemies, and any thing else which may be worthy to be depicted in the flowery land. The apparatus has been intrusted to the care of Mr. E. Morrison, a gentleman attached to Lord Elgin's embassy, and, as we are given to understand, an accomplished photographic manipulator.

Considerable expectations have been excited by the new paper-parchment, upon the preparation of which the Rev. John Barlow delivered a lecture at the Royal Institution on the 3d of last month. When Schönbein discovered the process of manufacturing gun-cotton, the most curious point seemed to be, that a delicate vegetable substance should be able to bear, unscathed, contact with the strong nitric acid used in the process of manufacture. The discovery was soon followed by others; all testifying to the fact, too improbable for belief, were it not demonstrated, that many strong acids act less energetically than the same when diluted. Paper-parchment is made by immersing paper momentarily in strong sulphuric acid diluted with half its bulk of water; then withdrawing the paper, washing it, and finally removing every trace of adherent acid by ammonia. For this curious discovery we are indebted to Mr. W. E. Gaine. The paper thus treated assumes all the appearance, and more than the strength, of parchment. A band of paper an inch in width, which will only support without breaking a weight of seven or eight pounds, has its tenacity so increased by the operation that it will support nearly a hundredweight. The change is attended with contraction of bulk, not corrugation; hence a piece of paper with an engraved impression thus treated becomes so diminished in size that the engraving is softened, and toned down. But what is more strange, a paper photograph may be exposed to the acid ordeal without any apparent injury. The question to be determined is, whether injury may be developed by time. If not, the paper-

parchment operation may be considered a clear gain to the photographer.

The consequences of the late explosion in the Lundhill colliery have awakened attention to the protective powers of Davy's safety-lamp, and to the causes of coal-mine explosions generally. Among other projects for rendering the lamp less dangerous, that of substituting the flame of coal-gas for the flame of oil is strongly recommended. Not only would so much additional light be evolved, that perhaps two sheathings of wire-gauze might be employed instead of one, but, less fuliginous matter being evolved from coal-gas flame than from an oil-wick, the wire-gauze sheath would remain cleaner than now, and would not be subject to the damage which its cleansing by the miners, from time to time, necessitates.

POLYGLOT READINGS IN PROVERBS.

IT IS EASY TO FIND A STAFF TO BEAT A DOG, OR A STONE TO THROW AT A DOG.—It is easy for the strong to find an excuse for maltreating the weak. "On a little pretext the wolf seizes the sheep" (French).—*A petite acharon le loup prend le mouton*—or the lamb, as the fable shows. "If you want to flog your dog, say he eats iron" (Span.).—*Para azotar el perro, que se come el hierro*; and "If a man wants to thrash his wife, let him ask her for drink in the sunshine" (Span.).—*Quien quiere dar palos á su mugir, pídele al sol á beber*; for then what can be easier for him than to pick a quarrel with her about the motes in the clearest water?

IT IS AN ILL WIND THAT BLOWS NOBODY GOOD.—There is a local version of this proverb—"It is an ill wind that blows no good to Cornwall." On the dangerous coasts of that shire almost any wind brought gain to the wreckers. We have seen it somewhere alleged that the general proverb has grown out of the local one; but this is certainly not the case, for it exists in other languages. The Italian form of it,—*Cattivo è quel vento che a nessuno è prospero*,—is almost identical in form as well as in spirit with the English. The French say, "Misfortune is good for something,"—*A quelque chose malheur est bon*. The Spaniards, "There is no ill but comes for good,"—*No hay mal que por bien no venga*; and, "I broke my leg perhaps for my good,"—*Que breme el pie, quiza por bien*.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

THE first works of a repentant conscience are not virtue, and the first products of an awakened taste are not beauty; but in either case the time for denunciation is at an end when these signs appear. Its work is done as soon as the sparks fly upwards, and not fire, but fuel, not abuse, but encouragement, is the special want of human nature when a new love for what is holy or for what is beautiful first begins to burn. The modern attributes of English cities illustrate in the most elaborate manner that great, vigorous, and successful enterprise, the Hunt after Ugliness, wherein we have been long engaged. But the hunt is over now; our search is for something very different, and a great deal better; and if we are still found taking bears for antelopes, or kissing a walrus as if it were a mermaid, the fault is no longer of will, but of knowledge only. There is a real and earnest hunger and thirst after beauty and its sweet influences; and what men want at present is a better chance of seeing it, and recognising it when seen.

The Manchester Exhibition of Art-Treasures answers these requirements precisely. It has one great characteristic feature found nowhere else in any thing like the same de-

gree. The works collected there are not a mixture of good and bad, of beauty and deformity, where the spectator must be the critic also, and where a false taste is as likely to be confirmed as to be corrected. With scarcely an exception, every one of these works has already passed the proof of criticism and time. Nothing is there which has not become famous for some special excellence or other. Picture and marble, glass and cameo, porcelain and steel,—they stand there, not for judgment, but for admiration. The men who worked upon them, and lived in them, are not aspirants after fame; they have aspired, and won it. It is not a hall of debate; it is a temple of many oracles. We are in a world where nothing exists which has not beauty of some kind for its chief attribute, and may pass through it with the happy assurance, that if we admire at all, we admire wisely and well.

No help to the improvement of modern taste could be more timely or more to the purpose; for it is the want of definite standards of excellence, the uncertainty where to go for an opinion, the loud assertions of ignorance, and the quiet modesty of better knowledge, that produce these amusing paroxysms of failure, in which our artistic efforts are being continually wasted. In our large cities, for example, where wealth accumulates rapidly, and a generous and princely expenditure is constantly going on for purposes of public decoration, the amount of real beauty set before our eyes is inconceivably small when compared with the cost and ardour of the attempt. The people of Manchester will, we have no doubt, be among the first to acknowledge this. Their unrivalled Exhibition will fill them with ideas of beauty and principles of harmonious thought, whose first effect will be a revelation of mistakes in the great efforts made by their own zeal for the improvement of their own city. They have built a noble infirmary, fine in parts, but faulty as a whole, because there is no harmony between the proportions of the building and of its cupola. The new front to their Exchange is bold and striking; but the effect of its great windows has been destroyed by forgetting that long perpendicular lines cut sharply off by a segment of a circle are necessarily ugly. The great pride of Manchester is in its warehouses. There are nearly two thousand of them, and those recently erected are of enormous size and considerable pretensions. The newest and largest of all has been built by the present mayor, and exhibits the growing tendency of the time in its most magnificent phase. This vast and remarkable building has cost as much as many palaces; its decoration in many parts displays an excellent taste, and there are certain points from which the view of it is extremely fine; but as a whole the purpose fails. The windows of the third tier in the main front are far larger and heavier than those below them; and with this mistake in its design, the harmony of the structure is irretrievably gone.

We point out these examples, not for censure, but for illustration. Our other cities are in no respect behindhand as to their architectural errors, and Manchester has at least the credit of providing in her Palace of Art the best remedy for an imperfect taste and the absence of an ideal beauty.

The building in which the Art-Treasures of Great Britain are now exhibited has been erected among green fields, just outside of Manchester, west of the city, and about two miles from the Exchange. The site is a very good one for the purpose. The high ground to the northeast would have furnished a much more picturesque situation, for the building stands now on a flat plain, almost in a hollow; but besides the additional labour to man and beast in going up hill, the prevailing winds, which blow the city smoke away from the present site, would have carried it over the higher one; and a great part of Manchester is an infernal furnace, with demoniacal vapours in its atmosphere. Externally, the building is on the whole an ugly one. There has been no attempt to make it ornamental. It is useful and sufficient, not unlike a railway station; and perhaps nothing better could have been done, the questions of time and cost

being taken into consideration. The colouring of the grand front is, however, an unnecessary mistake. The lines and blotches of heavy red would have been better had they been any other colour. They make the three round arches of the roof like three gigantic paddle-boxes. Three long halls, with semicircular roofs, two short transepts, and some additional side-buildings and refreshment rooms, compose the structure. The three halls are built side by side, with numerous openings into one another. Their six walls, together more than half-a-mile in length, are covered with pictures. The central hall is both longer and wider than those on either side, and contains, besides its pictures, the greater part of the statuary, armour, pottery, and miscellaneous works. The walls of the building are of brick and iron, for side-lights were not wanted; but the central part of each of the roofs, from end to end, is made of glass, and the result of this mode of lighting is admirable. The light falls almost always just where it is wanted, and there is perhaps not a picture in the whole collection that cannot be well and easily seen. One very beautiful, and probably unintentional, effect of optical illusion is produced in the great central hall. Its roof is supported by a series of circular iron ribs, made of thin vertical plates, projecting inwards. They are painted white, edged with tea-green and streaked with red. Standing at one end of the hall, and looking along the roof, the light so falls on the more distant ribs as to give them the appearance of complete transparency. The solid iron seems changed into ribs of glass, supporting the real glass above them. The whole effect of the interior is very pleasing. There is nothing gaudy or flippant, nothing like rag or tinsel; quiet colours prevail every where. The silent marbles and monumental altar-pieces suffer no outrage from the place, but seem at home there with all their immortal company.

So far, therefore, the building is a successful one. We have not yet, however, found out the proper use of glass and iron as materials for architecture. Even the Crystal Palace at Sydenham has left most of their highest capabilities altogether undeveloped. The natural forms inherent in a crystalline and brittle substance, such as glass, are points and angles. It is in the pointed and angular form also that glass discloses its wonderful power of dividing the common light of day into the colours of the rainbow. The highest beauty will be found, depend upon it, in the natural form; and it is not difficult to conceive a crystal building, in which the material suggested the architecture, presenting such a spectacle of beauty and splendour as we have seen hitherto only among the evening-clouds. Long crystal shafts, spear-headed and pointing upwards, have been set in fountains and extravagantly praised. They are exactly what a fountain does not want. Will nobody try them on the top of a glass-roof constructed on similar principles?

ON THE RIVER.

BY WESTLAND MARSTON.

WHEN last with thee I cleft this curving flood,
It was a day so blest, it sure took rise,
Not from our later suns, but owned the blood
Of orbs benign that set in Paradise.
The sky, like love, whose dream of perfect worth
Clothes the beloved, and what it glorifies
Deems glorious, wrapt the world below in light.
We paused, and cried, "How beautiful is earth!"
I float alone beneath the stars to-night,
Nor see the verdure of the banks or trees,
Nor the lost face that turns no more to these,
And thence to me, making the bright more bright.
My only radiance from on high is given;
I gaze, and sigh, "How beautiful is Heaven!"

MODERN MINSTRELSY. BY C. ROSSETTER

[National Institution of the Fine Arts. See p. 22.]

A STORY OF A HAUNTED HOUSE.

BY HOLME LEE, AUTHOR OF "GILBERT MASSENGER," ETC.
IN TWELVE CHAPTERS.

I.—THE HOUSE IN NEVIL'S COURT.

IN one of the courts in the vicinity of Eversley Minster, there lived many years ago an engraver, Nicholas Drew by name. He was a quiet, inoffensive, old man of retired habits, who minded his own business, and was charitable according to his means. He occupied the whole of the second floor of the house, to which he ascended, not by the common stairway, but by a flight of rude wooden steps, which he had himself constructed beneath the centre window of the room where he worked at his craft.

The curious in such matters said that Nicholas Drew's etchings were unique; but the probability is, that they brought him small gain; for though individuals were well inclined to turn over the contents of his folios, they were less disposed to pay the high prices which the old man set upon his works. He lived alone, and seemingly quite contented with his lot; but it was a tantalising mystery to the people of the court how he used the six rooms he rented; and though his appearance was that of meagre, nay, of sordid poverty, the gossip presently concluded that he possessed a fabulous amount of wealth, hidden away in the locked chambers. Close on this rumour followed another, which, a couple of centuries before, would have consigned him speedily to either stake or gibbet; but which now drew on him nothing more terrible than the ill-concealed dislike of his neighbours, and the jeers of little children, who would have

quivered to their shoe-ties if he had but turned and scowled at them.

It must be allowed that Nicholas did not carry a good introduction in his face: it was a stern, grim, unkindly countenance, not unlike the corbel-heads by the gateway of the court. His sharp gray eyes peered anxiously from beneath frowning grizzled brows, a dishevelled beard lay outspread upon his breast, and lank rusty hair curled down upon his collar; he had a restless choleric nostril, a high, full, bald forehead,—the one commendable point of his physiognomy,—a small nervous figure, and a rapid gait. When he went abroad his worn patched clothing was always concealed beneath a dusky tartan-cloak. He generally chose wet days or twilight for his excursions; and under the cloak was his portfolio, with a corner sticking out before and behind. His head was invariably covered with a wide-flapped felt-hat, which served partially the purpose of an umbrella, and hid all but the lower part of his face with its patriarchal appendage. In his right hand was gripped a stout stick, the very sight of which was protection enough against the little mocking urchins in the street, who, with precocious bravado and pitiful cowardice, would fling a stone after him when he was quite out of reach, and almost out of sight. If not pressed for time, poor Nicholas would sometimes watch for the temporary absence of his small enemies, that he might evade their attacks; for, if truth must be told, there was a heart under the old tartan that shrank from this universal hatred, and not seldom a hot salt moisture under the pent-house brow also. Some respectable people, passing the old man in the street, would vouchsafe him a nod, which he eagerly returned; he would have been glad to speak to

them, but the opportunity was not given him; so the poor engraver plodded on his silent and cheerless way, secretly marvelling what kept every body aloof from him, whilst he longed more and more each day of his life for friends and companionship. The fact was, he was clever, poor, and needy—not a desirable acquaintance, in short.

One snowy New Year's Eve Nicholas crept forth in the darkness, with his portfolio under his arm, to pay a visit to a printseller in the Barbican, who had half-promised to buy an etching of the Chapter-House interior, which the engraver had just finished. The wind was very high, and the blinding snow-flakes drove full in the old man's face as he turned his back on the Minster, and went down into Friargate; but less chilled than ordinary,—perhaps because he had escaped his tormentors,—and glowing moreover with a hope of ultimate appreciation, he bore it indifferently, and strode through the crisping snow with quite a light foot and almost a light heart.

It is an impossibility to crush the elasticity out of some natures. Nine men out of every ten would have collapsed utterly and miserably under a tithe of the disappointments that Nicholas Drew had borne cheerfully, supported by a very moderate daily portion of coarse bread and the love of his art.

It did not take the old man quite half-an-hour to reach his destination; but the printseller's shop was already closed. Nicholas knocked at the door for some ten minutes in vain; but at last a surly-voiced lad appeared, and said his master had some guests, and would not be disturbed.

"Then I'll come to-morrow morning," suggested the engraver.

"I don't think you need, for I heard master say he had changed his mind; your pictures are so dear," responded the youth; and with that he shut the door in the old man's face.

"Well, God is good," gasped poor Nicholas, turning off the step after lingering a few seconds; "God is good. I might suspect that He had forgotten Nevil's Court; but I know He has not; His time has not come yet, that's all. I wonder when it will?"

A woman came up, and begged of him; he tried to evade her, but she followed him closely.

"Master, for the love of Heaven—for the love of the mother that bore you—" Her voice was hoarse and feeble; he soon outwalked her; but the echo of her words, "for the love of the mother that bore you," pursued him like a wailing prayer. He turned back, and found her standing on the Barbican bridge, gazing down into the blackness.

"Come away; what are you thinking about?" he asked harshly; for his voice was toned to match his grim face.

"I can't tell; drowning, maybe. It is an easy death, they say," was the whispered response.

"Nothing of the sort; it is dreadful. When any thing tells you that, shut your ears; it is damnation to hearken."

"Nay, master, but that is hard; as well die at once as die by inches. Who condemns me to live, and gives me no means?"

"You must wait till your hour comes; it is, maybe, deferred that you may repent. You are not to lift the latch of life yourself, and steal away from your sorrows like a thief."

"I am not a thief, master."

"No; you only thought of becoming a murderess."

"It is easy to talk, master; but it is not easy to pine day after day, and to slink about ashamed and ragged in the streets at night; it is not easy to see people eye one suspiciously, and get out of one's way as if they were afraid to file their clothes with touching mine in passing;—that's not easy, master."

"Why, the very children spit at me! Little things that can hardly go alone raise a shrill cry as soon as I come in sight. Don't think you have got all the rough bits of life to yourself." They had come to the corner of the marketplace, walking as they talked. "Don't go down Barbican

again to-night, 'for the love of the mother who bore you.'" He put a shilling into her hand—the last he had, and pattered away homewards, hearing her earnest "God bless you, master!" echoed in the swirl of every gust that came cutting through the thick snow against his cheek as he scurried along. All the bells in the city were alive, clanging and clattering in every direction. Nicholas fancied the noise made the night warmer; but the fact was, that his keen edge of disappointment about the etching was blunted by that little exercise of human charity, and the blessing he had earned; his heart was warmer within.

The exhilarated feeling did not go down until he came within scent of a provision-shop. Poor old fellow! it is sad that genius, if it has not wherewith to eat, must hunger like coarser clay. Nicholas had indulged a mundane vision of supper in going to the printer's, which was now out of his reach completely: it is even possible that his eyes were not quite clear as the savoury gust waft against his nostrils, and reminded him of his failure in the Barbican; but he clutched his portfolio very tight, and crossed the street, trying to forget the gnawing emptiness under the tartan in a dream of future well-deserved reputation, some day to be his.

The wind and the snow and the bells together had got up a famous whirl in the Minster Yard, and came tearing down College Lane in a perfectly reckless way as Nicholas turned into it. It was all he could do to hold fast the cloak and folio, the stick and hat, as he crept under the projecting houses up to Nevil's Court; and there, having gained the partial shelter of the gateway, he paused to ascertain that he really had not lost any of his adjuncts, and to shake the snow from his garments before climbing his staircase. He had reared the portfolio in a niche, long since despoiled of its tenant, and was quietly taking off his cloak, when a sound close at his heels made him jump aside almost as if he were bitten. Could one of his little persecutors have lain in wait for him in such weather?—O, the depths of juvenile malice!—yet it seemed scarcely possible. However, in his alarm Nicholas darted across the court, and feeling his way up the steps, unlocked his window-door, and entered the room in all haste to escape from the shrill taunt and laugh which he so dreaded. "It is too bad," said he aloud, dropping his hat and cloak on the floor—"it is too bad: I don't know what it means. I never hurt any body in all my life that I know of. Poor old Nicholas! you're a sad, miserable, despised old pauper. No, you're not either; you're not sad, you're not miserable by any means, and don't say so, for it is not true; you know it is not, and it is wrong in you to mention it." He always talked to himself as to a second person; if he had not done so, his tongue would have stiffened with disuse.

Breaking up the block of coal which he had left smouldering in the grate, the room was filled suddenly with a dancing radiance; Nicholas chafed his withered hands in the glow, and as the snow on his beard began to melt in the heat, he shook the white flakes off, and said more cheerily: "Well, this is pleasant; I wonder if that poor soul in the Barbican has got to warm herself at a fire. What business have you to complain with such a shelter to come to, eh, Nicholas Drew? Now let us look at our work." He strode across to shut the door, which he had left ajar, and then with a groan remembered that he had left the portfolio in the niche.

"What is to be done; has that little mongrel gone to bed yet?" He advanced his head outside to listen, and hearing nothing but the heavy sweep of the laden wind, he cautiously descended and reached the gateway, grasped the case, and was returning, when a child's sobs startled him again.

"Why don't you go home to your mammie, little one?" he asked, with what gentleness he could, stooping over a dark bundle crouched against the wall. He got no answer but a kind of hysteric cry, and the figure shrank away from him further into the shadow. "You must not stop here all

night; you may get frozen to death. Tell me where you live, and I'll carry you home." He meant it; here was one of his foes in trouble, and his anger was quite gone. To this offer was returned a series of shrieking sobs very pitiful to hear; but the child would not suffer itself to be removed.

"What must I do?" said Nicholas, almost as much distressed as the stray child at his feet. After a moment's consideration, he determined to knock at the door of a woman who was a shade less uncivil to him than the rest in the court, and to ask her advice. There was so much noise of talking within, and such a clangour of bells without, that it was some minutes before he could make himself heard. At length the door was opened, churlishly enough, by the woman of the place, who, directly she saw Nicholas, said: "Are you wanting a light again, Master Drew? other folk can keep their fires in, if they have to leave them for an hour or two."

"It is not a light I want; but here is some poor body's child lying under the gateway crying. Come and see if you know whose it is."

"Bless me! a bairn out at this time, and on such a night: it is lost maybe." And snatching a candle from the table, round which sat a party of extremely merry guests, she scudded across the court, unmindful of the snow falling on her best cap. The little creature lifted up her face at the sound of a woman's voice. "Heart alive, why it is the forrin' wood-carver's bairn!" cried Mrs. Parkes. "Job, come out here. What's come of Louis Duclos, that Adie's left here?" The husband appeared at the summons, looking rather hazy and incapable, and desiring to know what it was all about; to which his spouse contemptuously bade him go back to his chimney-corner for a blind owl that could not see an inch beyond his nose; an order which he obeyed with commendable alacrity.

"You've a good fire in your room, I see, Master Drew; with your leave I'll carry Adie up there. Come, my bonnie bairn, come to me; I'll take care of you," said Mrs. Parkes in a coaxing motherly way, which had due influence over the child; who now, sobbing violently, allowed herself to be lifted from the ground and taken to the engraver's room. Nicholas had dropped the portfolio in his excitement, and it was not likely he should recollect to pick it up now. He followed Mrs. Parkes with the extinguished candle, and plunging into the room after her, stirred up the blaze again till every knob of the carved mantel and every panel twinkled in the glow.

"Here's a New Year's gift for you, Master Drew! I doubt some mischance has befallen the bairn's father, for Louis is not the man to let her be straying about alone of nights," said Mrs. Parkes, rubbing the child's benumbed limbs with rough yet kindly hands.

"If any thing has happened, I will keep the little lass myself," replied Nicholas.

"Hush now! she is quietened a bit; she'll speak enow. Adie, bairn, where's father? don't you know?"

The small eerie-looking creature turned a pair of great dark wistful eyes on her face, and said, with a shrill gasping cry, "O, he's dead! he's dead!" and fell weeping again as passionately as before.

It was useless to question the child any further then, for she was utterly incapable of answering; and after vainly endeavouring to elicit something further, Mrs. Parkes gave her some bread steeped in milk, which she ate with avidity, and then laid her to sleep on a rude settee, where she presently sank into an exhausted torpor.

"I wonder whether what Adie says can be true?" observed Mrs. Parkes reflectively. "She is not like other bairns, you see; she has strange flights and fancies for one so young; yet she can't have fancied that. You stop by her, Master Drew, while I go and ask them below if they know where Louis has been working yesterday and to-day. He was at the Minster last week; I saw him go out this noon, and at tea-time Adie went off to meet him, as she

always does; then our folks came in, and we hadn't opened the door after till you knocked. His place is all dark: see."

They were standing in the doorway; the wood-carver's room was on the ground-floor, in an angle of the court opposite. Mrs. Parkes now cautiously descended the steps; while Nicholas turned back into the room, wishing that the noisy bells would cease for once. He came and looked at the sleeping child very earnestly, making a silent vow to keep her and cherish her as his own, if what she had said should prove correct. It was a pretty mobile face on which he gazed, delicate in feature and dusk in complexion, as if the mellow warmth of a southern sun glowed through the tender skin. She was not like an English child at all; the ripe hue of her lips, the high arch of her brows, and the black gloss of her damp loose hair, were all more or less indicative of foreign blood.

After the lapse of a quarter of an hour, or rather more, Mrs. Parkes returned, accompanied by an elderly man, whom Nicholas recognised as a foreigner, and the frequent companion of Louis Duclos. "The bairn was right; he is dead; mashed a-pieces almost," whispered the woman, looking with pitying awe at the little orphan.

"How was it?" asked the engraver, working his fingers nervously, and moving nearer to the settee on which Adie lay, as if to protect her.

"He was working at a house in the Barbican, and fell off a scaffolding; they took him to the hospital with the bairn following; but before they could get him there he died, poor fellow! When Adie heard them say so, she took off like mad: you may think them that was with him would be so hurried they'd scarce heed her, expecting she would come to some of us where he lived. She meant to get in home all to herself, I fancy, and couldn't, for she'd lost the key. Mr. St. Barbe found it as he came to see after her, lying a few steps down College Lane, under the houses where the snow hadn't drifted: she must have dropped it. You'll take it, Master Drew."

Nicholas took the key, and begged Mrs. Parkes and St. Barbe to be seated. The Frenchman politely and gravely complied; but the good woman excused herself, saying that Job was growing cross at her staying away so long; and as he was not in a state to hear reason, she must go, but would come early in the morning to attend to Adie's wants.

The two men being left alone together with the unconscious child, exchanged first a few mutually puzzling compliments, and then sat silent; for St. Barbe had little English, and Nicholas no French. At last the engraver, with exquisite simplicity, thought he should simplify their difficulty by speaking his own tongue almost unintelligibly—as the Frenchman spoke it, indeed. He began: "Sarc, I wish keep Adie." St. Barbe nodded two or three times emphatically. "I be father to her, friend, every ting," added Nicholas, raising his voice, extending his arms, and embracing the air. "What say you, sare?"

"Bien, good, ver well!" responded St. Barbe, with a long series of gesticulatory movements expressive of satisfaction.

The affair being thus arranged to meet the views of both, the silence was resumed. Nicholas fidgeted about on his chair, feeling that on this night at least he ought to offer hospitality, to drink success to the new year, and a peaceful departure to the old. But what had he, poor fellow, in the corner-cupboard that was his larder but part of a brown loaf and a pitcher of water?—not gala-fare certainly. All at once, while considering how he should supply his lack of good cheer, the Minster bells stopped, and the clock struck midnight. The two men shook hands immediately, and wished each other many good wishes; the Frenchman diffused himself into a long compliment relating to Nicholas's evangelic charity and title to prompt canonisation, which would have rejoiced the old engraver's heart if he could have understood it. He then said he must return to his wife and children, who waited him with a little gather-

ing of friends; but before departing, he looked at Adie for a minute, touched her little hand with his gray moustache, murmured over her a few words, which Nicholas thought sounded like a benediction, and finally bowed himself backwards out of the room, almost losing his balance at the top of the steps by feeling for a handrail that did not exist. Nicholas shut the door after him, and replenished the sinking fire; he then drew near to Adie, and exulted over his New Year's gift, forgetting for the moment how he had come by it.

"What a wee birdie it is; what a tender wee nestling!" said he softly. He could scarcely forbear snatching her up and pressing her to his beating heart there and then; he would have done it but for fear of waking her. He said a great many things besides, very affectionate and very touching, from that stern disappointed heart of his, before he could leave her to sleep unwatched; and when drowsiness at last overcame him, it was with the greatest reluctance he crept to his bed. More than once before the frosty January dawn broke on the window-panes he came rustling to the settee in his tartan-cloak, like a comic ghost with a beard, driven about by anxiety of mind. At each visit he lingered a few minutes, and then scudded back with wonderful agility, lest she should awake, and, seeing him, should be frightened.

Poor old Nicholas Drew's heart was singing a new song the whole of that live-long night, though he went supperless to bed.

II.—THE NEW CARE AND NEW PLEASURE.

With daylight came Mrs. Parkes, carrying Nicholas's portfolio, all drenched with melted snow.

"There, Master Drew, thank me for that," cried she, throwing it down on the table; "the bairns were just going to rive it open when I stopped 'em. Maybe the things inside will be no worse."

"O dear, O dear, they are all spoiled; what a pity!" groaned the old man. He looked at the case dismally for a few minutes; then brightened suddenly as he turned to the fire, by which sat Adie in a huge leather-chair, with her tiny feet on a block of wood, and a basin of milk in her lap.

"Well I declare," exclaimed Mrs. Parkes in great bewilderment, "you are good friends already, I see!"

"Yes, we are," responded Nicholas cheerfully. "I don't know how it came about, I'm sure; do you, Adie?"

"I never called names after you, or threw stones," said the child timidly.

"Bless its bonnie face, that it didn't!" gasped Mrs. Parkes, melting. "You are a good bairn, Adie; you'll never be rude to Master Drew, will you?"

"Father said it was cruel, and I must not. O father, come back, do come back!" She would have flung herself to the ground in a wild paroxysm of crying, had not the woman caught her, and, gently rocking her in her arms, succeeded in soothing her again.

"There, there, hush, my bairn, be quiet!" said she; and then added: "Now, Master Drew, I'll stay with Adie, if you'll go and see Mr. St. Barbe about the funeral. Let it be decent, though maybe poor Louis has left nothing. And buy a bit of black stuff to make her a frock; I'll sew it."

Nicholas went to the great press, and took thence a little bag; this was a pretence, for he remembered ruefully that it contained only a few copper coins: he was quite puzzled how to meet this sudden demand on his scant resources. He staid pottering so long, that Mrs. Parkes, who shared the popular faith in his hidden wealth, began to think hardly of him, and to say to herself that he was but a grudging churl after all. She soon hit on an expedient for hastening him, and at the same time rebuking him for his supposed covetousness.

"Master Drew," said she significantly, "I'd advise you to sell them black pictures of yours for as many shillings as you've asked pounds; then folks will buy them, for they're

real beautiful, and you'll have something to give this bairn more than you seem to have got now."

Nicholas grasped at the suggestion eagerly; the value of his works would be the same whatever he took for them. "They'll be too common if I sell them cheap to the printers; but I'll carry a set, the whole cathedral set, to Canon Paget," cried he; "and I'll take whatever he'll give."

"Just as you like, master; only recollect this growing bairn can't live as you've done; and if you keep her at all, you must keep her well. As for your pictures being common if they cost little, the commoner a good thing is the better, I should say. I'd as lief, and liefer, please a hundred poor men's eyes as one rich man's; maybe you don't think in that way."

This view of the matter had never presented itself to the engraver; he thought it worth considering, and wondered how it had missed him before. Coveting fame, he had lost the way to it by toiling exclusively for one order of minds. Are not the suffrages of the multitude as worthy, — appreciation by the many who *feel* as worthy as appreciation by the few who *judge*?

The snow still continued to fall; it was drifted up into great white billows against the buttresses at the north side of the Minster, and lay thick on every ledge and arch and moulding, bringing out the hoary darkness of the stone in strong relief. Nicholas had no eyes for it on this morning, as he tramped through the yet untrodden covering of the gardens, in his tartan and round hat. It was still too early for the children to be about, or it is greatly to be feared that his odd fluttering garments would have been made the mark of many a well-aimed snowball. He reached the canon's house unmolested, therefore, and gave a faint pull at the bell. After the lapse of a few minutes a florid butler looked out of a side-window, and seeing who stood there, asked sharply what Nicholas wanted; and being told that he wished to speak to Canon Paget, replied that that gentleman was out of town, and would not return for a week. This was a totally unlooked-for disappointment; for some minutes after the red face had disappeared from the window Nicholas remained standing under the portico, considering with himself what he should do next. "I'll go down into the Barbican," he said at length, slowly descending the steps. "Yes, I will; Marsh has wanted these etchings a long while; he won't give much, but then I must have something. What does it matter to me whether they hang in his parlour or lie shut up in Canon Paget's folio? Nicholas Drew, you have been a fastidious, proud, old fool. This little nestling that has fallen on your door-stone must teach you to mend your ways; it is high time you did, I'm sure."

Exhorting himself inwardly, the old man turned down College Lane into Friargate; and, avoiding the temptation to run in and see that Adie had not evaporated, or changed into any thing of a less satisfactory nature, he went direct to the shop in the Barbican which he had visited the night before. Marsh was there, scolding his apprentice, and in a state of post-vinous excitement. He burst into a coarse laugh as poor Drew appeared, and came forward to the counter.

"Are you so sharp set as this, Master Nicholas?" cried he. "Bless you, man, I can't give your price for the plate, and I won't. Who is to buy it if I do, eh?"

"I have not come about that now; I have brought a set of the Minster etchings,—there are fifteen," replied the engraver calmly. "You have coveted them often, Marsh, when I was not disposed to sell; what will you give me for them now?"

"What I've offered ten times before—half-a-crown a piece," replied the printseller.

"Make it two guineas," said Nicholas.

Marsh smiled with a rather surprised air; and well he might, for the engraver's previous demand was five guineas.

"We won't split for a matter of a few shillings; the thing's done," he answered; and then counted the money out on the counter at once, lest Nicholas should repent of

his hasty bargain. Unrolling the etchings, he continued to eye them for some minutes with a genuine appreciation of their merits, and then said with unction: "I'll say this for you, Nicholas Drew, these etchings will fetch money when you and I are underground; there is not such a hand as yours in Europe at a Gothic building. It isn't only the form and shape and richness you catch, or the light and shadow either; but it is the very spirit of the place, and your own genius you put into your pictures. You might have been the original designer of the old Minster; the love of it seems bred into your bones."

"It is, it is. Hav'n't I lived in the shadow of it from a lad?" cried Nicholas, warmed by Marsh's words into betraying his enthusiasm.

"Ay, that's it. Habit will tell. Come in, and have a glass this cold morning," suggested the printseller.

Nicholas excused himself, and started homewards. When halfway there, he remembered what he had been bade to do; and turning into a shop, he purchased some black stuff and a little hood for Adie; then, with the parcel under his arm, stopped at St. Barbe's.

The Frenchman was a clockmaker, living near the Minster-gates. Being busy when Nicholas entered, he had not time to talk; but he gave him, to understand in few words that he would not be interfered with in any arrangements that he might wish to make for either father or child. St. Barbe washed his hands of it entirely; good Master Drew was a man of evangelic kindness; he would leave all to him—all. He was a poor man himself, and could not be charged with any but his own household; he had hard work to support them often, and more to the same effect.

This was conclusive.

"I shall not trouble him again; the child is mine," said Nicholas audibly as he tramped away to the hospital, to make final arrangements for the funeral of the poor wood-carver. He had not done so much business for years as he did that morning; all Friargate was astonished to see the tartan in action so early, and marvelled greatly what could have excited him to such unusual exertions.

When he reached Nevil's Court, the children were all out making a snow-man; at the sight of them the old engraver felt quite a cold thrill run through his veins. He had forgotten them in his excitement, until he came suddenly on the rosy shouting troop.

"Here's old Nick; let's pelt him; let's pelt him!" screamed an audacious urchin at the top of his voice. Half-a-score shrill youthful pipes took up the cry, "Old Nick, old Nick; pelt him; pelt him!" when, lo, with a burst, out came Job Parkes armed with a horsewhip! He charged in amongst the youthful fry, overturning some, and administering a salutary lash to others, until he had changed their tune into a most dolorous minor. Job had received his orders from his wife, and had been lying in wait to execute them ever since poor Drew went out. That was the last time he had to shrink from the mocking youngsters; they did not soon forget their lesson.

III.—THE FLOWER OF NEVIL'S COURT.

By the time that spring came round again, Nicholas Drew and Adie were quite settled and at home together. The child had the run of all the six rooms, and one especially was given up to her. Here she had flowers which bloomed splendidly in the wide sunny window, and a pair of most musical linnets in a cage. She was a stirring vivacious child, subject to wild fits of laughter and rarer moments of gloom, which gave Nicholas, who loved her as the very apple of his eye, a strange uneasiness at times. She was wayward and wilful also, but very affectionate; not slow to offend, but prompt to seek forgiveness. She had no application, and no striking or prominent talent. It was long before Nicholas could coax her into learning to read, although she was nearly eight years-old; she was, in fact, a little, indolent, freakish, loving thing, whose tears would gush at a sharp word, and whose smiles were the

essence of heart-sunshine; it took so little to make her happy, that it grieved the old man to see her otherwise, and the restraining hand he kept upon her will was very light.

Though living in Nevil's Court, amongst poor artisans and the like, Nicholas Drew was not of their class; he had been born in that house before it was let off in apartments, when his father—a more flourishing individual than himself—had rented the whole of it. Few people, if any, remembered this, though they felt that he was not one of them; that his genius, his education, and a certain innate refinement springing from a pure and gentle heart, made a wide gulf between them, which not even the miserable old tartan or his visible privations could by any means bridge over.

Circumstances began to improve with him now for very natural reasons; he sold his etchings at a moderate price, and also condescended to give lessons in drawing at several schools in Eversley, which he had formerly refused to do; but he still adhered faithfully to the ancient cloak and the felt-hat, while he delighted to see Adie dressed like a spring-flower. It was quite a picture to watch them sitting side by side in a stall at the Minster; she with such a soft pomegranate blush on her face, and he as faded, gray, and antique in shape as the queer effigies niched above them. They also often walked in the streets together, and Adie's beauty was a far greater protection to him from gibe and sneer than ever his own scowl had been.

As she grew up, her disposition became quieter and more pliant, and she submitted to be sent to one of those schools which Nicholas attended. Here much was done towards disciplining her impetuous character, though her natural abhorrence of rules sometimes came out very strongly. She appeared ignorant in comparison with other girls, but she was not really so; for the good old engraver had taught her much biblical history from his stores of engravings, and imbued her with some desultory knowledge by relating to her pleasing or terrible narratives from general history. Her strongest instincts were in her affections; she did not judge, she *felt*; the reflective element seemed to have been omitted from her composition altogether. She never readily attached herself to her schoolfellows, and cared for nobody's companionship so much as Nicholas's. Him she regarded with an enthusiastic, devoted, childish reliance; he was at once the best, the wisest, the dearest, and the most picturesque of old men; she took pride in the tartan and the beard which others ridiculed, and identified herself so completely in all his ways and oddities, that it was not safe to allude to them before her.

"He is not like other people!" she echoed one day after a weak girl who had laughed at him,—"not like other people! No; how should he be like them? Could he simper as men do who have nothing in their heads but wind? He has a great heart; he has a full brain. He could have built the Minster, I tell you. He ought to have lived long ago, and then he would have been a master of that grand society of Francs Maçons we read about to-day. He is a great good man, and every body else is—Bah! why do you vex me? If you want to laugh, laugh at some one I don't love." Adie had a dangerous light in her southern eyes, when she was angry, that intimated very excitable passions, and even the possibility of a quick blow following the hasty word. It was wise to refrain from irritating her; her school-companions acknowledged it with a dim confused fear and admiration for the fervour and earnestness of a temper so unlike their Saxon calm. Her gratitude, that was almost a passion; her imagination, so vivid and so picturesque; her warm sunny loveliness, attracted others even while they remained as a bar of separation between them. She, as well as Nicholas, was not like other people; but there was that about her which made little spites and jealousies impossible; she was beloved by every body who knew her, and Mrs. Parkes, to whom she was warmly attached by the memory of past kindness, called her alternately "poor Adie" and "the Flower of Nevil's Court."

MABEL.

SHIMMERING through the heavy curtains, broken lines of sun-
set gold
Fade within a stately boudoir, in a castle proud and old.
Dimly glow, on roof and window, blazons the Crusader bore;
Dimly gleam the gilded mirrors, dimly shines the inlaid
floor.
Mixed with sombre antique splendours, richest trophies deck
the bower
Of our modern art luxurious—picture, statue, book, and
flower.
Bending o'er an open letter, till her brow her tresses veil,
And the heaving of her bosom, sits a lady, still and pale.
Rapt from every outward seeming is her fixed and dreamy
glance,
And her silent passion holds her rigid, breathless, in its
trance.
As the deer, surprised, the hunter fronts amid the woodland
gloom,
She adown her spirit's vista gazes, face to face with Doom.
Lady, peerless Lady Mabel!—thou around whose youthful
head
Nature's gifts and Fortune's favours have their glittering
halo shed,—
When the bridal-bells were ringing, and thy stern relentless
sire
Gave thee, in thy budding girlhood, passive to his dreaded ire,
To a titled hoary Baseness,—motherless and helpless child,
Weeping midst the gauds they counted should thy girlish
heart have wiled,—
Did he think the blossom folded from the drear December-
day
Might not, to its desolation, open to a warmer ray?
Did no angel-voices, pleading for thy whiteness, meet his
ear?
Did no lightning-prescience smite him with a sense of danger
near?
Still she gazes on the letter; still, while thickly beats her
heart,
On the fatal message ponders:—"Fare thee well, to-night
we part!
Far from thee, from joy, from blessing, loveliest, most be-
loved! I go;
The full measure of my anguish may'st thou never, never,
know.
Lifted to the glorious presence of thy radiant womanhood,
Could I see the gulf that, hungering, yawned beneath me
where I stood?
Dazzled, blinded by the brightness of that charmed world of
bliss,
I have fallen from realms celestial to the hopeless blank
abyss.
Mad my words, my woe! yet think not that my frenzy
would unsphere
Thy complete and queenly beauty my lone student-lot to
cheer.
Dream of earth and hope of heaven take thy form—and only
thine;
But enthroned above my sorrow, as a saint above a shrine.
Yet, hadst thou been poor and lowly, nurtured in some
kindly shade,
Never bloomed so fair an Eden as for thee my love had
made;
For I would have wooed thee, dearest, with such sweet
resistless might
As had drawn the farthest planet from its steadfast path of
light;
And my soul, through thy inspiring, to such nobleness had
grown,
To such height of worth and goodness as had raised it to
thine own.

Fare thee well, once more—for ever!—bitter words, but
fondest prayer!
Solitude and exile call me—to the silence of despair."

What the new emotion, waking like a giant from its sleep,
To thy marble brow, O Mabel, makes the sudden crimson
leap,
While through all thine inmost being thrills a yearning
without name,
And the sharp electric pulses throb tumultuous through thy
frame?

Rising, eyes through tears uplifting, in her ruth she mur-
murs low,
Clasping her white hands imploring, "Shall I leave him to
his woe?

I, who from his lofty spirit nobler faith and hope have learned?
I, whose love, in sadness hoarded, to no other ever turned?
Shall a vow enforced, and hated at the moment it was said,
Bind the shrinking heart, that loathes it, to a contract false
and dead?
No, thou Heaven of Truth above me, truth and love my
steps shall guide;
For I love him, and his wand'ring will I share what'er
betide."

Tremblingly, the Lady Mabel, through the mists that dim
her sight,
Writes, "Beyond the gates I'll meet thee, and we shall not
part to-night."
And she seals and sends the missive to the Student in his
grief,
And the twilight slowly darkens, hours so long and yet so
brief.

* * * * *
In the solemn fragrant temple of the starry summer-night,
With a silent kiss, the lovers earnest troth unspoken plight.
Through the fragrance, through the starlight, forth they
fare o'er moor and lea,
Pressing still their rapid journey, hasting onward to the sea.

* * * * *
Brightly for the Lady Mabel glows the balmy southern sky;
Bright with Love's unclouded summer all her peaceful years
go by;
Valley, lake, and shining mountain, in serene protecting
bond,
Rounding her glad home's oasis from the desert-world be-
yond.

* * * * *
But the years glide on for ever; and amid their silent train,
Nearer yet, and ever nearer, comes a shape of fear and pain.
Flushed his cheek with fading roses, on his couch the loved
one lies;
And an ever-deepening shadow broods o'er Mabel's tearless
eyes,
And an icy hand is closing round her heart with deadly
grasp,
As her life's sole treasure passes from her clinging powerless
clasp.
Yet her words speak strength and comfort, and her beaming
sunny smile,
Though she knows the sand is ebbing, and the hour draws
near the while.

* * * * *
Soft and cool, the breath of even fans the pallid dying brow
Tenderly on Mabel's bosom for the last time pillowed now;
And the sun sinks slowly, slowly, with a loving lingering
ray,
Blessing the dim eyes that never may behold another day.
"Day is done"—the words come faintly—"and the gathering
shadows meet;
Not for me I mourn,—thus dying, dearest, even death is
sweet."

Fainter grow his words, and fainter: "Sunshine art thou still to me;
But I mourn that I must leave thee, and the lonely night for thee!"

And the failing wavering accents die away, as through the trees

Dies the low receding music of the wailing sunset-breeze.
Mabel presses back the stupor weighing upon heart and brain,
Closer twines her soft arms round him, whispers fondly through her pain,

"Courage, love! the sun is hidden but to rise in newer light;
Dearest, I am going with thee, and we shall not part to-night."
And a last faint smile plays, fleeting, dreamlike, o'er his lips, and fades,

As a passing gleam that brightens some lone tarn through twilight shades.

And her heart is chilled within her, stricken from its watchful care,

And its loving currents freezing in that hour of still despair,
As a fountain, slow congealing while the whirling tempests blow,

Stiffens when the hush of winter settles o'er the wastes of snow.

Calm and quiet lie the lovers, while the stars above them range,

Folded in that last embracing, safe from Sorrow and from Change.

* * * * *

Now, beneath a grassy hillock, sleep they softly side by side;
Hearts that Love so true united, pitying Death would not divide.

ANNA BLACKWELL.

FIRESIDE ELOCUTION.

To the Editors of the National Magazine.

GENTLEMEN,—I am one of the thousands who have derived benefit from the early-closing movement. I am no longer the slave of fashion or the martyr to trade, but the humble and willing servant of both. It has been said by the opponents of the movement, that we young men would waste the precious leisure afforded us in scenes of riot and dissipation, and entail upon ourselves and children all the consequences of familiarity with vice, if once freed from the glare of the shop gaslights, and the excessive fatigue of mind and body consequent on the performance of our duties. To those who have so often urged the *folly* of the movement, and to those who have aided it by tongue and pen, and moral and pecuniary sympathy, I here beg permission to relate how the young men of our house spend most of their evenings.

We have a book-club and a literary institution of our own; we have meetings for conversation, from which intoxicating drinks are totally excluded; we prepare and read essays, and at the close of each make free comment upon them. Occasionally we have a dramatic performance, works of the highest merit being chosen for representation; and we have besides a museum of antiquities, curiosities, and natural-history objects, formed of donations from members and their friends. But the recreation in which I take especial pleasure is the weekly elocution-meeting, when we simply read aloud selected passages from the most renowned English poets. Confined indoors as we are the greater part of our time, and out-door exercise being scarcely beneficial at night, we find that our health is greatly improved by the exercise our lungs obtain in this exercise; and it has occurred to me that, as many families find the long winter-

evenings tedious, that such a recreation would be found agreeable at the fireside of every family where the love of literature is in any way indulged. What is read out is more distinctly remembered than that which is read in silence. I have noticed, too, that where three or four persons take a book each, there will generally be one or two others who would rather talk; hence unanimity of feeling is not always promoted by the silent enjoyment of books. Besides, when friends are together, it is not always well for them to resolve themselves into a meeting of mutes. Let a book be chosen, and let one of the party undertake to read out a poem or a story. I know that I never enjoy any thing more than the reading of *Tam o' Shanter* by one of our members, who comes from 'yond Tweed; and I have myself contributed to the pleasant passing of an evening by reading Körner's magnificent "Sword Song," and Southey's comical poem of "Lodore." The practice strengthens the vocal powers, improves our knowledge of accent and emphasis, and gives one a new insight into the mode adopted by the literary artist to convey impressions and emotions through the medium of language. I can conceive no more pleasurable or beneficial enjoyment for any family-circle, when assembled round the fire, than the reading aloud, by one of their number, of some favourite author, on whom and the reader's style they can afterwards make comments, with a view to mutual good understanding and improvement.

P. P.

BRITISH INSECTS AND THEIR METAMORPHOSES.

III.—THE VAPOURER MOTHS (*Orgyia antiqua* and *Orgyia gonostigma*).

By HENRY NOEL HUMPHREYS,

AUTHOR OF "INSECT CHANGES," "BRITISH BUTTERFLIES, AND THEIR TRANSFORMATIONS," ETC.

THE early season of the year is always one of rapidly increasing attraction to the entomologist. Every day the increasing light and warmth of the sun bring into existence, or rather into a new form of existence, many curious creatures, passed by unseen by those who are not schooled observers of nature, but full of interest to the careful student. One morning a young naturalist brought me what he deemed a most anomalous creature, the appearance of which completely defied all his attempts to assign it to any class with which he was acquainted. The body appeared somewhat in the form of that of a beetle; but instead of being clothed in a shell of black armour, like the more ordinary species, or in one of glistening metallic hue, like the rose-beetle, it was entirely unprotected, except by a soft coating of close silky hairs. The eyes were not (when only superficially observed) unlike those of a common fly; and above, or rather between them, protruded two slender horns, as thin as a fine thread. It had six legs, and crawled briskly along, with a gait, as my young friend observed, something between that of a beetle and a spider. The joints, or segments, of the somewhat lengthened abdomen were just visible beneath the smooth gray fur which formed its covering, and at each shoulder was a small excrescence, which had somewhat the appearance of a foundation to which an artificial wing might have been easily attached.

I knew the little creature at once. It was an old acquaintance; one of the early problems of my studies as a naturalist, which had made entomology a world of wonders to me. "It is a moth," I said, in answer to the question put to me. "A moth!" exclaimed my young friend,— "a moth without wings?" "Yes, it is *Nyssia hispidaria*." But even my scientific name did not satisfy the inquirer, till I informed him that in several genera of moths the females were apterous, or wingless, while the males, gay rovers, enjoyed the usual luxury of wings. Even this was not entirely satisfactory, till I adduced the analogous case of the glow-worm; the female of which is apterous, like that of the moth in question, the light serving to indicate to the male the whereabouts of his destined bride.

Among the most interesting examples of moths apterous in the female sex, that of the Vapourer, *Orgyia antiqua*, and its allied species, *Orgyia gonostigma* (the subjects of our illustration), are perhaps the most interesting.

In the larva state, the common Vapourer, *O. antiqua*, is a remarkably curious and handsome caterpillar (No. 2 in the cut). He is of a rich dark-brown; varied with gray and orange tones, and spotted with red. On his back are four thick tufts, of pale straw-colour, which look like upright tassels of floss-silk cut square at the top; and at the head and sides are open brush-like bunches of delicate hairs, each tipped with a slight knob, or club. The male caterpillars are said to be darker in colour than the females, but do not differ in other respects, either in that or the chrysalis state; but on emerging from that metamorphosis-protecting shell, the contrast of the male and female insect becomes very remarkable. The male is furnished with handsome wings of a rich brown colour, varied with dark striations, and one remarkably brilliant spot of white at the posterior corner of the front wings. The female, on the other hand, is of a dull ashy-gray, and almost entirely wingless, the rudiments of wings being scarcely visible (as shown in the engraving at No. 3). The appearance there presented corresponds pretty nearly with that described by my young friend in another apterous female moth, though of quite a distinct genus. It is said that the females of this species have the power of emitting an odour by which the males are made aware of their presence, just as the light serves to attract the male glow-worm. The peculiar hovering, or "vapouring" flight, of the male moth of this species is said to be caused by his constant search for indications of the presence of his wingless mate, and it has also given to the genus its popular name.

The other and rarer species, *O. gonostigma* (No. 4), is much handsomer, being variegated with touches of orange and gray, as well as white; and the caterpillar (No. 5) is also more richly tinted. The female of *O. gonostigma* is much larger and deeper coloured than that of the more common species.

The caterpillars of both kinds are found early in the spring, and the perfect insects appear in the autumn, invariably taking their gay fluttering flight in the broad daylight, instead of the night, which is the promenade time of most of the moth family.

POULTRY-KEEPING.

DEAR MRS. HOME.—Many persons who keep hens for their profit or amusement complain that they do not obtain a sufficiency of eggs to repay the disbursements made for grain and other nutriment upon which they feed them. Some attribute this to the inferior breed of the fowls; but herein they deceive themselves; for if they are taken proper care of, there are none so unprolific as not to pay their own

food. Even connoisseurs in poultry, for the most part, ignore that the hen belongs to the omnivorous genus, and consequently, in order to become prolific, requires, among its other aliments, a certain quantity of animal food. When fowls are left at liberty to scrape up their own sustenance in the field, or around the farm, they devour quantities of insects, worms, and other animals; and when these are found in abundance, eat very little grain, and even pass it untouched to regale themselves on the more congenial

nourishment which Nature provides for them. Now if they are incarcerated in a prison where it is impossible for them to satisfy their natural taste for animal flesh, it is in vain to furnish them with abundance of grain; they become sickly and unprolific, and consequently the profit expected from them is diminished. In order to remedy this, a small portion of the remains of beef or fresh pork should occasionally be given them, and the difference in the supply of eggs would soon be obvious. I write this from conviction, having resided some years in Holland, where the practice is universally resorted to; and the immense quantities of eggs constantly exported to England from that country will in a great measure justify my remarks. Wishing your readers who may be induced to act upon my suggestion an abundant success, I am, &c., J. H. S.

THE WATER-SPIDER.

To the Editors of the National Magazine.

IN No. 4 of your Paper (dated October 25), a correspondent says, that the Water-Spider is furnished by nature with a skin, or bag, over the abdomen, which is capable of containing air; and that this bag, when filled, presents the appearance of a globule of quicksilver. This I believe to be incorrect. If your correspondent will take the spider out of water, and examine (by means of a lens), he will discover that the body of the insect is covered with a thick pile of fine hairs. On replacing the spider in the water, the air entangled in the hairs will be pressed out, and form the globule of air which gives the appearance of a globule of quicksilver. This does not seem to be in any way connected with the teats on the abdomen of the insect, excepting that they appear more raised and destitute of hair, so that the water presses down upon them. B. S.

THE WINGED-PEA.

A CORRESPONDENT, with whom this plant is a great favourite, tells us it was popular some seventy years ago, then gradually forgotten. We have been indebted to the kindness of this gentleman for a fresh supply of the seed, and have been thus enabled to send a small quantity to every subscriber who applied. No further applications can now be received.

SPECIMENS FROM RECENT EXHIBITIONS: NO. X.

PAINTED BY E. EAGLES.

THE RETURN OF THE PEASANT.

IL RITORNO DELLA CONTADINA.

(THE RETURN OF THE PEASANT.)

By E. EAGLES.

HAVING already criticised this picture in our review of the Exhibition of the Society of British Artists, it remains but to point out to the reader the extremely valuable qualities it possesses: firstly, the grand bronzed healthiness of the features, and their firm and resolute expression of self-dependence,—a character which the men in Italy seem to have parted with to the women; secondly, the self-confident and firmly-planted attitude with which the woman carries herself through the water, despite the double call upon her interest and attention.

Our remarks had been directed against the Romanesque, lurid, and unnatural colour of the picture; and our praise most freely given to the vigorous and forcible qualities which it exhibits: these are precisely such as should be as patent in an engraving as in the original. In addition to those first-named merits in expression and attitude, let us add that the drawing, being without pretension to deep science or extreme delicacy, has withal a powerful sweep, which might be advantageously cultivated by many painters of high reputation. The composition of the picture has exactly the character of robust vigour which would be expected from a designer who evinced so much power in other branches of art.

Our last word must be in earnest and sincere warning to Mr. Eagles of the manifest importance of cultivating a truer feeling for colour and light and shade, matters which he appears to ignore. But the whole tendency of the English school now turning upon truth of representation and brilliancy of colour, it will hardly be possible for a painter, whatever his talent may be, to succeed, unless he at least evinces his respect for such points in art, the nobility and value of which no one can for a moment contemn. This young artist's neglect of colour is the more lamentable, as it really appears to be wilful; there being in many parts of the picture phrases of this quality which are of much beauty, that seem to have crept out in spite of him as it were.

L. L.

UP THE ULLUA.*

I.—A SHARK STORY.

Is the month of June 1838, I was on board the barque *Calcutta*, at anchor off the Ullua. My gig was manned and alongside, and I and my friend Tom Carey were going up the river to look after our stevedore, who had been sent up some days before to select a raft of mahogany. The sea-breeze had set in strongly, and the afternoon was cool and refreshing. Don't misunderstand me; don't think it was really cool,—it was only comparatively so. The sea-breeze had but modified the sultry atmosphere of the morning; the thermometer stood at 82° in the shade.

We did not put on our dress-coats or black pants, although we were going to visit a gentleman of no small importance in those parts—the captain of the mahogany-cutters. But having duly encased ourselves in a suit of clean white duck, and taking our pea-coats to protect us from the chill of the evening, we stepped into our little four-oared cutter, and started for the river. My little boat had always been the admiration of the whole fleet; she was very sharp in the bow, light and buoyant as a cork, and was without doubt a regular clipper.

As we neared the bar I could see the surf breaking on it

* The Rio Ullua is a small river running into the Bay of Honduras, about twenty miles east of the port of Amoa, between Cape Cameron and the Golfo Dulce. It is navigable only by boats, and is used principally to float down mahogany to the fleet of ships which take in their cargo at its mouth. Its course is very rapid, and its banks extremely picturesque. There is a bar at its mouth, on which at times the surf breaks so heavily that boats cannot pass without great danger.

in a remarkably unpleasant fashion. I had heard of the dangerous nature of the entrance, but had not paid much heed to it; I thought it was only a tale to frighten youngsters and old women; but when I saw the immense breakers follow one after the other, dash on the bar, and then roll boiling and hissing right into the mouth of the river, I confess I altered my opinion, and looked on them with something like perplexity; however, with such a boat as we had under us, I did not fear.

We had not got far from the ship when the man at the stroke-oar called my attention to several boats which had put off from the ships in the fleet.

"Something amiss," said Tom Carey. "Look out ahead, coxswain, and see if you can make out what it is."

"Can't see any thing, sir; can you?"

"No," I replied; "yet I can't see any thing astern; it must be ahead. Give way, my men; perhaps it's a boat caped in the surf."

"Ay, ay, sir, you're right," broke in the coxswain. "See there, in the way of them two cocoa-nut trees; watch the next rollers, and you'll see the poor fellows holding on to the boat."

I did see them; and knowing that the coast swarmed with sharks, I saw at once that their only chance of safety, in case they escaped drowning, and got outside the surf, was for us to reach them as soon as they got clear of it. I therefore urged my men to put out their strength; they responded nobly to my call, and we soon began to fly over the seas. A race like this—time against life or death—is a most exciting thing; and as we bounded over the waves a multitude of thoughts flitted through my brain. It is perfectly astounding at what a rate the mind will travel under such circumstances. Had our boat been endowed with the same faculty, the result might have been different; but as it was, she seemed to know she was on an errand of mercy, for I never saw her skim so lightly over the seas. She was a paragon of a boat, was that same gig of the *Calcutta*. Stout arms and brave hearts propelled her with a velocity I had never before witnessed; yet we were some distance from the bar when we saw the boat come out bottom upwards, and two of the men clinging to her.

"One, two, three—that makes five, sir," said the coxswain, as three more cleared the surf and struck out for us.

"Thank God, they're all safe thus far," said I. "It's the *Resolution's* boat; I saw the captain and four hands go in this morning. Give way, my men; a bottle of grog each when we get on board."

"Ay, ay, sir," said the young fellow who pulled the stroke-oar, "never fear of that; but hang all grog in such a case as this."

I felt the rebuke; I felt I ought to have known sailors better.

"One, two, three, four,—I can only see four," said Carey; "one poor fellow's gone. What's that? A shark! God help 'em."

The water foamed from our bows; Carey and I clutched the thwarts of the boat; still we flew onward.

"Another shark," said Carey. "D'ye see him coming down to windward?"

"One, two, three,—only three; another poor fellow gone. Give way, my bonnies, rally again, all together; that's your sort."

We were now drawing close to the boat; one man only remained in the water; he struck out wildly, and then lifting up his hands imploringly, sank, and his faint cry for help was drowned in the surging of the waters.

"Way enough; in bow; back water," said the coxswain.

Carey, who had divested himself of his jacket and shoes, now dived after him; he rose, supporting the drowning man; we hauled them on board; just then a huge shark dashed past us.

"Thank God, you're safe," said I, squeezing my friend's hand. The two men who were taken off the boat had sustained no damage but a good ducking. We learned from

them that the first man who went down was the captain; and as he was striking out strongly only a few seconds before he sank, in all probability he was seized by a shark, for neither he nor the man ever rose again.

It was a melancholy termination to our first attempt to go up the Ullua, and I felt the matter painfully at the time, as I understood that both of the poor fellows had wives, and the captain a large family, to lament their loss. Of course, after such an occurrence, it was out of the question to proceed on our intended voyage, and we therefore made our way back to the ship.

I cannot avoid relating an incident connected with this sad scene which is strongly characteristic of the superstition of sailors. The boat in which the melancholy accident occurred was strong and well built, worth at least twenty pounds; yet after we had rescued the men from off her there was not a man in the fleet who would touch her, and she was left to drift out to sea. I must say she had a bad character, having capsized at the same place, on a former voyage, and drowned a man.

When we got on board, the appearance of the sky betokened one of those thunder-storms which at this season are common in these latitudes, and we therefore made all snug for the night.

A storm in the tropics is very grand, particularly in the neighbourhood of high mountains: the lurid lightning plays among their tops; the thunder, rumbling and then bursting with a terrific crash against their sides, seems hurled back again with double violence; rain falling in torrents—in sheets; over every thing hangs a black pall, which is occasionally rent asunder by forked lightning.

All this is very beautiful to contemplate under cover, with a pipe and a strong tumbler of grog, but to have been caught up the Ullua without shelter would not have been pleasant. Snugly ensconced in the cuddy of a good ship, I was fascinated; I sat up till the storm abated, smoked three or four pipes, and then retired to my berth to be lulled to sleep by the distant thunder.

II.—A DINNER IN THE BUSH.

The morning broke with a cloudless sky; the air was pure and refreshing. We took a hasty breakfast, and jumped into our boat. The surf on the bar had subsided, and we entered the river without any trouble. I had heard that the scenery was very picturesque, but I was not prepared for any thing so enchanting. For some distance the margin of the stream was fringed with trees and shrubs. Turning a sharp angle of the river, we came upon a small island in the middle of the stream; this, too, was covered with tall cocoa-nut trees and bushes, from which issued a cloud of parrots, macaws, and other birds, with the most gorgeous plumage, that flew round us, uttering most discordant sounds; monkeys, too, chased each other from branch to branch, chattering and looking wondrous wise; and when I pointed my gun at them it was evident they understood the nature of that weapon, as they all scuttled away like mad, except one old fellow, who knowingly dodged behind a large leaf, and, because he could not see me, thought himself perfectly safe.

Passing the island, the scenery became more bold, and of an entirely different character. On the right was a gentle slope, covered with fine grass, while in the distance the high land rose grandly, presenting a succession of thickly-wooded terraces, having the appearance of an immense natural amphitheatre. On the left a thick forest extended far beyond the range of our vision. It is at such a time, with the grand diorama of nature passing before you, and the distant mountains frowning on you, that you feel how far nature exceeds the descriptions even of poets.

I confess I was somewhat carried away by this grandeur, and wondered if in after-ages those vast and fruitful plains would be peopled and cultivated, and speculated on the probability of those vast forests falling before the march of civilisation. In fact, I was nearly lost in the region of

fancy, when a sharp bite from a mosquito brought me up all standing. I crushed the bloodthirsty insect for its impertinence in thus disturbing me; but it was well for me that I was interrupted, otherwise I should have lost a fine bit of sport.

As we wended our way slowly against the strong current, I cast my eye on the bank, and there, among the trunks of fallen trees, I saw something move. I did not stop to see exactly what it was, but raised my gun, and poured its contents in what turned out to be a large alligator. With a desperate bound, the beast dashed into the water and swam towards us. What the creature's intention was I cannot tell; for it is seldom or never that they attack a human being, much more a boat containing half-a-dozen. If such was its intention, Carey put a stop to it by putting a shot in one of its eyes. Master Alligator did not seem to like this much; for, after a plunge and a snort, he sank to the bottom. We were determined to see the end of him, and so we pulled in to the spot where he sank, and there lay the brute dead.

It was with great difficulty I could persuade Carey not to dive in to see if he was really dead, or only shamming it; and we finally settled it by splicing our two boat-hooks together, and giving him two or three admortory pokes. As he paid no heed to these, we concluded he was dead, and left him.

By this time I began to get most voraciously hungry, and dinner, that all-important never-to-be-forgotten business of the day, began to press upon the most tender sensibilities of my nature. As there was no post or electric telegraph in these benighted regions, we could not let our friends know we were coming; and Carey wondered how Peter would satisfy the craving of our stomachs, which was now becoming intense. He prophesied, and his theme was salt-herrings and salt-junk, and all sorts of horrid things; but I knew our stavedore better, and, as the sequel will prove, I was not disappointed.

As we approached the village, two mulattoes scampered off to give notice of our arrival; and shortly afterwards we saw Peter Byrne and the captain coming down to the landing-place to meet us. I could see by Peter's countenance that it was all right for dinner. There was no flurry, no apology. He inquired if we had dined, and when I replied in the negative, he led the way to his log-cabin with an air of satisfaction, which, to my mind, told of good cheer in reserve.

As we had matters of business to settle with the captain, and as Peter said the dinner would not be ready for some time, we started off, leaving the matter in Peter's hands. At the end of an hour we found ourselves in the captain's cabin; the furniture was not very *recherché*, but it was at any rate useful. There was a good-sized table, covered with what might once have been a white tablecloth; it was clean, but I suppose a mangle was not at hand, as the use of that instrument had evidently been dispensed with; still a tablecloth of any description was deemed a luxury in the bush, and we knew by this that due honour was to be done to our visit. The chairs, too, although made of mahogany, as was every thing about the place, were not suited to a London drawing-room; but in the bush they don't stand on the latest fashions; and so the captain's chairs, rough as they were, served us as well as the best.

On entering the hut, our olfactory nerves were assailed by a most savoury odour, and I could see Carey's face light up as the smell was wafted in at the open doorway. We had just seated ourselves, when Peter entered, followed by a black fellow bearing a large dish containing a most delicious stew. I shall never forget with what satisfaction I saw it steaming on the table. Without ceremony we commenced the attack. O, with what gusto did we dive again and again into that dish! We had taken our breakfast at eight, and it was now four. You may therefore imagine we were ready for any thing in the shape of a fresh mess. As we did not know what was to follow, we continued attacking the stew till the dish was empty. Next followed a dish

of small birds. As we had asked no questions about the stew, we asked none about the birds; but as they proved tender and tasty, and as Peter and the captain assisted in clearing the dishes with a vigour second only to our own, I was satisfied it must be Christian food, and washed the whole down with a bumper of sparkling pale ale. Seeing symptoms of something to follow, I protested I had had enough; but Carey was determined to stand by Peter to the last, so we ended the whole by filling up and chocking off, as Carey called it, with a lot of pancakes, light and crisp. And now the black fellow having cleared away the wreck, we lay in our grass-hammocks, like warriors resting on our arms; and taking a glass of strong grog and a pipe of fragrant tobacco, I felt my heart warm towards all my fellow-creatures, and more particularly towards my friend Peter. I felt, in fact, in that blessed state when one does not care to call the king his uncle.

Carey never was of a contented mind, and nothing would satisfy him but a description of the captain's *cuisine*, and a minute account of the various dishes which formed our bill of fare. I cannot help thinking that it would be highly inconvenient to managing housekeepers if all guests were equally inquisitive, and I told Carey so in a very pointed manner; but he only laughed, and returned to the charge. I could see that Peter avoided the subject, but I had no idea of the cause; he hommed and hawed and dodged about, but it was no use; Carey was determined to know, and so out it came.

Shades of Soyer! on what do you think we had dined? Stewed monkey and roasted parrots.

Reader, no doubt you felt disgusted at the idea of such a dinner; nevertheless it is one not to be despised, and very common in the Bay of Honduras. I confess I felt rather queer at first; but the recollection of its delicious flavour, and the gusto with which we had devoured it, soon reconciled me; and many a time has the memory of that savoury stew risen up to tantalise me when I have been dining off salt-junk in the cabin of the *Calcutta*. - T. E. S.

THE CHAINED EAGLE.

BY V., AUTHOR OF "IX. POEMS" AND "PAUL FERROLL."

The chain is strong, thou eagle fleet,
That binds thee in man's lower home;
And rusty is the lock become
That fix'd it on thy captive feet.
Since then thine eye, alas, is dimm'd,
Thy close-press'd fearful wings half-trimm'd;
Thy brief and melancholy cry
Comes harsh upon the list'ner's ear,
Not as when far in upper sky
He heard thee in the fields of air.
Ah me, poor bird! there's many a one
Goes chainless that is not more free;
Whose eye and spirit both are grown
Dim in captivity, like thee.
One knew I,—in his early day
So bright of spirit, wise, and gay;
Thy life could ne'er more joyous be
Than were his days of liberty.
But vainly might his spirit strain;
Fate drew him back to earth again;
And comrades base, and fortunes dim,
Have been captivity to him.
Thine, eagle, is the high-walled court,
Instead of heav'n, to soar and rise;
Thine the chain'd circle, sad and short,
Exchang'd for alpine rocks and skies.
His are the petty hopes and fears
Forced hourly on his weary ears,
In place of thought's unbounded flight,
Which shunn'd no depth, and fear'd no height.

Thou hast thy chain, whose weight is never—
Stir when thou wilt—unfelt of thee;
The comrade who on him for ever
Hangs the mind's burden-weight, has he.
Might he the mental chain unbind,
Fetter the body, free the mind,
And sit alone in captive thrall,
Lord of himself, beyond control,
Free from their shadows, to recal
The glorious visions of his soul!—
Methinks his fate were happy then,
And he might take his rank 'mid men.

But over mind, or frame, or face,
Years cannot pass and leave no trace;
And, noble bird, nor he nor thou
Can blot the time that stamps ye now.
The year-long bonds have slack'd the wing
That would have nerv'd itself in flight,
And vainly would its pinion spring,
Though freed, toward the midday light.
The broken chain would seem to grasp
Thy limb with its remember'd clasp;
And thou, though free upon the hill,
Wouldst be the shackle-bearer still.
The wing its strength must lose or gain,
The soul must better or decay;
And ev'ry year they live in vain
Takes from their inborn power away.
Then, ah, no marvel thou wouldst fain
Burst—though it cost thy life—the chain;
Or sink subdued by long distress,
A pris'ner cold and motionless,
With mournful eye still glancing round,
And talon, blunted on the ground.

He struggles still; for, young as yet,
His freedom he cannot forget.
The longing and the pow'r to soar
Survive, though to be used no more.
Hard is his portion! day by day
To feel his spirit in decay
Moulder like untrimm'd fire away;
And mark himself, his glory pass'd,
Grow cold to joys he leaves behind,
Till equal fate is yours at last,
A broken wing, a powerless mind.

NEW BOOKS.

DELIA BACON ON THE PHILOSOPHY OF SHAKSPERE'S PLAYS.

IN a former Number we ventured to bestow a few remarks on the curious attempt made by Mr. William Henry Smith to deprive Shakspeare of the credit of being the author of the plays which have generally been attributed to him. That idea, however, did not originate, it would now seem, in the brain of Mr. Smith, but in that of an American lady, who has, we are told by Mr. Nathaniel Hawthorne, the author of *The Scarlet Letter*, devoted her life to the investigation. Some time ago her theory was divulged in an article that appeared in an American magazine; and from this it is stated that Mr. Smith derived the suggestion for his letter to the Earl of Ellesmere, and the lectures which he has since delivered. We remark also, that Mr. Smith has just produced another work on the subject. And now we have before us a bulky tome, not by this gentleman, but by the American lady alluded to, with a preface by Mr. Hawthorne, in which he states, that the composition of the book is "worthy of its great subject," and that "the ability employed in" it has been "well employed for our intellectual interests;" and notwith-

standing its repulsive theory, whether she should succeed or fail in the proof, Mr. Hawthorne still ventures to affirm that "her failure will be more honourable than most people's triumphs, since it must fling upon the old tombstone at Stratford-on-Avon the noblest tributary wreath that has ever lain there."

This at first sight seems a strange assertion. What it means, however, will become clear enough in the course of our remarks.

The name of the adventurous American lady to whom the chivalrous Mr. Smith has been indebted for an idea is Delia Bacon, and her book is entitled, *The Philosophy of the Plays of Shakspeare unfolded*. The book has not been published in America, but bears the imprimatur of the English booksellers Groombridge and Sons, and has already challenged much English criticism. This book is a far different affair from Mr. Smith's letter and lectures; not the vehicle of a few flimsy remarks, but of some very eloquent criticism, and altogether, though written by a woman, the product of a mind thoroughly masculine in its grasp of thought and the energy of its style. In a word, it is a most extraordinary book; and it is on this account, and not on that of its theory, that we draw attention to it.

Miss Bacon treats in this work of the whole of the literature of the sixteenth century, and particularly as it relates to the philosophy of Lord Bacon, which she contends was not inaugurated with the intent of regulating the study of nature and the merely animal world, but that of man. The study of the former was exclusively transitional and preparatory; the express and special aim was the development of human being and the reform of those conditions, political and ethical, which are associated with it. According to her, the Elizabethan writers formed a school, a league, with its secret missions and symbols, and were consciously engaged in a formal conspiracy for the regeneration of man and the removal of those abuses in Church and State which had hindered that desirable consummation. She gives them credit for foreseeing the revolution that was impending, and, in a day of tyranny, of contriving means for accelerating its approach and preparing the minds of the masses for the mighty change. This school started a new system of philosophy, which was formally stated in the Baconian treatises, and further illustrated by the works of Sir Walter Raleigh and Sir Philip Sidney, and of such poets as Spenser, Ben Jonson, and the author of the Shaksperian plays. The centre of the school was Sir Walter Raleigh himself, who established a general literary agency, and maintained a multitude of clerks to register information derived from all parts of the world.

"He became himself the head of a little Alexandrian establishment. His house was a home for men of learning. He employed men in literary and scientific researches on his own account, whose business it was to report to him their results. He had salaried scholars at his table to impart to him their acquisitions. Antiquities, history, poetry, chemistry, mathematics, scientific research of all kinds, came under his active and persevering patronage."

Raleigh also was a decided patron of plays and players, and was accustomed to entertain private parties at his house with very *recherché* performances of a dramatic kind. He likewise contributed the sum of a thousand pounds to the building of the Globe Theatre, of which Shakspeare was manager, and had a considerable hand; Miss Bacon thinks, in the dramas produced by him, particularly in *Timon*. His works, and those of Bacon and others, are written throughout, so Miss Bacon avers, "in the language of a school."

"Our glorious Willy was," she says, "born in it, and knew no other speech. It was the 'Round Table,' at which Sir Philip Sidney presided, that his lurking meanings, his unspeakable nudacities, first set in a roar. It was there, in the keen encounter of those flashing *oil-combats*, that the weapons of great genius grew so fine. It was there where the young wits and scholars, fresh from their continental tours, full of the gallant Young England of their day,—the Mercutios, the Benedicts, the Brions, the Longuevilles,—came together fresh from the Court of Navarre, and smelling of the lore of their foreign *Academe*, or

hot from the battles of continental freedom; it was there, in those *réunions*, that our poet caught those gracious airs of his,—those delicate thick-flowering refinements,—those fine impalpable points of courtly breeding,—those aristocratic notions that haunt him every where. It was there that he picked up his various knowledge of men and manners, his acquaintance with foreign life, his bits of travelled wit that flash through all. It was there that he heard the clash of arms and the ocean-storm; and it was there that he learned *his old ward*. It was there, in the social collisions of that gay young time, with its bold overflowing humours that would not be shut in, that he first armed himself with those quips and puns and lurking conceits that crowd his earlier style so thickly,—those double and triple and quadruple meanings that stud so closely the lines of his dialogue in the plays that are clearly dated from that era,—the natural artifices of a time like that, when all those new volumes of utterance which the lips were ready to issue were forbidden on pain of death to be *extended*, must needs be crushed together, enfolded within themselves."

Such is Miss Bacon's theory of the origin of the Shaksperian dramas. In fairness, however, we must add the following:

"Of course it would be absurd, or it would involve the most profound ignorance of the history of literature in general, to claim that the principle of this invention had its origin here. It had already been in use, in recent and systematic use, in the intercourse of the scholars of the middle ages; and its origin is coeval with the origin of letters. The freemasonry of learning is old indeed. It runs its mountain-chain of signals through all the ages; and men whom times and kindreds have separated ascend from their week-day toil, and hold their sabbaths and synods on those heights. They whisper, and listen, and smile, and shake the head at one another; they laugh, and weep, and complain together; they sing their songs of victory in one key. That machinery is so fine that the scholar can catch across the ages the smile or the whisper which the contemporary tyranny had no instrument firm enough to suppress, or fine enough to detect."

Undoubtedly, in a high transcendental sense, there has always been a Spiritual Academe, a literary guild, of which all the sons of intellect have been brothers or fellows. And undoubtedly, in the Elizabethan period, as in the present, there was a unity in the spirit of the times of which all have partaken. There was an unmistakable purpose in the literature of the day, and the ends for which it worked were even those which have since become manifest in action and history. In such a high transcendental sense, a school exists now, did always, and ever will. But the mere materialism which would assert a corporate fellowship for the joint conception, execution, and publishing a new philosophy, a new literature, a new poetry, and a new drama, with the sublime purpose of delivering humanity from the mere "instincts" of barbarism into the "reason" of true civilisation, is, we think, a mystical fancy which cannot be thoroughly corroborated in fact. In another work, however, Miss Bacon promises to be ready with the historical evidences that shall connect Lord Bacon with this fanciful guild, and demonstrate *a posteriori* that the Shaksperian dramas were really his work for the most part; and that in them, and particularly in *Lear*, *Coriolanus*, *Julius Caesar*, and *Hamlet*, we are to discern the missing books of his *Great Instauration*. In the fourth part of this work, Lord Bacon promises that it should, or rather describes it as if it did, enter upon philosophy itself, furnishing examples of inquiry and investigation, according to our own method, in certain subjects of the noblest kind, but greatly differing from each other, that a specimen may be had of every sort.

"By these examples," he continues, "we mean not illustrations of rules and precepts, but perfect models, which will exemplify the Second Part of this work, and represent, as it were, to the eye the whole progress of the mind, and the continued structure and order of invention in the MORE CHOSEN SUBJECTS, after the same manner as globes and machines facilitate the more abstruse and subtle demonstrations in mathematics."

The design here proposed Miss Bacon sets about proving, by the most elaborate analysis, to have been methodically, scientifically, and philosophically realised in the

Shaksperian dramas. She rigidly applies Lord Verulam's Organum to it as a logical instrument, and drives the machine through the argument and treatment of each separate play. Minute points, hitherto unnoticed, grow under her hand into prodigious importance, and the larger or more obvious ones become literally titanic. And now it is that we begin to understand what Mr. Hawthorne means by speaking of this singular, and, at first sight, repulsive treatise as "the noblest tributary wreath" that was ever devoted to "the old tombstone." To the author of these divine dramas is attributed by this eloquent, enthusiastic, and somewhat too transcendental critic, all that belonged to Lord Bacon,—his learning, science, method of philosophy, and, in addition to all these sublime qualifications, the dramatic faculty, such as we find it displayed in the immortal Shaksperian works. If Shakspeare, and not Bacon, be their author, then is Shakspeare, by the whole firmament that encircles these unparalleled productions, a scholar, philosopher, poet, greater than this acknowledged prince of men—"the wisest, brightest, meanest of mankind." All the wisdom and brightness of Bacon, without any of his meanness, passes over, by logical necessity, to Shakspeare; and in him we have the highest and most complete example of human genius ever witnessed by the world.

It seems to this transatlantic lady the grossest absurdity that an author with such a purpose, and with such evident consciousness of the value of his works and the nature of fame, should have been so utterly indifferent, as Shakspeare is proved to have been, regarding their preservation. He took no pains to have the better portion of them published; died without seeing them in print, and without making any provision for their being printed; and during his life permitted his name to be placed on the title-pages of far meaner and very crude productions without a syllable of remonstrance, thus showing an utter carelessness as to what was or was not attributed to him. These meaner works, with two exceptions,—*Titus Andronicus* and *Pericles*,—are now excluded from the accepted volume of the Shaksperian dramas, as arbitrarily it appears to many as the others have been admitted. That there is some mystery in this state of circumstances must be conceded.

On the other hand, there are not a few who regard Shakspeare's negligence in all these respects as proofs of the divine unconsciousness of genius, and evidences of his inspiration. Here was a benefactor of his kind who, in his excelling benevolence, bestowed bounty on all and sundry as by spontaneous impulse and usual habit. And it must be conceded that this view of the poet's character is eminently attractive, and calculated to obtain a preference in a high order of minds, and is also not without sound philosophical reasons in its support.

Whichever theory we may adopt, the merit of the Shaksperian drama is not affected thereby; neither is the criticism which we find on it in this book. The first great review which Miss Bacon institutes relates to the philosophy of the tragedy of *Lear*. The Baconian points of view can be conveyed briefly, by being indicated technically, in the terms selected by herself. In it she has proposed to show "The Law of the Special and Respective Duties defined and illustrated in Tables of Presence and Absence." The reader, for the full explanation of these terms, must be referred to the *Great Instauration*, from which they are taken. The main argument may be more clearly apprehended from the titles of the chapters: 1. Philosophy in the Palace; 2. Unaccommodated Man; 3. The King and the Beggar; 4. The use of Eyes; 5. The Statesman's Notebook and the Play. On all these topics Miss Bacon's writing is both magniloquent and profound. She perceives, she tells us,

"A new and extraordinary treatment of the ethical principle in this play throughout,—one which the new, artistic, practical 'stand-point' here taken naturally suggested, but one which could have proceeded only from the inmost heart of the new

philosophy. It is just the kind of treatment which the proposal to introduce the Inductive Method of Inquiry into this department of the human practice inevitably involved. A disposition to go behind the ethical phenomena, to pursue the investigation to its scientific conclusion; a refusal to accept the facts which, to the unscientific observation, appear to be the ultimate ones; a refusal to accept the coarse, vague, spontaneous notions of the dark ages as the solution of these so essential phenomena, is every where betraying and declaring itself. Cordelia's agonised invocation and summons to the unpublished forces of nature, to be aidant and remediate to the good man's distress, is continually echoed by the poet, but with a broader application. It is not to the bodily malady and infirmity only; it is not that kind of madness only with which the poor king is afflicted in the later stages of the play which appears to him to need scientific treatment; it is not for the cure of these alone that he would upon his Prospero book, 'nature's infinite book of secrecy,' as he calls it in Mark Antony—"the true magic," as he calls it elsewhere—the book of the unpublished laws—the scientific book of 'KINDS'—the book of 'the historic laws'—'the book of God's power.'"

Into all the grandeur of the subject thus propounded we cannot enter. This citation must suffice. We must content ourselves also with simply referring to the extended social and political reasonings of the chapters devoted to *Coriolanus* and *Julius Cæsar*. They are too high, too deep, too broad, for mere cursory notice, and too voluminous withal for periodical columns. Enough that we direct the attention of the Shaksperian student to what is really profitable in a noticeable book, rather than to the professed theory of it, which the authoress herself acknowledges remains yet to be historically demonstrated.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

On the left of the grand entrance at Manchester, a gallery about four hundred feet in length contains the paintings of the ancient masters. There are upwards of a thousand pictures. They range in date from the age of Cimabue to that of Murillo,—from the thirteenth to the seventeenth century,—and include examples of every master who became famous during that prolific period. Mr. Scharf, to whose share the labour and the credit of their arrangement have fallen, has struck out a plan which is in itself one of the best features of the exhibition. He has hung the works of the southern and northern races on opposite walls. The genius of Italy stands face to face with that of her Germanic rivals. There is a challenge, and a fair field; we think there is a victory also. The Goths are once more at the gates of Rome.

The arrangement has been carried out very completely, so that pictures of about the same date are as nearly as possible opposite to one another throughout the gallery. Some exceptions have of course had to be made. Rubens, for example, facing Titian and Tintoretto; for the development of corresponding qualities in art has not always occurred in parallel lines on both sides of the Alps. Neither of the rival forces lacks any thing in the splendour and prowess of its leaders. The southern wall is held by Giotto, Angelico, Masaccio, Da Vinci, Michael Angelo, Raphael, Bartolommeo, Titian, Veronese, Correggio, Domenichino, Guido, and all their peers. Their assailants are Van Eyck, Memling, Matsys, Holbein, Durer, Mabuse, Rubens, Van Dyck, and Rembrandt; Snyders, Teniers, Wouverman, Cuyt, and the other great uncouth names of the German schools. To art in its present state, it is of the highest consequence that the contrast presented by these two rival lines should be correctly appreciated. There will be many opinions on the subject, and we are afraid the general verdict is likely to be the wrong one.

There are two legends, both favourite ones with the painters, which we shall relate here side by side. They illustrate a great deal of what we have to say.

St. Francis of Assisi, leading in his younger days a life, not vicious, but jovial, beheld one night a vision of armour, with the cross stamped upon each of the weapons of war. Believing himself summoned to battle, he became a soldier, till a second dream told him that his warfare must be with spiritual arms. He took the girdle and the cowl, abandoned the common walks of life, founded his famous order, and lived an ecstatic life of pilgrimage and poverty. Finally, for more perfect separation from the world, he went to a wild mountain in the Apennines, and received there, in the waste solitude, the reward granted to his penances and prayers. A crucified seraph appeared before his visionary eyes, stamped the marks of Christ's sufferings on his own wasted body, and left him entranced and beatified for the short remainder of his days.

St. Christopher, a giant of the land of Canaan, rioting in strength and vigour that seemed to have no bounds, be-thought him wilfully to seek the mightiest prince on the earth, and to serve him only. The fame of a great king, whom all nations feared, attracted him; but the king himself feared the devil, and Christopher left him to seek that Satan who was mightier than he. He found him easily, and served him well, till, behold, Satan trembled at the cross of Christ; and Christopher, astonished and offended, again set forth in search of this mightiest Lord. It was a long search, and an unsuccessful one; for the strong man would neither fast nor pray, and knew not yet how else to seek the Lord. But a hermit, hearing his desire and his history, sent him to a certain wild and rapid river, and bade him use his might in helping the poor travellers who had to cross the stream. The thought pleased Christopher. He made his dwelling by the river, and did good service there, working hard and bravely among the rough elements in the common highway. One night, the voice of a little child cried, "Christopher, carry me over." He put the child upon his shoulder, thinking this the lightest of his labours, and stepped into the stream. The wind rose, the waves broke round him; there was a tempest and darkness, and as he struggled forwards the burden he was carrying grew, from moment to moment, like the weight of mountains and of worlds. The brave strong fellow reached the opposite shore, still bearing the little child, but he was panting and astounded. Using his great strength for what appeared the smallest of the deeds of kindness, he had carried no other than Christ himself, and accomplished the greatest work that could be achieved by man.

Now, in comparing the works of the two great schools of art which Manchester has brought into such striking contrast, there is no doubt whatever that in the conception of grace and beauty in ideal forms the Italian painters are at present quite unequalled. There are no such mazes of lovely and noble lines, such floods of supernatural light, such refined and perfect harmonies of thought and feeling, on the opposite wall. But in solid strength, in sympathy with existing nature and actual life, in those qualities essential to continued and unlimited growth, and partaking, therefore, most truly of inherent immortality, the genius of the North shows as distinct a supremacy, and is to be regarded, we conceive, on that account as the nobler of the two.

Look at the great southern masters as a whole. The beauty of their works is the beauty of ecstatic imagination, conceiving things possible in the abstract, but with no true relation to the material world or the real conditions of human existence. The artist's soul is, as it were, disembodied, and sees ethereal visions, not on the solid and peopled earth, but in an otherwise empty sphere. They are visions of wondrous beauty, but it is the beauty of sentiment rather than of life; it represents the statics of emotion rather than its dynamics; it gives us ideal beings who, having a definite culminating point in their own nature, have attained it, and are so

far perfect; not beings with immortality before them and the power of endless progress towards an infinite perfection.

When man puts asunder what God has joined he is pretty sure to be a loser by it. We have not been made for disembodiment; we are made incarnate, and to put the positive realities of material life away from us, is to break a union necessary from the beginning to the best health of our souls.

There is a boundary-line to the excellence of all transcendental work, and it is reached pretty quickly. In looking at a single picture, or an ordinary gallery, this fact is not perceived; but it bursts out suddenly from such a summary of art as is found on Mr. Scharf's southern wall. We feel at once how beautiful and how limited is pure idealism. The abstract forms once arrived at, all is done; what follows can be only repetition. There is no source of perpetual variety and unbounded scope except in the study of true human life,—not in itself only, but in all its relations,—and the constant reference of our inward visions to a fitting place among the facts of the outer world.

Now it is an adherence to, and a natural sympathy with, that human life and that outer world, not as man could imagine them, but as God has made them, that gives its most striking characteristic to northern art. The Italian clothes his ideas in images of his own; the German, in the visible things around him. The one withdraws, like a monk, from the common elements of humanity; the other finds his daily work among them and upon them. The first is a St. Francis in the desert; the second a St. Christopher in the stream. Like St. Francis, the Italian has received the stigmata, and been lifted into a trance of glory; but it is the German giant on whose shoulders, one day or other, the noblest burden is to be borne.

There are four pictures whose striking individuality throws them out from among the rest in the first division of this ancient gallery. They are, the "Last Judgment," by Angelico, the "Riposo" of Bartolommeo, Van Eyck's great altar-piece, and Mabuse's "Adoration of the Kings." They are all masterpieces; they represent the same periods in either school; they illustrate precisely the essential difference between the southern and northern spirit; and in order to prove what we have been saying, we shall examine each of them separately, and the whole four in contrast with one another. Those who feel bewildered and overwhelmed, as thousands will do, on first entering this hall of wonders, can do nothing better than begin with these four great works, and stand before them till they know them by heart. Curiously enough, and characteristically, the two Italians were monks; their rivals, men of ordinary life, with whom painting was a profession. The work of Bartolommeo is perhaps surpassed in excellence by others hanging near it; but its size and the beauty of its colouring make it more noticeable; and if Italian art might in some respects be better represented, it must be remembered that on the other side the Van Eyck unfortunately is only a copy by an unknown hand.

"THE MENDICANT," AND "AUDACITY."

By STRAZZA, OF MILAN.

THESE statues, of which there are casts in the Crystal Palace, are fair specimens of the celebrated artist's attempts to introduce realism in sculpture; a task of no small difficulty, because, doing so, he has not only to contend against the whole weight of tradition and that habit which is said to be stronger than nature, but really to invent a new thing, as it were, taking out of common, and what is foolishly called "vulgar" life, the elementary forms which shall

THE MENDICANT. BY STRAZZA, OF MILAN.

be dignified in themselves or interesting to us. How far success has been the reward of this effort the reader will judge from the engravings before him. The first appears to us perfectly to suggest its subject, even without the title, of course under the obvious and general objection (to which all modern nude sculpture is liable) that the figure loses the expression of extreme poverty from the simple fact of its nudity; the attitude being that of a person habituated to that condition, and one whom we should no more think of commiserating on that account than we should a negro in his own country. The appeal is thus weakened.

The other figure, which is entitled "Audacity," represents an Italian youth—present at some revolutionary siege maybe—preventing the explosion of a shell which has fallen near him; an act which has always been considered as amongst the bravest of brave deeds, and for which one of our own naval officers was promoted while on service in the Baltic. The design suggests the natural shrinking together of a man desirous of exposing as little as possible of his body to the expected danger. More perfectly fulfilling its conditions, this latter we consider the more perfect work.

We shall take another and early occasion to engrave this statue also.

L. L.

A STORY OF A HAUNTED HOUSE.

BY HOLME LEE, AUTHOR OF "GILBERT MASSENGER," ETC.
IN TWELVE CHAPTERS.

IV.—THE WILD WHITE ROSE.

ONE bright July morning,—it was Adie's birthday, and she was seventeen years old,—Nicholas Drew was hard at work on a new plate of "St. Servin's Abbey," a ruin near the river, while the young girl was chirping a little French song, when a stranger appeared in the court below, and was heard to ask if Drew, the engraver, lived there. One of the children pointed to the stairs, and the individual ascended and came in. Nicholas took off his spectacles, and pushed a chair over to the visitor, whom he supposed to be one of those curious persons who were in the habit of coming to see his pictures, and of going away without purchasing any. His action was not very courteous, for he begrudged sorely the time taken from his work. The young man quickly undeceived him, however, by stating that he was himself an engraver on wood, and that he wished to learn the art of etching on copper from Nicholas, of whose skill he had heard in London, through a dealer in prints who possessed some of his works. Flattered and gratified that a pupil from so great a distance had been attracted to Eversley by the reputation of his genius, the old man gave him a cordial

welcome, and promised to render him the instruction he required.

They sat conversing together a long time about their art, and Adie, with a bit of work for appearance-sake, drew near to listen. The stranger—Laurence Royston was his name—had taken a seat with his back to the doorway, and though apparently quite intent on all Nicholas said, he still had time to steal many glances at the bright face by the old man's shoulder. At first sight Royston's countenance struck you as handsome; at the second, it pleased less; and at the third, its cold flickering eye and sinister mouth were the most prominent traits. His features were clear but sharp; his forehead high, bony, and pale, with tawny hair—golden, as the sun shone through it where he sat—waving loosely above it. His figure was tall, but slenderly built, and clad in a long olive coat with much embroidery on the seams and flaps. In his left hand, the thin fingers of which opened and contracted with a nervous movement, he held a wild white rose—gathered, perhaps, at the roadside as he came to the town, for he said that his lodging was at Crossley, a village two miles off; his right hand he kept buried in the breast of his waistcoat. But his voice was the most peculiar thing about him,—a false voice it might be called; for though clear and softly modulated as a flute, it did not seem to come direct from the well of his thoughts, but to make many subtle turns by the way, lest it should express too much.

Adie, moved by curiosity, tried more than once to get a fair look at the stranger's face, but she was always baffled by meeting his eye the moment she lifted hers from her needle; being caught in the fact, she blushed, and he involuntarily smiled, at which she blushed the more, and finally got up and changed her seat for one by the further window. Laurence Royston, as if to avoid the hot sunshine, immediately twisted his chair round, by which, without its appearing intentional, he still faced her, and thus checked her scrutiny. Adie seemed not to observe his movement; but he saw by the quivering of her lips and the dancing radiance in her eyes that she was laughing to herself; and secretly annoyed at such mirth where he would rather have made a grave impression, he said to Nicholas, "Your daughter is not used to so much solemn discourse, I think, Master Drew. She looks any thing but well entertained."

The engraver lifted up his shrewd face, and glanced at Adie. "If you are tired of our talk, child, get away to your birds or your flowers," said he gently. "I dare say it is often dull for her up here in Nevil's Court, sir; but she pretends she likes it for my sake."

"I am not dull any where; you ought to know I am not, Grizzie," retorted Adie, coming quickly behind the old man, and standing by him with her hand on his shoulder. "I am as happy as the summer-day is long, and all through you. I was laughing just now at my own thoughts: my thoughts are strange sometimes, so strange; they make me laugh whether I would or no."

"This white rose for the fancy that made you smile by the window five minutes ago," cried Laurence Royston, offering the flower. Adie blushed and hesitated.

"What was it, child?" asked Nicholas; "some mischievous freak either planned or remembered?"

"Neither, Grizzie; it was—No, I cannot tell you what it was." She glanced with some confusion at the stranger, and would have moved away, but Nicholas held her fast by the arm, and demanded what she meant by calling him "Grizzie" so irreverently before visitors. She gave him the gentlest possible pull by the beard, and ran off laughing saucily. The old man shook his head, and made a sort of half-apology for Adie's wildness, and then resumed his discourse about his art, which Laurence Royston found infinitely less interesting than before. He could not help wondering where the girl was gone, and whether she would return before he went away. His eyes turned frequently to the inner door by which she had escaped, and he put off his departure from moment to moment until another hour had

elapsed. He then rose to go in earnest; and while Nicholas and he were exchanging last words, the quick step and lilt-ing voice of Adie made themselves heard. She came in, evidently expecting that the stranger had left; for she cried, "I've found it, Grizzie—found it, after such a rummage!" then stopped short, with a scarlet blush dyeing her face to its very brow. She carried in her two hands a large engraving outspread, at which Nicholas looked up in bewilderment.

"What is it, child? Let me see," said he curiously, while Laurence Royston stood by the door with a peculiar smile on his face, as if he experienced a vindictive pleasure in her confusion. With great and visible reluctance, Adie came forward to the table, and threw the picture upon it, glancing with a timid half-defiance at the stranger as she did so. Nicholas drew the engraving towards him: it was "Satan playing with Man for his Soul."

"Well, what does it mean?" asked the old man, much puzzled.

"Do you not perceive your daughter's drift, Master Drew?" said Royston quietly, so quietly that Adie knew some sentiment was being strongly held in check. "She has a quick eye for a resemblance: she likens me in her mind to that unhappy man."

"Ah, I see it now," responded Nicholas, in a musing tone. "What expression in the face! He is meditating how he shall outwit his adversary and win the game, though it is going hard against him. Satan exults already; he knows the stake, once risked, is his."

They all three examined the picture for several minutes in silence. Its effect on each was different: Nicholas eyed it with critical appreciation of the genius which had infused such depth and mingling of expressions into the artist's work; Royston gazed at it with a look, first of cynical indifference, then of gravity, then of melancholy earnestness.

"It is a lost soul from the first move," said he, in a tone that caused Adie to lift her eyes from the picture to him,— "yes, little girl, a lost soul from the first move," he repeated more gently. "There is no redeeming angel at the man's elbow; only two fiends grinning their triumph in their master's success. I don't see how the adversary is to be foiled; do you?"

The girl pondered a few seconds, and then made answer, with a certain regretful strain in her voice,

"No; good thoughts are all gone out of his mind. Fear and shilly-shally alone possess him; and the fear is greatest."

"Then you think good thoughts may have once lived in him?" asked Royston gravely.

"Yes. No one is unmix'd evil. Satan himself was a pure spirit once; he may have his lingering regrets—who knows?"

"He fell through ambition and pride, which are princely sins. What is this man's temptation?" pointing to the figure in the picture.

"The greed of gain, the meanest and basest of all," answered Adie, resting her finger on the piles of coin represented as heaped up before Satan.

Laurence Royston drew a deep breath, and was silent; Nicholas rolled the picture up, and pushed it from him.

"Take it away, Adie; take it away; we have had enough of it," said he. "It is an uncomfortable picture. What induced you to bring it out? There, carry it off, and put it carefully into the folio again."

The young girl obeyed, and when she returned to the room Royston was gone.

There was at this time living with Nicholas Drew and Adie a middle-aged woman who acted as a servant. She was called Martha, and was of a decent appearance, but moody countenance. Mrs. Parkes held her in especial disfavour, averring that Nicholas had picked her up in the streets: she was indeed the person he had met and relieved in the Barbican on the very night that Adie was taken into his house. It is needless to enter into her antecedents, to

condemn her or to exculpate. Nothing of her history was known except to her master, and could only be guessed by her scrupulous avoidance of the pure young girl with whom she shared the charitable shelter of Nicholas Drew's roof. If possible, she would not meet her; and if compelled to speak, what she had to say was couched in the fewest words. The engraver acquiesced in this reserve: his flower must not be sullied by one evil thought. Martha from her kitchen-window had seen Laurence Royston come and go. She had a singular habit of watching furtively, and garnering things up in her mind; for what purpose it would be hard to say, as she never spoke of them afterwards;—perhaps it was to mark their issues, and to feed her morbid craving for excitement by deducing remote possibilities from small beginnings. The first time she went into the room where her master and Adie were after Royston was gone, she examined the girl's face narrowly, and traced there a certain anxiety which was strange to its expression; what did it portend? While Martha was there, she began to sing again broken snatches of her merry songs, and throwing off the troubled thought, whatever it might be, resumed her natural easy gaiety. Martha thought she had caught the first slight thread of the web, and went away to brood upon it and wind laboriously through its meshes at her after-leisure. She could not see yet whether it would be smooth of all pestered with knots and tangles, as so many are. She liked the girl, and wished her well for her master's sake, otherwise her saucy gaiety and instinctive pride would have jarred harshly with her own unstrung being.

When Laurence Royston descended the outside stairway into the court he dropped the wild rose that he had carried in his hands upon the second step, where it lay unnoticed until after noon. Adie was standing at the window idle, when she saw it; for a minute or so, she looked at it through dreamy listless eyes, then went out and picked it up. Martha observed the trivial action, and added another loop to the web. The poor little flower was soiled and crushed, its stalk broken, its leaves fallen, its scent almost gone.

"He threw it away," said Adie to herself, "and I think it is no better worth either." She whirled it from the window and it fell into the court below. "Now Grizzie would say that was wanton mischief," she went on musingly; "he would not have any thing of God's making treated with disrespect. That is a strange fancy of his, that the flowers feel, that they are susceptible of pleasure and pain. It may be so; they lift up their heads to the sunshine, they drink the dew and grow and bloom and give forth sweet odours,—their incense of prayer, their act of worship and thanksgiving; then they pine and die in unkindly frosts. If Grizzie be right, and I am inclined to think that he is, how that miserable little wild rose must feel its degradation, lying there in the dust to be trampled by any careless foot; this morning at dawn it was in some fresh green hedgerow, with hundreds of others that are blooming there still! I will go and rescue it."

Down she went, tripping noiselessly as a shadow, and taking the sullied flower once more into her hand, but this time with a certain tenderness of gesture, returned with it to the engraver's room. Martha riveted a new knot on her thread. Nicholas was all the while diligently absorbed in his work, and gave no heed to what was passing; besides, Adie was accustomed to utter her thoughts aloud without expecting any reply. She now came near him, and leant over his shoulder to watch him, as she often did; but finding that he was too deeply occupied to notice her, she sauntered to her chamber where were her birds and plants. She spent some time chirping to the linnets, putting up her ripe red lips for them to peck at, and teasing them with the wild rose, which she struck gently against the bars of their cage. Wearying of such idleness at last, she breathed a little tired sigh, and looked at the broken flower. "What am I to do with you now I have taken you out of the dust?" she said, as if she was speaking to a living thing. "You are too ugly to wear, too faded to put in a glass of water, for you will

never revive again; lie there till you become unsightly as a weed, and then Martha will throw you away perhaps." She laid it down by her looking-glass on the table before the window for that time; but at night, finding it still in the same place, she put it within a drawer amongst her few other treasures, where it stayed and was forgotten.

V.—THE OAK-CLOSET.

In that large room where Nicholas Drew always worked there was a closet, lighted by a very small window that looked, not into Nevill's Court, but into an old-fashioned luxuriant garden which lay behind the ancient bishop's palace. This closet was shut in by two elaborately-carved doors of black oak, further ornamented by tarnished brass knobs. Adie had never seen more of the interior of this closet than that it contained a rude table and chair, and a cabinet of great antiquity; the window was darkened with a veil of smoke and dust as impervious to sunshine as the thickest curtain, and a general air of gloomy mystery pervaded the whole aspect of it. Nicholas rarely entered it; and when he did so, he remained shut up there for hours, and always came out saddened and depressed, as if he had been keeping a solemn vigil, or airing painful remembrances, or perhaps experiencing some renewed agony of remorse. Adie regarded it as a haunted place, and had no curiosity to spy into its secrets; not so Martha. She had a burning desire to know what was hidden behind those closed doors; for she did not give heed to the popular idea that Nicholas Drew was a miser, and kept his money in an iron-chest. She believed rather that he laid his treasure up where it would accumulate at compound interest until his day of doom; and in that, doubtless, Martha was right. On the evening of the day of Laurence Royston's first visit, her master was shut up in the closet a couple of hours, while Adie, alone in the room, had much ado to keep herself out of mischief. Martha went in and out several times on various pretences; but Adie, who was sitting by the doorway, and watching the children at play in the court below, paid no attention to her black gliding figure.

At last, towards sunset, the old man came out from his retreat, and would have resumed his work, but the girl asked him to take a walk with her. He acceded readily, and they went together to the river-side. This was a favourite resort for the towns-folk after the day's business was over; for they soon escaped from the dust and heat of the city into rural shades and sweet-smelling meadows. There were consequently many people abroad, enjoying the cool of the evening and the pleasant sounds of country-places. Marsh, the printseller in the Barbican, with his hat set very far back upon his head, met them, and turned to have a chat with Nicholas. It was not possible that Adie should be insensible to the many eyes that looked and looked again at the lovely face under her broad coquettish straw-hat; it was a familiar face to most people who took their pleasure at this time of day, but custom stole nothing from its beauty. Marsh himself, though generally chary of his words, always had some pretty compliment at her service, which, it is to be feared, the maiden did not appreciate at the same value it would have had if issued from younger lips, or concocted beneath a less scant and hoary pate; for she only favoured him with short replies, and pouted scornfully when he called her Rosebud, May-dew, and the like. They also encountered St. Darbe, still obtrusively polite, but looking a solitary, old, well-to-do man; for death had disencumbered him of his wife and family. He always told Nicholas Drew now that he envied him the possession of Adie. "But who," he would add,—"who could foresee that of all his children not one would be left to him?" The Frenchman spoke, and passed on, but looked back often at the tall lithe figure quietly pacing along with Nicholas: he had been over-prudent certainly, or she might have been his companion instead, he thought. It was a calm, almost breathless, evening, but now the sun was gone the air was cool; a few red bars crossed the west, supported by broad masses of purple cloud;

the low meadows by the river-side had just been mown, and the fresh hay gave out its pleasant healthy scent. Many persons, young men especially, were resting on the ground where it lay, some smoking, some talking, others enjoying the luxury of perfect idleness. Amongst the last, Adie was the first to descry Laurence Royston. He sat apart from the rest, with a great shaggy water-dog coiled up on the grass beside him. The animal had been in the river, and had run past Adie some time since, bestowing on her dress a plentiful sprinkling in his transit. Laurence Royston had seen this; and as Adie, with Nicholas Drew and the print-seller, approached, he rose and offered an apology for his companion's misconduct. The next most natural thing to do was to join their party, and, walking beside Adie, to talk to her of the beauty of the evening, and the still loveliness of the twilight prospect,—at least he appeared to think so, for this was what he did.

"When the moon rises it is more beautiful still," remarked Adie, looking towards the city, that is, towards the Minster.

"I do not like moonlight, it is so chilling, so pale; I have an antipathy to moonlight," said Royston quickly. Adie seemed surprised.

"You are going to ask me whence rises my antipathy. Well, I cannot tell you," added he; "it is one of those indescribable feelings which afflict some people to the utter bewilderment of every body else. They reiterate their why, why, when, if they would only take the trouble to look at home, they would remember, most probably, that they have themselves some dislike or loathing equally unreasonable."

Adie smiled, and a half-blush suffused her cheek, though it was becoming almost too dusk to see it; for she recollected some very strong but groundless enmities of her own.

"Have you balanced the account in your mind, and freed me from your first sentence of bad taste or foolishness?" asked Royston quietly.

Instead of replying, Adie started a little to one side, then walked on rapidly in advance. Laurence Royston paused to see what had caused this movement, and observed a great toad crawling heavily under the hedge. He came quickly up to her again, when she turned, and said:

"Those cold-blooded creeping things make me thrill; I cannot bear them."

"Yet they are harmless; and the moonlight makes me thrill too. I always exclude it from my rooms. If it shines upon my face when I am sleeping, I have bad dreams. My adversary, in the picture you wot of, tempts me with some splendid prize to do evil deeds; or I am falling, falling, always falling over a precipice; or on water churned into white foam with fury, and only a plank between me and death; or I am destroying what I most love, and cursing myself as I do it."

The two, who had outwalked Nicholas and the print-dealer, were now summoned to return; and they all four sauntered slowly in company towards the city. Long before they reached it the moon was up, and the water rippled all white in its cold light, while the clouds and the ruins of St. Servin's Abbey, and the Minster towers beyond, high up in the clear atmosphere, looked larger and ghostlier in its shimmering radiance. The young stranger had been silent for some minutes, when Adie asked archly if the Tempter were discoursing with him then.

"No; I was holding a parley with my better angel," was the reply. "He has not forsaken me quite; he is glad to find me in such good company."

Adie spoke no more after that until they stopped by the Minster-gates to say good night to Marsh, who parted from them there. She then asked if he should go back to his lodging at Crossley by the fields. No, he answered, he had decided to remain in the town, and had found other rooms more convenient for his business than those so far off. Nicholas, overhearing this, invited him to return and sup with them, as, being a stranger, he could not yet have many

friends. Royston acceded; and they crossed the Minster yard as the great clock struck ten. The court was extremely hushed when they entered it, for all the early work-people were quiet in their rooms. Coming from the dark College Lane, it seemed quite light, almost as if snow lay on the flags and steps. They stopped a few minutes to notice the fine effect of the quaintly-ornamented house in the moonshine, and then mounted the stairway one by one. Martha admitted them in her taciturn, down-looking, yet observant way. She had been on the watch for her master's return some time, and hearing Royston's voice down in the court, had hastened to open the door, while she knitted a few more loops of the web. An oil-lamp burnt on the table in the centre of the room, but it scarcely threw out light enough to fill its dusky corners; for it was a spacious apartment, and had many little niches and recesses. Through the uncurtained windows the slanting moonbeams streamed down on the ledges and floor, but faded as they came within the circle of the lamp. The further side of the room, where the oak-closet was, and the disused door which opened upon the common staircase of the house, lay all in shadow, except when one of the metal knobs on the panels twinkled like an inquisitive eye in the gloom. In taking his seat, Royston faced this part of the room; and some inconsequential remark of his led Nicholas to say there was no egress by that way, for he had bolted the door up so many years ago that rust must long since have riveted it fast.

"There is a long passage just outside, which the people say is haunted," observed Adie, smiling. "It is haunted by footsteps; nothing is to be seen."

"I should imagine not," replied Royston, with a curious laugh. "But pray what sort of footsteps are they,—light and tripping, or with the orthodox tramp, tramp? I confess that it has always puzzled me why a ghost should have such solidity of step, when it is but an airy nothing. Describe this hapless soul's march; I should like to hear it, never having been so favoured."

"It is very slow and solemn, as of a person walking while he meditates, quite regular and never pausing. It only comes occasionally, in the dead of winter-nights; at no other time. Mrs. Parkes has heard it, but I never have; Grizzie has too."

"Yes; I have heard strange sounds in this old house," added Nicholas gravely; for his mind was deeply tintured with superstition, and he did not like to hear these mysterious matters lightly spoken of. "I believe that was the real reason why I closed up the door, though I tried to persuade myself at the time it was because of the children's noise and rudeness."

"And what is the second door, the double one? does that also open on the corridor?" asked Royston.

"O, no; that is the closet where Grizzie keeps his treasures!" cried Adie, laughing; "even I have never been in there. It is the ghost's quarters perhaps. Grizzie, what is the legend of the footsteps; do you know?"

The old engraver appeared somewhat annoyed at her abruptness.

"In that closet there is nothing that you or any one else would style treasures," said he; "but the footsteps appear to issue from it. The story goes that two brothers lived here formerly, who had united in the commission of a murder—the murder of a priest. The elder, to save himself, when the chase was hot after them, denounced his brother as the sole culprit, and betrayed where he might be taken, namely, in that oak-closet; where, after the commission of the crime, he had hidden himself with his remorse. He himself paced the corridor, waiting for the people who were coming to seize his brother. The younger suffered death, and the elder walks there still, and will walk, probably, so long as Nevil's Court remains."

Laurence Royston smiled at the old man's credulity. "I have small faith in such legends myself," said he; "but they assort well with the gloom and antiquity of these middle-age abodes. Indeed, they would scarcely be complete

without their ghost. I should like to see the inside of that oak-closet."

Adie expected to hear Nicholas refuse; but instead, he bade Royston bring the lamp, and he should be gratified. The doors being unlocked and thrown open, they all three stood within. The atmosphere was heated and airless; dust lay every where thickly, except on the old table and chair where the engraver had probably sat during the time he was shut up there in the evening. Spiders' webs festooned even the frames of these, and were woven in every available nook.

A mark as of fingers over the lock of the ancient cabinet attracted Royston's notice. "This is a fine piece of old workmanship; I never saw any thing of the kind richer or more elaborate," he observed. "Does the interior correspond in beauty with the outside?"

"Yes; the drawers are inlaid with ivory," replied Nicholas; but he made no further movement to gratify his guest's curiosity.

"It is a remarkable looking cabinet," said Royston, lingering before it still.

"You are right; it belonged to those miserable brothers, and contained proofs of their guilt when the one was taken. The footsteps start from it, and go down the corridor and back again."

"O, Grizzie, and do you keep your treasures in this wicked old cabinet?" asked Adie, half alarmed yet half laughing. "You will find them changed into withered leaves and gray dust some day."

"They are no better than dust now," replied Nicholas. "Come out, you have seen enough."

Royston was standing at the window, from which he had contrived to rub a little of the accumulated dirt. He saw that it looked upon a garden, and asked whose it was, and if Adie ever walked there.

"No; it belongs to the people who live in the old palace," said she, passing from the closet into the room.

Nicholas had to stand two or three minutes before his guest followed her, and then the door was reclosed and locked. As he was returning the key to his pocket, Royston asked to look at it. It was a very curious, heavy, rude implement, eaten with rust in round spots, as if blood had fallen upon it.

"It is strong enough to keep out a legion of ghosts," said he, weighing it in his hand. "They do not make keys like this now-a-days; it seems as if it had been formed to lock in deadly secrets on which hung men's lives. I can imagine many a plot having been hatched behind those ancient doors, while this key was tightly held in nervous fingers; but it tells no tales."

As he spoke the Minster clock struck eleven, and Martha entered to bolt the door for the night. Seeing Royston still there, she would have retired, but her master bade her stop. "You must go now," he added, addressing the young man.

"We keep early hours in the court. Go gently." Royston descended the creaking steps, and paused at the last to repeat his "Good night," which Adie echoed pleasantly as she stood at the doorway with Nicholas.

"Beware the fiend!" cried she, as he walked towards the gateway. "Say your prayers as you cross the Minster gardens; it is broad moonlight still." He turned round, laughing, and promised to obey; then disappeared under the shadow of the arch.

POLYGLOT READINGS IN PROVERBS.

THE FAIRER THE HOSTESS, THE POULER THE RECKONING. "A handsome hostess is a bad thing for the purse" (French), — *Belle hôteesse c'est un mal pour la bourse*; for this among other reasons, that "If the hostess is fair, the wine too is fair" (German), — *Ist die Wirthin schön, ist auch die wein schön*.
W. K. KELLY.

CANARIES AND THE BREEDING-SEASON.

The time has now arrived when a few practical instructions for Bird-breeding may be received with favour; indeed, we have been reminded of a given promise to resume the subject, in our former paper on the Canary.

If your birds be not already "paired," no time should now be lost in bringing them together. Select handsome *jonque* male-birds; and let the hens be of a pale yellow, or mealy colour. Both birds should be at least a year old; strong, healthy, and vigorous. Place them, first, in separate cages near each other; gradually diminish the distance, and in two or three days they will be "mated."

The next step will be to procure a breeding-cage. These are to be had of any dealer in birds. As regards the size, the larger the better. You cannot give your birds too much space, nor admit too much air. All must, however, depend on the height of the room in which they are to be kept; for the cage is to be suspended at least six feet from the floor.

See that the cage be provided with nest-boxes, water-glasses, tin pans, &c. &c., all complete; and having procured two nest-bags, scald them thoroughly to destroy the indwelling vermin. When quite dry, hang them (externally) on the front wires of the cage.

The birds may now be turned into their new habitation; and they will perfectly comprehend the nature of the provision that has been made for them and their future offspring. Hang them in a quiet corner; repress all prying curiosity; and you will very soon be rewarded by seeing her little ladyship commence "sitting."

Never attempt to peep into the nest, either while it is in the course of construction, or when there are eggs in it. Nature hates any interference of this kind. Only be patient, and wait thirteen days; you will then have a new part to play.

On the morning of the thirteenth day after sitting, you must have ready some scalded rape-seed, a piece of stale French roll dipped in cold water, and afterwards well squeezed, and some yolk of a fresh egg, boiled hard. This should be well mixed, and formed into a moderately-soft paste. Supply it in a small saucer. It should be made fresh twice daily. If allowed to be in the slightest degree sour, it would kill all the nestlings.

Sometimes the mother feeds the young; but more generally this tender task is undertaken by the papa, who considers it a pleasing duty.

Should any eggs remain unhatched after the hen has sat fourteen days, they may be at once removed. No doubt they are unfruitful.

Be very careful to supply the inmates of the cage, during incubation, with ripe chickweed, groundsel, &c; also with plenty of small pebbly gravel, mixed with old (bruised) mortar. Clean water, too, should be given twice daily, and occasionally bread and egg.

Sometimes the parents will neglect their children, and refuse to feed them. In such cases you must interfere; removing them in the nest, and feeding them by hand. This is easily managed by the aid of a short pointed stick, at the end of which place some of the food, and drop it into the birds' open mouths. This should be done every hour, assuming that the nestlings are about a week old when they are removed. Administer water, by letting it drip from the end of your little finger.

To encourage them to feed themselves, present the end of the stick to them with the food on it. They will prove

very apt scholars, and quickly "learn the way to their mouths."

Never remove any young birds from their parents (when they are fed by them) until they are five weeks old; and take special care not to change their food too soon. Continue to feed with egg and bread, in addition to seed, till they are two months old.

Cage them off separately at this age, and let their dwelling be light and cheerful. They will soon "record" their song, and amply repay you for all your past trouble. Give them each a bath daily, also a flight in a spare room if practicable.

By putting up birds of different colours, some very pretty varieties may be obtained. The colour in no way interferes with the song.

WILLIAM KIDD.

EASY PLEASURES.

THE cause of Duty *versus* Pleasure has been continually before the world ever since it was a world, and Adam the first defendant; the pleasure of duty is warmly insisted on, and, to the credit of our human nature, cordially allowed; but is the duty of pleasure allotted its honourable place among its fellow-duties, and sufficiently recognised by the community? The community we speak of does not, of course, include that portion who, walking arm-in-arm with Pleasure, meet Duty in their path, regard him with fashionable shortsightedness through a mental eyeglass, and won't see him, though beneath their very eyes; but the world of work, the world of anxiety, misfortune, and poverty, who, though bitterly alive to this neglect of their daily companion, themselves strain their weary eyes after a distant shadow, and give Pleasure the cut direct, even while he brushes their very skirts in passing.

Somehow we hard-working people are a little ashamed of such an acquaintance; he looks so bright and well dressed, that we feel ourselves to be shabby; we think he belongs to another class, and that we have no right to claim his acquaintance. But really we do him wrong; he is the simplest fellow, and is never so thoroughly himself as when, discarding all ceremony, he strolls with us through the fields, runs races with the children, or, in the unrestrained luxury of shirt-sleeves, rolls them, shouting with laughter, among the huycocks.

Your man of business regards him with still greater distrust. In his eyes he is a fine gentleman, a dandy, a silly fellow, not to be tolerated a moment by a man of sense. Nevertheless, Man of sense (for of course by that epithet you would indicate yourself), give Pleasure a trial, extend to him a cordial invitation to drop in after office-hours. He is an inexpensive guest; he wants no display, no costly wines,—indeed, they don't at all agree with him; and you will be surprised, after enjoying a chat together, to find how much keener are your perceptions, how much clearer and more expansive your views, and even how much stronger is the sense of which you are so justly proud.

Others, again,—mostly those depressed by care and anxiety,—are nervously shy of Pleasure. They knew him, perhaps, once, but it is so long ago. He has forgotten them; and for themselves, they cannot bear strangers. So they slip on one side, and hide till he has passed. Yet it may happen sometimes that he perceives them; he stretches out his hand,—they cannot avoid him, or withhold their own,—till, filled with the strength imparted by his cordial grasp, warmed by the reflected glow of old times the sight of him has recalled, they return with a step lighter than they ever thought again to tread with, and re-enter the dreary home, bringing something of the light from his honest eyes to brighten its dark and dingy walls.

Truly he is a good fellow, this Pleasure, and deserves a better character than we accord him. Let us consider, then, a little in detail, how to gather what lies so often unnoticed under our very hands—easy pleasures, the hedge-flowers that embellish the dusty roadside of our every-day life.

Pleasures, to be easy, must in many cases be attained quickly, in many more they must be attained cheaply.

You, tired hard-working clerk, who, during the bright spring or sultry summer evening, bitterly complain, in your close parlour, that there is no pleasure, no summer for you,—you who, having partaken without appetite of the meal that awaited your coming, now prepare to sit leaning your tired head on your shaking hand, and gaze through the open window on the dull dusty street, what are you going to do with your evening, the only fragment of the day that is your own? Be honest and fair-dealing with yourself. You work all day in the office of your employer, you study his interest, you would not rob him of a farthing, you would not waste a fraction of his substance were it ten times as great. Very good. You are a painstaking, honest, invaluable clerk; you know it, and are proud of it. But you put on your hat, and go home a totally changed character. There you find a man whose best treasure has been given into your keeping, and for which you are accountable. This man you defraud without remorse in every way. You waste unscrupulously the golden opportunities that would have repaid him with interest; you rob him of his birth-right; you would starve his craving instincts that cry aloud for food. Here you have no conscience. But you cannot kill them; their voice is loud in your heart at this moment. Rouse yourself, then. You say you are weary in mind and body; but this torpor is not rest. Call your wife and your children; it is but six o'clock, and the evenings are now light till nine. Those railway-screams and puffing engines that your throbbing head has made you so often anathematise,—you don't know them; they are calling you, they are among your best friends. You are just in time to catch the train. For your tickets you pay threepence each, while the two little ones count as one. (Mamma, though gratified in her capacity as housekeeper, is yet somewhat indignant that the dear children, who are all to her, should be each carelessly stigmatised as "only a half.") A whistle, a rush through the dark tunnel, which affords an excuse to the timid little wife to steal a hand in yours, and on emerging you see already the green fields,—London-like fields, to be sure, with skeleton-houses rising gauntly upon them, but with glimpses of something better beyond.

The train stops; this is Kilburn station. Here you descend; and plunging manfully down a narrow and unprepossessing alley, in less than ten minutes your back is to the chimney-pots, you are in a winding country-lane, the hedges on either side with their spring-green still bright. Here is a large white gate ajar. Go through. We are afraid it is trespassing; but they shouldn't have left the gate open; besides, the little people are in already, and half-way down the broad slope with the great beech-tree in the middle. You are off after them; you can't resist it; and at the bottom there is such a fine hollow, with a talkative little stream, and all the spring wild flowers dipping down into it. What a handful you get, and are just arranging them with the broad green leaves round, when down, without warning, comes a pelting shower! A shelter under this hedge will hold you all, and you can safely watch the "big rain" and hear it pattering upon the leaves overhead—one of the most beautiful sounds in nature. It is over, however, almost as quickly as it came, and the great black cloud serves but to make the finer sunset. How that thrush is singing after the rain; how the grass, the leaves, the flowers, seem to take it up; and how your heart involuntarily joins in the thanksgiving chorus!

But it is now growing twilight, and the last train will pass shortly. Here is the station again. Five minutes brought you; five minutes takes you home. You have expended one-and-sixpence; and what have you got in return? Answer for yourself.

When the days are at the longest, your journeys may extend. The same shrieking but beneficent friend will whirl you in a quarter of an hour to Willesden, with its sweet English lanes; or transport you to Kew, with the

gleaming Thames, and its gardens, where you can sit under the shade of a towering palm, and fancy yourself an ancient patriarch surrounded by your family,—not unthankful, however, that your "sons and your daughters" are not quite so unlimited as to number. Think that the payment of ninepence will not only transport you to a palm-tree, but bring you back in half-an-hour safely to — Terrace.

And you, poor tired teacher, who this hot day are fain to treat yourself to an omnibus-ride, don't stop it at the corner of this dark street; go with it to the end of its journey; it will only cost you twopence more. But these exercises—they must be corrected, these lessons prepared for to-morrow: they are your duties; you must not neglect them for mere pleasure. Neglect them, however, by all means, at least just now. Go on to Hampstead; pass quickly through the fascinations of the crowd of donkey-boys and the hospitable offers of tea at ninepence per head. Do you see that group of cedars on the hill? Make your way to that. Inhale the fresh wind that sweeps over miles of open country; then descend, and the smell of the hay will lead you to the fields, where the cows are now being milked: they belong to that old farmhouse close by, where you may get a glass of the new milk. Go on yet a little farther, and you are now quite alone. You throw yourself on the ground, and almost bury your face in the long grass, every blade of which is a separate delight, and speaks to you with the voice of a friend. Your tears are dropping into it, but they are not unhappy tears.

You make your way back through the yellow bushes of fragrant broom, and find your carriage awaiting you. Honest, lumbering, old omnibus, you never see it pass now without a benison, and a half-conscious feeling that it should, unconscious vehicle, be going every day up to Hampstead Heath.

No! don't open those books to-night; get up, if needs must, at five o'clock to-morrow morning; but go to bed to-night with the fields and the gorse-bushes before your eyes.

Here are but a few examples. In every direction may be found an outlet for easy pleasures; not in London only, but with even greater facilities from nearly every large mercantile and manufacturing town: Bristol, dirty and unlovely, but with overflowing beauty on every side; Liverpool, anxious, scrambling, wealth-devouring town, yet within reach of a wide expanse of sea, before which a man's heart cannot but recognise its own narrowness. Does Glasgow, making smoke and money in almost equal quantities, see only that Clyde on which it stands, muddy and darkened by its own proximity? has it no thought of the winding river farther down, Dumbarton, and the Vale of Leven? Consider that, even so far as regards this world, "Man does not live by bread alone;" and while conscientiously fulfilling all other duties, do not make it of small moment to enjoy what is also a duty to yourself and a tribute to their Bestower.

HOW TO BEGIN BEE-KEEPING.

In the whole range of rustic amusements and occupations, there is not one more delightful or more profitable than bee-keeping. The simple rustic, who "canna read," but who can "shepherd bees right wael," the statesman, the philosopher, the poet, may all meet at the bee-stall and find a common bond of unity,—one seeking profit, another amusement, another wisdom, yet all agreeing in a strong love for the objects of their common care. You cannot keep bees without loving them; they win upon you by their faculty of companionship; and if you make them an object of study, you have a subject that you cannot exhaust, even if you pursue it from childhood till you grow gray, and it is one that seems perpetually new, fresh, and additionally attractive; it is a joy indeed to keep bees, and learn to understand them.

At this season of the year, many folks who have never kept bees have yearnings to begin. They read and hear of many wonderful things, and they get tired of asking if such

things are true. One season's actual experience and observation would convince them that naturalists are not a set of Munchausens; that, in fact, there are more wonders to be seen in bee-keeping than can be told either by mouth or pen; every genuine observer of nature could relate truths that would never obtain general credence.

This month of May, then, is just the time to begin bee-keeping; for a good swarm well lived is better for a beginner than any old stock, because he can set to work in any way he chooses, with any kind of hive, and with any series of experiments. To begin, then, you must in good time arrange for as many swarms as you desire; and if your mind is made up as to the kind of hives you will use, those hives ought to be sent to the apiarian who will supply the swarms, with instructions to hive swarms into them; and transmit those swarms to their destination the same night, if possible. Many beginners commit the error of purchasing an old stock, and then by fumigating transfer the bees to a hive of their own choosing; and the affair generally ends in disappointment. Let no beginner be in haste to fumigate bees, or to meddle with them in any way. If they come to you in an old hive, set it on the stand, and let the bees alone. Work the hive according to its construction, and in time you will have a swarm from it that you can hive as you please, and then go on in your own way.

Now there are several matters to be thought of by those who intend to begin bee-keeping. The swarms are to be ordered, hives are to be chosen, and a bee-house must be built; and all should be ready, the smell of paint should be gone, the site chosen, and all preliminaries settled before the last week in May; for from that time to the end of June all the good swarms will be taken; and when once bees are set to work, they must not be shifted or disturbed in the least until the season of mid-winter.

The object of a bee-house is merely to shelter the hives from wind, rain, and excessive heat. Hence a simple roof and proper shelves for the hives are all that is needed, and the less filagree and ornamental work there is about it, the less will it be infested with spiders. In constructing a bee-house, measurements are very important, for improved hives are made of certain exact sizes as to breadth and height; and the bee-house should afford sufficient room for working many kinds of hives, the number of such to be of course dependent on the will of the apiarian. For every separate hive there should be allowed at least eighteen or twenty inches; so that a house to contain six hives in a row from right to left should measure inside from nine to ten feet, and from the hive-board to the roof there should be a clear space of two feet six at least. With these measurements, there may be either one or two rows of hives; if two rows, then there must be a space of two feet and a half between the roof and the upper hive-board, and the same again between that and the lower hive-board; but one row of hives is preferable. The aspect for a bee-house should be south or south-east.

As to the hives themselves, a novice would be perplexed almost out of his wits in attempting to make a choice from the many kinds that are in use. It should be understood, therefore, by every beginner, that however much bee-hives may differ as to shape, size, and general conformation, certain principles are common to nearly all, and every particular kind of hive is adapted to some particular mode of managing or studying the honey-bee. On the old plan of suffocating the bees in order to get their store, there was no great variety in the forms of the hives; but on the modern plan, of preserving the insects' life, the forms differ very much indeed, and the differences arise out of the various modes pursued in the preservation of the bees. You have to deprive them of part of their store without killing a single bee, and manage them in such a way as to prevent swarming; and to this end, hives are adapted to work (1) by storeyfying, (2) by nading, (3) by extension collaterally. In other words, improved hives are enlarged during the summer season by the addition to them of other hives,

DESIGN FOR A BEE-HOUSE.

caps, or boxes, and these are added at the top, at the bottom, and at the sides; some hives admitting of enlargement by all three processes.

The storeyfyng system is that best adapted for a beginner; and any of Taylor's bar-hives, Payne's straw cottage-hives, Milton's supering hives, or the celebrated Stewarton bee-boxes, will do well to begin with. There are two which especially recommend themselves to beginners, viz. Milton's Revolving-top hives and Neighbour's improved Cottage-hives; they are both simple, easily managed, very ornamental, inexpensive, and afford as good facilities for study as they do for gathering a fair share of the delicious harvest. We will briefly describe both of them.

The first figure represents the Revolving-top hive, with bell-glasses at work. This hive is made with a double crown-board, one portion of which revolves upon the other. In both boards holes are cut so as to admit the bees to the bell-glasses, or to a cap; and by simply turning the top board a little the holes are closed or opened as may be desired, so that in setting the caps to work, or removing them when full of honey, the operator incurs no danger,

fig. 1.

and need not come into actual contact with the bees. This is an ingenious and practical hive, one of the many invented by Mr. Milton, of Great Marylebone Street, who may justly be spoken of as a successor to Wildman. The Cottage-hive (fig. 2) is a very pretty affair, just the thing for a lady bee-keeper, who would like a yearly donation of pure honey, without risk, and who would also like, without fearing the fate of Fatima, to peer into the mysteries of the secret chamber. The hive itself is formed of straw, with windows for observation. When it has been stocked with a swarm, it must be left alone for a few weeks; and as soon as it is nearly filled with comb, one or two bell-glasses should be set to work. A timid person may easily accomplish this. Take off the hive-cover and fit the bell-glass in its place, and then withdraw the zinc-slide to open communication, and put the cover over the glass to preserve darkness and warmth. The bees will ascend, and commence filling the

glass with comb; and when they are fairly at work, if the season is propitious, place another and another, until each hole is opened and covered with a super. As soon as a glass is filled and the combs sealed up—to be ascertained by observation—proceed to take it away. In the middle of a fine day slowly pass the slide, and cut off communication. After a few minutes, when the bees are alarmed at their imprisonment in the glass, gently tilt it up with a wedge, and the majority will at once escape and enter the hive, leaving you in possession of a glass filled with the best of their store. If a few bees cling to the combs, brush them out with a feather, and at once carry away the treasure; if it is left any time in the neighbourhood of the hive, the bees commence to empty it of its contents.

In working other hives, similar plans are to be adopted. When the bees are fairly at work, extend the sphere of their operations by

fig. 2.

the addition of proper receptacles above, below, or at the sides, according to the particular construction of the hives adopted. What they deposit in these added compartments is the property of the bee-keeper, and what they store up in the stock-hive is to be their own, to sustain them through the winter. That is the depriving as opposed to the suffocating system of bee-keeping. On the first plan, the honey is obtained in its purest form at the height of the honey-season, and it is taken as wanted without the sacrifice of a single innocent life; on the other, it is obtained at the end of the season, when its first delicacy of flavour has departed, when it is mixed with pollen and brood and other impurities, and of necessity tainted with the smell and taste of the brimstone, which makes a barbarous slaughter of the unoffending children of industry, who would gladly have given as much, and better, honey, if kept in hives adapted to preserve them.

SHIRLEY HIBBERD.

SPECIMENS FROM RECENT EXHIBITIONS: NO. XI.

PAINTED BY H. S. MARKS.

CHRISTOPHER SLY.

CHRISTOPHER SLY.

By H. S. MARKS.

"Am I a lord? and have I such a lady?
Or do I dream? or have I dream'd till now?
I do not sleep: I see, I hear, I speak;
I smell sweet savours, and I feel soft things:
Upon my life, I am a lord indeed;
And not a tinker, nor Christophero Sly.
Well, bring our lady hither to our sight;
And once again, a pot of smallest ale."

TAKING OF THE SHREW, Induction.

WHEN the last of the Slys got so egregiously drunk that, falling asleep in the road before Dame Hacket's house at Wincot, he became, as it were, a prey to that unnamed lord whose whim rendered the drunken tinker immortal, it must have been with some such face as this that, on awakening, he heard himself styled "lord,"—with some such action as Mr. Marks's picture shows must his hands have questioned his corporeal self about its actual existence,—with some such stare must his bleared eyes have inquired if the unwonted splendours around were absolutely real, and not the staggering phantasies of a drunken dream. The metamorphosis was indeed amazing. "Old Sly's son of Burton Heath," whose leathery conscience was pricked through and through by the bitter conviction that he was in debt "fourteenpence for sheer ale," who had been threatened with the thirdborough, and last recollected himself lying sodden and mired in the highroad, now woke to be waited on with bated breath, endowed with a fair wife, and a choice of gorgeous raiment offered,—offered to him who had had no more doublets than backs, stockings than legs, and who could prove by demonstration that he had more feet than shoes! He, whose love-imaginings soared no higher than to Cicely Hacket, "the woman's maid of the house," saw enter, as out of some new land, that beautiful lady (would the painter had presented her) for a wife. Well might he ask, "Am I a lord? and have I such a lady?" and at last, so flatteringly delicious was the change, conclude that he "was not a tinker, nor Christophero Sly;" then, thirstily calling for smallest ale, with "Lord be thanked for my good amends," settle himself to hear the play with that desire for peace and quietness which the subtle dramatist puts into his mouth.

Even in boyhood, our own private opinion of this same Christophero Sly had decided that he was less fool than knave; in fact, that he knew himself deluded,—was a willing victim making the best of his snug berth. Rogue as he doubtless was, we would have pleased ourselves by paying that fourteenpence in order to converse with him. Alas, had he but lived in those days, modern philanthropy might have done something for him: was he not improvable? Notice how, in the short time of that scene i., his speech refined, swearing then only "by St. Anne," an oath which Chaucer and Shakspeare tell us was used by ladies only,—a minikin asseveration too small for larger mouths.

Yes, indeed, justice has been withheld from thee, O Christopher! Were you not willing to learn your manners? did you not promise rewards? was not that last speech of yours almost philosophical? It does not please us to hear you called a rascal. If that fourteenpence was scored against thee, could Dame Hacket swear she had put nothing into the ale? Were there no misreckonings, no limed or salted sack, O hostess of Wincot? Indeed, although thou shouldst have tinkered no pots of ours, son of Sly, you might at least have taken the pledge, we think, and somehow got your condition ameliorated.

The picture is now at the National Institution, and has been referred to in this Magazine at p. 22. L. L.

EXHIBITION OF THE ROYAL ACADEMY.

THE EIGHTY-NINTH.

THIS seems an exhibition remarkable rather for what it lacks than what it has. Celebrated names are weakly re-

presented or totally wanting in the catalogue: the President contributes nothing; among the Academicians, C. Landseer, Lee, Webster, E. M. Ward, and A. Elmore are not represented. Holman Hunt exhibits no pictures; how is this? He is not disgusted surely with the reception of the "Scapegoat," before which the dandies simpered that it was a "peculiaw pictaw" (peculiar indeed, my well-dressed friends, and of a peculiar subject, could you but see into it). Why are Messrs. Noel Paton, Windus, and Arthur Hughes absent? They have not been misapprehended. We hoped to have seen a great work from Mr. Maddox Brown, and something to confirm Mr. Martineau's budding reputation. Mr. Herbert, R.A., presents us with a landscape; Mr. Anthony with two, (for him) but indifferent; and Mr. Armitage's single work is hung out of sight, as is a little work by F. Smallfield, a landscape by A. W. Hunt, and another by Inchbold.

No. 78, "King William visits Peter the Great when working at Deptford Dockyard," by D. Maclise, R.A., appears at first sight a brilliant wilderness of bright colour and crude forms; but more attentive regard brings out one of the finest pictures the artist has produced, full of incident, expression, and character, and so well designed that one wonders how he could mar his work by such countless executive peculiarities. We ask ourselves in vain, What is his object in this? Does he aim at ideal beauty? Clearly, no. Nature, then? No again, that cannot be; for the flesh-tints are unreal, the light and shade non-existent, the drawing even seems to us scarcely to bear examination and reasoning out; much of the colour, however bright, is hard and opaque; and, worse than all, some of the expressions are forced, and the figures disproportioned to each other. Despite such faults, examination will develop the infinite variety of incident, some admirable phrases of abstract colour, and noble principles of design, which elevate it into the highest consideration. This fullness of incident and energy of design would be at once patent to the eye, if Mr. Maclise did not systematically ignore the most ordinary truths of light and shade, and other aerial effects. As it is, the whole picture comes hard and flat in a bright confusion: the man in the centre wielding the adze appears dubious whether he shall cut off the leg of Peter or the head of his fellow-workman before him; King William looks fairly propped up against the carpenters' bench, although there are, between him and it, two men sawing a log, which last, by some unaccountable means, has got under the bench. We turn with more unmixed satisfaction to the magnificent series of forty-two outline-drawings by this artist, illustrative of the "Story of the Conquest," 1159, which appear to have been the progressive result of many years' labour, and exhibit an extraordinary improvement in their advance, from the earlier to the later drawings of the series. It would require an essay to describe all these; therefore we shall confine ourselves to bare mention of the most remarkable. No. 5, "Harold and the Saxons as Prisoners," is divided into three sections by the columns of the dungeon; the group in the third of these is noticeable for its variety of design. That of William's family in No. 6, "Imprisonment of Harold announced to the Duke," is singularly striking. No. 10, "William making Harold a Knight," is an example of the danger of excess in carrying out so large a series of designs; for here the artist has fallen into sheer Germanism: no one less than Cornelius could have designed that centre group. No. 15, "Coronation of Harold," is grand and whole. No. 16, "Harold's Marriage," is most excellent. No. 19, "Tostig's Flight," the defeated prince in his galley, is a thoroughly grand and perfect design. In No. 30, "Retreat of Edwin and Morcar," the group of disconsolate earls is admirable. No. 37, "Normans before the Battle of Hastings," appears to us the least satisfactory of the whole series. "The Death of Harold," No. 41, is the most perfect design of the subject we have seen; but some of the figures are distorted and incorrectly drawn. No. 42, "Discovering the Body of Harold," which completes the series most worthily, is a grand com-

position, very impressive and effective. In such a series as this we of course accept the artist's conventional drawing (such things as large eyes, &c.), and there being no erroneous light and shade to offend us,—we may, with these allowances, indeed assert this series to be worthy of the labour of some years of a great man's life, and consider them incomparably the noblest of his works.

No. 138, "The Young Brother," W. Mulready, R.A., one of the most charming of his works, represents a girl carrying a child on her shoulders, whose beautiful infantile face is towards us, looking up at the hand of a youth who is playfully teasing him.* The exquisite flesh, with purple half-tints, of the girl's shoulders, with the admirable drawing throughout, render this picture perfectly delightful. A direct contrast, in point of colour, is No. 107, by W. Dyce, R.A., "Titian preparing his First Essay in Colour:" the great painter, in earliest youth, contemplating a statue of the Virgin, and near his feet a basket of flowers, with the juices (?) of which he is said to have painted a Madonna. There are points of colour in the boy's dress which are very rich and beautiful; but we are surprised to find the scene is an English meadow on a bleak April morning, instead of a sunny Italian pasture, and Titian himself, whose face is expressive, resembling a delicate English boy, with dead-purple complexion; the general result in colour is of course chilly and dull. We contrast these pictures, because in the one the artist has taken an English subject, in which the colour errs, if at all, in excess; while the other, dealing with an Italian subject, gives us English characteristics, and exaggerates them on the reverse side. The truest and most thoroughly English pictures here are three by Mr. Hook, A.R.A., who has outdone himself this year: No. 160, "A Signal on the Horizon" calls a pilot from his look-out station, near a cottage built against a cliff, whence he is sighting the signal from a homeward-bound ship; his hardy clear-eyed son waits but the order to join him in their boat and proceed to her. Far below the tide breaks sharply on the shingle, and on the deep green sea there is a fresh breeze which might be fancied lifting one's own hair. No. 278, "A Widow's Son going to Sea" has just parted from her, and stoops to cast loose the mooring-chain of a boat in which to leave; his face is from her, but we see signs of manly grief upon it. The artist has made a point by the introduction of a child swimming a toy-boat in the green waters of the creek, whose deep colour reflects the shore. No. 541, "The Ship-boy's Letter" has come to his home far inland, where the sun lies in broad light on meadows and trees. A sturdy labourer listens to his wife reading the missive, with out-looking eyes, as if the simple detail brought before him, instead of those green fields, broad rolling waters, and in place of the wind-shaken trees, the balancing rig of a ship. His face, her face,—indeed all the faces, all the actions, all the colour, in each of these pictures,—are perfect and delightful. In colour they are masterly studies, for the artist has evinced his knowledge of the great secret in that quality—intense variety and a system of counterbalances; the green trees are of intensely various greens, as in nature, and chromatic echoes occur throughout. One feels personally indebted to Mr. Hook for these pictures, they are so wholesome, fresh, and new.

Of a different scene, but perhaps in equally perfect feeling, is Mr. F. R. Pickersgill's (A.R.A.) "Orsino and Viola," *Twelfth Night*, No. 87. The lady has declared her love in veiled words, and the unsuspecting duke questions her; she stands in an attitude of ineffable modesty against a garden-chair, in which he is seated; on her pure pale face is a clear reflection, which lights up for us its exquisite expression and delicate pallor. Here, as in the play, we care little for the duke, except for her sake; yet the artist has hardly done him the justice he might; nevertheless this is by far the finest picture he has produced, and never was there a more excellent illustration to Shakspeare's most perfect work. Mr. Frith, R.A., has only two small pictures, "Kato Nickleby at Madame Mantellini's," and "A London Flower-Girl." He

is reserving himself, we believe, for another exhibition; when we hope to see some worthy rival of his great picture of last year. Mr. Egg's (A.R.A.) picture, No. 331, "Scene from *Esmond*:" he returns after the battle of Wynndel, and is decorated by the hand of "Trix, who, in her grand artificial way, is kneeling before him; the sarcastic and grinning dowager looks on amusedly, while behind is his "dear mistress" in the agony of jealousy. Esmond himself, drawn up stiffly, is precisely the man we thought him to be. The colour in this work is a little hot and heavy, but not unpardonably so; indeed, far greater faults would be redeemed by the solid and valuable qualities of the picture, which is the first illustration we remember to have met with of Mr. Thackeray's famous historical novel. It may be, that expecting so much from Mr. Leslie, we are disappointed with No. 213, "Sir Roger de Coverley in Church." The modern master of pictorial humour is scarcely equal to himself in this; it really has the fault of chalky colour in excess, and contains nothing strikingly new in character. The staring half-dozing baby held by a girl at the side is as natural as Leslie only can paint. Mrs. E. M. Ward's little picture, No. 122, "God save the Queen" (a music-lesson), although rather coarse in colour, has much character in it. The same may be said of No. 27, by Miss Solomon, excepting that the latter deals with far higher character. No. 299, "Nameless and Friendless" (a young lady selling drawings at a fashionable printseller's), promises much from the artist, Miss Osborne.

C. W. Cope, R.A., contributes "Departure of the Pilgrim Fathers," No. 503, which, to us, has a displeasing conventionality of design, a chalkiness of colour, and general gray texture about it, that, despite some fine expressive heads, renders it not very satisfactory as a whole. His "Breakfast-time," No. 173, pleases us far more, both in colour and force: it shows a mother giving a lump of sugar to a child, whose expression is capital. We have seldom seen a picture by the artist we liked better than this. No. 562, A. Solomon's single picture, "Waiting for the Verdict," is an admirable subject admirably painted. We most heartily congratulate Mr. Solomon upon rising from the ranks of *genre* painters. This picture, in spite of the painful nature of its subject, is so manly and unaffected, evinces throughout such deep feeling, that we cannot but especially invite the reader's attention to it. "In Time of War," No. 532, J. Archer, although in colour strangely black and cold, is in design and expression most admirably true. We shall look with interest for the future productions of this young Scotch artist. Mr. F. Goodall, A.R.A., surpasses himself in No. 364, having introduced considerable vigour into the design of the dancers in "The Wedding-Dance, Brittany." The colour therein, although vastly improved, cannot be said to be natural. Mr. F. Stone, A.R.A., in No. 355, "Bon jour, Messieurs!" has risen to real humour and character. A French *paysanne*, with the wickedest of eyes, who is riding in a cart with others, salutes the spectators in the words above. This picture is bright and light, and the faces, although somewhat out of drawing, are admirably expressive. Mr. Rankley, in No. 127, an old subject of a dame-school, shows great improvement in execution, solidity, and colour; yet we must regret not to see more novelty of character in the work. Neither of Mr. Wallis's pictures, though exhibiting his usual excellent choice of subject, are quite worthy of the painter of "Chatterton," both being black and heavy. No. 501, "Montaigne in his Library dictates to Mademoiselle de Gournay," has great character and expression in the heads, force of light and shade, and powerful tone; this last is, however, overdone. The same occurs in No. 458, "A Sculptor's Workshop, Stratford-on-Avon, 1617" carving the bust of Shakspeare: the bust itself, which is placed between the figures, casts no reflections upon them, as so large a mass of white could not fail to do. The effect of the picture is ruined by this. A little girl in the doorway is full of character. No. 568, "Infancy," J. Sant, a child just awakened, lying in bed, is very worthy of him, and more naturalistic than usual.

No. 39, "A Syrian Scheik," by J. Lewis, has more apparent finish than real thoughtful care about it. Men in that climate get a swarthy purpleness of tint very different from the embrowned floridity of this worthy, who is so remarkably clean in skin and dress that he might have been painted from an English gentleman. No. 225, "A Prison-window, Sevilla," and No. 448, "Charity, Sevilla," by J. Phillip, are evidently most faithful renderings of Spanish character; the latter, where a *padre* passes heedless of a beggar's appeal, is full of force and rich sombre colour. We rejoice to see more than usual *motives* in these pictures, which are indeed worthy of the painter's high talents. Mr. Poole's (A.R.A.) single picture, No. 391, "A Field Conventicle," exhibits the artist's brilliant, vigorous, but eccentric colour, and that power of design wherein none surpass him, but which he seldom seems to care to work out. Mr. Armitage's picture (most unsuitably placed), No. 1021, "Souvenir of Scutari," representing a number of Turkish women, with his ordinary broad and powerful design, appears very deficient in colour. No. 1004, by E. Eagles, is very far inferior to his work in the Exhibition of British Artists. Mr. M. Halliday's picture, "The Sale of a Heart," No. 663, a capital modern subject, shows great improvement in effect and executive power over "The Measuring for the Wedding-ring," of last year. It contains some good solid painting, and much character; its deficiencies are a want of *real* scientific colour and beauty of feature; the design, too, appears to have been hardly thought over enough, or why do we have the back of a man's coat amongst the most prominent objects? A similar want of *real* colour is observable in Mr. Barwell's "Adopting a Child," No. 614; an excellent subject, well told, forcible, and expressive. The child's reluctance to part from its mother is doubtless lightened by the unsavoury appearance of its future patrons. We look for much from Mr. Barwell.

Mr. J. Clark's picture at the British Institution deservedly attracted considerable attention ("The dead Rabbit"); his work here, No. 616, "The sick Child," is even more worthy of it, showing great improvement in execution, superior finish, at least equal character, and a power of rendering expression which few artists ever surpass. The scene is a labourer's cottage; he nurses the ailing little one, while the mother is coaxing it to take some food; the little thing's face, with its expression of tearful languid nausea, remind one of Wilkie. The picture partakes of that artist's fault—dullness of colour. We do not mean to insinuate the slightest charge of plagiarism by saying this, but merely point out an only defect. No. 309, W. Nicol, "Cottage Interior—Women ironing," is another picture of similar qualities, which well merits observation. No. 133, J. D. Luard, "A Welcome Arrival," of a chest from England in a hut before Sebastopol, shows that the receiver has opened his treasures, and amongst them finds a miniature-case, which, after a hasty glance, he conceals; two other officers are standing by with well-bred inattention. This picture has most valuable qualities—solid execution, truth of detail, with all the interest arising therefrom, and great judgment in rendering expression. We like to look upon such a work as this; it is so manly, frank, and English. No. 138, "Thoughts of the Future," R. Carrick, a young mother looking at her child asleep, exhibits a peculiar truth of light and shade, exquisitely firm textures (how rare this quality!), and a broad sobriety of colour, which single the artist out of the crowd here as a painter of great promise. No. 996, "Waiting for the Stage-coach—Seventeenth Century," is so true to its period that the artist has wrought in the manner of that age very successfully. It represents a Puritan lady with her son in a tavern, wherein is a kind of Roger Wildrake, whose boisterous civilities are not very welcome to his companions. This is one of those executive singularities which, like the colour in Mr. Eagles' picture in Suffolk Street, arise from time to time to astonish us with the wilful eccentricity of the artist. Gerard Dow might have painted this, as Giulio Romano, could he have drawn so well, that by Mr. Eagles.

L. L.

DESTINY UNCERTAIN.

GRACEFULLY shy is yon gazelle.

And are those eyes, so clear, so mild,
Only to shine upon a wild,
Or be reflected in a shallow well?
Ah, who can tell?

If she grows tamer, who shall pat
Her neck? who wreath the flowers around?
Who give the name? who fence the ground?
Pondering these things, a grave old dervish sat
And sigh'd, "Ah, who can tell?"

WALTER SAVAGE LANDOR.

THE MOTHER.

UNNATURAL mother,
Who've hastened to smother
Whatever is fairest and fondest in child;
In Hell's bitter water
You've plunged your own daughter,
Nor have wept when she wept nor have smiled when she smiled.

When sorrows assail you
Who then will bewail you?
The true and the tender for ever is gone.
Unnatural mother!
Ah, never another
Will love you or mourn you as she would have done.

WALTER SAVAGE LANDOR.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

FRA ANGELICO DA FIESOLE was born in the year 1387, and became a Dominican monk. He was one of those beings who seem to pass through human nature without entirely belonging to it; an ethereal and beautiful soul, pure as his own dreams of angels, and with no passion but that of worship for the loveliest and brightest things. He painted only from the love of beauty and the impulse of piety. He received no money or other recompense for his immortal works. He began every picture with prayer; he painted his Madonnas on his knees. He believed his hand to be guided by inspiration, and altered nothing that he had done. His famous picture of the "Last Judgment," hanging near the western end of the south wall at Manchester, has suffered a good deal by time; it is, indeed, between four and five hundred years old, but though somewhat faded in colour, all the beauty of the design remains unimpaired. The grace of the forms is altogether wonderful. One hardly sees any where an attitude of surpassing beauty of which the prototype or the suggestion is not to be found here in its highest form of delicate refinement.

In the upper part of the picture, Christ sits enthroned, pronouncing the final words, "Come, ye blessed"—"Depart, ye cursed." The artist, with characteristic tenderness, has turned His face towards the damned, and given it an expression of divine sorrow rather than anger. Below, on one side, the angels are welcoming the just; on the other, the infernal fires break through the floor; savage claws are stretched up through them from the hidden gulf, and demons drive the wicked to their doom. The great charm of the picture is, as might be expected, on the angelic side. There is no end to the beauty of these forms. The Madonna sitting above, with her raised hands and pale-lilac robe; the angel in lilac and gold, on the same side, standing upon a cloud; the

saint kneeling in the foreground, again in lilac, which is clearly the painter's favourite colour; the angel with the crimson robe, and that marvellous saint in yellow, whom he leads by the hand, and who stretches her own hand with such infinite grace and sweetness towards another of her companions; the modest, happy, girlish figure in red, behind her; and, in the crowd below, the greetings of newly-risen friends;—all these are matchless and indescribable.

In the corner, on the other side, is a representation of Dante's Hell, with Satan sitting near the bottom, a huge black monster, munching Judas Iscariot; by the heels, however, instead of the head. The wicked are tortured by devils very like apes, who set about their work in a most business-like manner, pull their victims by the hair with relentless vigour, and pour molten metal down their throats with decided gusto.

Now the spirit of Italian art is felt through the whole of this fine picture. It is not, and is not designed to be, in any respect, a credible representation of a possible event. The event as represented has been separated from all external relations. It could happen only in an imaginary world. The scene has no locality and no accessories; the forms and faces of the blessed are pure and lovely, but they are those of abstract essences, not of men and women rising from the grave. There is no thought in them, no passion, and little character. They have a beauty, perfect of its kind, but one sees they have always had it and will never have any other. The wicked, on the other side, are not less ideal shapes. They typify forms of anguish: they bite their hands; they fasten on each other's lips; they tear their hair and their flesh; but the despair or agony of a real human soul is not seen among them.

On the opposite wall hangs the altar-piece of Hubert and John Van Eyck. It is a copy only, and it represents but a part of the original; but it is sufficiently excellent to satisfy the unprofessional. The original picture was painted for the church of St. John at Ghent. It was very large, and was one of those altar-pieces, painted in many compartments, whose wings fold over the centre, and have pictures on both sides. The great work itself has been divided and dispersed. The lowest part of it was destroyed. This copy, which comprises all the central compartments, was long in the chapel of the Town Hall at Ghent, and was carried away by the French, at the end of the last century. The two brothers Van Eyck were contemporaries of Fra Angelico. The subject of their grand picture is the "Atonement," illustrated by the worship of the Lamb, spoken of in the book of Revelation. There are two rows of panels. The upper row has seven. Of these, the centre panel represents the Trinity in the person of the Father, who sits, crowned with the triple crown, and furnished with every emblem of regal power. Next to Him, on either side, are the Madonna and John the Baptist; beyond them, two choirs of angels, and on the outer panels, the figures of Adam and Eve. In the row below, the Lamb is worshipped by saints and angels among the bowers of Paradise.

The Madonna of Van Eyck is a great and remarkable creation. She sits in glory. Unlike the Madonnas of other painters, she has a book in her hand, and she is reading. Her attitude is inexpressibly beautiful. It combines the dignity of a queen with the grace of a woman and the simplicity of a little child. Her face is noble, thoughtful, lovable, and pure; a rich warm woman's face, in which human nature is glorified but not a jot of it destroyed. Compare her with Fiesole's dream. She is not, indeed she could hardly be, more beautiful in external form; but the one embodies an idea, and the other a life; one is exactly fitted for the scene she appears in, and for nothing else, the other may live and move wherever there are life and motion. Van Eyck has gloried in his Madonna, as well he might. He has clothed her in a magnificent robe of the deepest blue, and put perhaps the most splendid and appropriate crown that was ever painted on her long fair hair. Her forehead and eyes express what was suggested by her occupation. She

is the Queen of Heaven, but she is not therefore destined to live for ever in a single thought, and be the type of a single sentiment. She reads with interest and self-absorption, even while the new covenant is being proclaimed; and the act itself, while it fills her with lifelike reality, adds very much to the impression of royal state and serene beatitude intended to be conveyed.

The figure of John the Baptist is on the other side. It is grave and noble. He also has a book in his hand, but he is not reading. His mission has been to bear witness, and he retains his character. God speaks. The book is forgotten. He raises his prophet's hand, and appears to repeat to the multitude below the words that issue from the throne. The choral angels on one side, those with musical instruments on the other, and St. Cecilia at the organ, with her rapt face and gorgeous robe, are wonderfully true and living. The naked forms of Adam and Eve contrast strongly with the rest. Eve, who has an apple in her hand, is positively ugly. Adam looks half-starved. He might be forgiven now for eating apples, or any thing that happened to come in his way. But they stand there as the representatives of human sin, and the painter has been right in taking away their beauty. The moral is made the more perfect by the fact that Eve in feature is not unlike the divine Madonna. It is only the expression of guilt and shame that has changed her beauty to deformity.

On the panels underneath, the Lamb, shedding His blood into a cup of gold, is the central figure. Its treatment illustrates very curiously the painter's love of reality, carried, in this case, doubtless to excess. The lamb itself cannot, under any treatment, be more than a symbol; and an Italian master would have made it so. Not so Van Eyck. He has drawn a stout, spirited, but not particularly spiritual, animal. A manly thought, but too mundane for the subject. How noble, however, are the four groups of worshippers, approaching from the four corners of the picture, through those beautiful groves, with the towers of the happy city, the bright horizon, and the blue line of hills, behind them! See how those censers swing from the hands of the angels; observe the character and life of all the faces, from poets to monks, from the delicacy of an Italian Christ to the strength of a Gothic soldier! Here is a head like Shakespeare's, behind one of the foremost figures; here the profile of an apostle, kneeling in front. Of these four groups, three are composed of men, the fourth only of women; an unfair proportion, one might think. There is a poetic instinct, however, in the artist's arrangement even here. Manly virtue presents itself to his mind in different and separable forms; that of woman as an indivisible glory. He has led his female saints down one of the richest avenues, and the palms they carry in their hands, unlike those borne by the other sex, are luminous and ethereal.

The side panels of this division are full of the same fine human nature, the horsemen on the left especially. Two of them are traditionally known as portraits of the painters themselves. On the right, St. Christopher leads the way in his well-known red mantle. He is a favourite with the German school. Their instinct draws them to him; and the fact is a significant one. There are several representations of him on this northern wall; one, small but capital, by Albert Durer; another, very noble, on the right-hand leaf of Memling's Triptych.

Leaving this great altar-piece, which, indeed, we have not half described, we cross over to the beautiful "Riposo" of Fra Bartolommeo. He was born a hundred years after Hubert Van Eyck; was the student of Leonardo da Vinci, and the friend of Raphael; a pious monk, and, like Fiesole, of the Dominican order. The Virgin sits under a pomegranate-tree, with a palm behind; the infant Christ on her knee is giving the cross to the infant John. Joseph sits close by, under the palm-leaves, looking gravely at the children. In the distance, behind, the Holy Family are seen pursuing their journey; one of the quaint attempts so often made by the old painters to represent two consecutive events

in a single composition. There is a curious example of this on the opposite wall, in Van Eyck's picture of "Moses and the Burning Bush." Fra Bartolommeo's picture is a rich and lovely piece of idealism. His Virgin—sweet, tender, and passionless—is made expressly to rest by the wayside; and for no other purpose: the wayside itself came into existence solely for her to rest in; it is no spot on earth; she sits neither on grass nor sand. The palm and the pomegranate have their roots in mellow tints; fit soil for purely ethereal trees. It is the same with all the figures, and with the whole composition. The beauty is very great, the effect unquestionable; but they belong not to things, but to abstractions.

Nearly opposite hangs Mabuse's "Adoration of the Kings." The contrast is so immense, one could almost laugh at it. Mabuse has not confined himself, as Fra Bartolommeo has done, to the drawing of merely human forms. The most striking objects in his picture are the three wonderful angels making obeisance in the air, and flights of supernatural beings come flocking downwards towards the fine ruin, in the midst of which he places his Madonna. Yet the whole is perfectly lifelike, and mechanically possible. It represents no abstraction. The artist saw the vision as it might exist on this very earth. The rest is in the same spirit. His Virgin's face is grave and fine; she holds her child with the pride of a living mother. A fold in the hem of her robe shows that she wears serviceable shoes and under-clothes. What a face is given to the kneeling king; what solicitude it expresses, and how well it contrasts with the half-Ethiopian features of his stolid royal brother! The details are all those of ordinary life: a little dog enjoys himself in front with a bone he has found; another, less fortunate, sits gloomy and carnivorous in the corner; there is a donkey behind, eating the weeds at the foot of the ruined wall; and flowers, such as bear seed after their kind, spring up from the broken pavement. At first sight, the picture is nothing like so beautiful as Bartolommeo's, but you may look at it for an hour with continually increasing pleasure; while the Italian tells all at once, and hides nothing behind. The one makes this actual world interesting; the other forgets it, and takes you out of it. Perhaps this is the sum of all the difference between northern and southern art.

ECCENTRICITIES OF LONDON LIFE.

By STEPHEN HUNT.

THE BUSKER.

THE individual commonly known by this *sobriquet* is an itinerant reciter, vocalist, conjurer, buffoon, or other species of stage-exhibitor, whose subsistence depends upon the precarious patronage he receives from the visitors at fairs, races, tea-gardens, taverns, and public-houses. His avocation is strictly peripatetic; and hence he takes his title from the short boot, or "buskin," which has been a common article of stage-apparel—one of the most indispensable of an actor's properties—ever since the earliest days of the drama.

Possibly he is a young provincial actor out of an engagement, destitute alike of money and friends; or he may be an outcast from a home where his follies and vices have rendered him unbearable. Incapable of application to any business pursuit (if he has ever been taught any), impatient of restraint, and unhappily gifted with some peculiar talent fitting him for the stage, or adapted for a still more vagrant mode of life, he plunges into a career that will most likely exclude the possibility of his ever gaining a social position of the least pretensions to respectability, unless, indeed, after years of suffering, he is found to be endowed with extraordinary abilities.

The London busker,—most frequently a reciter or vo-

calist,—commonly secludes himself in his miserable lodging during the day, beguiling the time either by studying new songs and recitations, or reviving his recollection of old ones. About eight or nine o'clock in the evening he prepares to leave home, first by cleaning his boots; an operation which, if wanting proper implements, he manages to achieve with an old nail-brush. Then he puts on a clean collar, made, most likely, of paper, and ingeniously pricked round with a pin to imitate the work of a needle. If very particular as to his appearance, he adds to this a clean shirt-front, or, with a bit of chalk or whitening, imparts to the dirty one a candle-light semblance of purity. Having completed his toilet by applying a few drops of ink to the darns in his coat, and also to the little bits of white stocking that peep pertinaciously through the cracks in his boots, he sallies forth to collect the pence on which he depends, not only for his supper that night, but for subsistence during the morrow. His first object is to discover where he can make his bow to good audiences; and for this purpose he goes about prying in at the parlour-windows of taverns and public-houses, or, if foiled by the closeness of the blinds, stopping to listen for the sound of voices. The reading of a newspaper aloud drives him away at once, but hearty laughter affords him most gratifying encouragement. Assuming the confident air of a customer, he passes the landlord at the bar, glances at the company as he enters the coffee-room, and either sits quietly down and calls for a glass of ale (if he happens to have a few pence in his pocket); or, taking advantage of the observation his entrance has attracted, immediately addresses the company, hat in hand, with, "Gentlemen, would you like to hear a song or recitation this evening?" Most probably there is no answer. "Gentlemen," continues the busker, with a smile of confidence, "silence, it is said, gives consent, therefore I will make an attempt to amuse you;" and lest any body *should* speak, he commences a song or recitation directly; then another; and then, availing himself of one of the little circular trays on the table, he goes round the room collecting his pence, thanks his audience, bows, and exits; unless, indeed, some very good-natured person should patronise him by calling for a particular song, when, with the chance of fresh company dropping in, he will probably give an hour's entertainment very profitably. This, however, is one of the most agreeable scenes during his nocturnal wanderings, in the course of which he is always liable to be insulted and expelled by the landlord, or thwarted in the success of his appeal to the guests by the stern and imperative "no" of some one among them whose temper has perhaps become unusually acidulated by a touch of indigestion.

Some of these unfortunate beings are not only very pleasing singers, but gifted with a skill in music that enables them to accompany themselves very creditably, even on such an imperfect instrument as the accordion; while, for a solo, they will astonish you with the overture to *Tekeli* or *Lodoiska*, either on a pigmy trumpet or penny whistle. During the winter season, when the evenings are long, they will pick up as much as fifteen shillings a-week in London, having discovered, by experimental visits, the houses where they are certain to find indulgent landlords and liberal audiences. During the summer they frequent fairs, races, ship-launches, and other large assemblies, suburban and provincial. In the palmy days of Smithfield and Greenwich fairs, the busker invariably reaped an abundant harvest at those scenes of revelry.

Though generally realising a bare subsistence, and leading a career of obscurity, there have been some of the fraternity who, possessing peculiar talent, have attained short-lived celebrity and comparative affluence, both, however, proving equally ephemeral. Gouffe, the monkey-imitator, whose name always drew crowded audiences at the London minor, and major provincial, theatres, was indebted for his introduction on the stage to the proprietor of an establishment on the Surrey-side of the water, who happened to witness his feats of agility in climbing about the walls and

running round the mouldings of a spacious apartment at a tavern in the Blackfriars Road. On trial, he was found to acquit himself still better, not only on the stage, but in the circle of boxes and gallery, where his monkey-mimicry was further tested by presents of nuts, apples, and oranges, which he demolished in a style of the most perfect baboonery. Thus, instead of the few shillings per week he had been in the habit of picking up as a busker, he soon found himself in the regular receipt of as many pounds, to say nothing of the very handsome sums occasionally realised by benefits.

Sharpe, the ventriloquist, also commenced his career as a busker, and was so successful that he collected as much as fifteen shillings per night, and was obliged to have a trustworthy person with him to carry his halfpence. Subsequently he received a munificent salary at the Cider Cellars, and other places of public entertainment; and, during the summer, could always command a lucrative engagement at any provincial theatre. He was the son of a farmer, and when quite a child evinced a remarkable talent for imitating the cacklings, crowings, bleatings, barkings, neighings, bravings, and other peculiar utterances of the animals in his father's farm-yard. Long practice rendered him perfect in the entire range of ventriloquial mimicry. A *début* at any one of the principal theatres or assembly-rooms in London would doubtless have raised him at once to a high rank in public patronage, and might speedily have afforded a comfortable independence; but a very different fate attended him. Owing either to the injurious effect produced physically by the perpetual practice of ventriloquism, or as the natural consequence of late hours, constant excitement, and excessive conviviality, his mind became affected, and he died in Bedlam, a raving maniac, leaving his wife and family in the most abject destitution. It has been said by those who were intimate with him in the zenith of his prosperity, that the tricks he played on board steam-boats, at places of public resort, and among strangers generally, by the cry of an infant, the yelping of a dog, a facetious remark from the most staid-looking person in company, or some other imposition of harmless fun, were sufficiently numerous, varied, and amusing to have formed a volume quite as attractive as the popular work of *Valentine Vox*.

One of Sharpe's very intimate friends, and possessing, perhaps, more genuine talent in another line, was Newman, a fellow of infinite jest, whose bursts of facetiousness and displays of mimicry, in addition to his talent as a comic singer, were always wont to "set the tables in a roar." He was the son of a tradesman in the vicinity of Covent Garden; a man so well known, and of such unexceptionable reputation, that his name stands most honourably enrolled in the parochial records of Saint—No matter what, inasmuch as they would not be found to contain the name of "Newman," which was merely an assumption of the son, to prevent his family from knowing his degraded position.

He was one of those rollicking spirits who delude themselves with the idea that the world is all sunshine, the exuberance of their vivacity not allowing them to think seriously about any thing. Sights that would bring tears into the eyes of others throw them into convulsions of laughter; and the experience in their own persons of what people commonly regard as misery, is, to their conceptions, nothing more than a pleasing dilemma or amusing catastrophe. They pass their lives in laughter, and die with a jest on their lips.

In catching and portraying personal peculiarities, Newman was, in his humble sphere, without a rival. His imitations, of the London actors especially, were perfect. The voice of each was no sooner heard than it was greeted with a laugh of recognition, while the step, gesture, and peculiarities of attitude rendered the impersonation complete in all but the expression of the countenance. Of Liston, however, he managed to give a complete portrait, by puffing out his cheeks, and giving to his nose a slight curve upwards, with a piece of thread so fine as to be imperceptible at a distance.

Seated at a table, and leaning forward in one of Liston's assumptions of mystification, with a candle on each side of him, there was a vivid resemblance, quite equal to and far more striking than any thing which could have been produced by the pencil of an artist. For this, and his imitations of the rest of the London actors,—Kean, Young, Elliston, Kemble, Jones, Harley, Terry, Meadows, and others, who then composed the galaxy of dramatic talent,—he was well known to the frequenters of Offley's, the Cider Cellars, Coal Hole, and other houses of nocturnal resort among the "fast men" of the day. The manager of the Birmingham Theatre offered him an engagement, for his imitations alone, at five pounds per week, clear of travelling expenses; but he was then in too ill-health to accept it. After several months' suffering, under a most painful internal malady, he died in extreme poverty and wretchedness in a miserable lodging at Cow Cross,—“the last,” as he said, “of all his crosses.”

Among that class of buskers who depend upon their talent for recitations, and commonly find much better encouragement in the country than in London, there have been some extraordinary instances of downfall from a higher sphere. One was that of an actor named Comerford, many years the impersonator of minor characters at Drury Lane Theatre. During the latter part of his life he travelled about the provinces, reciting the most effective soliloquies from the works of our best dramatists, or going through entire scenes, and sometimes the whole five acts at once—as an entertainment before schools and private parties—of any play that might be called for. The modulation of his voice, to suit the different characters, was excellent, except in juvenile parts. He could not imitate properly the sharp shrill voice of youth; and it is related of him that, finding, one night, while reciting *Douglas*, he was creating disapprobation by the exaggerated intonations of his Norval, he called one of the schoolboys to him, and, having no copy of the play for the lad to read from, he gave all the speeches himself, in the third person, thus:

“This young gentleman's name is Norval. On the Grampian hills
His father feeds his flocks; a frugal swain,
Whose constant care is to increase his store,
And keep his only son—this young gentleman—at home.”

Poor fellow! if he had had somebody to keep him at home too, it might have saved him from dying in a workhouse.

Such, indeed, or something akin to it, is the usual fate of the fraternity, with very few exceptions; that, for instance, of—not an actor, but an *amateur* busker—a late eminent counsel, who was an excellent mimic, and being in his younger days of rather unsettled and thoughtless habits, and entertaining an extreme repugnance to the profession for which his father had had him educated, he left his home, and travelled the country as a busker, in company with an acquaintance who possessed some talent as a vocalist. The reverses they experienced were at one period so extreme, that they had only one pair of trousers between them, and the future counsellor laid in bed while his friend went out singing. Ultimately he entered the legal profession, through the generous help of one of its most distinguished ornaments, to whom he was indebted for all the pecuniary assistance such an elevation required for the development of his high talent.

Seriously speaking, the provincial busker would rather aspire to the countryman's smock than the barrister's gown, except, perhaps, in mere mimicry. His unfortunate conceit of his talent, combined with an utter incapacity for the drudgery of dry study, to say nothing of his want of a suitable education, are the chief causes of his contentment with a precarious subsistence, to obtain which he is compelled to be perpetually travelling on foot from one town to another, in all kinds of weather, at the average rate of from fifteen to twenty miles a day, unless, indeed, he happens to get a temporary engagement at some low concert-room. While yet young, his life is cut short by a fit of sickness, aggravated by destitution, and a pauper's grave rejects the least token that might revive the memory of his existence.

THE CHILDREN IN THE WOOD. BY A. J. WOOLMER.
[Society of British Artists.]

A STORY OF A HAUNTED HOUSE.

BY HOLME LEE, AUTHOR OF "GILBERT MASSENGER," ETC.
IN TWELVE CHAPTERS.

VI.—THE GHOSTLY FOOTSTEPS.

ON every succeeding day throughout the months that followed this first visit Laurence Royston was constant in his attendance on Nicholas Drew. He worked with diligence and success, notwithstanding the bright eyes that often overlooked him; and the old engraver was pleased and satisfied with his pupil. He was enthusiastic himself, and he thought Royston, under his cold cynicism, had sparks of the genial fire too. His coming also gratified Adie; for she liked change and variety, of which there was ordinarily but little in Nevil's Court.

It was not strange that after a while she grew to like him, because his manner towards her was impregnated with the subtlest flattery. He differed essentially from every one she knew, in his quiet ways of winning into and answering her unuttered thoughts. He made his mind, as it were, chime responsive to hers; he studied her face until he understood her feeling ere she could express it; he ob-

served her tastes and distastes, her little whims, weaknesses, and vanities, and played upon them with a master-hand, until he could wind and turn her any way he would, and all this without having committed himself by a single word. He went through it like a game of skill, in which the most astute must win; while she blushed, and was angry and astonished at herself in secret to see how much she was giving for nothing—unasked, possibly undesired. She could not lay the soothing unction to her heart that Laurence Royston so much as liked her; for if he were kind, almost tender, one day, he would be cynical and careless the next; if his eyes dwelt on her caressingly one moment, the next there came over them that flickering sinister light as of a cruel thought shining through.

Nicholas, as they learnt to know each other better, began to regard him with less favour; *why* was not apparent; he distrusted him, probably. One dark November night, Adie happened to be left alone in the room at Nevil's Court; Nicholas had gone out reluctantly on business, and Martha had been absent a few days in the country, where she was supposed to have gone to nurse her aged mother. The girl sat idly by the crackling wood-fire, twirling in her fingers the shrivelled relics of the wild white rose, which she had

fetched from its hiding-place to keep her thoughts company. In her eyes there was a deeper stiller expression than formerly, and a less frequent smile on her lips also; but the rich glow of her southern beauty had not lost a single tint. Her heart was restless, but not sorrowing.

Laurence Royston had been there in the morning, in his pleasanter mood; and as Adie sat alone by the fire, she was thinking within herself how dull they should be when he was gone away. She, at least, not Nicholas; for he had said that day, with a vehement expression quite unusual to him when Royston had left, "Adie, I do not like that man; I have been deceived in him;" and she had turned away, with a slightly angry flush darkening her brow. If the old man had struck her, it would have pained her less than hearing him speak thus. For the first time in her life, she felt resentful against poor Nicholas,—felt as if he had injured her; and she let him go out before her passion cooled. She was brooding over it now, when a sound caused her to raise her face and listen intently. In the corridor outside the wall, there went slow, distinct, measured steps; she could have counted them. Her cheeks blanched, and all the blood rushed back violently to her heart; but she kept her place within the broad light which the fire threw out upon the floor. The steps advanced and receded thrice, and died into indistinctness far beyond the room. Adie's angry thoughts had been put to flight by this; she longed excessively for Nicholas's return. A few minutes after, her heart gave a throb of relief, for she heard some person mounting by the outside stairway. She rushed to the door, and opened it in haste, to admit, not the engraver, but Laurence Royston.

"There is nobody at home but myself," said she, in confusion at his sudden and unexpected appearance. "Grizzie has gone down into the Barbecue."

She stood holding the latch in her hand, expecting him to depart; but he advanced into the room, and lifted his hat from his head, saying:

"It is a wet night, Adie; give me an hour's shelter. Will he soon be back again?"

"Yes; he promised to hasten as I was alone," she replied; and she shut the door, for the wind blew in coldly and strongly.

Royston stood by the fire, resting his arm upon the mantel-shelf; Adie sat down in her old place, secretly wishing that the visit had been better timed, and feeling an inward conviction that Nicholas would be displeased to find his pupil there at his return.

"What is the matter, Adie?" asked Royston gently. "You look as if you had seen a ghost; such wild eyes and pale cheeks!"

"I have heard the footsteps to-night," replied she, looking up in his face. "I was wishing so much that Grizzie would come back when you arrived. I dare not be left alone again in the house."

"Silly Adie! I thought you had more courage than to tremble at a sound. What harm can those footsteps do you?"

"They make me nearly sick with fear; I should go mad if I heard them often; they make my blood cold in my veins; I cannot describe it. If you had not come, I should have gone down to Mrs. Parkes and Job until Grizzie came home."

"Now that I am here, Adie, let me speak to you: I have a word for your ear alone. Will you listen to me, Adie?" Her colour came and went rapidly, for there was a passionate tenderness in his voice that she could not misunderstand; but an instinct of maidenly reserve whispered that he ought not to have sought her clandestinely, and stilled the rush of joy to her heart. She drew away her hand which he had taken, quietly and with a certain coldness, but she could not shroud the lustre in her eyes that belied the repulse. "Adie," he repeated earnestly,—"Adie, have you never seen my love for you? Is my dear hope to fail?" That strange voice of his had a truthful ring in it now he had left acting. A quick change passed over the girl's face; she put up her hand to shed back the long hair from her brow, and looked at him—openly, honestly, questioninglly.

Some doubt of him must have crossed her mind then, for he drew back before her glance which expressed it. "Adie, if I tried you, it was but to spare myself pain; I could not make my heart a football for a girl's caprice," he said deprecatingly. "I did not know you until lately, and since then you have been all my thought. Forgive me, Adie, forgive me; at least if you deny my love."

A thrill ran through Adie's frame as if a cold wind had breathed upon her, that quick convulsive shiver which is said to creep along the nerves when some step passes over the spot where our grave is to be made. She remembered Nicholas's few stern words that morning, and an undefinable sensation of fear, pain, and longing, stole into her heart. He saw the wavering, and was swift to turn it to account. Warm loving words, passionate vows, fell softly, dreamily, into the porches of her ears, and passed on to the responsive heart-strings making them all musical with delight; the rosy blush deepened; the lustrous gleaming eyes grew humid, and her lips quivered into a confession.

"Then, Adie, you are mine—mine!" cried Royston exultant; "you will not let any one separate us. I love you better than my life, and you must give me the same love; if you love me best of all, you will leave all for me." Adie remembered poor Nicholas's kindnesses; and her conscience, yet uncalledous, reproached her for deceiving him. "Do you regret already?" said Royston; "do you fear I cannot hold my own? Keep our secret until I bid you speak, and all will be well; promise me this." Adie promised. "I shall come to-morrow. Now I will leave you, lest Nicholas should return. You are not afraid of the footsteps now, are you?"

"O, no," she replied smiling. But he lingered still, there were so many warm assurances and farewells to make, so many warnings to give; but at last he was gone, and Adie sat down again by the fire alone. Her mind was in a whirl, she saw nothing clearly; one sensation only was distinct, and that was painful,—she had given her word to deceive poor old Nicholas—confiding, honest, old Nicholas; that was bad; it was wicked. She felt less happy than before Laurence Royston had said he loved her; what she had coveted so earnestly had brought the first dark stain upon her conscience. She tried to thrust the obtrusive self-reproach aside, but it refused to be banished. While she was thus at war with her better genius, the engraver came in. He had ascended the steps unheard, and appeared before her so unexpectedly, that she started and uttered a cry of alarm; which she explained by saying that she had heard the footsteps in the corridor soon after he had left her, and that since every slight noise made her tremble.

"The footsteps?" repeated Nicholas in a troubled tone.

"Yes; they came and went three times between the closet and the stairs, and then ceased," said Adie.

The old man stood before the fire in his wet tartan, gazing sadly into the red caverns of the embers. "They have begun early this winter," he remarked. "What is it they forbode?"

"Do you take them for an evil prophecy, Grizzie?" the girl asked, going to him affectionately, and disencumbering him of his drenched cloak and hat.

"Yes, child, they have always proved such; but perhaps it may not be to you or me, but to others in the house. Listen!" The regular echoing tramp came up the corridor again. Adie trembled, as she clung to the old man's arm; the steps came nearer and nearer,—threatening angry steps they were. They traversed the length of the corridor several times, and then all was again still; Adie could hear the beating of her own heart in the hush that followed. Nicholas passed his hand gently over her head, which rested against his breast, saying, "God shield thee from harm, child!"

At that moment an impulse came strongly upon her to tell Nicholas what had passed during his absence; but a thought of Royston checked the confession on her tongue,—might he not be displeased with her?—so she held her peace, and withdrew herself from the kind arm which had been so

long her protection. She went to the window, and looked out into the dense, blown, wintry night; there was a faint reflection on the wet pavement of the court from some fire in a room below, and her eye fixed on the glistening pools. It was not possible she could have been deceived, but she half-doubted the evidence of her senses, when the figure of Laurence Royston emerged stealthily from the open doorway of the house, and darkening the light for a moment, passed out at the arch into College Lane. She made no remark, but returned to the hearth; Nicholas was unlocking the doors of the oak-closet. He went in alone, leaving them ajar, and presently called to her: "Adie, did you or Laurence Royston observe where the cabinet stood last summer?" he asked. "I have not been in here since I showed it to you both, and it seems to me that it has been thrust from the wall; it certainly stood close to it formerly."

The girl could not remember, but she went in and looked. "I did not notice that there was a door behind it, Grizzie, so it must have been moved, or I should certainly have seen it," said she. "Is the door locked up?"

He shook it strongly, and replied, "Yes, it is fast; but the fastenings are without. The bolts are gone from the staples inside, and there is no key, unless the one that belongs to the outer door opens this also."

He fetched it and tried, but it turned in the wards without unlocking it. He made Adie repeat her description of the footsteps, and questioned her particularly as to whether she had heard any other noise, to which she replied that she had not.

"I will look further into the matter to-morrow," said the engraver seriously. "We have little to lose, it is true; but evil-disposed persons have been known to make use of such legends as attach to this house in Nevil's Court for bad purposes. It is well to be on our guard. The cabinet has been moved from without; something has been introduced through the wide crevice between the door and the wall, and so it has been pushed forward."

That night both Nicholas and Adie lay long awake; the one listening for the footsteps, the other revolving the evening's occurrences with alternate thrills of joy and pain; but no sound disturbed the stillness, except the loud Münster clock and the gusts of sighing winter wind. The following morning Nicholas rose early, long before Adie was awake, and went down into the court, and thence by the common stair into the corridor. He carried with him a lantern, and narrowly examined the floor, which in the thick dust showed traces of feet backwards and forwards. This circumstance convinced him that some actual person had occasioned the previous night's alarm, and that it was not the ghostly visitant Adie had heard. He tried the door of the closet, but could not stir it; and then returned to his room, where he applied himself as quietly as possible to undoing the closed-up entrance from it to the corridor. This was a work both of time and difficulty, and it was still undone, when he heard Adie moving in her room; he immediately desisted, and lest she should be troubled by needless alarms, he made every thing look as much like what it did before as possible. After breakfast he fetched a blacksmith, and had the cabinet secured to the wall of the closet by several strong staples; it then completely covered the door, and made an entrance by that means next to an impossibility.

Royston came while the man was at work, and expressed his approval of Nicholas's precautions; he afterwards examined the corridor with him, and suggested that the door into it should be opened, that the nocturnal visitant might be detected. The engraver privately told him what he was doing, but said Adie must not know, or she would be in a constant tremor and excitement. Laurence promised to repeat nothing.

After that day the engraver never left Adie alone in the house; Martha returned; and the weeks crept on until nearly Christmas. The footsteps were heard no more, and the first impression of alarm died away; Nicholas even began to talk

of once more closing up the door, because it admitted draughts; but the doing of it was deferred from day to day, until it was forgotten again. But one black moonless night, as the engraver lay awake, he heard a sound passing by the wainscot that caused him to start up in haste. It was of a stealthy, naked foot, and a hand drawn along by the wall as if feeling the way. He passed into the large room, and succeeded in opening the door noiselessly; but when he flashed his light into the corridor, it was silent and empty, only a rush of wind sweeping up it extinguished his candle. He went no more to bed, but sat listening and expectant; but the visitant, whether of flesh and blood, or of shadow and spirit, came not again.

This time he did not think fit to speak of what he had heard to any one. However, Martha, whom nothing escaped, had been startled by the same noise, and had moreover seen with wonder a figure that she well knew steal across the court shortly after. In the winter nights a lighted oil-lamp hung inside the gateway of the court. Now possibly that secret visitant had not calculated that there were such wakeful eyes and such industrious thoughts upon his track as Martha's discovery entailed. Her web, which had hitherto run tolerably straight, was all at once thrown into inextricable entanglement.

FILOTSAM AND JETSAM.

IN certain manors adjoining the sea there are old-established rights and customs which empower their lords, or their ladies, to claim whatever valuable fragments may be thrown up by the waves, and which are known in manorial language as Flotsam and Jetsam.

A periodical publication like ours is a manor whose boundaries extend as far as the ocean, and beyond it, for we have already stretched to the antipodes. Into our storehouse comes tribute both from sea and land; not only solid bales of intellectual wares, but also broken morsels of literature,—bits of wreck perhaps,—from which we shall use the privilege of selecting the most precious. Wafers and strays like these must be a heterogeneous sample, from the very accident of their being thus collected. What the rest may prove the reader cannot possibly guess from the specimen presented as

AN INFANT ARBITER OF LIFE AND DEATH.

The *Augsburg Gazette* relates a curious fact in reference to the judicial customs of Turkey.

A Turk has been condemned to death for the crime of murder, committed upon an individual whose wife happened to be *enccinte* at that moment. Before the execution could take place, the widow of the victim was delivered of a boy. The capital punishment consequently remains suspended till the child just born is come of age, when it will be his duty to decide whether his father's murderer shall be allowed to redeem the price of blood by a money-payment, or whether it be his will that the condemned person shall be put to death. Till the decision can be given, which this child alone has the right to make, the murderer must remain in prison.

E. S. DIXON.

RISTORI.

THE appearance of Madame Ristori on the Parisian stage has been the principal feature of the dramatic season, as it was two years ago, when—despite the scepticism of the French mind with regard to foreign talent, the tyranny of theatrical conventionalism, and the serious obstacle to success of a foreign idiom in this cosmopolitan capital, which will not give itself the trouble of comprehending any tongue but its own—this new candidate for dramatic honours took her place, by divine right of genius, in the highest rank of histrionic art.

It was on Tuesday, the 22d of May 1855,—while the vastness of the Paris Exhibition, influencing the fashion of the time, was prompting the getting-up of plays of a hundred *tableaux*, monster concerts, and circus-spectacles of a thousand performers—that Adelaida Ristori, heralded only by the measured praises of the *Ravista Contemporanea* and the conflicting reports of rumour, first presented herself before the critical areopagus of Paris, convened in the *Théâtre des Italiens* to witness the performance of Silvio Pellico's pale transcription of Dante's most passionate, most pathetic page, brought out by a *troupe* of four or five actors, in an unknown tongue, with great sobriety of decoration, and no other promise of orchestral relief than that afforded by the execution of a lugubrious overture in C minor, by a band whose poverty of numbers and of talent contrasted most unfavourably with the musical traditions of the house.

"The thing will be a failure," whispered the critics, with a shrug, as the curtain rose after this inauspicious beginning. La Ristori herself, with her charms of person, of manner, and of voice, produced a favourable impression; but the piece was so watery, the other actors were so tame and so "provincial," that the audience, through the two first acts, remained cold, uninterested, incredulous. Evidently the critics were right, and the appearance of the "Comedians in ordinary of his majesty the King of Sardinia" was doomed to be a failure.

But suddenly, in the third act, in the interview between Paulo and Francesca, a sort of electric thrill went through the house, revealing to that listless and disappointed audience the presence of a great tragedian. Every eye was now riveted to the stage; and the spectators, breathless, and completely absorbed by the intensity of passion, the irresistible pathos, the surpassing grace and tenderness of Francesca in this marvellous creation, burst forth into a tumult of applause at the conclusion of the scene. The rest of the performance was a continuous triumph. Her appearance in *La Locandieri* of Goldoni, in which she played that same night, showing herself to be as admirable in comedy as in tragedy, was the occasion of a new ovation. Recalled over and over again after the fall of the curtain, she was overwhelmed with bravos and with flowers. The cause of the brilliant stranger was won; and, by next morning, all Paris had learned that a star of the first magnitude had risen to the zenith of the dramatic heavens.

The pre-eminent position thus suddenly attained by Madame Ristori has been abundantly confirmed by her success in the various characters in which she has subsequently appeared; and her reception in London and other capitals, and the enthusiasm with which her return has been greeted by the public of this usually inconstant city, have fully legitimated the verdict which has awarded to this magnificent artist an equal share in the honours of dramatic supremacy, so long the exclusive possession of her great rival, Mademoiselle Rachel.

Adelaida Ristori, now about thirty-five years of age, comes of artist-stock, and may be said to have passed her life upon the boards. Her early years were not happy; but her beauty and talent gradually improved her position, and at length paved the way to her marriage with the Marchese del Grillo, a representative of one of the oldest families of the Sardinian aristocracy. Her private life is most exemplary; and so high is her conception of conjugal and maternal dignity, that she has formed an irrevocable determination never to appear in the character of a courtesan.

In person, Madame Ristori is tall, slender, and beautifully proportioned, though somewhat thin, with the hands and feet of the Venus of Arles. Her finely-formed head, with its luxuriant brown hair, and its open intelligent brow, is admirably placed on her fair and flexible neck; and her smooth white shoulders boast the rare median line so dear to sculptors. Her complexion is brown but fresh; her eyebrows are black and delicately arched; and her dark hazel eyes are full of fire, of sweetness, scorn, tenderness, and

mirth. Her nose is small and well shaped, and belongs to the Roman varieties of that feature; her mouth is mobile and expressive in the highest degree; her lips are full and red; and the regularity and whiteness of her teeth give remarkable brilliance to her smile.

Her port is noble, easy, and sure; her gestures are graceful, dignified, natural, and so perfectly in harmony with the sentiment portrayed, that their apparent spontaneity completely hides the consummate art of which they are the result. Her voice, admitted by all to be the finest organ of the modern stage, is clear, penetrating, sonorous, yet full and mellow; and its inflexions, like the play of her features, of her glance, and of her movements, command the entire range of human feeling.

In the rendering of love, hate, terror, apprehension, doubt, scorn, pity, tenderness—of joy, sorrow, aspiration, or despair, she is equally successful; the rapidity and vividness with which the most opposite expressions succeed each other in her countenance being comparable only to the shifting play of colours in the diamond.

In personating a character, she identifies herself so entirely with her part, that her face flushes or pales with the varying excitement of her character; and as she never uses either paint or powder,—those "lies and medicaments of the visage," as Ovid calls them,—the play of her features is thus completed in Nature's own way. Whatever the sentiment or situation of the moment, every thing that goes to make up the *ensemble* of the actress moves and speaks in unison; so that, whether portraying the complex emotions of life, or the convergent subsidence of death, she is, from head to foot, in look, voice, and attitude, the living, vibrant impersonation of her theme. And perfect as is her command over each separate element of expression, it is still the harmonious concurrence with which all are brought to bear at once in the rendering of every thought and feeling of her part that constitutes the distinguishing quality of her acting; a remark so true, that it needs but to have heard her read a single *scena* in a drawing-room, with none of the scenic aids to dramatic effect about her, yet supplying them all by this concurrent mobility of feature, voice, and gesture, to be convinced that herein lies the chief secret of her power.

The characters in which Madame Ristori has won her present brilliant reputation, are (besides the two already mentioned) Schiller's Maria Stuarda, Alfieri's Mirra, and the Medea of M. Ernest Legouvé, so skillfully translated for her by her accomplished countryman, Joseph Montanelli, that the Italian version of this play is far superior to the original both in beauty and in force. To these she has now added Ottavia, in Alfieri's *Nero*,—a weak and tedious composition, which all the magnificence of her acting only saved from a total failure,—and Camma, in the three-act tragedy just written for her by M. Montanelli, and in which she has achieved one of her most decided triumphs. Her repertory will be still further enlarged by the addition of Lady Macbeth, Fazio, and *Les Fausses Confidences*, which have been translated for her with special reference to her approaching engagement in London. Her new creation of Camma, with her Medea, are usually regarded as the finest of her impersonations. Yet how touching, how tender, how exquisitely pathetic she is in Francesca! With what lurid splendour does her passionate love for Paulo gleam through the cloudy horror and remorse of the adulteress; and with what sublime tenacity, with a clasp that not all the fiery tears of eternity shall burn asunder—condemned by her conscience, but absolved by her heart—does she cling to this fatal, this overmastering affection! And in the concluding scene, how touching and how *natural* is the way in which she dies,—as one who, exhausted by suffering, looks upon death as a deliverer; and as she falls expiring, with what imitable filial grace does she draw her white robe over her wound, to hide the sight of her blood from her despairing father; and how marvellously done is the expression of calmness and repose that spreads itself, when

all is ended, over the face of this fair victim of an untoward destiny!

And in *Maria Stuarda*,—in the magnificent scene between the two queens in the castle-garden, which resumes the whole interest of the piece,—with what admirable skill does she depict the various emotions of the wronged sister, the outraged woman, the captive queen! How perfectly does she render the conflict between the sense of injury rankling in her heart with the dictates of prudence counselling the suppression of the upbraidings that rise to her lips; with what dignified grace of voluntary humility does she meet her stern and ungracious visitor, at once her rival, her gaoler, and her foe; with what touching gentleness does she endure the ironical compliments and rude sarcasms of Elizabeth; with what delicate womanly tact does she appeal to the womanly sympathy that must surely exist—could she but reach it—in this woman's bosom, not perceiving that the very treasures of beauty, eloquence, and grace which she is pouring out at her feet, do but serve to embitter the hatred of the rival, and provoke the tyranny of the despot; and by what marvellous gradations, as this fact becomes evident to her, does she pass from supplications, which she feels to be useless, to remonstrances, which she sees to be equally vain; until, stung beyond endurance by Elizabeth's taunts, and roused to desperation by the sense of wrong, she abandons herself to the storm of passionate indignation that fills her soul, and hurls upon her haughty and implacable enemy the bolts of her scathing denunciation and defiant scorn!

In the first four acts of *Mirra*, justly characterised as "a weaker *Phèdre*," we see only the nurse, Cœnone, bewailing the inexplicable malady of the princess; her father, ignorant of the terrible fatality that has overtaken his child; her stupid mother; and the rejected lover, who commits suicide just when he ought to bestir himself on her behalf. But how superb she is in the last act, despite the utter repulsiveness of her part! What eloquence in the guilty eagerness with which she listens for the accents of the king,—in her lamentations over the horrors of her fate,—in the gleam of unholy joy that irradiates her face when her father, grieving for her illness, and comprehending nothing of the tortures to which she is a prey, takes her tenderly in his arms,—and in the look, so full of scorn, of sorrow, and despair, with which she watches his retreating steps, when, the hideous truth at length discovered, he turns from her in horror, drawing her mother after him, and leaving the victim of a supernatural vengeance to die alone, unpitied, self-aborred! In her part of Medea it would be difficult to specify the passions most vividly portrayed,—for love, jealousy, scorn, rage, hatred, tenderness, maternal devotion, and despair, all are there,—or to cite the most effective points of a creation which is living, complete, and rounded out with the breath and energy of nature from one end to the other.

Her entrance upon the scene a homeless, friendless wanderer, sustained by her boundless devotion to her absent husband, to her weary fainting children,—the ineffaceable majesty of the queen, reduced to beggary on a foreign coast,—her meeting with Creusa, and the unequalled and horripilant pantomime which, at the thought of Jason's possible infidelity, transforms her into "the leopardess of the forest, when, seized on by a terrible and roaring joy, with sudden bound she falls upon her prey," and she draws herself and her imaginary victim backwards, with a crouching, beast-like movement, into an imaginary den, tearing, with stiffened claw-like fingers, slowly, gloatingly, limb from limb, the quivering and bleeding body,—the transition from confidence to suspicion as the dialogue between herself and Creusa goes on,—her burst of jealous fury when Jason's treason is revealed, and the gleaming triumphant scorn of her incredulous "*Vedremo!*" as she turns with the smile of an incensed Juno from her terrified and shrinking rival,—offer a series of effects absolutely perfect in themselves, and so admirably co-ordinated, as to make of this first act a living, breathing whole, which, at once entirely natural and

intensely dramatic, is perhaps without a parallel on the modern stage.

To recapitulate the magnificent effects of the succeeding acts would be to cite every passage pronounced by her throughout the play. Who that has witnessed it can forget the change from rapture at the sight of her long-sought husband to consternation and bewilderment as he turns coldly from her; the eloquence of her look and attitude (with that inimitable *pose* of the arms, which of itself would suffice to tell the depth of the shadow that has fallen upon her soul), and the mingling of indignation, despondency, and reproachful tenderness in her tones, as, standing unnoticed behind her faithless lord, she murmurs, "*Giasono, io son Medea!*" the energy of the "*Se li ami!*" drawn from her by Jason's insidious question; the scorn with which she unmasks his hypocrisy when he assigns his horror of the atrocities committed by her as the motive which has determined him to divorce her, sums up, one by one, these hideous deeds, committed at his instigation and for his benefit, and defies him to sunder two destinies wedded together by such monstrous community of crime; and the transition from the fury with which, when the affections of her sons have been stolen from her by Creusa's gentleness and gifts, she drives them from her, reproaching them with their father's perfidy, and apostrophising them as "Jason's image, traitorous as their race!" to the remorseful tenderness with which she takes them back to her heart,—his children? no, her own!—sole consolation of her woes, her life, her darlings"? Who has not felt his blood run cold at her hissing tones of concentrated rage, as she moves across the stage with the stealthy sidling gait of a hyena, glutting her vengeance with the anticipation of the moment when, "stealing thus along the wall at night, like a shadow, into her chamber, she shall plunge her dagger into the fair breast of the abhorred Greek"? Revenge struggling with pity and remorse,—the resentment of the repudiated wife overborne by maternal abnegation,—her utter desolation when her children are torn from her,—her transports of gratitude and joy when Jason, moved by her anguish, offers to leave her one of them, and bids her choose which she will,—her despair when, unable to make "a choice that, whichever she shall take, must rob her of his brother," she sees herself deprived of both, and driven forth into a widowed and childless exile,—the absorption of all other feelings in the thirst of vengeance, "some unheard-of horror" that shall strike the heart of Jason through Creusa and the children,—the melting away of her revengeful projects at the touch of her children's hands,—her attempt to escape with them, and the concluding scene, after Creusa's death, when, driven by the populace to desperation, and having killed them rather than allow them to be torn from her by her husband's orders,—to Jason's furious demand, "My sons! who killed them?" she points to him with her dripping dagger, and sternly answers, "*Thou!*" as the curtain falls,—are one continuous triumph of dramatic power.

This version of the sombre tragedy of Euripides was written by M. Legouvé expressly for Mademoiselle Rachel; but was refused by her on the ground that a part so full of horror as that of Medea was unfit for production on the stage. And she was undoubtedly justified in this refusal; for, interpreted by her, with her uncompromising severity of style, the part of Medea would have been too revolting for artistic representation. The piece was accordingly withdrawn, and remained in its author's portfolio until brought before the public by Madame Ristori. And such is the softening charm thrown by her over all the details of her part, and so skilfully does she attenuate the crimes of the barbarian princess by the vividness with which she brings out her grandeur of soul, and her passionate tenderness and devotion, and the enormity of the wrongs heaped upon her by her selfish and perfidious spouse, that "*la terribile Medea*" is brought back into the sphere of our sympathy, and, so far from exciting our disgust, commands our pity and admiration.

POLYGLOT READINGS IN PROVERBS.

NO ONE KNOWS WHERE THE SHOE PINCHES SO WELL AS HE THAT WEARS IT. I WOT WEELE WHAR MY AIN SHOES BIND ME (Scotch).—Erskine used to say, that when the hour came that all secrets should be revealed, we should know the reason why—shoes are always made too tight. The above proverb is commonly ascribed to Æmilius Paulus; but the story told by Plutarch leaves it uncertain whether Æmilius used a known illustration, or invented one. The relations of his wife remonstrated with him on his determination to repudiate her, she being an honourable matron against whom no fault could be alleged. Æmilius admitted the lady's worth, but pointing to one of his shoes, he asked the remonstrants what they thought of it. They thought it a handsome well-fitting shoe. "But none of you," he rejoined, "can tell where it pinches me."

A BOW O'ERBENT WILL WEAKEN. "The pot that boils too much loses flavour" (Portuguese).—*Pancta que murto ferve o sabor perde.* "All work and no play makes Jack a dull boy."—"This nation, the northern part of it especially, is given to believe in the sovereign efficacy of dullness. To be sure, dullness and solid vice are apt to go hand in hand. But then, according to our notions, dullness is in itself so good a thing—almost a religion. Now if ever a people required to be amused, it is we sad-hearted Anglo-Saxons. Heavy eaters, hard thinkers, often given up to a peculiar melancholy of our own, with a climate that for months together would frown away mirth if it could,—many of us with very gloomy thoughts about our hereafter,—if ever there were a people who should avoid increasing their dullness by all work and no play, we are that people. 'They took their pleasure sadly,' says Froissart, 'after their fashion.' We need not ask of what nation Froissart was speaking." (*Friends in Council*.) "The mill that is always grinding grinds coarse and fine together" (Irish).

W. K. KELLY.

NOVEL-READING.

"Pray put away that book;" "I wish you were not so fond of novels," and the like phrases of displeasure and reproach, are familiar to the lips of many mothers, to the ears of many daughters. Why is it that this class of books is so vehemently decried by careful, sober judging, anxious parents? Why is it that even those novels which they themselves would admit to be good ones, valued by the highest minds among us for their elevated tone and pure morality, their graphic delineation of scene, character, or circumstance,—novels that they themselves derive pleasure, and perhaps profit, from perusing,—they would fain jealously keep from their children, more especially from their daughters.

"Novels are very well," a matron remarked in our hearing the other day. "I enjoy few things better myself, than a really good, interesting novel. But for my daughters, it is a different thing. I consider such books decidedly dangerous for young girls. They exert a bad influence on growing minds, especially on feminine minds, by nature inclined to an overbalance on the side of feeling. They excite the imagination, arouse morbid emotions and aspirations, and so render them unfit for the homely duties and aims of common life, and cause them to feel unsatisfied with its realities."

And there is reason in this. Novel-reading, persistently

and incautiously indulged in, has this effect upon young undisciplined minds. It would be useless to deny it. On the other hand, it is equally indisputable that some of our best impulses are often fostered, the germs of our noblest ambitions cultivated, indirectly and unconsciously, it may be, but surely, by this same equivocal and perilous means. Surely there are few amongst us who cannot trace to some such source the first visible existence of an impression, the first assertion of some feeling or yearning, which perhaps has influenced for good the formation of the character, and, in a measure, the course of the whole after-life. For it is to be noted, that though "a good novel," i. e. one both sensible in style and excellent in tone, may give a false idea of life to those as yet utterly inexperienced in its ways, it will always hold up a lofty ideal of character; and its standard will be an elevated one by which people, motives, and actions are valued.

Therefore, one would naturally ask, What result but good can be effected by the study of such books? Let us try, dispassionately and impartially, to examine into this question, viewing it, not only from the stand-point of one who appreciates and is grateful for the many beneficial influences which undoubtedly may be derived from certain novels; but also taking in the side of those who prize youthful freshness and singleness of heart, girlish simple-mindedness, and untouched purity of feeling, as treasures too precious to be suffered to approach even the boundaries of debatable land.

We believe that a certain amount of ill is apt to be generated when a young mind, unprepared by reflection, unbraced by experience, plunges into the delicious waves of fictitious literature. The first danger arises out of that exaggerated idea of the superior importance of the emotional or subjective over the practical and objective in the affairs of life; the undue magnification of love as the one sole aim and end of life, which we almost invariably find in books of this class. "False ideas" must assuredly be received into the mind which implicitly accredits the life of novels as the life of this busy, many-sided world. And both boys and girls are liable to be thus deceived, although not equally. Not equally, because the two natures are different; the one more impressionable in the first instance, and more ready to succumb to imaginative influences; and also because the education and way of life of a boy takes him comparatively out of himself, leaves him less time for fancies and speculations, and is better calculated to right any subjective bias of his mind. The girl's employments, on the contrary, are chiefly sedentary, her recreations even, less physically active; while the nature of her studies appeals but seldom to the reasoning and mathematical faculties, and her life shows her little of the outside world. She has in herself, therefore, no corrective to the too highly wrought descriptions of characters, passions, and events, recorded in novels, unless she possesses an amount of cool judgment and plain practical sense rarely found in early youth, and by no means indicative of the highest type of mind when so found.

Novel-reading, we are thus bound to conclude, if systematically indulged in, and especially by girls, will probably result in the acquirement of those "romantic notions" and "false views of life" so much deprecated by the parents and guardians of youth. Blanche and Maria, under this sort of training, look coolly on all matter-of-fact affairs, and give their best energies, direct their highest aspirations, towards something as yet vague and unformed in the future. The cares and duties of home are too small for their heroic capacities; the affection of father, mother, brothers, and sisters does not satisfy their deep and yearning hearts. Blanche, a damsel gifted with health, intelligence, loving friends, and a peaceful home,—Blanche goes on imagining miseries for herself, and adroitly weeding out all the homely, sweet happiness which life offers her. She is unappreciated, misunderstood by all around her; their ways are not her ways, and she arrogantly assumes that it would be sinking herself to grow to their level. The first, best years of womanhood thus pass, and

It is not till they are passed that she recognises the unique treasure she has let slip—the absolutely priceless jewel she has lost—for ever. Pity her as she slowly wakes—aroused, it may be, by the shock of some great, real trouble—to the knowledge of how morbid was the pain, how senseless the discontent, how forced and imaginary the so-called “suffering” of those years,—those irrevocable years, which should have seen her fresh of spirit, brave of heart, cheerful in temper, the brightener of her home, the helper of those nearest her. But her nature has strength, strength hitherto misdirected, and she will arouse herself; she will discipline the wild feelings, order anew the untrammelled energies; and her after-life may do much to rectify to others those misspent, wasted years. But, alas, nothing in the world can give back to her the freshness and sweetness and gladness of girlhood. “A woman may hope one day to be an angel,” a poet once said; “but she can never again be a girl.”

Maria is of a different and commoner nature; weak, and inclined to sentimentality, in which form her romance evinces itself. She is prone to confidences with female friends; writes long letters to the confidante *par excellence*,—letters with the invariable postscript, “Burn this directly you have read it.” Love is of course her grievance; and Maria is always equally in love and in distress, just like a heroine, as she consoles herself by recollecting. Her brain teems with visions of chivalric Arthurs, noble-minded (but low-spirited) Ernests, devoted Henrys, &c., of whom she has read so much. By the aid of her ready imagination she transmutates into the likeness of these gentlemen the honest hard-working Messrs. Brown, Smith, and Jones—young men of her acquaintance. O, beware, soft-hearted Maria, of placing faith in those well-conned pictures of lovers and husbands. When Mr. Brown proposes, don’t expect him to fall at your feet, nor dash his hand upon his forehead, nor glare fiercely, nor gaze with indescribable tenderness, nor, in short, to fulfil any of those conditions you have been taught to believe inevitable to declarations of the kind. When you are engaged, moreover, do not assume as a matter of course that every other interest in Mr. Brown’s life is swallowed up by that of love; and that his every thought, his looks, his words, must all naturally converge to you, and you alone, for the remainder of his natural life. Do not assume, do not expect this, or woful disappointment, selfish pain, and vexation of spirit, will inevitably be your lot. Not one man in ten thousand loves with exclusive devotion; and no man is at once so desperate and so unchanging, so passionate and so unselfish, so fiery fierce and so thoughtfully tender, as your favourite romances would have you to believe. These several characteristics belong to separate idiosyncrasies—widely differing orders of individuals. In real life it is oftenest the ordinary, commonplace-seeming people, quiet, and leading unnoticable lives, who make no fuss about their feelings, and are, in brief, neither romantic to hear about nor picturesque to see, who are most deep-hearted, constant to one idea, one faith, one memory; and who, perhaps, in their own still, undemonstrative way, suffer most and endure most.

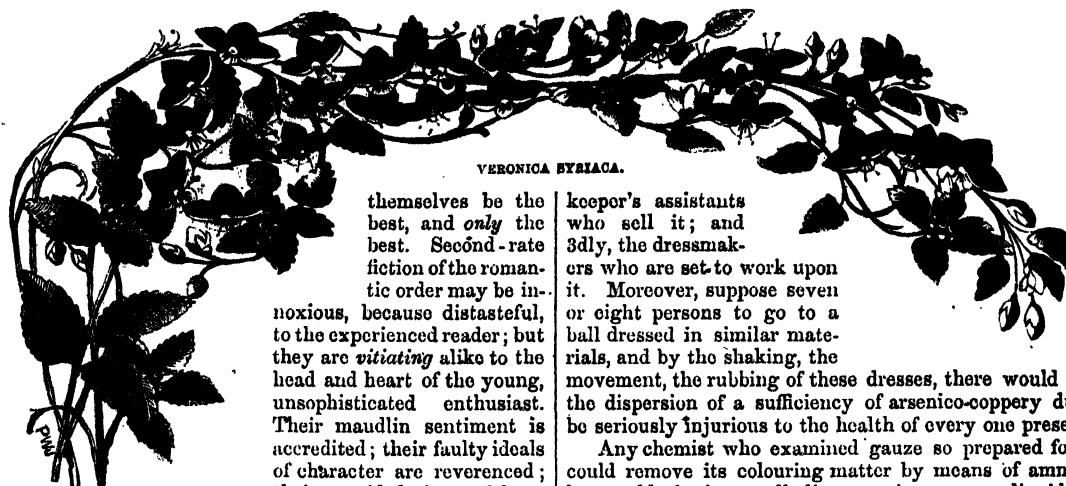

No, Maria. If your Mr. Brown be a good man, and love you truly, it is quite reasonable to suppose that the *hazen* of his busy multifarious thoughts will always be that same little “you,” to which, tired, embittered, or world-weary, he will instinctively turn for comfort and rest and help. See that you afford all this to him, and be content. Wholesome, every-day, household love is, after all, a better thing to live on than all the “impassioned,” “soul-subduing,” “intense” kind of thing that sounds so well in novels. Bread is more nourishing than *tipsy-cake*.

Women in fiction are generally much more correctly drawn than men. This is attributed to the preponderance of women-writers of such books, who naturally delineate their own nature most faithfully. But another and scarcely less probable solution of the question may surely be found in the fact, that young women being generally great novel-

readers, and strongly impressed by what they read, are apt unconsciously to copy the types of womanhood therein set forth, to the destruction of whatever originality they themselves may be endowed with. We talk of the present system of female education tending to stamp all women as with one likeness, and turn them out as of one mould. Has not the indiscriminate study of novels something to answer for in this respect? Must we not confess that our friends Blanche and Maria are, in fact, but real-world, flesh-and-blood versions of certain Isabels and Helens we wot of in certain three-volume records? Only unfortunately, while the novelist can fashion his heroine as he will, and make her, in spite of her wrong ideas, her needless desperation, and her generally picturesque unreasonableness, courageous, high-minded, and perhaps, at the end of the book, patient, gentle, and very fit to fill the position of wife and mother,—while the autocratic novelist can do all this, human nature is less happy and less potent. The girl whose character is influenced by such traditions, who entertains an ambition to be like Isabel, and voluntarily or involuntarily imitates her ways, her sayings, doings, and thinkings, is apt to stop short of that which is really noble and beautiful in the imaginary woman, while she is satisfied with catching the outside peculiarities, the romantic surface, which a false taste and a degenerate ideal teaches her to consider admirable and becoming. How many girls, so influenced, have learned absolutely to cultivate a passionate temperament as something rather “fine” than pitiable; and have clenched their hands, uttered fierce words, rushed about the house, knocked about the things nearest them in a fashion most dismaying to their quieter relatives and friends,—in a fashion which they would be ashamed to follow if Isabel had not given them the precedent,—dear, handsome, impetuous, interesting Isabel, who is so good and true-hearted in spite of it all!

Again, what a picturesque characteristic, in a novel, is that well-known “proud reserve,” that dignified reticence, which never shows what it feels, and seldom says what it means,—which expresses six hearts full of emotion by a tightening of the lip or a quiver of the fingers,—which lives and suffers, dies and makes no sign! How interesting all this can be made in a book; how intolerable, how unlovable, how unprofitable it would be in real life! Happily humanity cannot attain to the ultimate perfection of this type of being. No woman can carry out to the full extent such an idea of stately calm; no woman ever succeeds in thoroughly becoming such an ice-encrusted volcano. Still she may endeavour, and tend towards such an ideal; but O, young ladies, my dear friends, if you *must* copy fictitious personalities, I do entreat you let your model be after another pattern than this last and worst of all! Do not attempt to distort your features and behaviour into that spurious placidity; do not try to curb out of your pleasant English faces the arch glance, the quick smile, the numberless sweet and changeful inflections, as natural to them as to your native skies, and as dear and winning. Do not pause ere you speak till you have arranged those well-balanced, nicely-rounded periods that fall so sublimely from the “proudly-curved” lips of the ladies of the reserved and haughty school. In short, place your ideal higher than the heroine of any novel whatsoever. Interesting, charming, nay, beautiful, as are the “female creations” of some novelists (always excepting the last-instanced variety), the second-hand reproduction of their characteristics in living women is neither beautiful nor profitable.

It seems, then, that there are two or three things to be guarded against before young people may safely be permitted “novel-reading.” First, let them be made aware that the descriptions of life, people, and manners, in such books are to be taken, emphatically, *with reservations*. Secondly, let this fascinating sort of reading be well balanced by a course of more solid literature; by which the intellect shall be exercised more than the imagination, the reason cultivated as well as the feelings. Thirdly, let the novels

VERONICA SYRIACA.

themselves be the best, and *only* the best. Second-rate fiction of the romantic order may be innoxious, because distasteful, to the experienced reader; but they are *vitiating* alike to the head and heart of the young, unsophisticated enthusiast. Their maudlin sentiment is accredited; their faulty ideals of character are revered; their one-sided views of duty,

their quasi-conceptions of sorrow, trial, and temptation, are believed in to the uttermost. Such wrong ideas may be expected to work their results on the character as yet unformed and unsettled.

• Peremptorily to forbid novel-reading, to banish all such books from the library, and place a mandate against their entering the house, would be esteemed unwise and unworthy by most parents of this present generation. It is so simply natural for young people to desire such mental aliment, and the desire in most cases is so engrossing and insuperable, that sooner or later they will evade the restrictions, and force their way into the forbidden territory. It need hardly be said that, under such circumstances, all ordinary dangers and disadvantages are aggravated tenfold. Better, we think, and wiser is it, that the older and more experienced should themselves pilot the untried ship through the charmed sea; should point out the rocks and sandbanks, and guide her safely past the shallows and rapids that beset the pleasant way.

DEADLY DRAPERY.

WE have heard of the poisoned shirt of Nessus, and have regarded it as a portion of the mythology, as claiming equal credence with the bow of Cupid or the trident of Neptune. We have read of the envenomed plasters of the middle ages, through whose means certain death was administered under the guise of a remedy. A fatal contact, even more unsuspected in its nature, has lately been detected, which, if allowed to work its consequences, would prove still more destructive in its effects than the treacherous poisons of either heathen or historical times.

The *Journal de Chimie Médicale* publishes, on the authority of a member of the Conseil de Salubrité, a fact which has lately been pointed out to the administration.

A lady bought, in one of the principal shops of Paris, a quantity of gauze, intended for a ball-dress. This gauze, of a charming apple-green, was sent to a fashionable dressmaker to be made up by her workwomen. Five of the girls who were employed about it suffered in consequence in a greater or less degree. Samples of the gauze were sent to the administration by a gentleman who became cognisant of the accident; and M. Payon was requested to examine them. That chemist discovered, 1st, that the gauze which had been sent him to analyse was coloured with Schwenfurth green; and 2dly, that this green adhered but very slightly to the stuff, and that the colouring matter was shaken off with the greatest facility.

It follows, therefore, that the conversion into a dress of this gauze, laden with Schwenfurth green, exposes to accident, 1st, the workmen who prepare it; 2dly, the shop-

keeper's assistants who sell it; and 3dly, the dressmakers who are set to work upon it. Moreover, suppose seven or eight persons to go to a ball dressed in similar materials, and by the shaking, the movement, the rubbing of these dresses, there would result the dispersion of a sufficiency of arsenico-coppery dust to be seriously injurious to the health of every one present.

Any chemist who examined gauze so prepared for sale could remove its colouring matter by means of ammonia; he would obtain an alkaline arsenico-coppery liquid, very easy to recognise. This liquid, saturated with sulphuric acid, and then introduced into Marsh's apparatus, would give arsenical stains.

Several accidents have been recorded that are attributed to a similar cause. A milliner, after finishing dresses of the same pattern of gauze, had sore fingers and was attacked by a severe inflammation of the nostrils. And, adds the learned chemist, a physician's daughter states that dressmakers who worked for her under similar circumstances were seriously indisposed in consequence.

Efficient measures have been taken by the authorities to prevent the sale of the poisonous gauze in Paris for the future. It is well that a caution should be given to the purchasers of ball-dresses during the present London season.

E. S. D.

VERONICA SYRIACA.

Who does not love the little speedwell, that in early spring

"Lifts up its tender eye of blue
To the younger sky of the selfsame hue?"

It carpets the green churchyard with its pretty tufts of leaves, and its trailing stems leap against the worn stone, and enamel it with a thousand dottings of the brightest azure. Every bank and mossy nook, every turf slope and neglected corner, is a home for it; and all the summer long it keeps company with harebells, pimpernels, wood oxalis, wild thyme, and "goldyllocks," making the wild places joyous with its profusion of delicate blossoms. Every body knows what a speedwell is; gatherers of simples call it "eye-bright," because it is so much like an innocent laughing blue eye that never saw any thing but purity in all its life, and never will, because its home is in the midst of greenery and rustic quietude.

Botanists know at least a hundred and fifty species of Veronica; but florists give attention to only about a third of them. They are mostly blue-flowered plants, very hardy for the most part, very pretty, and very common. Four of them are aquatics, and the greater part of the remainder are hardy herbaceous plants, of easy culture.

Veronica Syriaca is a speedwell recently introduced. It was first raised by Messrs. Ernst and Von Spreckelsen, of Hamburg; and the entire stock was purchased by Messrs. Henderson, of Wellington Nursery, St. John's Wood, and by them let out for the first time this year. It is an annual, of bright-green foliage and compact habit, rising only six or eight inches high. Its flowers are of a bright gentian-blue, the under petals being white. The flowers are produced in large masses; and when grown in a bed, or in masses, the effect is truly charming. As a pot-plant for the window, it is sure to be patted by the ladies.

SHIRLEY HIBBERD.

THE MUMMELSEE, AND THE WATER-MAIDENS.

BY C. A. DOYLE.

THE MUMMELSEE.

GERMAN TRANSLATION FROM THE "SAGEN AUS BADEN."

BETWEEN the valleys of Sasbachwald and Oberkappel the mountains of the lower Schwarzwald attain to their most considerable elevation. An extensive mountain-ridge rises some three thousand five hundred feet above the level of the sea. Almost all vegetation ceases there; only the broom-plant or the red moss covers the swampy peat-bog, that sinks at every step, and upon which, at intervals, solitary, gnarled, dwarf pines eke out with difficulty their sickly existence. This inhospitable region is variously denominated Seekopp, Hornisgrinde, and also Gnuzberg; the southern peak in particular bears the latter name. Here lies, on a rocky ledge, in a deep mountain-basin, enclosed by enormous cliff-masses, a gloomy unfathomable mountain-lake, whence takes its source the Seebach, of which the wild Acher is a tributary. A deep unbroken silence reigns constantly over the lonely desert region. The black thorn grows amidst the towering crags; the blue sky overhead is reflected on the dark surface of the lake. This gloomy horrifying lake is now called Mummelsee, from the Mummelchen, or water-maidens, that are said to dwell there. Wonder Lake (*Lacus mirabilis*) it was called by the ancients. In its neighbourhood lie the ruined mountain-castles of Hagenbrugg, Bosenstein, and Hokinrodt. In the mouth of the people there are numerous legends concerning this lake.

The Undines, or lake-maidens, who dwell in the deep abyss, in crystal palaces with splendid gardens, in which the blood-red coral blooms by the side of the fragrant water-rose, are marvellously lovely enchanting beings, of sylph-like form and rosy beauty. Nightly do they ascend to the surface of the dark waters, and join in the charming dance, to the sound of soft music; or hasten with the spindle to the nearest cot, there to pass the evening in gossip and work, in the circle of the simple-minded inhabitants of the mountain. But the first gleam of morn, and the crowing of the cock that heralds the dawn, calls them all, without exception, to their realm beneath the wave. Still it happens, at times, that the charming water-maidens linger too long in the upper world; that the day dawns as the diligent workers are still on their way home; that at the lightsome hue of the first morning-beam in the east the night-stars vanish, while the lovely Undines yet move in the graceful dance, without perceiving that the surly, old, gray water-sprite ascends from the dark abyss, just as the night-mists flit before the morning's glimmering light, and angrily admonishes the dilatory ones to return without delay to their watery home.

LORD CHESTERFIELD.

By JAMES HANNAY,
AUTHOR OF "SINGLETON FONTENAY, R.N."

LORD CHESTERFIELD'S is one of those reputations which occupy a peculiar position. He is at once very famous and very little known. Every body is familiar with the name, and few with the man. Yet one so renowned deserves to be better understood; a reflection which I hope will justify me in having undertaken to write about him now.

His family was ancient and knightly, though it did not make its appearance in the peerage till the suspicious epoch of James I. The first Earl of Chesterfield fought for the king in the civil war. The second earl is only remembered by the fact, that Dryden dedicated a translation to him, for which he seems to have returned those solid acknowledgments which it was the fashion to make, and not the fashion to refuse. The third earl was a gloomy saturnine Jacobite, as unlike his son as possible. "He had neither the will nor the power to teach me any thing," says our Philip Dormer, the fourth earl. But the lady whom he married brought in a flow of brilliant blood, to which her

son, the famous earl, owed an immense deal of his talents. She was a Saville, a daughter of that eminent Marquis of Halifax whom Macaulay describes so well. Halifax's writings are extant,—not nearly so well known as they ought to be,—and one is struck in reading them with the similarity of talent between him and his grandson. There is the same worldly wisdom and piquant shrewdness, the same good-nature and graceful vivacity, the same pointed smart sayings. Young Philip was born in London in 1694, and brought up in the house of his maternal grandmother. At the age of eighteen he went to Cambridge, where he stayed two years. He and his set were called the "Witty Club" there; for Lord Stanhope, as he then was styled, was very precocious. He was early noted for his cleverness and his wildness, for blending literature and dissipation together. It was the jolly time of Queen Anne, when a certain convivial tone pervaded English life. One famous political club took its name from Kit-Kat pies; another, equally famous, from October ale. The Secretary of State opened as many bottles of Burgundy as he did despatches. Poor Pope found that his health could not stand the literary life,—that you could not perfect your taste without ruining your nerves. Whatever gay young men were doing, we may be sure Lord Stanhope was doing. But he was not a common "fast man;" a character, indeed, apt to be a fool, in that time as in this. He was fond of letters, and he was ambitious. He was a well-balanced character; took pleasure and work in fair proportions, like wine-and-water. Throughout life he preserved this kind of medium. It was a favourite maxim of his, that business and pleasure mutually assisted each other. In fact, he was in pleasure exactly what a practical man is in business; he kept accounts square,—knew that if you over-draw on your health Nature will dishonour your bill,—and was prudent in the midst of excesses. This is the man-of-the-world's point of view, and Chesterfield very early had the philosophy of it complete.

In 1714, he passed his summer at the Hague. That August Queen Anne died. The Tory ministry of Oxford and Bolingbroke was scattered to the winds. Swift departed gloomy and fierce to Dublin. In came the house of Hanover, in the person of George I. The Whigs were in their glory when the new parliament met in 1715, and nothing was talked of but impeachments of the late ministry, Jacobite plots and intrigues, England's honour sacrificed to France by the recent peace of Utrecht, and so forth. The Stanhopes were very busy in politics just then; and Lord Stanhope was brought in for a Cornwall borough before he was of age. I have said that the old earl, his father, was a Tory and Jacobite; nevertheless the son came in as a Whig. In those days a thorough-going Tory usually held notions about the divine right of kings, the sacredness of their persons and prerogatives, the house of Stuart, and the memory of Charles the Martyr, such as a man like Chesterfield could no more hold than he could have held the doctrines of the Brahmins. He had no sentiment, no romance. He did not care for the white rose; he had no feeling for traditions, which are the very life of Tory politics. He viewed politics as he did every thing else—from the worldly shrewd point of view. Now the Jacobites were, with few exceptions, men of quite a different stamp; sincere high churchmen, or jolly obstinate country gentlemen, such as the man of whom Fielding said, that he was afraid his land would be sent over to Hanover. Their weak points were such as a man like Chesterfield saw at a glance; their good points were far above his level. For the essential feature of the eighteenth-century man was KNOWINGNESS; he suspected and derided enthusiasm; and Chesterfield was an eighteenth-century man all over. Accordingly, we need not wonder at the side he took; and as he was young, lively, and audacious, he took it decidedly. The *Parliamentary History* tells us, that in his maiden speech, on the articles of impeachment of the Duke of Ormond, he said, "*That he never wished to spill the blood of any of his countrymen, . . . but that he was persuaded the safety of his country required that examples*

should be made of those who had betrayed it in so infamous a manner." This was pretty strong. One of the opposite party, finding the young gentleman so vehement, hinted to him that they were aware he was not of age, and had no right to be speaking at all. He took the hint, and departed to Paris.

No doubt French influence had a great effect on Chesterfield, and especially in imbuing him with that profound regard for elegant manners which distinguished him through life. The long reign of Louis XIV. was just coming to an end; and the whole epoch had been one of social brilliance in France,—of good talk, happy wit, polish, and pleasure. In these matters the French were ahead of us; because for a great part of the seventeenth century we had been intent on far higher matters. The civil war had broken up our social life; the land had been full of Puritans and sectaries, who despised the Graces as much as they did the Muses. The effect of these events lasted, of course, long after the events themselves. The Restoration brought us a court, which, though it imitated France, did not so thoroughly catch its manners as it did its morals. The Queen-Anne literature, the essays of Addison and Steele—graceful in treatment as they were excellent in purpose—were now working a change, yet the change was working slowly. And when the house of Hanover came to the throne at the period now before us, English life in the highest quarters was comparatively rude. Ladies of rank wrote sentences which their great-great-granddaughters would now scarcely venture to read out loud. A maid-of-honour, under the first George, was a good judge of a cask of ale. When one opens *Sir Charles Grandison*, one finds Richardson's model heroines using such phrases as "hang it" and the "dence." Chesterfield was full of the superiority of French society to our own; he admired it, and it in return admired him. We have several testimonies to their regard. His French was praised by Fontenelle, as was his wit by Pope, his speeches by Horace Walpole, and his manners by every body.

He early belonged to the court of the Prince of Wales, afterwards George II., as gentleman of the bedchamber. For the next few years we find him attached to that court; voting occasionally and speaking in parliament, and devoting himself to society and to literature. He knew all the able men of the day; corresponded with Swift, and visited Pope at Twickenham. Young, of the *Night Thoughts*, celebrated him in his exquisite epigram, when, called on for an *impromptu*, he borrowed his diamond, and scrawled,

"Behold a miracle instead of wit;
See two dull lines with Stanhope's pencil writ."

Occasionally he went down to Derbyshire, and moped among his ancestral trees. He had no love for the country; he despised daisies and buttercups as only fit for the raptures of milkmaids. He liked St. James's Street and White's, the gay glitter of a drawing-room, the tender green of a gaming-table,—not meadow and stream. "There are no tolerable winter-quarters," he says, "but Paris and London." Of all pleasures, society was his favourite; and society soon welcomed him as its greatest ornament.

At thirty-two he succeeded to the earldom; the year after (1727), George I. died. The year after that, Chesterfield went to the Hague, as ambassador to Holland. He was fond of play; and the frugal Dutch liked a man who lost his money—as he did every thing in life—with a good grace. But he had every requisite for a diplomatist. Quite apart from his manners, he had substantial talents and sense; and his manners were fascinating. There is a curious paragraph in one of his letters to Lady Suffolk at this time which illustrates his humour: "You must know," he says, "that last Sunday I trusted the people here with an English christening in my chapel of a black-a-moor boy I have; having had him first instructed fully in the Christian religion by my chaplain, and examined by myself. The behaviour of the young Christian was decent and exemplary; and he renounced his *likeness* with great devotion." This pleasantry was habitual to him, and greatly contributed

to his success. He performed his embassy successfully, got the Garter, and was made steward of the household; but after his return, in 1732, he voted against Walpole's Excise Bill, and was dismissed from his place. Next year he married Melosina de Schulenberg, a natural daughter of George I.

He was now a member of perhaps the most brilliant of all modern oppositions—the opposition to Sir Robert Walpole's ministry. Bolingbroke's stately and witty eloquence, Pulteney's scarcely inferior talent, talkers and writers the best in England, were all arrayed against Sir Robert and the court. The incessant cry was, that the country was being ruined by corruption at home, and sacrificed to Hanover abroad. Chesterfield was at this time personally hateful to George II. Hanover was the tender point to touch the monarch on, and Chesterfield accordingly made the most of it. In a paper of the time, called *Fog's Journal*, he wrote (among other things) an essay on the German princes and their armies, which is a very good specimen of his talents in this kind of way; indeed, it would not dishonour the name of Addison.

Chesterfield spoke in the Lords' pretty frequently, and with the success which attended him in most things. Parliamentary reporting was then in its infancy. We have, however, one speech of his at length, that which he made, in 1737, against the bill for submitting dramas to a censorship; and it justifies his reputation by its lucidity, its elegance, and its strokes of pleasantry.

For the next few years he was still in opposition. At last Walpole's long reign ended; and now the patriots who had turned him out could not agree among themselves, and could not retain power. Lord Granville's administration (commonly called the *drunken administration*, from that very able man's love of Burgundy) did not last long. A coalition government was established by the PELHAMS, to whom Chesterfield was related; and in the ever-famous year '45, he again went as ambassador to the Hague, and in August to Dublin, as lord-lieutenant of Ireland.

His lord-lieutenancy of Ireland was a bright spot in his life. The times were very trying. A rebellion was on foot, of which no man could estimate the danger, and a rebellion which naturally looked to Ireland for sympathy and aid. Chesterfield delighted every body by his affability; managed every thing without fuss, without show; took care of all proper precautions. Two capital and characteristic anecdotes belong to this period. "Your excellency's coachman," reported a solemn person to him, "goes to mass!" "Does he?" said Chesterfield; "I'll take care he does not drive me there!" Another time, an official came rushing into his room in the morning, "*They're rising in Connaught!*" He looked at his watch: "Well, sir; its nine o'clock, and they ought to be." He plumed himself on this polite coolness; and, joined to his tact, suavity, and real good sense, it made him one of the most popular lord-lieutenants Ireland ever had. Some may think, perhaps, that these sayings were made for the events, rather than produced by them; no doubt this is the case with many *bons mots*, but Lord Chesterfield's rest on very good authority. And as we are on this point of his colloquial wit, let us look at one or two more of them, gathered from his biographers, and from the lively pages of Horace Walpole.

Somebody told him that the famous singer the *Viscontina* said she was only twenty-four. "*She means twenty-four stone, I suppose*," he replied. On one occasion he had to lay before George II., for signature, the patent of appointment of a man whom the king detested. George II. paused over it, and then exclaimed angrily, "*I'd rather give it to the devil.*" "*With all my heart, your majesty; but you observe that it is addressed to our right trusty and well-beloved cousin!*" He made a very clever *impromptu* in verse. Sir Thomas Robinson, who was an immensely tall man, challenged him to write on him. Chesterfield wrote,

"Unlike my subject now shall be my song;
It shall be witty, and it *sha'n't* be long."

One of his clever sayings sprang out of a very clever little bit of his private diplomacy. There was a certain Lord R— of that time, who was fond of dabbling in amateur surgery, and who fancied that he shone especially in the use of the lancet. The party were very much in want of a vote, and away went Chesterfield to Lord R—. Of course his health was naturally inquired after. "Why," says Chesterfield carelessly, "I'm rather out of sorts to-day; a slight oppression of the head,—fullness." Lord R— was all attention, and instantly suggested blood-letting. "You think it necessary? I have heard so much of your lordship's skill, that I should be glad if you *would* try your lancet on me." So he bared his arm, lost the usual *quantum*, and after binding it up again, he asked (with the inimitable easy air which we can fancy) whether his lordship "was going to the House that afternoon?" Lord R— had not intended; was there any thing going forward? Of course Chesterfield carried him down in triumph; and he told his friends afterwards that he had "*bled for the party*," which was more than any of them could say.

After leaving Ireland he was made Secretary of State, which high post—the highest he attained—he held for about two years, from 1746 to 1748. During this time an event happened, which, if Chesterfield had never written a line, would have indissolubly, as it has painfully, connected him with our literary history. It is the most painful part of his life, but it must not be passed by.

Of course a man of that rank, who had written in periodicals, defended the interests of dramatic authors in the House of Lords, and who was famous, far and wide, for wit and courtesy, was looked up to by literary men as a patron. Patronage was just going out, but had not gone; and it was still not unusual for writers to receive gifts from lords, as Dryden had received one from Chesterfield's own grandfather.

One writer of that time just beginning to be known,—a burly, honest, melancholy man, in whose massive face noble genius and piety and deep religious sentiment struggled through the traces of poverty, of sorrow, and disease—a rusty uncouth mortal to the careless eye, but who in proper company woke up into a giant of wit, eloquence, and insight,—visited the house of Lord Chesterfield in 1747. Samuel Johnson (for he was the man) was fifteen years younger than Chesterfield, and consequently now thirty-eight. He had not written *Rasselas*. He was just planning the *Dictionary*. His fame was not made. He had published the *Life of Savage* and *London*. But he was still not an established man; and as for Boswell,—Boswell was then a little boy, scarcely breeched, and, I suppose, playing about the grounds of Auchinleck. Johnson came to Chesterfield to solicit patronage for his *Proposals for a Dictionary*. We know, from Johnson himself, that Chesterfield at some time gave him 10*l*. But what neglect he showed him, or how he slighted him, cannot now be accurately known. Johnson tells little about it, and Chesterfield nothing at all. Certain it is that Johnson took deep offence; and seven years afterwards,—when the *Dictionary* was coming out, and Chesterfield, long retired from politics, yet still writing essays occasionally in the *World*, wrote two in support of the forthcoming work,—Johnson addressed that immortal letter to him, which Boswell teased him into giving him at a later period, and which every body who calls himself a man-of-letters ought to have by heart. This business is still involved in some mystery. The doctor was proud, and the noble was too fastidious on the score of personal refinement. But it has been justly argued that Chesterfield's health was then bad; that the deafness, which vexed him more or less all his life after, was coming on; and that Johnson in 1747 was a man with different claims to regard from the Johnson of twenty years later. In this twilight I must leave it. Our veneration for the memory of Dr. Johnson, one of the wisest as well as the best of Englishmen, secures our respect for any view of an event which he chose to take. At best Lord

Chesterfield was but a good-natured, very able, and brilliant man-of-the-world; yet that he was fundamentally good-natured I do believe, and I hope that he acted from error rather than design on this occasion.

Next year, '48, he gave up the seals of his secretaryship, partly from bad health, partly because the great Pelham, the Duke of Newcastle, did not behave well to him, and interfered with the patronage of his office. It is highly characteristic of him, that the very night he left the government he made his appearance at the gaming-table at White's. In office he never touched a dice-box.

Up to this time Chesterfield had generally lived in Grosvenor Square, or in the well-known Chesterfield House, which still belongs to his representatives; and where the rich and classic apartments, with their books and their busts, in which he enjoyed the lettered luxury of his rank, are still preserved as he left them. But now, on retiring from active public life, he bought and improved a villa at Blackheath, which was the favourite dwelling of the remainder of his prolonged days. Here he had a garden, of which he was fond; here he tended his apricots, and read his books; and wrote many of those letters to his Son, by which he is best known, and will always be best remembered, and which are very interesting illustrations of the eighteenth century.

This son was born when Chesterfield was at the Hague, in '32, the year before his marriage, and was sixteen years old when he gave up the secretaryship. As his wife had no children, he felt an intense interest in this lad; and it is a great sign of Lady Chesterfield's good-nature and affection for her husband, that she shared this interest with him. Whatever else we may think of the matter, I suppose we shall agree that, having the boy, it was his duty to do the best he could for him; and it is certain, that if young Philip had been the lawful heir to the title (instead of what he was) twenty times over, the father could not have been more anxious about him, or taken more pains with him. He sent him to Westminster School; then sent him on the Continent, with an eminent scholar for his tutor; then to Leipzig, to learn German; next to Paris, to be polished. The following passage from a letter of his to a French lady of high rank shows us what his design was:

"As I am infinitely fond of this child, and shall take a pride in making something of him, since I believe the materials are good, my notion is, to unite in him what I have never yet met with in any one individual,—I mean, what is best in both nations. For this purpose I intend him his learned Englishman, who is likewise a man of sense, for the solid learning I would have him possessed of; and his French afternoon tutor, to give him, with the help of the companies into which he will introduce him, that ease, those manners, those graces, which certainly are nowhere to be found but in France."

In fact, he aspired to make the boy a complete man, according to his notions of what such a character was,—a person fitted to shine and triumph in the high places of the world. And we learn the world of that day by seeing how he set about it.

Certainly he spared no pains. There are nearly four hundred of his letters to him extant, beginning with little Latin ones, to teach him Latin as a youngster; and French ones, to teach him French; and elementary instructions in geography and history. As Secretary of State he wrote many; and all through life he went on. With the letter to Montesquieu, or the letter to Voltaire, off went the letter to Philip Stanhope. He taught him all he knew about men and business; wrote freely and copiously of the characters and politics of that time, which alone would make these documents of high value. As soon as the boy was old enough, he got him into the diplomacy, and he strained every nerve of his interest and connection to push him forward.

In the first of the objects I mentioned just now he succeeded. Philip Stanhope became a man of solid attainments and good sense, but as for the *polish*, there a deficiency seems to have been early perceptible; the grain was good, but the surface was dull. Chesterfield laboured to give

him external brilliancy as a sculptor works at his marble. He writes again and again on the subject.

These letters, intended to form the lad's manners and graces, suggest various reflections. It is an obvious remark, that he insists with immense earnestness on points, not the highest which can employ a rational being's attention. But we must remember, 1st, that he was addressing a person whom he thought already possessed of a love of the solid excellencies of life, and with a view to a special deficiency in him; 2d, that he was addressing a person destined to a particular career,—to shine in the great world, such as the great world then was in Europe.

We must be fair to Lord Chesterfield. It would be perfectly silly to class him, on account of all this stress upon the graces, with a man like Brummell; for these graces with him were *means* to an *end*, and the end was social consequence, or political power. He wanted his son to be a great personage; and he argued that these were the arts by which that success was attained. It was a practical view. Chesterfield set no extraordinary value on kings or potentates, on birth or rank. As for the latter, he rather laughed at men who plumed themselves on pedigree; and one of his essays in the *World* is against them. His own descent was excellent; yet he hung up two portraits among those of his ancestors, one marked Adam de Stanhope, the other Eve de Stanhope, to quiz the vanity of birth. But he knew that the world was governed by kings, potentates, and men of family, and that they in their turn were governed by men of tact and address; and he wanted his son to be conspicuously a man of tact and address. If you had got Chesterfield quietly in a corner, in a serious mood,—let us say on a gray day at Blackheath, with the sea coming up the sky in a sea-breeze,—and had said to him, *What is the chief end of man? Is it the chief end of man to shine in Newcastle House, or to make the Prince of Wales laugh at a stupid party?* he would have shrugged his shoulders, and said, "These are all vanities; but such is the world, and we have to act in the world as we find it—*Que voulez-vous?*" There was no doubt a whole world of feelings lying deep in his nature which he never gave utterance to. Unquestionably, he was no trifler. He distinctly predicted the French Revolution in one of his letters some forty years before it began. His judgment of men and books was sound. When Hume's works began to appear, he saw their merit; when Robertson's first history came out, he declared its excellence. That, with so much solid ability, he should have joined such a regard for superficial attractions, shows us a great light into the character of those times, but should not induce us to underrate him. In fact, to judge of any man, we must try and put ourselves in his position; we must make up our minds to take him as he is. Chesterfield was not John Knox. A geranium is not a lily. Why should I quarrel with the lily because it is not a geranium, or *vice versa*? To do so, won't help me one whit to *understand* either of them; but it will very probably make me notably unjust to the one I do not happen to like.

No doubt that was an artificial period; and Chesterfield was too thoroughly a man-of-the-world not to bear deep traces of the world to which he belonged. There was little earnestness in that age. Poetry was at a low ebb; and the poetry of an era is always the best index of its state of sentiment. In Richardson's novels there is much mawkishness and cant; in Fielding's there is a great deal of coarseness, and a disposition to excuse every thing in characters not utterly *worldly*, which shows that utter worldliness was exceedingly common and fashionable. Low theories of human nature were in vogue, theories which undervalued all worth in man and woman, which taught that self-interest was the mainspring of mankind, that "every body had his price," and so on; and we know that there is a direct connection between low theory and low practice. That Chesterfield refined social life is certainly true; but of course his development of the truths that belong to the doctrine of manners bore the colour of the period in which he lived.

The manners of Europe evidently took their rise in feudalism. It was in the bosoms of the old feudal castles that that chivalrous loyalty to women, that regard for rank and age, that respect for one's own dignity, which is indissolubly connected with a respect for every body else's, gradually formed itself. When the Black Prince waited behind the chair of the King of France, after the battle of Poitiers, he embodied the whole sentiment in one beautiful act of courtesy. What the ancient gentlemen did spontaneously, and half-unconsciously, Chesterfield would have wished a later and less simple age to do deliberately, artistically,—and though partly from good feeling, still partly, also, from policy, and for the sake of its convenience. Yet it is too much to expect a man to be beyond his age altogether; and good breeding is so immense a gain to social life, that the man who does any thing for it should be affectionately remembered.

Upon the whole, his plans for his son proved failures. Philip Stanhope had but a poor success in Parliament, was never conspicuous for the charm of his address, and rose no higher in his profession than to be British Envoy at Dresden. He was but thirty-six when he died; and Lord Chesterfield, now old, infirm, and melancholy, first heard that the grave had closed over so many ambitious hopes and plans from a lady whom his son had married without consulting or informing him, and who presented herself to the old peer with two sons. The blow must have been terrible. But we learn from the letters which Philip Stanhope's widow printed, that the good-natured old man, at extreme age, was as interested in the grandsons as he had been in the son, and anxious about their educations.

He lived for five years after this event; kept out of society by his decayed health. "Tyrawley and I," said he once, "have been dead these two years, but we don't want it to be known." At last the end came, in London, when he was in his eightieth year. His last scene was one of the most characteristic of all. Half-an-hour or so before his death, the servant opened his bed-curtains, and announced his friend, Mr. Dayrolles. The old earl moved his head, and his last words were, "*Give Dayrolles a chair.*" This was the latest gleam of that sleepless courtesy for which he had been famous through life; and it is with a strange mixture of humour and tenderness, and many serious reflections on the age and the man, that one contemplates it. He died in 1773. He had been born only a few years after the death of Charles II., and he died several years after the birth of George IV., so that he forms a link between the fine gentlemen of those two epochs; and he certainly had more elegance than the earlier of the two sets, and much more wit than the later of them.

He was, in fact, the last of an old school. He had not been twenty years in his grave, when the troubles which he had predicted broke forth in Europe. A period of tumult came on; Europe was shaken to its foundations, in an age of great passions, great crimes, great ideas, and great action. The unhealthy stillness was broken by a thunder-storm. We now have, with all our faults, a greater earnestness, a higher literature, larger human sympathies, than the men among whom Chesterfield lived could boast. But we shall do well to remember, that he too, after his fashion, represented excellencies which ought not to be forgotten, and ideas which will always be true; and I confess that I for one cannot turn away without kindly feeling and admiration from contemplating the memory of PHILIP DORMER STANHOPE.

POLYGLOT READINGS IN PROVERBS.

HE THAT WILL NOT WHEN HE MAY, WHEN HE WILL SHALL HAVE MAY.—Never refuse a good offer; for "A man has been known to leave roast meat, and afterwards to long for the smoke of it" (Ital.).—*Tal lascia l'arrosto chi poi brama il fumo.*

W. K. KELLY.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

THE end wall of the Gallery of Ancient Masters at Manchester is hung with old pictures more likely to attract the artist than the public. They are, however, both interesting and curious. They consist of such examples as could be got together of paintings earlier in date than the fifteenth century, with one or two later specimens of the Byzantine style, tame and statuesque, as it still exists in Russia. These paintings, with the exception of the last-mentioned, are all by Italian artists; for, except on cathedral-walls and in illuminated manuscripts, there are scarcely any remains of Dutch or German painting before the time of the Van Eycks, who lead off the Northern schools with a full-blown power, never perhaps entirely equalled by their successors. The names of artists attached to these oldest pictures, on their frames or in the catalogue, must be considered as conjectural only in the majority of cases. In general the means of absolute verification do not exist. Over the door, in a handsome Gothic frame, is a picture of the "Coronation of the Virgin," ascribed to Giotto. The woman's face and attitude are lovely. An "Adoration of the Kings," by Bartolo di Fredi, is very interesting. The faces are like miniatures, while the animals in the picture show that Landseer is not a reproduction from the fourteenth century. The "Noli me tangere" of Orcagna is an example of early tenderness and grace; and on the other side of the door is a curious picture in two compartments, painted, probably, by a foreign artist in England, as far back as the reign of Richard II. The catalogue calls it "The Wings of a Triptych," apparently without sufficient reason. It was in the possession of Charles I. and James II., and belongs at present to the Earl of Pembroke. In the left hand compartment, the kneeling figure, which will at first sight be taken for a woman, is Richard II. himself. The face is in profile, and is no doubt a portrait. He is attended by his three patron saints—John the Baptist, Edward the Confessor, and Edmund Ironsides. The heads are beautiful both in finish and expression. The king is kneeling to receive the benediction of the infant Christ, who, in the right-hand compartment, is held in his mother's arms, and surrounded by angels. The number of blue wings and blue draperies give a singular appearance to this part of the picture. There is an old inscription on a strip of brass at the bottom of the frame. We shall be told, no doubt, that the idealism of Italian art belongs chiefly to its later stages: we shall be referred to the earlier pictures, and to the term "Pre-Raphaelite" itself, as evidence that external truth was aimed at by older masters. This is so undoubtedly; but the contrast between the north and the south is not affected by it. Those Italian Pre-Raphaelites, for all their realistic efforts, were the natural fathers of the later schools. The development was inevitable from one to the other; the germ of it was in the minds and character of the southern race, and as art grew, it grew necessarily more and more in this direction. The love of symbols predominating over the love of facts, determined the matter from the first. Nothing that is not symbolic can be artistic; but there is all the world of difference between a symbolic fact and the symbol of a fact. The first derives all its significance from its truth; the second, all its truth from its significance. The north loves the one, the south the other. The German paints real things, which are the symbols of ideas; the Italian paints ideal things, which are themselves only the symbols of reality. Look, for example, at the "Nativity," by Botticelli, where much of the scene is minutely real, but where the men and angels in the foreground are embracing one another with such transcendental difficulty and discre-

tion; or at Bellini's "Mount of Olives," where, over the life-like figures of the sleeping apostles and the quaint details of the scenery, the outline of a naked white cherub brings the outline of an imaginary cup into the air. The tendencies of the two races are at least as obvious when we pass on to the second saloon, where Rubens, Snyders, and Van Dyck are opposed to Titian, Tintoretto, and Paul Veronese. Among the Venetian colourists the painting of nude women was one of their chief delights. The beauty of the female form, and the opportunities it gave to their own special powers, attracted them irresistibly. We get, accordingly, such pictures as Titian's "Europa," "The Muses" of Tintoretto, and the four magnificent, though not over-delicate, allegories of Paul Veronese. But in such pictures one sees directly that the painter's love is for form and colour in the abstract, not for form and colour in their relation to the realities of the world. The "Europa" lies on the bull's back as no mortal would ever think of lying. "The Muses" are strewed about without locality, or any other purpose than that of being painted. "The Sleeping Nymph" of Veronese, splendid in itself, is not a real girl in a real chamber.

There has been no thought of the possible, no realisation of the outward fact, in the artists' minds. The outward and the possible are not represented; they are only symbolised. The images are very beautiful. They give specific pleasure to the beholder, but their power to do so is limited by the extent of human sympathy with abstract ideas.

See now what is done on the opposite wall. There is an equal love of form and colour, but they are seen in facts, not in allegories. Whether the subject be a goddess or a gooseberry the scene is real, the laws of nature do not stand in the painter's way, but are his natural allies and helpmates. Rubens was not a blushing virgin; he had no surplus modesty about him; he would have pulled the skin off his figures as well as the clothes, had it served his purpose. He was fond of human flesh, and knew how to handle it; but the visions that passed over his brain would pass there only as realities; and since there are not very many scenes in which women could appear undraped and natural at the same time, he has generally furnished them with clothes. Rubens may never have thought of this: most likely he did not; he followed the instinct of the north. The great attribute of this part of the gallery is the attribute of inexhaustible power, and here the German side unmistakably carries away the palm. Strong hands alone have wrought on this northern wall; you may see them shake their brushes as a conqueror shakes his sword. There is a dash and vigour in these designs, as if the work bowed down before the sweep of the workman's arm. Who can look at the "Prometheus," the "Juno," or the "Queen Tomyris," without feeling that the man who painted them was a giant who, as far as muscles go, might have painted any thing? Rubens is not alone either; his friend Snyders, and his pupil Van Dyck, belong to the same race. The Italians, too, opposite, though shorter by a head, are still mighty men of renown. Fine pictures arrest us at every step. Next to the "Europa" there is Titian's small picture of "Proserpine." The four black horses tearing through the water are very grand. His "Riposo" is delightful in its landscape and trees. Three of his portraits—the lower one "Ariosto"—are splendid. Compared with some of those by Van Dyck, the grand portrait of Snyders, for example, and others near it, we feel that Titian has the advantage in expression. He has caught the soul in action; Van Dyck, in repose; and it is the active soul in which the living being is characteristically revealed. In "The Milky Way" and "Leda," Tintoretto displays his power over the naked female form. Veronese's "Rebecca" is beautiful and delicate. On the other side, the figures in "Queen Tomyris" are magnificent; the sweep of the queen's robe splendid, though perhaps exaggerated. Juno putting the eyes of Argus into her peacocks' tails is goddess-like, and celestially cool in going about her horrid work. The "Prom-

theus" is grand in its muscular display of strong limbs in torment. There is a delicious small picture, also by Rubens,—*"Children blowing Soap-bubbles."* Snyders revels among his dogs, boars, and irresistible huntsmen. The picture, all in the sky, of a heron with hawks swooping round her, has left nothing more to be done in the painting of birds on the wing. His great market-picture is underneath, where such boundless profusion is heaped up with such perfect truth and ease. These piles of fruit are in no attitude; have never grown to be painted; have no idea how they look, or how they tumble, or which side is uppermost: they are just real and gorgeous; as unlike the fruit-pieces made up by feebler hands as a lion's spring is unlike the vaulting of a harlequin.

But amidst all this excess of power, art is presented here in a lower form than it assumes among the older masters. It is not that the subjects are changed—that was needful and desirable; but the spirit is changed also, and for the worse. Look at these two *"Magdalenes;"* one is by Titian, the other by Van Dyck. The treatment in both is similar, and it is worldly, sensual, and bad; the men who could so conceive of the Magdalene would never, we may be sure, conceive any very high subject in its noblest form. Accordingly, the beauty of this part of the gallery is not that of noble thought and feeling. On the Italian side the hour of decomposition is fast approaching; southern art is following the legend of its favourite saint, and like him hastening to the grave. It has begun with worship in Giotto, has risen to ecstasy in Raphael, and is now almost ready to draw the last panting breath of agonised enthusiasm in Salvator Rosa. The north has a different destiny. Its giants of the seventeenth century are to be succeeded by a race who may still surpass whatever has been done hitherto; but in this age of Rubens the devout and earnest spirit of Van Eyck and Albert Durer is felt no longer. The power is vast, but its works are not holy. It is St. Christopher serving the prince of this world.

Before going further, we must stop to mention a few more works of special interest passed on the way. Beside *"The Last Judgment"* of Fiesole there is, in a deep gold frame, a head of Christ, half bowed, with closed eyes, and crowned with thorns, by the same master. It was cut, we believe, from a fresco-painting of *"The Crucifixion."* The beauty is wonderful; the faded colours almost heighten it. Strong contrasts of light and shade would be inharmonious about its spiritual purity. Further on, an unfinished picture, attributed, formerly to Ghirlandajo, but now, with good reason, to Michael Angelo, is one of the finest things in the gallery. The forms and faces are perfectly noble and original. There is a beautiful head by Da Vinci close by; an arrow held in the hand. Raphael is represented by no very striking works, but by a great number of moderate size and exceeding beauty. A small medallion-picture of the *"Annunciation"* might escape notice, but it is altogether lovely. The face of Mary is one of the sweetest even among Raphael's Madonnas. Among the pictures of the Carracci school, a *"Riposo"* by Albani is a delicious little piece. Two angels offer fruit; three cherub-heads are watching; an angel leads the ass to a fountain, and Mary is looking up at Joseph, who gathers dates. The famous picture of *"The Three Marys,"* by Annibale Carracci, is almost a miracle of painting, but will receive, we imagine, more than its proper share of admiration. Its beauty is unquestionable: the figure of the dead Christ, with the living hand on his breast, is as fine as possible; even the position of the left hand, if ungraceful, as Dr. Waagen thinks, gives it a skeleton look which adds vividness to the idea of death; but in the faces of the women, although grief is expressed with the utmost power, it seems to us that it is not the grief of very noble natures, and that in its manifestation there is an air of suddenness and surprise, as if the dead body had been found rather than followed, which is out of keeping with the scene.

Those who are fond of Murillo's soft outlines and tender

saints will find them collected together in the vestibule between saloons B and C. There is a *"St. Francis"* among them, by Gutierrez, more powerful than most of this school.

THE TWO PICTURES.

By G. W. THORNBURY.

In a lonely church at Florence,
Dusk and quiet and incense dim,
With a stillness only broken
By the rarely-chanted hymn,
There's a chapel steeped in twilight
(Windows sable-red as wine),
With a shadow only lighted
By the silver altar's shine.

You may hear the dusty olives
At the lattice crisp and shake,
With a sobbing, as of sorrow,
Winds lapse through them, and a wake
Of gray whiteness follows after,
Violets purple all beneath:
There I found the famous picture—
"The Mary of the Lily Wreath."

This side of the silver altar,
Where the tapers stand in rows,
Slender, tall, with flowers of yellow,
Veering as the soft wind blows;
Above the tomb with crimson crosses,
Where kneels the widow hour by hour,
There hangs the other solemn picture,
"The Jesus of the Balsam Flower."

Painted by a monk, they told me,
Far up in old Fiesole,
Where the prison'd vines and olives
Watch the Arno seek the sea.
It was a sunset of the summer
That he finished—then he slept.
When the bell rang out for vespers,
Still that weary trance he kept.

Dropp'd the palette, dropp'd the brushes,
Still at matins he sat there;
Then the angry abbot, chiding,
Smote the sluggard in his chair.
He *was dead*!—his long work finished.
Now he rests this stone beneath.
That's "Jesus of the Balsam Blossom,"
This, "Mary of the Lily Wreath."

There they hang,—that dead man's pictures,—
All but immortal with their dyes,
Stolen as from summer twilight,
Or from blue April's morning skies.
And there below, the foolish tourists
Squint and gape and show their teeth,
Smiling at the "Balsam Blossom,"
And at the "Virgin's Lily Wreath."

Ah, still they hang—those solemn pictures—
Where the brown monks pass and bow;
In his golden cope the abbot—
Hark! the dead men hailing now,
Sings the nightingale beneath,
Hymns to the Jesus of the Balsam,
And Mary of the Lily Wreath.

AUDACITY. BY STRAZZA, OF MILAN. (SEE PAGE 152.)

A STORY OF A HAUNTED HOUSE.

BY HOLME LEE, AUTHOR OF "GILBERT MASSENGER," ETC.
IN TWELVE CHAPTERS.

VII.—CHRISTMAS EVE.

CHRISTMAS EVE came; a loud blustrous day, with a light covering of snow upon the ground, and clouds heavy with storms in the sky. Laurence Royston had left Eversley for a few days, saying, that he intended to spend the festive season with some relatives at a distance. Adie was sorrowful during his absence; for she had still to bear the burden of her secret, and to deceive old Nicholas. Her treachery weighed on her heart; but though she had entreated Royston to let her tell him, he had always put her off, saying, that such a confession would lead to their instant separation; for the engraver was resolute in his way, and had evidently conceived a strong distaste for his pupil's character. Since they had become better acquainted, Royston had let fall much of his disguise, and had frequently given utterance to hard, selfish, worldly principles that had revolted the good old man; and detecting, in spite of their guarded manner, that he and Adie were on closer terms than they wished to appear, Nicholas had pressed forward his instructions, that there might be no reason for the young man's remaining in the town. But what most deeply grieved him was, that Adie should have withheld her confidence from him. He turned it over in his mind, and could not remember that he had ever given her a harsh word that should make her fear him; and yet from her tone, and from her anxious air and watchfulness, he knew she was keeping something from his knowledge. Besides, coming suddenly from the inner room one day into that where he had left them together, he

saw Royston leaning over the girl's chair, winding her long dark tresses round his fingers, and whispering to her softly; he even bent over her, and kissed her without resistance. At first Nicholas thought he would charge her with her deception; but remembering her passionate resentment when thwarted, he put it off, hoping that she would soon, of her own accord, tell him all.

But he spoke to Royston in plain terms, telling him that his visits in Nevil's Court must be discontinued, and that he had done a vile wrong in poisoning the girl's mind against her protector so that she had learnt to deceive him. High and angry words were exchanged between the two men; but neither of them chose to make Adie a party to the dispute. Royston doubted not that he should succeed with her whenever he chose to bring the matter to an issue, since her love for him had already undermined old feelings of affection and gratitude; and Nicholas hoped that the girl's own eyes would be opened by and by to the real character of her lover. Things were in this position when Royston left Eversley, just before Christmas. Perhaps Martha alone had a complete view of all that passed, for her watch never relaxed.

It was after dinner on Christmas Eve that Nicholas and Adie, sitting by the fire, both of them unoccupied, first felt how wide the gulf that lay between them had become. The unnatural restraint galled both, but neither could or would break it down. The old man was silent and mournful; Adie's thoughts yearned to comfort him; she longed to put her arms about Grizzie's neck, and to pull his beard, and hear him call her pet-names as he used to do; but one remembrance of the absent Royston tied her down to her chair. At length some allusion recalled the Christmas Eve long ago, when the engraver had taken the little child from

the winter night into the shelter of his poor but warm hearth. Could that tall beautiful girl be the small helpless frozen thing that might have died in the snow unheeded but for him? and was this distance and estrangement to be the sole reward of his charity? Perhaps in all his solitude the old man had never felt more desolate or more lonely than now, because the heart that he had striven so long to bind to himself was turned from him. He looked at her questioningly when she was not observant, and saw that in her face which told him she was not happy, as she had been, or as she ought to be, and he experienced a feeling of intense wrath against Royston as its cause.

When the Minster-bell began to ring for prayers, Adie rose wearily from her chair, and said she would go to the service. She did not ask for Nicholas's company as she used to do, but donned her bonnet and cloak, and went out alone. When she had got into College Lane her heart smote her with the reproach that this was not kind, and turning hastily back, she re-ascended the stairway to the room. The engraver had pushed back his chair, and sat with his arms on the table, and his face buried in them. Adie, with quick remorse, sprang towards him, crying, "O, Grizzie, Grizzie, don't be grieved with me; let me tell you all; let us be friends, as we were before Laurence Royston came to Eversley."

The old man lifted up his head, and held forth his arms; she nestled into them, and began to weep passionately on his breast.

"Adie, child, why did you ever mistrust me?" said Nicholas. "Was I not always kind to you? would I not have almost coined my flesh into gold to have purchased you a pleasure?" She only sobbed the more at the gentle rebuke of his tone. "Adie, you love this bad man,—nay, do not leave me,—you love him?" She did not answer, but wept on. "You should have suspected him when he tempted you to deceive me. Who but a bad treacherous man would have played his part? If he had come to me openly and honourably, I would have given you to him; but he must needs steal you away from your best friend. It was not honest, Adie; it was cruel and unjust; the act of a base creeping nature. He was never, in his best days, worthy of you, my child; how much less, then, now, when he is all sullied with his crooked ways through the world,—calloused, faithless, and, though you may not see it, cruel too!"

Adie had withdrawn herself from his encircling arm, and stood aloof, still fearful, but indignant too.

"O, Grizzie, you do not know him!" she said, with passionate force. "He is kind and gentle; he has never spoken one hard word of you; he would have told you weeks since, but he knew you did not like him, and we dreaded that you would command us to part."

"Adie, it was an evil day that brought him over our threshold; you will live to rue it. O, my heart's darling, I would let you go to him this instant if I did not see such ominous shadows about his future. He is a wicked evil man, and he will drag you down with him. It would have been better to let you perish in the snow ten years ago than to give you to him now."

Adie stood silent; the glistening tears hung on her lashes, but ceased to fall; a bright spot burnt on her cheek, but her passion cooled.

"Grizzie, will you hear him speak for himself?" she said tremulously; "I cannot plead our cause with you, for it makes my heart burn to hear such words against him from you. But you do not know him, or you would speak far otherwise."

"I will give him a fair hearing, my child. But do not let any thing cause this cold shade between us to come back. Is this love of a few weeks to obliterate the memory of ten years, Adie?"

"No, Grizzie, no; I always wished you to know, and it was only because you were deceived that I was not perfectly happy," cried the girl warmly. "Let us be friends." Nicho-

las sighed, and fondly stroked the bright head that had again nestled against his breast; but he said no more about Laurence Royston.

The Minster-bells had ceased for several minutes, when the old man reminded her whither she had been going. "Run away, my child; you will still be in time for the beautiful anthem," said he. She asked him to go with her; but he said no, the evening was very cold, and he should take so long wrapping up that the music would be over; and besides, he would rather sit by the fire until she came back. So she put her two arms round his neck, kissed him, and went to the door. There for a minute she hesitated, then turned back quickly to where Nicholas stood, and said, with glittering eyes, "Grizzie, have you quite, quite forgiven me my wickedness to you?"

"My darling, from my heart." He blessed her, and bade her go.

For a few minutes after Adie had left him, Nicholas sat by the fire thinking of her pityingly and with great love, as one blinded and misguided by a most unhappy passion. He folded his hands, closed his eyes, and laid his head back wearily, but not despondently. "She will come to see him clearly soon; only give her time," said he to himself. Then he rose, and walked to and fro in the room, talking to himself, while his eyes took a softer gleam, and his brow looked less stern than usual. Perhaps he was praying for his darling, for he went to the window and gazed up eagerly to the stormy sky, as if invoking help or comfort for them both. At last he lighted his lamp, and, entering the oak-closet, unlocked the ancient cabinet, and proceeded to turn over the poor treasures it contained. Whilst thus occupied, he was startled by the sound of the opening door, and Laurence Royston's voice asking, "Are you at home, Nicholas Drew?" The young man was already in the closet; but Nicholas motioning him back, they both retired to the fireside.

"I thought you were far away from this. What brings you here to-night of all nights?" asked the engraver impatiently.

"My own restless spirit, Nicholas," was the reply. "Where is Adie? Gone to say her prayers?"

"Yes; she is at the Minster."

"I have walked far, and I have walked fast; for it was like living in hell, that horrible suspense," said Royston, with grim earnestness. "I must have another answer from you about Adie. Old man, your blood runs slow; you know not what love is." He warmed up into passion, and those restless fingers of his clasped and unclasped themselves, clutched at the air.

Nicholas looked him steadily in the face, in no wise intimidated by Laurence's violence. "I have nothing to add to what I said before," replied he.

This calmness seemed only the further to excite the young-man.

"If I lose my soul for her I will have her," said he, in a deep suppressed tone, as if he were struggling to keep down a fierce gust of passion that was almost too strong for him. "You have hated me and suspected me for no cause but your own fancies; you have watched us, and divided us, and tried to turn her heart from me under a false specious guise of affection. You have acted treacherously by her—"

The old man, roused out of his habitual meekness, confronted his accuser with an indignant steady gaze. "It is you, you, Laurence Royston, who have played the traitor in this house! you, with lying words, have poisoned her good heart. She has told me all; and, by the God above us, if gratitude and affection have any power remaining, your wife she will never be. Your evil influence has not done all its work; she will not forsake me; she will come to know you as you are. Go out of my sight! Adie shall never, with my will, see your wicked face again."

While he was thus speaking, Laurence, with his teeth set and lurid eyes burning, stood irresolute; but as Nicholas

waved him towards the door, his wild suppressed passion broke bounds; and pressing on the old man, he took from his breast a pistol, which he had carried for his protection on the journey, and shot him dead. The moment the deed was done, he started as if the tempting and now triumphant devil had laughed in his ear; and stooping hastily down, he clutched the dabbled white hair in his gloved hand, and raising the ghastly face, saw that he had done his murderous work but too surely. For five hideous minutes he stood beside the corpse staring at it. O God, with what awful thoughts! Lifting his hat to wipe off the heavy beads of sweat from his face, his cheek was touched by the clammy glove; he could scarcely repress a shriek, and dragging it from his hand,—that hand which could never lose its stain of blood-guiltiness,—he flung it far from him on the floor. Presently came the idea of escape,—immediate escape; and his mind, used to quick conception and prompt action, in an instant devised it simply and safely. He first secured the door into the court, and then, going into the closet, he flung about upon the floor the contents of the cabinet, to give the appearance of the old man's having met his end from robbers who, attracted to his dwelling by the fabulous rumours of his wealth, had broken in upon him, and, meeting with resistance, had killed him for the sake of plunder. This done, he returned to his poor victim, and staid by him, biting his nails, and with his awful face darkened by fear, remorse, and despair, for some time. Hearing a light step in the court, which he knew well, he flung his arms wildly into the air, and, opening the door into the disused and haunted corridor, he plunged into its darkness, and made his escape, leaving his glove, that guilty witness, on the floor.

It was a cold misty twilight abroad, with heavy gusts of wind driving round corners and sweeping the snow from the ledges and drip-stones of the Minster. Adie gathered her cloak tightly about her, and feeling happier in mind than she had felt for many a day, entered the solemn gloom of the great church. She passed up one of the side aisles and by the steps to the altar-rails, where she was alone and almost in darkness. The few scattered lights showed her the congregation below in the choir, but so dimly that their presence was no company to her, and no disturbance. It was a luxury of enjoyment to her impressible character to linger in this solitude, thinking her own thoughts, dreaming her own dreams; and when the swell of the rich music rolled up to the vaulted roof, her heart seemed filled to overflowing with an ecstasy of devotion that was almost pain. The fall and rise of the symphony, and the sweet distant voices, were softened to her by her remote position; the proclamation fell on her ear as if out of heaven, "Peace on earth, and good will towards men!"

"O, I am glad I told dear Grizzie, and that he forgave me," she thought to herself. "How could I have borne to listen to this, if I were deceiving him still? Good, kind, old Grizzie, it was very cruel of me; how could I do it, even for Laurence?" She staid until the last, until the people and priests and choristers had vanished, and the vergers came to put out the lights; then she slowly left the Minster, and issued out into the night.

The wind had increased to a tempest, and drove furiously about the open space. If it had been light enough, you would have almost expected to see it careering madly with outspread vaporous wings in the shaken air. She could scarcely keep her feet against it, and often the gusts caught her, compelling her to stand still for a minute to regain strength and breath; then there came shrill shrieking blasts which seemed to warn her back, followed by long piteous wails and moans and laments that died into a momentary hush only to be renewed again and yet again. At last, she reached the comparative calm of the court, and paused a little while, thinking within herself that it was on just such a night as this that Grizzie had found her crouched under the archway, crying for her father. Good old Grizzie! She looked up to the windows, hoping to see his figure

darkening the glow from within; but the ruddy firelight shone through full and unbroken. She mounted the steps softly, intending to surprise him and reproach him archly for not keeping watch for her return, scarcely expecting, however, that she should reach the door before it would be opened; but she did, and peering cautiously through the glass, as soon as her eye became accustomed to the light, she saw that something unusual had happened. The doors of the closet stood open, and there was a candle on the table within; there was also a heap of things lying about the floor, but Nicholas was not visible.

"Perhaps he is at the cabinet, or sitting in the corner by the fire," said Adie to herself, though her heart throbbed fast and painfully. She attempted to open the door; but it was fastened inside, and resisted all her efforts. Then her alarm was aroused; for it was not customary with Nicholas to lock the door when he was in until night. She knocked loudly on the glass, and cried, "Grizzie, Grizzie, let me in; it is Adie."

There was no answer but the echoes of her own voice. She ran down the steps in haste, and to Mrs. Parkes's door; but that also was shut, for Job and his wife had gone to spend their Christmas Eve abroad. The whole court seemed deserted; even the children had vanished. Where could Martha be? she was not used to go out so late. Then Adie remembered that she had asked leave to spend the afternoon at the hospital with an old acquaintance, and she had not returned yet. The girl, now full of fears and excitement, ran into College Lane, in the hope of meeting some neighbours. A tall figure enveloped in a cloak rushed by her, and was lost instantly in the pitchy darkness. The person had come out of the court, and must have emerged from the stairway, for she had not seen him before; but his sudden and hasty appearance now redoubled her terror. At this moment Martha came up; Adie caught her by the arm, and whispered faintly that something must be wrong, for she had left home not an hour before, and now she could not get in. The woman mounted the stair swiftly, and looked through the glass, with the girl close behind her. "The door into the corridor is open; we must go that way," said she, after vainly trying to make herself heard by rattling the window. They descended again, and went up the black broken stair, feeling their way. When they entered the long passage, they perceived by the thread of light shining through a chink at the further end that they were right in thinking the door was ajar. Adie, trembling in every nerve, clung fast to Martha, and relaxed her haste; she feared she scarce knew what.

There was a dead breathless silence within. They stood a moment and listened. No sound except the draught of the fire and the howling wind in the bishop's gardens. They went in, Martha the first. Nicholas lay prostrate across the hearth, his face downwards, one arm outstretched. A dark slender stream had trickled down the slope of the floor almost to where their feet had been arrested by the sight. Adie stood petrified with horror; Martha advanced, and stooped down over the old man. He was dead—murdered; a small hole in the left temple betrayed how.

They heard steps below in the court; Adie rushed frantically to the door, and drawing back the bolts, called to two men who were there to come up in haste. The tale spread, and in a few minutes, as it seemed, Mrs. Parkes and Job were there, and Mr. St. Barbe, and many others, all talking in awed whispers, which rose at times to a hoarse scream. Adie watched helplessly, and listened, and turned her dusk, clouded, distraught eyes from one face to another, as if questioning whether it were a dream or a reality. She did not dare to look on the dead still countenance yet; and when they carried the corpse into the next room, she did not follow, but staid by the fire, which was sparkling and roaring in the keen frosty air with a living mocking lustre. She picked up a glove from the floor, and twitched it nervously and unconsciously in her fingers, and gazed about the floor, and then crept to the other room, and stood behind

Martha and Mrs. Parkes, trembling and fearful, but with dry burning eyes.

The idle marvel-mongers were dismissed, and then the officers, who had arrived in the interval, took note of the appearance of the first room. One of them said, "The old man must have been shot by some one who took him at advantage; there has been no struggle; he has been murdered for the purposes of robbery."

They went into the closet. The cabinet was open, the drawers out, and their contents scattered on the table, the floor, and in the adjoining room. They were a miscellaneous collection; women's clothes and a few valueless trinkets, child's things, and toys,—the poor old miser's treasures. There was nothing else left,—probably had been nothing else to leave,—so the man-slayer was disappointed of his spoil. The people looked at the yellow linen and tarnished bits of jewellery with curiosity; and Mrs. Parkes observed that somebody must have done it who knew the house well and Nicholas also,—somebody who believed the old story that he kept money hid away in that closet. For her part, she had long known it to be all nonsense, but there *were* folks who credited it. Martha spoke not a word, but peered about for traces in her furtive eager way; there was a set rigidity in her face, as if she had registered a vow of vengeance and were seeking the way to its accomplishment. Her search was abortive, however, and for the present she discontinued it to listen to what Mrs. Parkes was saying about the murdered man.

"Who would have thought it of old Nicholas Drew?" she was asking. "Who would have thought he would have set such store by a lot of rags? They are dropping with age,—look!" and she lifted one of the garments from the floor, and held it up. "Whose can they have been?"

"His young wife's and his bairn's," answered Job.

"His wife's, Job? I never knew he had been married," cried Mrs. Parkes softly, but with vivid curiosity.

"It was before your time; but I remember her. A pretty, dark-haired, little lass she was, and very kind-spoken to poor folks. They were well off then, I dare say; but they were very young to be married, every body said. Then they had a bairn, and I know both she and it died in a fever; and after that Nicholas was out of his mind ever so long, and had to be taken care of. When he came back to live in the court he had let his beard grow, and was so queer, people were half afraid of him; and then it was they began to set stories afloat about his being a miser and a wizard, and what not."

Adie heard this little explanation of poor Grizzie's treasures, and with a melancholy reverence she gathered them together, and put them back into the drawers. Whilst doing so a folded paper slipped from between two handkerchiefs; she opened it, and saw coiled round and round a thick tress of black hair with a little auburn curl lying upon it. Then her tears began to flow, gently at first, but soon in wild passionate sobs and writhing. The women carried her away to her own chamber, and shut themselves up together, while one of the officers and St. Barbe stayed in the outer room. Before morning broke the girl was raving in delirium, calling on "Laurence, Laurence!"

"Who is it she wants?" asked Mrs. Parkes of Martha. "We had better send for him maybe."

"He is not in the town now, and I don't know where he is either. He went away for his Christmas," was the reply. "It is Laurence Royston."

"See, poor thing, she has got one of his gloves, and she's holding it against her heart," said the other, with tears. "Poor Adie! O, it's an awful deed! I do hope, though it isn't Christian-like perhaps,—I do hope whoever did it will be brought to justice. He was a very good old man."

"He *was* good," repeated Martha emphatically; "and I will never rest day nor night until the man that did it is dead,—never!" She spoke in a deep, concentrated, ireful voice, which made the calmer Mrs. Parkes shiver.

The girl's pitiful cry and moan went on still. They

tried to calm her: "Yes, Adie, he is coming,—he is coming soon," said Mrs. Parkes, laying her hand on the burning forehead which turned restlessly on the pillow. Adie opened her eyes with a start, and put up her arms as if to push away some weight; the glove fell to the floor, and was picked up by Martha, who laid it carefully in one of her young mistress's drawers, thinking that she set great store by it. Presently she grew quiet, and sank into a heavy sleep, which even the loud pealing of the Christmas-morning bells could not break, while a few paces off lay the dead cold clay which had shrouded a soul then in God's Paradise.

RISTORI.

[Concluded from p. 173.]

THE story of *Camma*,—taken from Plutarch, and previously dramatised, but unsuccessfully, by Thomas Corneille and others,—though highly tragic, is exceedingly simple.

Sinato, one of the two principal chiefs of Galatia, has espoused a young maiden named Camma, widely famed for her beauty, goodness, and devoted love for her husband, and, as High Priestess of Diana (*Corivena*), held in profound reverence throughout the land.

Sinoro, the other of these powerful Galatian lords, becomes violently enamoured of Camma, assassinates Sinato, and immediately pays his suit to the widow. Camma's suspicions are roused by this indecent haste on the part of Sinoro; and she regards him with aversion and horror as the murderer of her husband, whose death she has vowed to avenge, even at the cost of her own life. But though believing the murder to have been committed by Sinoro, she has no proof that such is the case; and her position as the interpreter of the will of Diana, and consequently as the highest judicial authority of the country, makes it incumbent on her to obtain full proof of his guilt before inflicting its punishment.

In order to obtain this proof, the widowed priestess, when Sinoro urges her acceptance of his suit, tells him that she is absorbed by a horrible but unconquerable passion: she is persuaded that the hand which struck Sinato was guided by love of her, and she is determined to marry no other than this unknown assassin, who has proved the intensity of his love for her by committing, in the hope of winning her, a crime which, if discovered, must cost him his life. Sinoro falls into the snare; declares that, prompted by his passion for Camma, he laid in wait for her husband, and stabbed him as he passed through the myrtle-grove on his way to the Temple of Diana; confirming his statement by a wound in his arm from the dagger of Sinato, and the possession of his victim's heart, which he tore from the body after the murder, and preserves as a memento of the deed that should open for him the road to the object of his desires. Repressing her horror at this recital, Camma suffers the murderer to take her hand as a pledge of betrothal, and consents to allow the marriage to take place without further delay. The temple is accordingly decorated, the priests and priestesses are convened, for the celebration of the nuptial rite; and Camma, in her bridal-robes, retires into the inner sanctuary to prepare the marriage-cup, which she fills with poisoned hydromel. Returning to the altar, she offers a libation to the divinity of the temple; and having drunk from the fatal cup, presents it to Sinoro, who, in his guilty exultation, drains it to the dregs. Scarcely has he done so before he feels the effects of the poison, and falls into the arms of his attendants; while Camma denounces him to the assembled people as the murderer of Sinato, and calls upon Diana to witness, that, "if she has feigned to smile upon the suit of the basest of men," she has done so only in order to acquire the certainty of his crime, and to insure its punishment. After which, Sinoro is carried, dying, from the temple; and Camma, informed of his death, meets her own with exultation, rejoicing that the murder of her adored

Sinato is avenged, and that she is now to rejoin him in the realms of immortality.

The part of Camma is La Ristori to the very life; and the poet has most skillfully adapted all the details of its development to her peculiar genius. Her exclamation, "*Tu he!*" when, on Sinoro's approach, she instinctively divines his crime; the transparency she gives to the mask of smiles she wears in her interview with him, showing so marvelously the abhorrence underneath it, that the two expressions seem to be kept up simultaneously; her management of her mourning drapery in this same scene; the spasm of irrepressible horror as she gives him the hand he claims in right of his identity with the unknown object of her pretended passion, and her low cry of anticipated vengeance,—"*Monster, thy nuptial couch shall be thy tomb!*"—as he leaves her exultingly at its close; her magnificent outburst of scorn and abhorrence when, in the marriage-scene, to Sinoro's bewildered interrogation, "*The cup . . . ?*" she answers, with flashing eye and dilating form, "*And what cup could I share with thee but the cup of poison?*" with the ring of her voice, and the imprecation of her gesture, as she cries to the astounded people, "*He killed Sinato!*" and the death-scene, with its physical tortures overborne by the belief in immortality, and the joy of her approaching re-union with Sinato,—will all be noted among the finest things in the whole range of her acting.

The presence of two artists of such transcendent merit as Rachel and La Ristori at the same time on the Parisian stage could not fail to divide the theatre-loving public into two rival camps; each party decrying the pretensions of the other, and claiming the palm of superiority for its favourite.

But these hostilities have been of short duration; for it was soon felt that the genius of the two great tragedians, equally unquestionable in point of fact, was of a character so opposite as to make it impossible to establish a comparison between them. Nature has been equally generous to both, though in a different way, and both possess in an equal degree the science, sentiment, and resources of their art; but the nature of their genius being essentially different, they arrive, through opposite methods, at the production of opposite effects. Thus, even in the performance of the same part—Schiller's *Maria Stuarda*, in which Rachel also has frequently appeared—the peculiar talent of each artist imparts so different a character to the same impersonation, that it is impossible to establish any thing like a qualitative comparison between them.

It is now generally admitted, by critics and public, that we cannot, by any received canons of art, decide which is the greater talent of the two; the preference accorded to the one or to the other being the result of the personal idiosyncrasy and tastes of the spectator.

Rachel may be defined as an animated statue; the most perfect incarnation ever seen of plastic art as it has come down to us in the immortal creations of the old Greek sculptors. The contour of her small low-browed head, the pale oval of her face, the symmetrical proportions of her form, are all in the highest degree classical and statuesque; and she wears the tunic as naturally as though she had worn it from her childhood. Through persevering study, aided by the peculiarity of her mental structure, she has so thoroughly imbued herself with the traditions and spirit of ancient Greece, that every attitude and gesture is as classically correct as her appearance; and in her acting she attains, with the same completeness, the same conventional ideal.

In her delineations of the fiercer, as of the softer emotions, she never falls short of, never exceeds, the sobriety of that average of expression which is the *ne plus ultra* of sculptural truth. No weakness, no exaggeration, deforms the harmonious outline of her creations. The fire of her eye, the exquisite modulations of her voice, the majesty and grace of her movements, her magnificent bursts of tragic fury, regulated by her profound intelligence of her part, serve to fill up this outline, but are never permitted to exceed it.

For Rachel, it may be said that nature—the nature of

this outer world and of humanity—does not exist. With her, art has taken the place of nature; an art, whose elements, perfectly co-ordinated, constitute a world by itself, with its own laws and its own coherence, its own denizens, life, interest, and beauty. But this world is not *our* world; its women are not *women*, but goddesses or demons; its terrors do not move us, its tears do not melt, nor its smiles warm us. It is true that in the character of Adrienne Lecouvreur (in a play founded on the history of a famous actress of the time of Louis XV.), and in that of Mademoiselle de Belleisle (a young girl of noble birth and unsullied purity, exposed to odious and ungrounded suspicions), Rachel has proved that she can be human when she will; while, as the Leslie of M. Berthet's graceful drama, she has shown that she possesses, would she but use them, a charm and beauty equal to her power. But parts of this description are rare in her performances; and her appearance in them, though highly successful, would probably have never won for her the pre-eminent position she has attained in the classical creations with which she has identified her name. Yet in witnessing her interpretations of Camille, Emilie, Phèdre, Hermione, &c., we feel that we are in presence, not of any passion or emotion, but of a most perfect representation of passion and emotion. In these purely intellectual appeals to our intelligence, we are conscious of receiving a high artistic gratification, and follow with admiring wonder these magnificent exhibitions of plastic power. But they produce no illusion, excite no emotion; we recognise the transcendent art of the actress, but, for us, the art remains *art*, the actress an *actress*.

If Rachel be the high priestess of art, compelling us to follow her into a region purely ideal, La Ristori is the interpreter of nature in the broad sphere of human life and emotion. Her creations, no less artistically perfect, are to those of Rachel as is the woman Eve to the Eve of the sculptor. They live, breathe, move, with the same life that pulses in our veins and beats in our bosoms. "Bone of our bone, and flesh of our flesh," they stir our hearts with the "touch of nature," and waken an answering vibration in the innermost fibres of our consciousness. Whatever the sentiment she is portraying, La Ristori says and does just what we should say and do in the same situation. Her joy, her sorrow, her anger, hope, pity, or revenge, are real human emotions; exactly such as we ourselves should feel under the same circumstances. Her smile enchants us, her tears afflict, and her indignation rouses us, for they are *our* own.

While Rachel, as in *Maria Stuarda*, compels the most capricious, pathetic, and touching phases of human feeling to assume the proportions of the conventional ideal she has made her own, La Ristori, as in *Mirra* and in *Camma*, avails herself even of the introduction of the supernatural element to deepen the purely human pathos of her part.

Rachel, subordinating nature to art, so chastens every detail of her character, that no distortion ever impairs its classic contour; La Ristori, pressing all the resources of art into the service of nature, models every portion of her acting so faithfully upon the reality of life, that, in her most impetuous, most pathetic, or most terrible delineations, she never misses, never oversteps, the truth.

HOME RECREATIONS.

NO. I.—THE GAME OF THE TWENTY QUESTIONS.

THERE is a great difference between what people like, when they try it, and what people like to try. This is eminently

the case with amusements. Several exist which give more pleasure than those which are more cultivated. A person is bored by nine-tenths of the means to which he persists, nevertheless, in resorting for his amusement. The complaint is common; but the fact itself is more common than even the complaint of it. Sometimes a person is betrayed by circumstances into an unpremeditated occupation which interests him, not only beyond all his expectations, but beyond nearly all his experience of any thing else. If he have a will, the accident becomes a lesson to him, and a life is changed. He was a burden to himself; he relieves the burdens of others. But most people have only a fitful temporary will. However, this is a very deep subject, on the extreme confines of psychology, from which, as from the cliffs of the shore, we recognise the limits of a present condition, and look out over the sea upon which we must all of us yet set forth, and which rolls off infinite and dark.

The intelligent reader will understand us. What causes the pleasure of the mind; what rescues it from the gnawings within; what takes it out of the bewitched abysses of sadness (no matter how arising),—would be indeed curious to inquire and profitable to say; but it is a theme far too vast for the present purpose. The *Anatomy of Cheerfulness* would reward its writer and its readers better than that work, after executing which Burton destroyed himself; but there is a much smaller matter now before us—"the Game of the Twenty Questions."

Fox, Pitt, and Burke, and many of the foremost men of Charles Butler's time, were, he tells us, passionately fond of this curious amusement; and he relates one instance in which Canning astonished a large dinner-party by obligingly furnishing them with a practical illustration of the skill which had been attributed to him in the pastime so called. Till then, such skill had seemed to the company to be of necessity an exaggeration, a mistake, in short, incredible. Fox, who had some experience in games, and who was a veteran buccaneer in the coarsest forms of gambling excitement, was not insensible to the strange charm of the most elegant, the most tranquil, and the most decidedly intellectual "sport" that ever was devised to beguile the leisure, while exercising the power, of acute and cultivated minds. He threw himself into this mental wrestle with thorough abandonment, and, till at the fifteenth or sixteenth question he had netted the secret, forgot cards and wagers and wine, cabinets and wars and budgets.

In truth, no game ever invented can more absorb the player on one side; and few games ever invented are less calculated to be generally popular. The reason is twofold; first, to play it even decently well, some of the very highest faculties of the human intelligence are called into action; and most of us, I suppose, may modestly ask most of us, "Will they come when you do call?"

Secondly, the senses are not addressed at all in the process; and since we have a body as well as a mind, this is an unfavourable condition for any amusement.

On the other hand, the advantages are, that no instruments of an artificial kind are required for the game, and that it may be played either indoors or out of doors, either on land or on sea, at all times, in all places, under nearly all circumstances. You need no chessmen, no board, no cards, no theatre, no instrument nor implement, save those which nature has provided; and these (in the bodily order at least) need have no degree of excellence. You must have an ear, but not necessarily an ear for music; you must have a voice, but not necessarily for singing; and writing would put the pastime within reach of the deaf and dumb themselves.

What intellectual qualities are demanded in revenge for this exterior and mechanical cheapness or accessibility will be best shown by example.

Here is the whole game. One person thinks of something, in heaven or on earth; it may be any thing whatever,—abstract or concrete; having or not having matter or

body; past, present, or to come; living, dead, or inanimate; whatever, in short, he or she pleases. This done, the individual who has thought of the thing which has to be discovered either confides it secretly to the knowledge of some third person, or writes it down with equal secrecy on a slip of paper, which is placed aside in safety.

This precaution of either mentioning or putting on paper the thing thought of, is to prevent the possibility or the suspicion of having changed the object, as well as to enable any umpire present to judge whether the questions to be asked shall have been fairly and exactly answered.

When the preliminaries here mentioned have been accomplished, the opponent in the game begins his part. But here it need scarcely be said, that it is perfectly indifferent to the true conduct of the game itself whether there be or be not a wager on the issue. People may bet upon any thing; and people often have betted on this. The reader may suppose, or not, as he pleases, that a stake is involved in the result. All that can be said is, that, as in the little mechanical German game of "Besiegers and Besieged," the besiegers ought to win, so in this intellectual conflict the guesser ought in most cases to defeat the challenger. In most cases he does not. And, indeed, the very contrary appears to be likely, since twenty guesses seem to be very unfairly matched against the countless millions of things in creation, any one of which the person inviting conjecture may have selected as his "thought."

But here must be stated a condition which has generally been adopted to render the chances more equitable: it is that you must think of your object *within* the sphere of your adversary's fairly presumable knowledge. Thus, if you know Greek and your opponent is totally ignorant of that language, it would be mere cheating in this game to select as your *thought* the name of one of *Æschylus's* plays, or the phrase used by *Themistocles* when threatened by the Athenian rabble, or even, for example, one of the letters of the Greek alphabet. So with technical pursuits; the farmer must not select some bucolic process or term when playing the game with a physician, nor the physician a medical process when playing it with a layman. The matter must lie fairly, as has been said, on common or neutral ground, and within the reasonably presumable knowledge of both parties.

Then the second player should carry off the victory; his twenty permitted questions ought to sweep and exhaust, like a drag-net, the uncounted millions of possible thoughts, until he has landed the very thing selected by his opponent.

In the case alluded to, where George Canning solved the riddle, he did not use, to speak from memory, the whole of the questions to which he had a right to receive answers. The thing which he had to guess was the wand of office carried by the Usher of the Black Rod. He was sorely puzzled after the eleventh or twelfth question had been replied to; and he took much time, and employed much consideration in framing his remaining inquiries. Bets were made, or might have been, and the odds shuffled and veered, as he got gradually down from the more to the less general, until at last, quitting his great drag-net of logical induction, he took a hand-flet of guess, and fished up the identical black rod, which had been hidden deep from him in the vast pool of the arbitrary, the whimsical, and the possible. For him who has to play the finder's part there is very absorbing work; with the rest the game is less agreeable. They must wait and talk of something else during the long intervals of thinking between the questions.

But the whole procedure will be best shown by an instance or two.

Suppose, for example, a person has selected as the object to be divined the nose on the guesser's own face. That nose is duly written down, "Mr. A.'s nose." The paper having been intrusted (unread, if this be liked, and, indeed, unread is more interesting), Mr. A. begins his askings. One primary and capital principle in these is, that they should be so

framed as that the answer, whether negative or affirmative, should give a class of things distinctly rejecting all other classes, and manifestly, that the first classes thus rejected should be as large as possible; otherwise a hundred questions, or many hundred, might not be enough. It follows that you must open with the most general forms of being, and so come down to particulars. The reader will see that there is great art, and that this art implies a high philosophic mind in never wasting a question. Nothing is easier. If you ask whether it be any individual specimen of a species before you have asked whether it belongs to that species at all, you waste the question; for it may not be that individual specimen, and yet you have made no progress. There are thousands, perhaps millions such, any of which it may be; and if you even were allowed to go through them all, one by one, you are still at fault, and in a wrong category of things.

First, then, we will suppose Mr. A. to inquire whether the thing be immaterial? The answer to this is absolutely certain to disencumber him at once of millions and millions of objects, and to reduce proportionately the field of his search. The answer in the present case happens to be "No," since the nose on his face is incontestably material. Getting this answer, he reflects what are the widest classifications of material objects, and he remembers that they are all divided into the animate and the inanimate. He therefore asks next, "Is it inanimate?" Answer No. 2, "No." It is a material and an animate object. Again he thinks what are the widest classes of the material animate world, and he remembers that it is *all* either human or brute. He asks, "Does it belong to the brute order?" Answer No. 3, "No." "Is it male?" Answer No. 4, "Yes."

Here the guesser naturally imagines it is either a corporate body, such as a nation or a society, or else a man. He asks, "Is the name of it a noun plural?" Answer No. 5, "No." He concludes it is an individual man. "Is it dead?" Answer No. 6, "No."

His next question produces a burst of laughter, if the object to be discovered is known to the rest of the company, which burst of laughter is of immense service to the questioner; for which reason, better, as we have said, that the object should not be thus known to any save the one person who has framed and written down the "puzzler."

Our friend demands, with a severe and meditative frown, "Is he a public character (a general chorus of merriment), or is he in private life?" (Renewed laughter.)

He who has to reply, in all probability, now damages his own chances of the stake or of victory, as the case may be, by his perplexed manner, by the observations he makes, and by the discussion which they provoke among the amused bystanders. "How shall I answer that question?" says he. Suppose the questioner is a public character, still whoever heard of a public nose? Here the questioner, who has attentively watched these appearances of hesitation and bewilderment, remarks, that what he means to ask is, "Whether the individual may or may not, in common parlance, be said to belong to public life?" Fresh hesitation, and a renewed but low burst of little laughs all round the circle, like the small spitting fire that runs along a train of gunpowder. "The individual!" What can they say to the query? Can they say "he"? After much hesitation, they perhaps pronounce the question impossible to answer in that shape, but still insist upon his counting it as his seventh. Very well, but in that case he equally insists upon some answer, and this is manifestly fair. Finally, they tell him that "he may call it public, if he pleases." "It!" That pronoun startles him, upsets all his foregone conclusions, and lands him, for the moment, in thick darkness.

Then it is not a man; but yet he has been informed that the name of it is a noun singular; consequently it is not a corporate body, and further, it is material, animate, human, and male. Still it is not an individual: What else besides an individual man can be material, animate, human, singular, and masculine? He is lost in his reflections; a long

silence on his part ensues; the rest begin to talk about other matters; not only his reasoning powers, but his faculty of concentration also, are considerably taxed, to save himself from being diverted or distracted from the trail, now grown so faint, which must guide him to a solution. From time to time he is good-naturedly assured that "he will never guess it;" and his adversary probably invites him to give it up at once, own himself vanquished, and hear the true answer thundered in his ears.

No, he won't. Often, at such a stage of the game as this, our friend is forced to get up, take his hat, and pursue his meditations somewhere else, beyond reach of disturbance. We omit what may be called the illegitimate or accidental helps towards a discovery—such as the fixed glances at the object, if within sight, or the studious avoidance of even a glance in that direction, &c.

He is gone. He returns with a look of resolution. "Is the object," he asks, "a part of any thing?" Answer No. 8, "Yes." He now knows that it is some bodily organ, limb, or sense. But the senses are five in number; the limbs, including fingers, still more numerous; and the structural organs, brain, heart, lungs, &c., practically innumerable. It is very common at a stage like this to waste one or more questions, as we have termed that blunder. For instance, if you ask, "Is it a limb?" and are answered negatively, you are not enabled to conclude that it is one of the senses, for it may be a structural organ; nor that it is one of these, for it may be a sense. This is a very attenuated and excusable example of the mistake of throwing a question away, or at least risking it; because here there are only two unascertained alternatives remaining, whereas there might be, and often are, hundreds, thousands, millions. We have known a case of the following sort. A second game begins, after "*The Emperor Nicholas*" had been the subject for discovery in the first. The new subject or object to be found out is, we will suppose, "*theft*." The questioner begins by asking, "Is it a private person?" He is told it is not; and then he guesses the Emperor Napoleon III., and half-a-dozen sovereigns in succession. Failing in these, he goes through a list of generals; and, of course, when he winds up at the twentieth time of asking with General Tom Thumb, he is just as far from his quarry as he was at starting, having squandered away every single one of his questions.
